MR. MASON'S DOGS.—In a letter from our worthy friend Mr. Hugh Dalziel, we are informed that Mr. Mason sailed from Cardiff in the *Rheukina* on March 25 with his grand lot of dogs, which we have already noticed would be entered in the forthcoming show. Those of our friends who desire to communicate with Mr. Mason can do so through this office. The following notice, taken from the *Stock-Keeper*, March 25, gives the list of Mr. Mason's dogs:

Mr. H. Mason, of Bradford, and, we believe, Mr. Henry Lacy, of Hebden Bridge, also, leave for America to-morrow. Both are well known as successful breeders and exhibitors here, and Mr. Mason is going to try his luck at New York Show and has sent us the following list of dogs he takes out, and as none of them will, presumably, be seen on an English show bench again the list will be interesting to many of our readers.

We wish Messrs. Mason and Lacy a pleasant voyage and success to them in their objects.

LIST OF DOGS TAKEN OUT BY MR. MASON.

Pointers—Champion Don (4,201); Champion Chancellor (first Palace, 1880); Water Lily, with five puppies by Don; Chelmsford, by Don—Lady Lizzie.

Fox-Terriers.—Moslem II., Twilight, Moonlight and Tartar (all winners).

Greyhounds.—Dropping Well, by Telegraph-Old Mother Shipton (grand young bitch, black and white, never exhibited); Fly, red bitch, by Riot Act-Affection; Slingsby, by Rapid (black dog).

Mastiffs.—Salisbury (9,336), Creole (both in form).

Newfoundland.—Mayor of Bingley.

Bulls.—Alexander, Noble (late Petrie's, winner at three kennel club shows).

Bull-Terrier.—Young Bill.

Smooth sheepdog, Italian greyhound bitch, dandie bitch, pug, Lina (late Foster's), capital Airedale, two good Yorkshires.

SAN FRANCISCO BENCH SHOW.—Our esteemed contemporary, the *Pacific Life*, so well known as the authority on sporting matters on the Pacific Coast, writes as follows in its issue of March 26, regarding the bench show of dogs which has just been held in its city: "The past has been a busy week at the office of the Pacific Coast Kennel Club, 313 Montgomery street. D. R. McNeill the courteous manager has been overwhelmed with applicants for entries and blank forms of entry. Several entries of dogs were made in the different classes, and many ladies and gentlemen expressed an intention to enter their pets for the exhibition. All indications are that the bench show will be a great success, and next week we hope to be able to give our readers a partial list of the entries. At any hour during the day persons may be seen walking into the office, leading dogs for which they desire to find places among those to be put on exhibition. The majority of the owners of valuable animals seem to be uninformed as to the rules and regulations governing bench shows, and Mr. McNeill's time is mainly occupied in enlightening them. It is not generally understood that while the pedigrees of the dogs are desired they are not necessary. Many people fear that they cannot enter their dogs because their pedigrees are unknown to them. This is a mistake; dogs may be entered pedigree or no pedigree. Valuable prizes will be awarded to the best specimens of dogs in each class, also certificates of highly commended to dogs possessing superior qualities and fail to win first or second prize. And a very valuable special prize will be given to the most perfect specimen of dog or bitch in any class."

ANOTHER BIG DOG HEARD FROM.—The Dodgeville, Wis., *Chronicle*, says: "A correspondent of the FOREST AND STREAM, writing from San Francisco, describes a dog owned by him of the species known in natural history as the 'Great Dane,' but more generally known as the 'Siberian bloodhound,' and asks if any one knows of a larger one. His dog took the first prize at the bench show in New York, in 1879. 'He stands 33 inches high at the shoulder, 32 at the rump; is 6 feet 5 inches long from end of nose to tip of tail, 42 inches round the girth and 13 inches across the chest. He weighs when in good condition about 175 pounds.'

"If the gentleman were a subscriber of the *Chronicle* we could give him some information on the subject; but as he is not, we suppose we are not necessary. Many people fear that they cannot enter their dogs because their pedigrees are unknown to them. This is a mistake; dogs may be entered pedigree or no pedigree. Valuable prizes will be awarded to the best specimens of dogs in each class, also certificates of highly commended to dogs possessing superior qualities and fail to win first or second prize. And a very valuable special prize will be given to the most perfect specimen of dog or bitch in any class."

THE COCKER COMMITTEE CRITICISED.—TORONTO, April 1.—I noticed the announcement in your journal that the Cocker Committee would meet at the rooms of the Forrester Gun Club, Buffalo, at 8 P. M., on March 30. Having signified my willingness to subscribe to the American Cocker Club, I thought that by attending the meeting of the committee I might gain valuable information by listening to the arguments upon the various points and qualities of a cocker spaniel and, accordingly, proceeded to Buffalo on the date announced for the meeting only to find the solitary member of the committee present. The absence of the other members, I have since been informed, was caused by a telegram received by them from Mr. A. H. Moore, of Philadelphia, to the effect that the meeting was postponed unavoidably.

Matters are, it seems to me, being unnecessarily delayed. The great aim of some at the first was to rush things too fast, and now the order of the day seems to be to place stumbling-blocks in the way. Had the meeting been called for April 1 I could have under-

stood the joke. Personally, I desire to thank the several members of the Forrester Gun Club for their kindness and attention to me during my stay in their city, and if any of them ever comes to Toronto we will try and return the compliment.—COCKER.

GUIDO'S LILLY.—Memphis, Tenn., March 30, 1881.—Seeing an accurate illustration in your last impression of the very beautiful and meritorious native small pointer Orgilla "Rush," I would like to say a word about his mamma, "Guido's Lilly." All that you said was the truth, but you did not say all of the truth. If I remember aright Flash, the sire of Rush, was first exhibited at Baltimore, in January, 1877, taking first; winning also special for best stud dog, being exhibited with Rush and Rose. At the New York show in the spring of 1877, "Daisy," one of this "phenomenal litter," (as the lamented Mr. W. M. Tilcston always called Lilly's ten babies), carried off first, and here Rush and Rose gained the grand accumulative of winning the magnificent special prize given by Mr. Schuschart, who was pleased with the award, as the class was an extraordinarily good one for best brace in the show, regardless of weight. Rush and Rose were then less than fourteen months old. Lilly early showed excellent nose, perfectly steady before and behind a pretty retriever, and was amiable and lovely as a maid with hazel eyes. GUIDO.

THE JOCKEYING AT THE FIELD TRIALS—Cleveland, O., April 2.—I am really obliged to you, as every other real sportsman should be, for your exposition of that abominable jockeying at the late field trials. It will take but a very short period to knock all field trials endwise if allowed to be practiced by the judges. It is a pity the judges should not order such fellows off the ground directly they try the game. If they tolerate it much more no respectable sportsman will attend any trials at all. They will have to stop it or stop field trials, one or the other.—J. C.

FLASH—PRINCESS WHELPS.—At the New York Show last year, Dr. A. Russell Strachan, of this city, and Mr. George G. Barker, of Boston, arranged for the breeding of their remarkably fine pointers Flash, by Dr. Strachan's old George out of Peg, and the beautiful champion black pointer bitch Princess, by Ranger out of Fan. The result has been a wonderfully fine litter. We had the pleasure of seeing the dog puppy selected by Mr. Barker for Dr. Strachan, and must confess we have never seen before a more lively and precocious youngster of nine weeks old. He is the image of his grandsire George, whose sketch we gave in our issue of March 24. The litter is not for sale.

ENTRIES FOR BEAGLE PRIZES—Baltimore, Md., April 5, 1881.—The undersigned and General Bond hereby beg to enter their straight-legged beagle bitch, Lulie P, for FOREST AND STREAM, special prize for that class. The action of the Westminster Kennel Club, in failing to provide a class for the bench-legged beagle, will prevent our sending on any of that class.

T. CLAY MADDUX, M. D.

BELLE OF HACKENSACK.—Inquiry is made for the authentic pedigree of red Irish bitch, "Belle of Hackensack;" perhaps Mr. Sanford can send it.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Patsy—Mr. E. F. Rhodes, Providence, R. I., claims the name of Patsy for red Irish setter puppy out of Sally (Plunkett-Jane) by Sancho (Elcho-Juno).

Dock—Mr. Chas. D. Bryant, Zumbro Falls, Minn., claims the name of Dock for white pointer puppy with lemon ears, by Mr. S. B. Dilley's champion Ranger out of Dolly, whelped August 1880.

Bell—Mr Chas. M. Miller, Woodbridge, N. J., claims the name of Bell for black and tan foxhound bitch whelped July 1879, out of Leonard's Judy by Dougherty's Dan, Judy out of Johnson's imported Psyche by Brow's Spot.

Dan—Mr. W. Duff, Kittanning, Pa., claims the name of Dan for his black and white ticked setter dog puppy whelped Jan. 1, 1881, out of Mr. Howard Hartley's Ruby by Rake.

August Flower—Mr. H. W. Livingston, New York city, claims the name of August Flower for English setter bitch puppy by owner's Ray out of owner's Delta (now dead) whelped August 10, 1880.

Peter Schlemihl—Mr. H. W. Livingston, New York city, claims the name of Peter Schlemihl for English setter dog puppy by owner's Ray out of owner's Delta (now dead) whelped August 10, 1880.

Queen Bess—Dr. Richard P. Kremer, Lebanon, Pa., claims the name of Queen Bess for English setter bitch by Crack (Carlowitz-True) out of Queen.

George III.—Dr. A. Russell Strachan, New York city, claims the name of George III. for liver and white pointer dog puppy whelped Feb. 1, 1881, by owner's Flash (George-Peg) out of Mr. Barker's champion Princess (Ranger-Fan).

Twilight—Dr. D. M. Fraser, Stratford, Ont., claims the name of Twilight for Gordon setter puppy out of Moll III. by Blossom, purchased of Jr. S. Niven, London, Ont.

Flirt—Mr. H. S. Coulter, Johnstown, Pa., claims the name of Flirt for his cocker spaniel bitch out of Birdy by Fred, whelped July 27, 1880, purchased from Mr. F. D. Adams, Franklin, Pa.

Diana Vernon—Mr. Henry W. Gerdale, Danbury, Conn., claims the name of Diana Vernon for his black and tan Gordon setter bitch, whelped April 6, 1876, out of Rhine by Don, Rhine out of Alice by Hero, both imported by Mr. H. W. Jenkins, Baltimore, Md. Don imported by Mr. Richard Lloyd, Boston, Mass.

Prince—Mr. Fred. H. London, Rock Hill, S. C., claims the name of Prince for his lemon and white setter dog puppy, four months old, by champion Gladstone out of Stoother's champion Frost, presented him by Dr. W. A. Strothers, of Lynchburg, Va.

Larry O'Neil—Mr. Alonzo Campbell, De Kalb, Ill., claims the name of Larry O'Neil for red Irish setter puppy out of Molly Pluuket by Don Juan, purchased of Mr. Leonard Ryan, Medora, Ill.

Bounce—Mr. Edward Orth, New Orleans, La., claims the name of Bounce for lemon and white setter puppy whelped June, 1880, by Noble V. (Brussels-Pearl V.) out of Sallie V. (champion France-Zita), presented by Mr. M. F. Smith, Houma, La.

Rhea H.—Allenhill—Claimed by Mr. Burr Hollis, Hornellsville, N. Y., for black spaniel bitch puppy, whelped Oct. 15, 1880, out of Imp. Jenny by Imp. Bub, Champ. Rhea (2,428) by Champ. Brush (7,371).

Grouse-Alma—Mr. Geo H. Everall, of New York, claims names of Grouse and Alma for his liver and white cocker spaniel dog and bitch pups, whelped January 26, '81, out of Dr. J. Symington, imported Belle by Dr. J. W. S. Arnold's Music. Music was formerly the property of Dr. H. B. Wygant, of Peekskill, N. Y.

Frankie—Claimed by the Riverside Kennel Club, Claremont, N. H., for cocker bitch puppy, whelped Jan. 6, '81, out of champion Feather by imported Snip, color, liver and white, handsomely ticked on body and legs.

Clio—Claimed by the Riverside Kennel Club for cocker bitch puppy, whelped Jan. 5, '81, out of champion Feather by imported Snip, color, liver and white, ticked legs and very handsome.

Lady Love—Mr. Chas M. Wray, of New York, claims the name Lady Love for liver and white cocker spaniel bitch pup, whelped Jan. 28, '81, out of Dr. J. Symington's Jane, reported by Dr. J. W. S. Arnold's Music. Music was formerly owned by Dr. H. B. Wygant, of Peekskill, N. Y.

BRED.

Romp-Snapshot, Jr.—Mr. Edmund Orgill's pointer bitch Romp (Rush-Romp) to his Snapshot, Jr., April 4.

Rhona Rocket—Mr. Edmund Orgill's pointer bitch Rhona (Snapshot-Rose) to his Rocket, April 4.

Snow Flake-Jerry—Mr. Theodore Meyer's (Jersey City, N. J.) pointer bitch Snow Flake (Gleamark Girl) to Mr. Paul Ermann's (Rutherford Park, N. J.) Jerry (Sensation-Coburn's Belle), March 24.

Lady Duke—Mr. John Dixon's lemon and white pointer bitch Lady to Mr. John Fawcett's lemon and white pointer dog Duke, March 5.

Bell-Jim—Mr. J. Bolige's beagle bitch Bell to Mr. John Fawcett's dog Jim, March 5.

Rat-Scotty—Mr. John Fawcett's Scotch terrier bitch Rat to owner's dog Scotty, March 27.

Queen-Rover—Mr. John Fawcett's dachshund bitch Queen to owner's dog Rover, March 2.

Jip-Duke—Mr. John Robinson's liver and white pointer bitch Jip to Mr John Fawcett's lemon and white pointer dog Duke, March 25.

Frau-Duke—Mr James Hutchinson's liver and white pointer bitch Frau to Mr. John Fawcett's lemon and white pointer dog Duke, March 10.

Belle-Joe, Jr.—Mr. J. L. Valentine's (Nashville, Tenn.) setter bitch Belle to Joe, Jr., March 25.

Peg's Boy's Girl-Letty—Mr. Clarence K. Drane's Peg's Boy's Girl (Peg's Boy-Blanche) to his Letty.

Zoe-Dick—Mr. W. P. Laurence's (Boston, Mass.) setter bitch Zoe (Cowing's Ben-Clytie) to Mr. G. B. Inche's Dick (Dinks-Flirt).

Minque-Widair—Mr. Eugene Powers' Mingua to Mr. Chas. Kent's Widair, April 3.

WHELPS.

Cora—Mr. F. G. Wotherspoon's (Three Rivers, Canada,) red setter bitch Cora whelped March 31, eight puppies, three dogs and five bitches, by owner's setter dog Robin.

Lucy—Mr. J. E. Dolhs' (Beverly, N. J.) English beagle hound Lucy (b. c. Pittsburg beach show 1881) whelped April 2, 1881, three dogs, color white and brown, and white tan and fawn, by owner's Fly, 1st prize Pittsburg, 1881.

Lassie Crozier—Mr. Charles Pugh's (Philadelphia, Pa.) imported collie bitch Lassie Crozier has whelped seven black, tan and white puppies, by owner's Tom, 1st special prize winner at Philadelphia, 1879, and 1st prize winner in the collie trials at the Pennsylvania State Fair 1880.

Girl—Mr. R. T. Greene's (Jersey City, N. J.) pointer bitch Girl (Maryland-Nell) whelped ten puppies, eight dogs and two bitches, by Mr. W. F. Steel's (Piermont, N. Y.) Glenmark (Orgill's Rush-Romp).

Buck, Jr.—Mr. G. W. Campbell's setter bitch Buck, Jr. whelped seven puppies, four dogs and three bitches, by Joe, Jr., March 30.

Dip—Mr. Duff's (Kittanning, Pa.) black and white pointer bitch Lavera's bitch Dip whelped April 5, 1881, six puppies, three dogs and three bitches, all black and white, by Mr. Howard Hartley's imported Laverack dog Rake.

Deuce—Mr. P. P. Graham's (Madison, Ind.) Irish setter bitch Dance (Stoddard's Bob out of Buck) whelped April 5, ten puppies, four dogs and ten bitches, by Elcho II.

Princess—Mr. George G. Barker's (Boston, Mass.) champion black pointer bitch Princess (Ranger-Fan) whelped Feb. 1, 1880, five puppies, by Dr. A. Russell Strachan's (New York) George-Peg.

Clymont—Baltimore Kennel Club's (Mr. A. J. Kelly, manager,) pointer bitch Clymont (Blake-Lilly) whelped April 6, 1881, nine puppies, five dogs and four bitches, by Sensation. The puppies are all white and lemon.

Clio—The Riverside Cocker Kennel has sold to Mr. Ralph Doe Rolenstord, V. H., the handsome cocker bitch puppy Clio, whelped Jan. 5, '81, by imported Snip out of imported Champion Feather, winner of first and special prizes N. Y., 1878, first N. Y., 1879, and second Philadelphia, 1879.

Fairy Prince—Claimed by Mr. J. C. Higgins, Delaware City, Del., for his dog puppy, Pontiac-Fairy II., whelped Sept., 1880.

Juno—The Lechlee Kennel's (Whitegrove, N. J.) liver and white cocker bitch Juno whelped seven puppies to their imported black spaniel Benedict, four black and three liver, with white on breast of each, and some with white toes.

Dolly Dean—Mr. Jos. B. Dewis's (Montview Kennel) Dalsy Dean whelped, April 4, four dogs and one bitch, by Lincoln.

SALES.

Garfield—Mr. John Fawcett, McKeesport, Pa., has sold to Dr. N. Ness, York, Pa., lemon and white pointer pointer pup Garfield.

Grouse-Fan Whelps—Mr. John Fawcett, McKeesport, Pa., has sold to Mr. J. Rodehamer, McKeesport, Pa., two lemon Belton setter puppies out of Fan by Grouse.

Grouse-Fan Whelps—Mr. John Fawcett, McKeesport, Pa., has sold to Mr. S. H. Hoffman, McKeesport, Pa., one dog and setter bitch puppy out of Fan by Grouse.

Grouse-Fan Whelps—Mr. John Fawcett, McKeesport, Pa., has sold to Mr. Matthew Seward, Capital Hill, Pa., lemon Belton setter bitch puppy out of Fan by Grouse.

Joe-Nell Whelps—Mr. John Fawcett, McKeesport, Pa., has sold to Mr. A. J. Armstrong, Pittsburgh, Pa., liver and white pointer dog out of Nell by Joe.

Grouse-Fan Whelps—Mr John Fawcett, McKeesport, Pa., has sold to James Sullivan, McKeesport, Pa., two lemon Belton setter bitch puppies out of Fan by Grouse.

Joe-Nell Whelps—Mr. John Fawcett, McKeesport, Pa., has sold to Mr. Henry Biziemen. Pittsburgh, Pa., two lemon and white pointer puppies out of Nell by Joe.

Dirk Hatteruck-Bridget Plunkett Whelp—Mr. E. J. Robbins, Wethersfield, Conn., has sold a red Irish dog by Dick Hatteruck (Elcho-Nell) out of Bridget Plunkett (Plunkett-Stella) to Mr. C. W. Patterson, Beaver Falls, Pa.

Joe—Mr. John Richner, Philadelphia, Pa., has sold his black and tan cocker dog Joe, who was run in the collie trials last year at Philadelphia, to Messrs. C. T. Yerkes & Co., of Philadelphia, for $100. The purchasers have sent Joe to Montana.

Rough—Mr. Gard G. Hammond, New London, Conn., has sold to Mr. Walter F. Burnett, Oregon, the Chesapeake Bay dog Rough, ten months old, out of owner's Rose by his Rake.

Joel-Gipsey Whelps—Mr. Thos. Blyth, McIntyre, Pa., has sold to Mr. F. S. Watts, Canton, Pa., two Irish setter dog puppies out of his Gipsey by Joel.

Joel-Gipsey Whelps—Mr. W. J. Rool, McIntyre, Pa., has purchased of Mr. Thos. Blyth, McIntyre, Pa., an Irish setter bitch puppy out of Gipsey by Joel.

Bunaway—Mr. Thos. Blyth, McIntyre, Pa., has sold his Irish setter dog puppy Duncan, five months old, to Mr. G. H. Piatt, Elmira, N. Y.

Dream—Dr. Downie, New Market, Md., has sold his Gordon setter bitch Dream, by Dr. Speir's Gypicum, out of Dr. Speir's Fan, to Mr. Thos. Blyth, McIntyre, Pa.

Mollie—Black spaniel dog pup, out of imp. Jenny by imp. Bub Champ. Rhea (2,428)-Champ. Brush (7,371), E. K. C. S. B.), sold by Mr. Burr Hollis, Hornellsville, N. Y., to Mr. Chas. Denison, Hartford, Conn.

PRESENTATION.

Gladstone-Frost Whelp—Dr. W. A. Strothers, Lynchburg, Va., has presented to Mr. Fred. H. London, of Rock Hill, S. C., a handsome liver and white dog puppy, four months old, by champion Gladstone out of Strother's Frost.

Noble V.-Sallie V. Whelp—Mr. M. F. Smith, Houma, La., has presented to Mr. Edward Odell, New Orleans, La., a lemon and white setter puppy, whelped June, 1880, by Noble V. out of Sallie V.

Mr. H. H. Green, Philadelphia, Pa., has presented to Levi Woolley, of Sebastisville, Maine, English setter bitch Jipsey, 4 years old, lemon and white, she by One-eyed Sancho out of Petrill, Petrill out of imported Olive.

IMPORTATIONS.

Fearless—Mr. Ashton, of the American Horse Exchange, New York city, has imported from England the collie bitch Fearless, winner of first prize, puppy class, Brighton, 1880.

KENNEL MANAGEMENT.

122 G. R., Tallahassee, Fla.—I have a setter bitch which has accidentally been warded by a cur dog and had puppies. I have had them killed. Will whelping her litters hereafter if I breed from her? Ans. Yes, in all probability.

123 H. E. B., Milford, Mass.—I received a pointer bitch puppy a short time ago. Then I never saw a puppy that had a better hang ear. Since that time her ears have turned back and now look out of place. Can anything be done for them? Ans. Nothing.

124 J. J. D., Boston, Mass.—My Irish bitch puppy is dead from inflammation of the bowels. I first noticed her sick on Tuesday morning; she was very weak on her legs and could hardly walk. Her back was lame and her tail very limp; body; no appetite and she groaned very much with pain. I first gave her powders of calomel and opium, one grain each every three hours and gave her a hot bath, then rubbed her dry, then rubbed her with a liniment compound of turpentine, ammonia and sal ammo; after fourteen hours I gave her a dose of castor oil, syrup of buckthorn and syrup of poppies. She died next day. Was treatment right? Ans. The calomel and opium and external applications were all right, but the castor oil, etc., was bad. The opium should have been freely repeated.

125 A. P. B., Rochester, N. Y.—About two weeks ago my pointer, three years old, was taken with vomiting (not violent) which lasted two or three days and followed soon after eating. I changed his diet from table scraps to corn mush mixed with thoroughly boiled beef liver chopped fine and it seemed to pass off all right, but a week later I noticed he kept constantly biting his lower jaw and fore legs and gnawing his hind legs and, by so doing, has made them raw in two or three places. Wherever he lies down he leaves quite a quantity of his hair, but I suppose that is natural enough at this season of the year, only the parts mentioned are thickly covered with little spots where the hair has come out. The dog seems to feel and act well when out, but in doors he is a little dumpish. I have consulted a friend who I have regarded as a good doctor and he says his blood is out of order and a little powdered sulphur and salts put into his feed regular. I thought I would consult a little higher authority and consequently call on you. Ans. Use the sulphur, but give also two purges of castor oil twice a week for two or three weeks and rub in some sulphur ointment thoroughly where the hair has come out. Feed carefully and give plenty of exercise.

126 F. W. S., Philadelphia.—I have a cocker bitch puppy six months old. For the last six weeks she has not eaten one good meal and sometimes she will not eat anything. Her coat which was a dark liver color has faded nearly brown. About three weeks ago I noticed she passed something that looked like thick blood. Again I saw the same, but did not notice anything strange about her. I took her out recently with another dog and had a chain on her. All at once she seemed to get frightened, ran and pulled to get away. She frothed at the mouth and seemed afraid of everything. The spell lasted about half an hour. Her eyes were wild looking and red, and she barked when she ran around. I caught her and tied her; she seemed to want to run away all the time. Her nose is hot most of the time. I feed her on table scraps and keep in good dry kennel. Will you kindly tell me what is the matter with her. Ans. The puppy had a fit, in which young dogs are very subject. Possibly she is in the first stage of distemper, or has worms. A few mild doses of sulphur followed by a little castor oil may be of service, and then give two grains of quinine three times a day.

127 DON, Sitka, Alaska.—My name is Don, my age one year and six months. I have been a child of misfortune from my youth up. I came of a good pedigree, both my parents being setters of good standing. In my early infancy I received a severe fall, badly hurting me. I was pronounced cured by my attending physician, but I always had grave doubts of the same. The mange I manage to "accumulate" by playing with a cur of low degree. I left the hospital about four months ago cured of that. Now, Mr. Editor, I am not old enough to have paralysis, but a constant twitching in both my fore shoulders annoys not only myself, but all my human friends who see me, and I have heard my master desire if by some of his friends to shoot me. Can it be I am afflicted? Is it paralysis, or what is the trouble? My appetite is good and I am very frisky, and it is only while lying down asleep, or standing still that the twitching can be noticed. There ain't any dog doctors here, so please send me some remedy, for I fear my next hunt will be in the happy hunting grounds. Ans. Don suffers from "chorea," or St. Vitus' dance, and seems to have been pursued by a "Nemesis." Possibly, however, he may be benefited by giving him a pill, three times a day, containing one grain of the valerianate of zinc, one-eighth grain of Nuclx vom. and two grains of quinine. At the same time give him plenty of exercise in the open air.

Rifle and Trap Shooting.

RANGE AND GALLERY.

NO BRITISH TEAM.

Gen. Wingate has received the following letter from the chairman of the council of the British N. R. A.:

20 GROSVENER PLACE, S. W. LONDON, March 26, 1881.

Sir: As Chairman of the Council of the English Rifle Association, I beg to inform you that after much consideration the Association regrets that it does not see its way to send a Team of Smallbore Rifle Shots to the United States to compete with an American Team this season.

But it is hoped that next year we may find eight gentlemen who will go to New York for the International Rifle Match. Believe me, sir, Yours faithfully,

(Signed), STANHOPE.

General George W. Wingate.

PROFESSIONAL RIFLEMEN.—At the last meeting of the Board of Directors of the National Rifle Association with Gen. E. Wingate in the chair, the Committee on Professionalism in rifle shooting submitted the following report, which was adopted:

A professional rifleman is one who exhibits or advertises his skill for a pecuniary consideration, or who is employed either directly or indirectly by a manufacturer, or by makers of rifles, to shoot his or their especial weapon, for the purpose of advertising or selling it; or who pursues rifle shooting as a means of gaining a livelihood. Excepting in military team competitions, professional riflemen shall always submit to a handicap equal to ten per cent. of the possible total score, in addition to any handicap that may be otherwise imposed. All competitors in individual matches at Creedmoor, during the year 1881, shall be classified according to their records for the year 1880, as published by the National Rifle Association; but the status of a competitor in any match must be obtained from his best two actual scores in similar matches only, to wit: Matches at the same distance or distances, the same rifles and same positions being allowed. Sharp-shooters are those who have made, as above indicated, 44 points in a possible total of 50 points; 31 in 35; 22 in 25, or 88 per cent. of any other possible total. Senior marksmen are those who cannot be classed as sharpshooters, but who have made, as above indicated, 36 points in a possible total of 50 points; 25 in 35; 18 in 25, or 72 per cent. of any other possible total. Other individuals shall be known as junior marksmen. Riflemen may be handicapped by the terms of a match, or by resolution of the Board of Directors, such action being printed in the monthly programmes, before a match shall have been shot. And in like manner, any classes or class of riflemen may be excluded from any particular match. The Board of Directors reserves the right to promote a man from one class to another, according to the record of the year 1881, or as it may deem proper. All previous action inconsistent herewith is hereby repealed. All of which is respectfully submitted.

Adjutant Murphy, the minority of the committee, urged a system of handicapping. Col. Gildersleeve thought the word "professional" a bad one to use, and suggested "crack shot."

BOSTON, April 9.—To-day was the first perfect spring day of the season for the riflemen. The wind was rather erratic in the early part of the shooting, but later became settled, and indicated upon the dial from 11 to 12 o'clock. About noon a fire which had been raging on the previous night behind the butts at 500 yards, broke out afresh near the centre of the range, and approached rapidly toward the pavilion. Shooting was suspended, and all the riflemen turned out to fight the fire, in which they proved successful, turning it toward the hill, where it did considerable havoc among the trees. Several acres were burned over, and the fire was still burning when the riflemen left. The few long range men who were out for practice found it hard to find the targets, owing to the smoke. Mr. E. Cram in the record match put in a full score of ten consecutive bullseyes, making the eighth full score ever made on the range. The entries were very large, space being given only to the best, as follows:

Record Match (Massachusetts Target).

L L Hubbard	12	11	12	10	11	11	11	11	12	—79

MAGNOLIA GALLERY—Boston.—The shooting has been exceedingly brilliant. Mr. Cram put in a good score of 49 in the Badge match and E. C. Arthur has the elegant showing of five 49s in the Forest and Stream match. In the new pistol match just begun Mr. C. Dunn heads the list in ready measurement, that is, measuring from the centre of the bullseye to the centre of each shot. J. H. Williams also has a good score. The result of all the matches is appended:

WORCESTER, Mass., April 8.—The glass-ball tournament, under the auspices of the Worcester Sportsmen's Club, Fast Day, at their range, near Lake Quinsigamond, attracted a large number of sportsmen. Tatham's secret tied blue balls were used; they were sprung from C. H. Holden's improved rotating trap, at 18 yards rise. The first event was for a purse of $75, to be shot for by teams of three, 20 balls per man. The following is the score:

W S Perry	20	N S Johnson	17
F T Smith	15	W H Cobb	16
A Houghton	17—52	J E Browning	15—48
W H Edger	16	H Nichols	17
T J Beardsley	16	E A Folson	15
Dr Chamberlain	14—47	L O White	16—47
E W Webster	16	A P Pond	18
O F Belcher	16	L R Hudson	15
J C Haskell	14—46	C B Holden	11—44
E Barry	16	O H Bush	12
G J Rugg	12	W H Leighton	13
J H Frost	14—42	H S Fay	15—41
J T Muscroft	14	C H Gerrish	14
A S Newton	14	A D Putnam	10
T H Fuller	11—39	M D Gilman	14—38
C H Griffin	10	G B Clark	14
L C Keyes	15	N Brigham	10
A S Shepard	11—36	C P Winslow	10—34
G R B Claflin	11	A B Bowdish	14
A B F Kinney	9	D F Howe	10
D W Badson	13—33	N Forrest	6—30
A H Appleby	9	C Dodge	4 H A Moffit	11—21

The second event was for a purse of $50; individual sweepstakes; 10 balls per man. There were 41 entries. The first prize was divided between Perry, Cole and Gerrish, each scoring 9; the second was divided between Nichols, Holden and Jones, each scoring 8; the third was divided between Rugg, Webster and Bush, who each scored 7 balls.

The third event was for $100; individual sweepstakes; 15 ball per man. There were 20 entries. The first prize was divided between Perry and Haskell, who scored 14 each; the second between White and Pond, the third between Smith, Baudry and Eager.

The fourth event was a sweepstake; individual sweepstake 10 balls per man. Browning took the first prize; the second was divided between Perry, Eager and Smith.

The prize for the best individual score to the person shooting in all the events was awarded to W. S. Perry. He broke 82 of the 85 balls offered.

After the shooting Capt. A. P. Pond, of the late firm of Pond & Shepard, of the Bay State House, was presented with a solid gold medal. It was made by Greene & Nichols, of Boston. Its markings are as follows: "Presented to A. P. Pond, by the Worcester Sportsman's Club, 1881." Mr. Pond is soon to go to Chicago.

MEDFORD, Mass., April 7.—Some thirty or so lovers of sport gathered at the Belleyne range to-day, and for seven hours, in spite of an adverse wind, the bullets pattered like hail-stones on the targets, a large percentage of the shots bringing the white disc to the center of the target. Subjoined are the seventeen best scores 200 yards:

Whitney	5 5 4 4 4 5 5 9 4 5—46	Walters	44
Webb	5 4 5 4 5 5 5 4 5 4—46	Waterman	44
Russell	5 5 5 5 4 4 5 5 5 4—46	Webster	44
Jacobs	4 5 4 5 4 5 5 4 4 5—45	Edwards, 2d	44
Ames	4 4 4 4 5 5 5 5 5 4—45	Henry	44
Williams	4 4 4 5 4 5 5 5 5 4—45	Harrison	42
Winslow	5 5 4 4 4 5 4 5 5 4—45	Davis	41
Teel	4 5 5 4 4 4 5 5 4 4—44	Pollard	40
Edwards	44		

Assistant-Secretary A. E. Weston is busy preparing an interesting album of the members and ex-members of the Board of Directors of the National Rifle Association. There are some sixty in all, who have during ten years past assisted in the councils of the Association. The majority of the photographs have been secured, but he would like to receive imperial photos of the following gentlemen: Gen. A. E. Burnside, J. Powell, Jr., A. W. Craven, Col. H. G. Shaw (California), Gen. J. M. Varian, Gen. Augustus Funk, Hon. David W. Judd, Gen. Samuel W. Johnson, Gen. J. H. Liebenau, Col. Gourverneur Morris and Judge Hilton.

ALBANY, N. Y., April 7.—The weather this afternoon was not very inviting for the riflemen who attend the weekly matches at Rensselaerwyck. The wind blew in gusts, and the matches set down for competition being at the extreme short range are not enticing to many of the men. The first match was a subscription match with re-entries allowed. In spite of the adverse conditions good scores were made by a number, though fully as many more did not get an average of inners, the scores in detail being:

Gaus, Bal S	5 5 4 5 5 5 4—31	Spelman, S. M	*2 3 3 4 4 5 4—29
Geiger, R S	4 5 4 4 4 4 5—30	Mosher, Bal S	4 5 4 4 4 4 4—29
Miles, Bal S	4 4 4 5 5 5 4—30	Dexter, S S	3 4 4 0 3 4 4—22
Fitch, R C	3 5 5 4 3 4 5—29		

*Allowance to military rifles.

Following this came a match at 300 yards for a Wilkinson reloader. The entrance fee was small, the shots few and unlimited re-entries allowed. Mosher had gone over for the express purpose of winning that re-leader; he had all kinds of ammunition, and was ready to stay until dark, or later, to make a winning score. He nearly pulled the lock out of his gun, but he succeeded in winning the re-loader, and came back a happy man. The scores were as follows:

Mosher, Bal S	4 5 4 45—22	Spelman, Jr., S M	*2 3 4 3 4 5—20
Miles, Bal S	5 4 4 5 4—22	Gaus, Bal S	4 4 4 2—19
Fitch, S M	*2 4 4 3 4 5—22	Dexter, S S	4 3 4 3 4—18
Geiger, R S	4 4 4 4—20		

A new match was arranged at the same distance as the two previous matches, for a large cake. Lieutenant Spelman wanted the cake. He had come prepared to win something. He had a rifle which had been won by a team of the tenth regiment three years ago. After the disbandment of the regiment the rifle was delivered to Lieutenant Spelman by the State authorities, and now it was Spelman's turn to do something with it. He had got the hang of the gun, and for the sake of the gun the rest of the competitors were willing to let him win. They shot carelessly, getting inners and centres right along. Spelman's chances were good and the gun was doing splendidly. He had one shot to fire before he decided the cake. With the aid of two rannods and the hammer, he succeeded in carefully loading the prize gun, and stepped to the firing point with a look of confidence that only comes to a man when the fates have sided with him. He took careful aim, pulled off at the right moment—and got—a miss, and lost the cake. The shot decided the fate of the gun. It will probably be divided among the members of the team. The scores were as follows:

Fitch, S M	*2 4 4 3 4 4—21	Dexter, S S	4 3 4 3 4—18
Geiger, Bal S	5 3 5 4—20	Gaus, Bal S	4 4 4 3—18
Miles, S M	2 4 4 4 3—20	Mosher, Bal S	5 3 4 3 3—18
Spelman, Jr., S M	*2 4 4 4 5 0—19		

Next Thursday afternoon there will be three matches at 200 yards, as follows: First, the fifth competition in the 200 yard Life Membership match; second, a match for a Wilkinson reloader and the third, for a Greener gun, which has been presented to the association and will be won in one competition. These matches are open to all comers, and the entrance fee being small, there should be a large turnout to secure the valuable prizes.

CONLIN'S RIFLE, PISTOL AND RECORD GALLERY, 1,222 Broadway.—The Pistol Tournament which has been in progress during the last ten weeks ended on the 26th inst. The competition for the supremacy in skill was extremely close, and the general public evinced a great amount of interest in the shooting throughout the entire match. The wonderful scores made are considered exhibitions of almost if not quite perfect skill. The general plan was that the tournament would be held for ten weeks. During each week the championship for a certain style of shooting would be contested, and the competitor making the best score to be declared the winner of the championship of such style of shooting. The contestant who makes the second best score to win an expert's badge, but in no case could the holder of the championship win the expert's badge. The competitor holding the greatest number of championships to be declared the champion of pistol shooting for the year 1881. The following are the names of the winners of expert's badges:

Pierre Lorillard, Jr., swinging balls; W. C. Southwick, three-fourth bullets; C. J. J. Dunn, tack shooting; D. D. Davis, swinging bullets; J. B. Miller, ace target; Geo. E. Rogers, Creedmoor target.

Messrs. W. M. Chase and D. A. Davis were prevented from taking an active part during the entire tournament owing to sickness, and W. H. Wickham was not able to compete in a number of the contests owing to absence from the city. As these gentlemen are considered champions there is no doubt but what the champion would have had even a greater struggle for the honors if they had been active competitors in all of the contests. It is claimed by many of the posted ones that the winners of championship and expert badge would form a team second to none either in this country or Europe. All the scores made by the winners are marvels of skill, and the record made by the champion is rendered all the more notable by the fact that he is comparatively a new hand with the pistol.

Heretofore there has been no standard or basis by which the various records of crack shots could be compared owing to the differences in the conditions under which the respective feats of marksmanship had been performed. The tournament supplies the deficiency. If the conditions of same be stipulated for each of the styles of shooting, and universally adopted, then it will be an easy thing to rate the skill of a pistol marksman, and the scores made during the match forms a starting point for the comparison of future records.

CAMDEN, N. J.—Stockton Rifle Range, April 9.—The opening of the rang for the year took place to-day. Short-range match, all comers, any rifle, 200 yards, 7 rounds; 10 prizes, value, $64.50:

Geo Fox	32	H S Booz	*30
Maj J H Burroughs	32	M Price	29
F H Eachus	31	J Price	29
E Arom	31	J Tull	29
Dr G Cardwell	30	G W Coulston	*29

*Military rifle.

SAN FRANCISCO, Cal., March 26.—S. L. Kellogg, Jr., Robt. McKillican, G. H. Brown and Nicholas Williams shot a match to-day at 200 yards, 100 shots each. N. L. A. rules. Brown was given 30 points by Kellogg and Williams and McKillican 10 points. Brown was given 10 points by McKillican. The prize was a silver tea-sett. Brown and Kellogg used the Hotchkiss rifle, 45 grains powder, 485 lead. McKillican used a Sharps-Borchardt line rifle, 65 grains powder, 485 grains lead, and Williams had a Sharps-Borchardt line rifle, 60 grains powder, 440 grains lead. The scores stood:

Kellogg	4 4 5 4 5 4 4 4 4—42 5 5 5 5 5 5 5 5 4—48 4 5 4 4 4 4 5 4 5—43 5 4 4 5 5 5 5 5 5—46 5 4 5 5 4 4 5 5 4—44 4 5 5 5 4 4 5 5 5—46 5 5 5 4 4 5 5 4 5—45 4 4 5 5 4 5 5 5 4—45 4 4 4 5 4 5 4 4 4—41 5 5 5 5 4 5 4 5 5—47	Williams	4 4 4 5 4 4 5 4 5—43 4 4 4 5 5 4 5 5 4—44 5 5 4 5 4 5 5 5 5—46 4 5 5 4 5 3 5 4 5 5—46 5 4 5 5 4 4 4 5 4—44 4 5 4 4 4 4 5 4 5—43 4 5 5 4 5 3 5 4 4 4—42 4 5 4 5 4 4 5 5 5—46 5 4 5 4 5 4 4 4 4—42 5 4 5 4 5 5 4 5 5—46 4 4 5 4 5 4 5 4 4—43 5 4 5 5 4 5 4 5 5—46 4 5 4 4 5 4 4 4 4—42

VINCENTOWN, N. J., April 7.—The Coaxen Glass Ball Club of this place held their monthly shoot here to-day; Card's trap, 18 yards, 10 balls each:

W S Hilliard	7	Capt. W. D. Haines	6
H. E. Haines	5	Jos. S Haines	6
R. H. Trick	5	T. C. Shreve	8
S. S Butterworth	3	F. S. Hilliard	9
J. W. Haines	2		

There was a slight mistake made in publishing our last month's score, viz.: It was W. S. Hilliard who won badge instead of F. S. Hilliard.—SHERDRAKE.

THE BRIDGEPORT GUN CLUB will celebrate Fast Day, April 15, with a grand live bird shoot, sweepstake matches, etc. The noise will begin at 9 o'clock A. M. sharp.

SOUTH ABINGTON, April 7.—The first shoot of the South Abington Sportsman's Club for the gold badge was held on the Park to-day. Card trap, 20 balls each:

W H Cook	11	F Bryant	12
W Alden	10	M Barrett	4
Geo Hartman	15	P Smith	6
Sam Norton	16	D Howe	14
Matt Lincoln	19	C F Cook	18
W Edson	17	C Bickford	9
Seth Gurney	10	H Whiting	10
Thos Fish	16	Geo Edson	13
E Whidden	19	H Vosmos	3
A Thomas	11	E Bates	13
Chris Smith	13	Wm Wilder	6
A Le Baron	17	C Nute	5
S H Norton	13		

Ties shot off at 21 yards: E Whidden broke 19 straight, Matt Lincoln breaking 9. Whidden wins the badge.—E.

NEW YORK GUN CLUB, Bergen Point; April 9.—Match, 5 single birds each at 20 yards rise, and 3 doubles each at 25 yards; the looser to pay for the birds.

	Singles.	Doubles.		Singles.	Doubles
Edmunds	11111	10 00 01—7	Arnold	01110	10 00 01—5

Match of 10 birds, for the birds, 29 yards rise:

Arnold	11111 11101—9
Edmunds	11111 11010—8

Match at 25 birds each, for $100 a side and the price of the birds, at 29 yards rise; miss and go out:

Arnold	11110 11110 11010 01101 10111—111—21
Edmunds	10111 01111 11101 10011 11001—110—20

The Baron Trophy, 10 birds each, handicap rise, entry $1, ties to be shot off at three birds. Each competitor to shoot at the distance at which he was handicapped the first time he entered into the competitions. Those who have not previously entered will shoot at their handicap at the time of entering. Winners of sweepstakes on any day assigned for this match previous to the hour for the commencement of the match, will be penalized as prescribed in the rules. Should the cup be finally won previous to the 28th of May, then another trophy will be offered under similar conditions.

Arthur	25 yards	1 1 1 1 1 1 1 1 1—1 1 1—13
Hunter	26	1 1 1 1 1 1 1 1 1—0 1 1—12

Munz	23	1 1 0 1 1	0—5	Stone	23	0 1 1 0 0	0—2
Bullwinkle	26	1 0 1 1 0	1—5	Sauer	21	0 1 1 0 0	0—2
Spurate	29	1 1 1 0 1	0—5	Henry	22	0 0 0 0 0	0—0

FOLSOM, Cal., Mar. 28.—One year ago the Folsom Sportsmen's Club gave a trap-shooting tournament which was so decided a success that the club some two months ago announced a most attractive programme for a second event, to come off on the 27th and 28th of this month. It was decided to have a club match on the first day, open to teams of five men each from regularly organized clubs, and individual contests on the second day. Applications were not slow in coming in, eight clubs responding. The clubs entering were the California-Pigeon Shooting Club and Cosmopolitan Gun Club, of San Francisco; the O'Neill and Stockton Gun Clubs, of San Joaquin; the Forester Gun Club, of Sacramento; Placerville Gun Club, Butte County Gun Club and the Folsom Club. Entrance for each team was fixed at $100, the first prize being 30 per cent. of entrance money and $100 added by the Folsom Club. Conditions, 15 birds to each shooter, 21 yards rise and 80 yards boundary. Six carloads of people left by special train at 9 o'clock A. M., yesterday, and made the attendance at the grounds quite as large as the participants in the match cared to see. The day turned out to be a pleasant and comfortable one.

Dr. Durant, President of the Folsom Club, delivered a hearty

speech of welcome. He also read a letter from A. L. Thiel, President of the Chico club, expressing regret at his club not being able to send a team. The others elected were: Judges, J. D. Young, of Sacramento, and Geo W. Terrill, of San Francisco; Referee, S. A. Tucker; Scorers, John Holz, of Sacramento and Charles E. Mack, Jr., of Florin; Loading-Judge, A. Flohr, of Sacramento; Puller, L. C. Moore, of Folsom. It was arranged that two teams should shoot five birds each, then two others, and so on until each had three innings. We give the score in detail

Folsom Sportsmen's Club.

* Sang out of bounds. † Retrieved, but too late.

On the second day, given up entirely to individual shooting, many of the men redeemed themselves. The shooting began about half-past 9 o'clock, and was kept up without intermission until the distant hills became dim with darkness. The judges selected were Messrs. J. H. Burnham and Wm. Golcher. George W. Gilbert acted as referee during the forenoon, and was succeeded by Mr. Card, of San Francisco, in the afternoon; scorers, S. B. Milligan, of Sacramento, and Charles Burnham, of Folsom; loading-judge, A. Flohr, of Sacramento. The several matches were as follows:

First match—Freeze out. At 21 yards:

F Wentworth	1 1 1 1 1—5	P D Brown	1 1 0 w
Frank Sheplar	1 1 1 1 1—5	J Burnet	1 1 0 w
Charles Rich	1 1 1 1 1—5	Dr Card	1 1 w
J Loechler	1 1 1 1 1—5	Mr Barnes	1 1 0 w
F M Lastreto	1 1 1 1 w	C E Hohenshell	0 w
George Harms	1 1 1 0 w		

The first four named divided the pool between them.

Second match—Nine birds, 21 yards. Score:

Lastreto	1 1 1 1 1 1 1 1 1—9	Smith	1 1 1 1 1 1 1 1 1—9
Maskey	1 1 1 1 1 1 1 1 1—9	Eckloo	1 1 1 1 1 1 *—8
Robinson	1 1 1 1 1 1 1 1 1—9	Routier	1 1 1 1 1 0 1—8
Rich	1 1 1 1 1 1 1 1 1—9	Roche	1 1 1 1 1 * 0—7
Burnett	1 1 1 1 1 1 1 1 1—9	Suttenville	1 0 1 1 0 0 1 1—6
Golcher	1 1 1 1 0 1 1 1 1—8		

Holder, Marshall, Sheplar, Harms, Wentworth, Hohenshell, Childs, Liddle, Bell, Chapman and Schnable withdrew.

Ties on 9 were shot off at three pairs, with this result:

Robinson	11 *1 11—5	Smith	11 11 10—5
Lastreto	11 11 10—5	Tucker	01 10—2
Rich	10 11 01—4	Maskey	10 11 01—4
Burnett	11 01 11—5		

Second tie, same conditions:

Robinson	11 11 11—6	Smith	11 11 11—6
Lastreto	11 11 11—6	Rich	10 11 11—5
Burnett	11 01 11—5		

Third tie, same conditions:

Robinson	11 10 11—5	Smith	01 11 10—4
Lastreto	01 11 11—5	Burnett	10 11 00—3

Fourth tie, same conditions:

Robinson	11 11 11—6	Lastreto	11 11 01—5

Robinson won first money, Lastreto second and Smith third. Lastreto distinguished himself in this match by making five or six remarkable shots, killing his birds at from fifty to seventy yards from the score.

Third match—Six birds, 30 yards rise, both barrels (English rules). Birds marked * indicate those that fell dead beyond the bounds, and birds marked † indicate those killed with the second barrel.

Tucker	1 1 1 1 † 1—6	Chapman	0 † 1 1 †—5
Robinson	1 † 1 1 1 1—6	Woodward	0 1 1 0 †—4
Sheplar	1 1 † 1 1 1—6	Routier	1 * 1 1 0 1—4
Lastreto	1 † 1 † 1—5	Harms	1 0 1 † 1—4
Maskey	1 † 1 † 1—5	Bell	0 1 1 0 0—3
Hohenshell	1 1 1 0 †—5	Liddle	0 1 0 0 1 0—2
Childs	1 0 1 † 1—5		

Ties on six, same distance, at three birds:

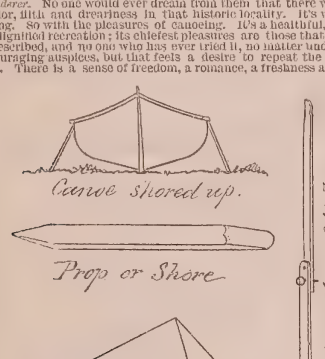
Tucker	1 1 †—3	Sheplar	1 1 0—2
Robinson	1 * 1—2	Lastreto	† 1 0—2

In the shoot-off for second and third moneys, Lastreto and Robinson each killed three birds and divided. In this match Liddle got a bird by trying to shoot off an empty cartridge, and one of Robinson's fell dead a foot beyond the boundary with fifteen No. 9 shot in its body.

Fourth match—Freeze out at 30 yards rise; entrance, $5, divided into two prizes. Score:

Robinson	1 † 1 1 1 1 1 1 † 1 † 1 1 1 1 1 1 1 1 1

way to Pigeon River, the boundary line, a distance of forty miles. Lying straight out from the first gap is Isle Royale, thirty miles distant. You will agree with me that this is truly a magnificent sheet of water for yachting when I tell you that it is navigable with large steamers in its entirety, and there are only two or three shoals in the whole bay. It truly ought to be the home of yachting on Lake Superior. The yachtsman, ambitious to battle against the gales of the lake, can get there inside of twenty miles, and a hundred mile run will take him to the Copper Region of Michigan on the south shore of our "unsalted sea." Again, should one want a cruising trip on smooth waters, the intricacies of our sister bays, Black and Nepigon, which are each as large as ours, can be explored, while one cannot sail for twenty miles without being able to reach a trout stream.



A word on the subject of boats: I have noticed the discussion carried on in your columns with regard to sharpies. Not having ever seen a sharpie, its definition becomes a little vague, but should imagine that the style and build are similar to what are called here fishing skiffs. The proportion for these is about seven to one. The bow and stern are exactly alike. They are nearly flat bottomed, with a rounded bilge; sail splendid in both heavy and light weather, and are beautiful sea boats. Usually rigged with a fore and mainsail, the former set with a gaff but no boom; the mainsail with a gaff or sprit and boom. The foremast is stepped as far as it can go in the bows, and that sail about half as large again as what is erroneously called the mainsail. When a jib is used it is only for running free. They are centreboards and draw with ballast and board up about 12 inches of water aft, and almost nothing forward. Nevertheless they are hard boats to beat in heavy weather. G. T. M.

Prince Arthur's Landing, Canada.

TENT FOR SMALL BOATS.

BY THE AUTHOR OF "A CANOE TRIP."

A CANOE cruise is not all romance. There are many things about one that are far from pleasant. To the novice, rainy days, mosquitoes, cooking, washing utensils, etc., are grim realities and inevitable as measles, teething and whooping cough are to babyhood, and equally as trying. It's no joke to desert a comfortable office or store and paddle all day in the sun or rain, cook one's own food or ten with the most dyspeptic results, and, in lieu of the accustomed bed, try to court Morpheus with a legion of mosquitoes fiendishly gyrating around an upturned nose, pointing skyward from the recesses of a canoe. It's all well to read enthusiastic accounts of cruises. The Rev. L. Titus Banger visits the Holy Land, and his descriptive effusions crowd the columns of his native paper, the *Mudville Weekly Thunderer*. No one would ever dream from them that there was any squalor, filth and dreariness in that historic locality. It's very deceiving. So with the pleasures of canoeing. It's a healthful, manly and dignified recreation; its chiefest pleasures are those that cannot be described, and no one who has ever tried it, no matter under how discouraging auspices, but that feels a desire to repeat the experiment. There is a sense of freedom, a romance, a freshness about it,

that appeals right to the soul of manliness, but it has a practical side which the novice is prone to leave out of the question. Perhaps one of the most important things tending to a comfortable cruise is the matter of shelter. The canoe itself makes an excellent bed, and with paddle laid lengthwise along the canoe, supporting a rubber blanket over the cockpit, makes also dry shelter in case of rain. A tent is, however, always found in the outfit of the canoeist. With it he is not compelled to retire betimes to his canoe at the end of a day's journey, but can sit up and read or write up his log, and have shelter if weather bound. The objections to ordinary tents are that they require poles, and are somewhat heavy and cumbrous as well as troublesome to set. The *desideratum* would seem to be some light, secure shelter, capable of being pitched over the canoe and easily adjusted.

Macgregor on his cruise in the Jordan had his canoe arranged so that a portion of the deck was removable and supported by means of the paddle and a cane with a canvas covering made a very snug little cabin; but a removable deck is open to several objections.

The plan of a tent here presented, devised by the writer, was successfully used in last summer's cruise. It weighs only between 60 and 70 ounces, and packs with its folding sticks inside into a very small bundle. It is easily adjusted, and with but little modification can be adapted to any small boat or yacht. Under its shelter the writer has, on a rainy evening, seated in the canoe with a small alcohol stove between the knees, prepared his "Leibig" soup, coffee and toasted crackers, written up his log, read awhile by lantern light and turned in snugly to "sleep the sleep of the just," oblivious to the elements.

The most important thing connected with a camp is keeping the canoe upright on keel. It was the custom of MacGregor to settle his firmly on the sand, but sand is not always obtainable. The practice of blocking up the canoe with sticks or stones is liable to subject it to strain or injury. The canoeist should always carry two wooden skates as light prow. Is inches long by 3 inches wide, pointed at one end to insert on the ground, and covered with rubber to insert in under the fender of the canoe on each side. When not in use they fit snugly along side the floor boards of the canoe.

The tent consists of four sticks, each jointed in the middle to fold together, somewhat like a pocket-knife, for convenience, and when opened out are fastened through by a little pin attached to the stick by a string for security against loss. Of these sticks the two longer are placed upright in two screw-eyes placed on the outside of the combing, each side of the after-end of the cockpit, the two shorter being placed similarly each side at the forward end of the cockpit. The simple operation of placing the canvas part of the tent over the sticks and tying the cords at each corner into rings set in the canoe, completes the setting of the tent. A door in the side affords ready means of ingress, and held up by two sticks with the aid of a rubber blanket set at the side it may be converted into a kitchen in rainy weather if desired. The tent can also be constructed with the top detachable, and without the sides used as an awning in hot weather.

YACHTING NEWS.

ELEPHANT.—This fast sloop has been sold to W. Patten, Springfield, Mass., and will sail from Saybrook, Conn.

FIRST OF THE SEASON.—The Mosquito fleet, of South Boston, opened the season with a match last Thursday, for which there was eight entries.

STILL ANOTHER CUTTER.—Mr. D. J. Lawlor, of East Boston, is to build a 25 ft. cutter, and McManus & Son, of Commercial Wharf, will supply the sails.

FIRST IRON YACHT.—The *South Boston Inquirer* says that Vindex will not be the first iron yacht in Boston waters, R. B. Forbes having sailed the iron Azalea in Boston twenty-five years ago.

BIG SCHOONER.—The new schooner building by D. D. Kelly, East Boston, is 100 ft. long, 21 ft. beam, 7½ ft. hold. Masts, 7 and 75 ft; topmasts, 38 ft. Working sails will have an area of 9,000 square ft.

BEVERLY YACHT CLUB.—*Editor Forest and Stream:* Pictures for the club for this year are as follows: First championship regatta, swampscott, July 9; second, Nahant, Aug. 6; third, Marblehead, Sept. 10; special regatta, Swampscott, Sept. 24.—B.

LAKE FLEET.—D. H. Fitzhugh, Jr., of Bay City, Mich., is having a fine schooner built, 46 ft. keel, 13 ft. beam, to be off by the next month. The example set by Mr. S. McLean, of the same city, with his new schooner last season, is bearing good fruit.

EAST RIVER YACHT CLUB.—*Editor Forest and Stream:* Our club has changed the dates for its regattas from those first determined. Our opening day will be June 6, and the spring regatta June 20. The Americus has been secured to accompany the boats over the course. S.

SOUTHWARK YACHT CLUB.—The boat houses have been burned and with them the new Millie, belonging to Mr. Correl. The Commodore's boat, belonging to Emma Bingham, was set adrift during the excitement, and floated down the Delaware. Damage reaches perhaps $3,000.

NEW JERSEY YACHT CLUB.—*Editor Forest and Stream:* Our officers for the year are: Commodore, W. H. Dilworth; Vice-Com., A. Jeanneret; Secretary, F. T. Dilworth; Treasurer, C. J. Rogers; Measurer, H. S. Jhea. Regatta Committee, E. W. Ketcham, C. W. Roedenberg and Dr. H. G. Stebbins, Jr.—X.

PACIFIC YACHT CLUB.—The officers for the year are: Commodore, R. S. Floyd; Vice-Commodore, J. McDonough; Measurer, J. C. Kelley. The Secretary reported the club in a most flourishing condition, with 116 on and 49 contributing members. The fleet includes the schooners Ariel, Aggie, Nellie, Fleur de Lis, Azalone, Gen. Geo. H. Evans and Daphne, and sloops Amie, Clara, Laura, Nellie and Ella.

MODERNIZING.—The sound little ship Caprice, Mr. David Williams, is coming out in the yawl rig. She will be the first of the kind in New York waters. Gracie and Vesta are lowering their lead on to outside skin, and the schooner Agnes, Com. Latham Fish, A. Y. C., will be brought up to date by outside lead. And so New York is beginning to move at last. Gracie, we imagine, will sail like a new craft this year, with her low weights and sure-headed mainsail.

CLEVELAND YACHTING ASSOCIATION.—*Editor Forest and Stream:* At the annual meeting, April 2, the following officers were elected for the ensuing year: Commodore, Geo. W. Gardner; Vice-Commodore, James Raleigh; Rear-Commodore, Wm. Gerlach; Secretary, C. C. Kaube; Treasurer, H. Phelps; Measurer, A. Lyman; Executive Committee, James Gibbons, W. Scott-Robison, W. H. Eckman, R. E. Gill and T. H. Smead.—C. K.

BRENTANO'S MONTHLY.—We regret to announce the premature death of this publication as a yachting magazine. Our contemporary, with much pluck, has learned by experience that it is very much easier to criticise FOREST AND STREAM than, like it, to establish yachting literature on the sound basis of commercial success. This journal has been the first and is, so far, the only one which has made its yachting columns pay, the true test, after all, of their intrinsic worth.

THE PACIFIC FLEET.—Mr. Hyde Bowie, of the new Nellie schooner has issued the following challenge: "Hyde Bowie, owner of the schooner yacht Nellie (Turner model), hereby challenges the schooner yacht Cum O'Connor (White's model) for $1,000 over the same course and under the same conditions as sailed in the O'Connor-Chipsa race; the race to take place within 60 days, and notice of acceptance to be given him inside of 30 days from date. His boat and money are ready."

HARLEM REGATTA.—The Secretary of the Harlem Regatta Association informs us that the coming programme for June 4 will include the usual rowing races, a yacht race for fifteen entries; entrance fee, $3; entries to close May 24, at noon. Secretary's address, Jasper T. Goodwin, P. O. Box 595, city. We hope this chance of giving the general public an opportunity of observing a big fleet of canoes will be made the most of.

OSHKOSH YACHT CLUB.—*Editor Forest and Stream:* At the last meeting the following officers were elected for the year: Commodore, Geo. W. Burnell, Vice Commodore, Geo. F. Stroud; Secretary, Geo. M. Basbrouck; Treasurer, Frank Helling; Measurer, S. P. Gary; Fleet Captain, John Dickinson. The policy of a regatta with prizes enough to induce outside competition was much discussed, and met with favor in the club. The outlook for a successful season is very flattering.—C. C. M.

SOUTH BOSTON Y. C.—The election of officers resulted in the following choice: Commodore, Dr. Robert Disbrow; Vice-Commodore, F. G. Cooley; Fleet Captain, Jas. Rogers; Secretary, William Morris; Treasurer, Thomas Christian; Measurer, John Winniatt. Regatta Committee—M. J. Riley, William Morris, Jas. Charnock, Jas. Bertrand, J. E. Chandler, J. C. Merry and O. D. Laforest. Cash receipts last year, $1,025. Membership, 103; yachts flying the club burgee, 54. Balance on hand, $167.46. Prizes to the amount of $100 are offered for a union regatta on Decoration Day.

AMERICA CHALLENGE CUP.—The following letter has been directed to a member of the New York Y. C. by the secretary of the Bay of Quinte Y. C.:

"BELLEVILLE, April 1, 1881.

"*Dear Sir*—Captain Cuthbert has handed me your letter asking information as to the Bay of Quinte Yacht Club, which you will find inclosed. * * * The club, I may add, has a membership of seventy-five. The officers are those of 1880, as our annual race, which will take place until the first Wednesday in May. Captain Cuthbert desires his compliments to you, and says you may fully calculate on seeing him in New York this summer. His new sloop is nearly in frame, and will be pushed forward to completion as rapidly as possible. The challenge will be forwarded at an early date.

"RICHARD S. BELL,
"Secretary B. Q. Y. C."

KNICKERBOCKER YACHT CLUB.—*Editor Forest and Stream:* The annual election of officers was held April 5, and the following officers elected for the ensuing year: Commodore, Geo. A. Hibby; Vice-Commodore, Wm. A Stewart; Secretary, Alfred Varian; Treasurer, Wm. Potter, Jr.; Measurer, Chas. Coughlin; Steward, R. H. Miller. Board of Directors—W. Potter, Jr., D. F. Coughlan, A. E. Miller, A. Wright and C. E. Baker. The club is in very prosperous condition. There are seventy-five names on the roll. The fleet consists of six cabin and twenty open sloops. The first regatta will be sailed on May 30, and several new yachts will be added to the fleet before that time.—Y.

SOUTHERN YACHT CLUB.—*Editor Forest and Stream:* We have elected the following officers for the year: Commodore, A. A. Maginnis; Vice-Commodore, Edwin Harris; Rear Commodore, Harry T. Howard; Secretary, Arthur H. Harris; Treasurer, James B. McConnell. At the same time new sailing rules were adopted, a copy of which I will send you shortly, and if was determined to have an inter-state regatta here this summer, when such purses would be offered as would make it interesting to all comers and remunerative to the winners. The classes will comprise 25 ft. boats, like the Sleeper, Dare Devil and others; also 25 ft. boats of the Puck and Luck's class, and 22 ft. boats like the Addie Taylor. We will give large purses, and we are anxious to have your cracks come down and pay us a visit.—H.

THE DE BAY PROPELLER.—We have laid the experimental trials with this new invention before our readers, and now add the report of the master of the steamer Cora Maria, of 800 tons, which made a round voyage as a further test. In his report the master says: "The trial trips at Cardiff in July and August last were quite sufficient evidences of the great superiority of the De Bay propeller over the ordinary screw. The superiority has been more fully exemplified and established by the results of our voyage to the Danube, in the North Sea, from Cardiff to London, and also in the Thames. The De Bay propeller has performed all claimed for it, viz., greatly increased speed, entire absence of vibration, perfect handiness of the vessel in crowded anchorages and in river navigation, but it must be admitted that the old crank gearing was defective in its construction, and proved a serious drawback to the success of the voyage. The Cora Maria was with the ordinary screw an 8-knot boat when loaded, and when in ballast about 8½ knots was the extent of her speed. With the De Bay propeller she is a 9 to 9½ knot boat when loaded, and 10 to 10½ knots when in ballast." He feels confident that much better results will be obtained on a finer lined vessel, as also a much less disparity in the speeds, loaded and light. The entire absence of vibration is, he says, "a grand feature in connection with the De Bay propeller, and every pilot that has been employed during the voyage, of whatever nationality, has been astonished at the rapidity the vessel answers her helm." He has no hesitation in stating "that he has full and implicit confidence in the stability of the steel blades of the De Bay propeller. In his opinion the steel blades of the De Bay propeller would stand more strain and more rough usage than the ordinary cast iron screws." As regards fouling the propeller with ropes from the ship, he has repeatedly tried to get a rope in it at sea without success.

For Neuralgia, Pains and Aches in the Back, Kidneys or Limbs—Hop Bitters.

Answers to Correspondents.

☞ No Notice taken of Anonymous Communications.

BROOKLYN.—We have at present no report of where the wild pigeons are.

C. N. M., Woodbridge, N. J.—Is the popular idea that the first litter of puppies is not good correct? Ans. No.

H. E. B., Vermont.—By Adams Express it will cost you from $1 to $5 to have the dog shipped. He must be boxed.

J. M. C., Peterborough, N. H.—The articles on dog breaking appeared in five numbers of the paper. Price fifty cents.

R. I. M., Syracuse.—You neglect to give weight of gun. A charge of 4 drs. powder, 1¼ oz. No. 4 shot we should recommend.

C. L., Memphis, Tenn.—The firm has no regular agent in this country. You can obtain the gun of any of the New York dealers.

D. D. H., Franklin, Ind.—The gun is safe and reliable, and is just the thing when one wishes to be prepared for all kinds of game.

E. L. F., Pagets springs, Cal.—The manufacturers of the arm have failed. It is not a success. We do not know where you can buy it.

P. B. McE., North Platte, Neb.—You can procure wild rice of Chas. Gilchrist, Port Hope, Ont., or of R. M. Valentine, Janesville, Wis. Plant in spring or fall.

F. S. D., Philadelphia.—Can you give me the present address and occupation of W. Holberton? Ans. With Conroy, Bissett & Malleson, 65 Fulton st., New York.

SPARTAN, West Sparta, N. Y.—The Draper shell is not now manufactured, we believe. You can probably procure it of the New York dealers in sportsmen's goods.

CURRER, New Castle, Pa.—We should be pleased to receive your "notes." Anything which adds to the variety of the FOREST AND STREAM's bill of fare is always in order.

E. L. H., Geneva, N. Y.—You are not a "subscriber" direct unless your name is down on our books. You have all the benefits and privileges of a regular subscriber, however.

F. G. W., Three Rivers.—The ordinary H and T traps will answer your purpose. They can be bought of dealers in sportsmen's goods. We should not particularly recommend the style you refer to.

L. K. C., Wittman, Md.—We want four red foxes, two of each sex, for breeding purposes. We have entirely broken up the stock at this point. Where can we get some? Ans. Write to Reiche & Bro., Chatham street, New York.

TAPPAN, Newark, N. J.—For pedigree of Lister's Bang see answer to R. S. M., this column, which gives the pedigree of Bang's sire, Hamilton Thompson's Duke, the dam of Bang, was an imported bitch. Mr. Lister is unable to give pedigree.

J. P. H., Community, Madison Co., N. Y.—Can you tell me where I can get complete copy of the game laws of Maine? Ans. Write to the Game and Fish Commissioner, E. Stillwell, Portland, Maine, who will furnish what you require, or tell you where to get it.

G. G., Apollo.—What are the names of the owners of kennels in England from whom I could get a dog? Ans. There are hundreds of responsible parties whom you can correspond with. State what breed of dog you want and we will send you a list. See advertisements in another column.

W. G. W., Sparta, Wis.—Can you inform me what has become of the N. A. R. C. Stud Book, Vol. II., which was to be ready last year? I sent my money and entries in last April. Have written Mr. De Ronge but had no reply? Ans. Address Mr. Joseph H. Dew, Columbia, Tenn. He is the acting secretary at this time. Mr. De Ronge has ceased to fill the office.

W. W. S., Boston.—Can you obtain for me or tell me where to obtain the pamphlet "The Lakeside Library series No. 221-222 Game Birds of the U. S. by Thos. Alexander, published by Donnelly, Gassette & Lloyd, Chicago, a few years ago (companion to No. 99 same series)? Ans. Any news company can furnish it if it is to be had. Try the New England News Co.

F. W. G., Danbury, Conn.—1. How can I enter my dog in the stud book? 2. When do the entries close? 3. I thought the book was to be published a year ago? Ans. 1. By addressing Mr. Joseph H. Dew, Secretary National American Kennel Club, Columbia, Tenn. We have written Mr. Dew for the information, but as yet have had no reply. The book was promised last year.

C., Frederick, Md.—1. Will black bass take a fly? 2. What species of fly is best, and when can they be handled? 3. The best month for fly fishing for bass? Ans. 1. Yes; in some waters, in others it is reported that they will not. They seem capricious. 2. Large, bright, gaudy flies are used of many patterns. Write to any of our advertisers. 3. August and September are good in most waters.

A. B., So. Boston, Va.—How am I to stop a steady leak with a tendency to increase in volume under the base of my fish pond? Where can I get a supply of black bass fry to stock with? Ans. Dig down and plank across the leak, drive down planks endwise, or tamp in clay. As to fish, all at this distance is so much depends upon the nature of the soil. You can get black bass from most Virginia rivers, especially if you ask for "chub," for that is the local name.]

G. P. M., Oswego, N. Y.—A party of sportsmen got into an argument the other day about shooting duck from a sail yacht. I claim that as no one has the perfect right to shoot from sail or steam boats, or boat on Lake Ontario anywhere on the York State side, but according to the State Game Law had not that right on any of the inland ponds, lakes or rivers. I of course want to be understood that this applies to the present season only. Ans. Shooting for ducks is prohibited except in the waters of Long Island Sound, Lake Ontario and the Hudson River below Nyack.

D. S., Upper Preakness.—1. Where are there any trout streams near Paterson? 2. What would a good book on fly casting cost? 3. Will not trout hite worms as well as artificial flies? Ans. 1. You do not give your State and we have no idea where Upper Preakness is. If you mean Paterson, N. J., there are no good trout streams near there. You should not leave this for us to guess. 2. The American Angler's book, by Thaddeus Norris, is the best on all fishing; price $3.50. You can furnish it. 3. Yes; sometimes better, but there is no comparison in the sport of fly and worm fishing. One is like wing shooting while the other is like resting a musket over a fence and killing a bunch of birds on the ground.

R. S. M., New York City.—Mr. Walter Humphrey resides at present at No. 28 Ward street, Newark, N. J. The pedigree of Hamilton Thompson's Duke is as follows: Duke, by J. F. Marster's Bang, out of Hamilton Thompson's Belle. Bang by Paul Mead's Dash, out of Palmer's Belle. Dash by a red Irish setter dog owned in Canada, out of A. Johnson's "Kent Bitch." Palmer's Belle by Paul Mead's Dash, out of Palmer's imported Belle, sent Mr. Palmer by Mr. Talbot of Dublin. Thompson's Belle by Robinson's Jack out of Thompson's Jane; Jack by Putnam's Dan, out of Palmer's Belle; Dan by Paul Mead's Dash, out of Putnam's Nell. Jane by Scott Rodman's Dash, out of Thompson's Fanny;] Dash by Paul Mead's Dash, out of Palmer's Belle.

P., Westfield, Mass.—1. How is the cocker for general work in New England? 2. Will they retrieve well from the water? 3. Would they be good in Florida? 4. Would a dog one year old not broken at all, be very difficult to break on account of age? 5. Do they point their game, or always raise it without orders? 6. Which would be the best weight, 25 or 30 pounds? Ans. 1. The cocker is used for treeing grouse and shooting woodcock over. He is not a quail or snipe dog; although in dense cover and in boggy bottom he can be used for flushing quail. 2. Yes. 3. Yes. 4. Old dogs are more difficult to break than young ones that have been brought up always to mind, but a year old dog can be readily trained; of course, a great deal depending on his disposition and intelligence. 5. Cockers flush their game. 6. 25 pounds.

S. F., Hollidaysburg, Pa.—Being about to locate several carp ponds I would ask you for your opinion on the matter. Do you think carp will do well up here in Allegheny Mountains? How deep, large, and how many ponds should there be? Through our fish commissioner, Hon. B. L. Hewit, of this place, I will get about five or six carp one year old. Will they spawn this year? Where could I buy a second-hand aquarium? Or, if not second-hand, a new one? Ans. Carp will do well in warm water, the warmer the better. Ponds should be from two to six feet deep, or even deeper if they freeze hard. They may be of such size and shape as the land permits, from ¼ of an acre to four or more acres. It is doubtful if your fish will spawn this year. Begin with one pond and add as required. Write Greenwood's Aquaria Depot, 39 College Place, New York.

S. D., Pa.—I live on a trout stream in which I allow the public to fish. A neighbor who raises trout for sale in a pond has proposed putting 10,000 young trout in my stream this spring, if I will allow him after they have been in two or three months to take half that number out. Would such an arrangement be to the benefit of the public? I do not care for fishing, but try to preserve the fish for those who do. Ans. It would not benefit the public much, if any. There is a large percentage of loss the first two or three months from fish, insects, etc., which in some streams may be over 50 per cent. Besides this the man will want to drag your stream with a fine net, which will disturb much trout food if not kill it. We think that 1,000 at three-months' old would be plenty for him. The first three months is the critical time with trout.

D. P. B., New York.—What causes the tails of my gold fish to fall off? I have a large aquarium with the water constantly running in at the bottom and out at the top. For the past four weeks I have lost several. First I notice part of the middle of the tail breaks out, then all except the top and lower bone, then it all falls off and I find them dead with one exception, and this one lost all of his tail, and now it is covered with something that looks like dry mold. It seems to be lively yet. Ans. We should look for the presence of some nocturnal water beetle or other insect, if there are no other fish in the tank. Gold fish are not apt to nibble each other. Take out all your fish, clean the tank, put in some sand and gravel, first protecting the supply pipe from it, then plant some water plants and put back your fish. Try feeding them with cracker or prepared food.

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Adv.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

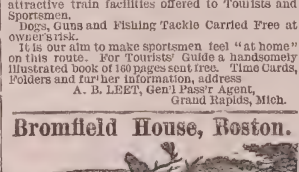
The TROUT season begins May 1 and ends Sept. 1. The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.



During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

Wild Fowl Shooting.

THE

NEW YORK

Commercial Advertiser.

THE LARGEST EVENING CIRCULATION OF THE THREE-CENT DAILIES.

Office, 126 FULTON ST.,

NEW YORK.

THE FISHERMAN'S

Automatic Reel.

New in its construction and effective in its working. In size, weight and general appearance does not differ from ordinary reels. With its aid the sportsman can capture fish so slightly hooked as to be entirely beyond the control of any other reel. For descriptive circular, address LOOMIS & PLUMB, manufacturers, No. 1 Onondaga County Savings Bank Building, Syracuse, N. Y.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 70 Wall Street, N. Y.

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and 6¼ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in *kegs* of 6¼, 12½, and 6½ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, April 21.

LOCAL NAMES OF FISHES.

A CORRESPONDENT writing from Augusta, Ga., says: "Your correspondent, 'Buckshot,' as well as yourself I think are mistaken in the name of the 'red-breasted perch.' It should be called 'bream.' It is very plenty in all Southern waters, and a game fish to catch, and delicious to eat when fresh caught"

This well illustrates the confusion existing among common names. We knew of the name 'bream' being applied to the fish in certain sections, but did not give it because we do not wish to extend that error. There are no bream in America. That is, if the fish which is so-called in England for centuries past has a right to the name by priority. The fact is, as has often been stated, that English names have been misapplied to American birds, fishes and mammals which have not the slighest resemblance to the originals bearing the names The English bream (*Abramis brama*) is fish with soft fins, a cyprinoid, nearer to the "fall-fish," "corporal," chub (of the North) and "shiner," whose only resemblance to the Georgia fish is in its outline; and that is not a very close one. The misnomer is as great as the application of the name of "salmon" to a pike-perch in the Susquehanna, Ohio and Upper Mississippi rivers, or that of "trout" and "chub" to the black bass in Virginia and Southern waters. The names bream, salmon, trout and chub are preoccupied in the language, and really belong to certain fish as much as "cat," "dog" and "horse" do to certain animals, and to those who know to what they belong it sounds just as outlandish to transpose them.

We thank our correspondent for calling our attention to this matter, as it serves as an excuse to lecture upon. There is much confusion arising from the application of names purely American applied to purely American species in different parts; and we do not feel warranted in the latter case in assuming that a certain one is correct because it happens to be the one which has been familiar to us from childhood. For instance, between the names "striped bass" and "rock-fish," applied to the same fish North and South; "bluefish" and "tailor," etc. These are commercial fishes, and as the great market is New York the names in use in the markets there will probably prevail, because the buyers use them.

Now to the fish in question: "Buckshot" wrote of "red-breasted perch," and described its colors and sharp dorsal fin-rays; and as we always like to make it clear what fish our correspondents mean, if we are sure that we can do so, a foot note was added in which we said: "From our correspondent's description this red-breasted perch is evidently one of the many fishes which are variously known as 'sunfishes,' 'pond fishes,' etc. It is probable that it may be Jordan's 'bloody sunfish,' *Xenotis sanguinolentus*." We have fished in waters North, South, East and West, and have picked up an extensive vocabulary of local names applied, or misapplied, to many fishes. In the North the name "bass" is applied to many fishes which become "perch" in the South. Bass is a corruption of the Dutch *Barsch* for perch, and therefore the two names stand on about an equal footing. The Northern angler knows only two "perch," the white and the yellow. The former is a tidewater fish; and the latter is common to all fresh waters except cold trout streams, and is the "raccoon perch," "barred perch," etc., of the South, where the yellow ground color of the fish did not attract so much attention as the dusky bars on its side. The Southern angler has many "perch," which often includes all the "bass" of the North, the "black bass" becoming "black perch" in parts where it is not a "trout," chub or welshman. But what shall be the name of our so-called red-breasted perch? "Bream," no matter how dear to the heart of the Georgian from old associations, is preoccupied by a fish as widely different as a hedgehog differs from a rabbit, and therefore is not available. "Red-breasted perch" is descriptive, and there seems no objection to it. If this particular species, which belongs to an extensive family, which in some form inhabits all the ponds and warm streams east of the Rocky Mountains, were caught by a Massachusetts angler, he would christen it a "red-kiver," a man from New Hampshire would say "Here is a red-pond-fish," while one anywhere from New York to Iowa, and along that line north and south, would immediately call it a "red-bellied sunfish," which Prof. Jordan has crystalized into "bloody sunfish."

Now to a few scientific distinctions: The family *Centrarchidæ* (*kentron* a spine, *archos* the *anal* opening, from many spines in the anal fin, or fin just behind the opening), includes not only many species but also many genera. They are all short bodied, flat sided fishes, quite rounded in profile. They have but one dorsal (back) fin, which has both hard and soft rays, a large anal fin with three to nine spines according to species. There is usually a black spot at the end of the opercle (gill cover), which sometimes lengthens into a flap which projects some distance over the side of the fish. The family includes the black bass, the warmouths, rock bass, goggle eyes, red eyes, etc., as well as forty or fifty more species which are quite local and have different local names, but from the usual bright colors, in which red and green are usually prominent, they are widely known as "sunfishes." The name sunfish is also applied to a great marine fish not related to this family, whose body is flat sided, round as a cart wheel, and has the appearance of having no tail. And so the common names go. It is often impossible to tell to what fish a man refers, unless one is exceedingly well posted in the changes which are made in the names in every State or county in the Union. It is sad, but true, and it will take long to better it, so strong is local prejudice, even with the help of widely circulated papers like the FOREST AND STREAM and the reports of the Fish Commissioners, some of whom have tried hard to overcome the use of names which are palpable misnomers, but which people generally stick to after they know them to be so, because it is really difficult for most people to change a familiar for an unfamiliar name.

N. A. K. C. MEETING.—Mr. P. H. Bryson, president, has called a meeting of the National American Kennel Club at the American Institute Fair Building, on Wednesday, the 27th inst., at eleven A. M., to take action on such business as may be presented. The room for the meeting is furnished through the courtesy of the Westminster Kennel Club.

RIFLE PRACTICE VS. ENCAMPMENTS.

FROM being the leading State of the Union in the matter of militia rifle-practice, New York promises to become of the worst conditioned. The notion seems to possess the Adjutant-General that he has only to pass strict martinet laws, and the volunteers of the National Guard will at once come up to the requirements. The fact that the members of the State militia never intend to do more than give their leisure time to soldiering does not seem to enter into the calculation of the officer general, who has shown thus far only a facility in throwing matters into discord. In rifle-shooting the evils of the present ill-advised system are specially patent. In place of having the citizen soldiers visit the range at their convenience and for the sole purpose of perfecting themselves in butt-firing, there are to be official encampments, where the men are supposed to learn something of camp duty at an expense of several days taken from business, and in connection with these brief episodes of tent-life there are to be intervals of practice with the rifle. The fault of the system which we have had for several years past was its wastefulness. There was a waste of labor, of material and of time. A regiment as a whole was ordered to Creedmoor or any other of the State ranges and set at work blazing away at the shortest distance. There was none of the gradual promotion from the instruction of the company drill-room, where the manipulations of the rifle and position were to be taught, to the opportunity of the range, where the varying influences of distance, light, wind and moisture were to be mastered. The results under the old system were not as great as they should have been, yet something was accomplished, and to-day we have in the ranks of the ten thousand national guardsmen in and about New York City scores and hundreds of marksmen whose performances would compare favorably with the sharp-shooters of any army of Europe. To cease practice now would mean the loss of those experts as they gradually go into the ranks of the veterans, and it would mean also the loss of the instructions by example which these marksmen are able to give to the new recruits in the guard. All that has been accomplished in ten years of careful cultivation of rifle practice by the National Rifle Association in connection will be lost by a few years of this repressive policy, and Gen. Townsend must be prepared to take the strong talk which will follow the placing of the national guard on its old basis of mere tactical knowledge; and while an enlightened policy would be looking to a change in the arming of the men to bring them up to the latest developments in rifle construction, the object of the present regime seem to be the rehabilitation of the old pompous packages of gold lace and uselessness. If our soldiers are not to shoot then we might as well buy up a lot of old army muskets at old-iron rates, for, with a little scouring, they will glitter very nicely on parade. But if we are to have a force of civilian soldiers, ready for any emergency, then we want not only the best arms that our inventive genius can devise and our armories turn out, but with efficient instruction in the use of them, so arranged as to bring out the best results with the least inconvenience to the volunteers.

THE PROTECTION OF BLUEFISH.

UNDER the provisions of the proposed law now before the Legislature of New York it will be unlawful to offer for sale bluefish weighing less than three-quarters of a pound. This clause has been the subject of some verbal criticism among the professional fishermen of Long Island, who claim that as there is no such law in other States all the small bluefish caught will go to other markets, and that these fish are caught by them in great numbers and are a great source of revenue. The anglers claim that often there is nothing else to be caught except bluefish under the weight named.

The facts, as they appear to us, are that there is little use in protecting this fish in any manner. It is a bold, fearless and aggressive fish, which breeds freely in our waters and is abundantly able to take care of itself. It is a scourge and a terror to all other fishes which may be smaller than itself, and while the bluefish seem in no danger of decreasing it is a belief of ours, seconded by many fishermen and anglers, that their decrease would be fully supplied by an increase in weak-

fish, Spanish mackerel and many other fishes equally valuable. The fact, as developed by the inquiries instituted by the United States Fish Commission, is that the bluefish is increasing in numbers notwithstanding the enormous yearly captures, and that it is in no danger of extermination, nor even of diminution. It may seem odd to some of our readers that FOREST AND STREAM should look with disfavor upon a clause which proposes to protect a valuable fish, for our voice is usually for protection to all such, but the bluefish is a peculiar fish. It came as a stranger to our shores about fifty years ago, and after a year or two of trial took its place as one of our finest table-fishes; and not only did it establish itself here, but it has steadily increased in numbers at the expense of other fishes, which are decreasing, until it is an open question if it would be a loss to our food resources if the bluefish should depart forever, for then other fishes, relieved from the presence of this ichthyic tiger, could propagate in peace All who know the bluefish well know that it slays after its appetite is sated, and often rushes into a school of menhaden and bites large pieces from their bodies, which its gorged condition forbids it to swallow.

If the law passes, it means an end of "snapper fishing," that sport of the juvenile which takes the family to the seaside; and if the fish is to be protected at all, it seems to us that a quarter of a pound is a better limit than three quarters. A bluefish of the latter weight is quite a respectable fish, and while not in much demand at hotels is largely sold to the family trade in New York bringing sometimes twice as much per pound as its larger brethren; but if there is a fish in our waters which can better do without protection, or about whose actual benefit to our food supply there may well be differences of opinion, it is the fish with shark-like habits of destruction known in the North as "bluefish," and in the South as "tailor," but whose full name is *Pomatomus saltatrix*.

EVENING IN CAMP.

THE day was one of abundant satisfaction. It could not have been improved upon had it been made to order. We had spent it with Nature, listened to her voice in the babbling brook and in the echoes that came rolling down the mountain sides, and had seen her face in a multitude of varying expressions, rough and sturdy in the gnarled and knotted trees and in the jagged rocks, bright and smiling in the quiet lake, joyous and laughing in the hurrying stream, modest and timid in the creeping vines and wild flowers, and radiant in the hues of sunset. In purple and gold and crimson the sun went down, and following came the gray of evening, and that in its turn melted into blackness

Our shanty was a jewel among shanties. No temporary affair was it, hurriedly constructed to afford some belated sportsman a resting-place for a night, but one put together carefully and with full attention to details. A spring of water near at hand and a wood pile all around furnished a supply more than equal to the demand for those necessities. There was a background of precipitously rising mountains, and a stone's throw in front was the lake whitening beneath the rising moon. Rods are placed safely aside, wading shoes kicked off, dry clothes put on, and wistful glances cast toward the preparations for supper.

The coffee pot was singing a solo for tea, the frying pan was hissing the song and putting golden brown touches on the trout, while the big kettle seemed to be bubbling over with light-hearted merriment and potatoes, and occasionally betraying a desire to throw water on the performance; and the odors that commenced to titillate our nostrils announced that four hungry men would soon have little cause for complaint. It makes one fierce as a wolf this missing of a midday meal, but it's well worth the missing if you are casting your lines where the trout sport with matchless grace and activity.

Appetites seemingly inappeasable were satisfied with the quality and quantity that had been prepared and the pleasant, jolly evening around the camp fire commences. It may not last late, for the angler, while suffering no real sensation of weariness from his day's tramping and fishing, may perhaps have a feeling of being healthily tired, yet will not forego for an hour the story and song and the after-supper smoke. He counts it as a very important factor in his sport when, glowing and pleasant in the ruddy glare of the camp fire, every face beaming with cheerfulness, comes the evening's reunion—a glorious lassitude.

Carlyle's precept, "Speech is silvern; silence is golden," will not content him in holding his tongue. Speech by the camp fire is golden. There one wants a fellow to talk even though he says nothing. The brilliant flashes of wit may be very obscure, the choice morsels of wisdom seldom half done, and where well done spoiled in the cooking; but let them have free play. They help to frighten away the blue devils if there are any lurking about the camp. They can't bear the sound.

And then the smoking! No cigars, but the choice old pipes, next to the rod and reel the most indispensable articles of the angler's outfit. The shanty is fast filling, and we are soon enveloped in clouds from the fragrant weed which are peculiarly odorous and refreshing. The nicotine of civilization mingles best with Nature's oxygen here in the woods, where the air is laden with balsamic odors. It makes one's tobacco the more enjoyable, and improves the balsam of the forest.

And then the singing! The far-away hills reverberate our songs and return our choruses in trebled sounds. Now and then the crickets crowd in a word edgewise, but seldom are even they heard, incessant talkers though they be. The sweetness of the music would be heightened by distance, and the greater the distance the sweeter the heightening. Revival hymns, campaign choruses, songs of love and war are irredeemably mixed and commingled with the monotonous refrain of the crackling fire, the sighing breeze and the chirping insects. It would make the average midnight serenader close his music-box and "silently steal away."

The stories are told; the songs, thank Heaven, are finished; the pipes are empty; the night fire replenished. Read the Riot Act and disperse the crowd. Metaphorically speaking, we go to roost, and balmy sleep needs no more earnest wooer than the man who has angled from rosy morn till dewy eve.

MILLARD.

ANIMAL LIFE AS AFFECTED BY THE NATURAL CONDITIONS OF EXISTENCE, by Carl Semper, Professor of the University of Wurzburg, D. Appleton & Co., New York. This is a volume of the International Scientific Series, and, like its fellows, is very fully illustrated. Prof. Semper writes in an attractive style, clear in expression and profuse in illustration, and his book may be read with pleasure by any one at all familiar with zoology. He thinks with Jaeger that, "enough has been done in the way of philsophizing by Darwinists, and that the task that now lies before us is to apply the test of exact investigation to the hypothesis we have laid down," but at the same time acknowledges its difficulty. It appears to him that of all properties of the animal organism variability is that which may be first and most easily traced by exact investigation to its efficient causes. This is no doubt the subject around which the strife of opinions is at present raging, and therefore one of general interest. The author has collected a wealth of material which he compresses into a digestable form and presents it in a manner to show its fullest significance. His freedom from dogmatism may be seen in his frank admission that "In all zoological investigations, as in almost everything else, a certain influence may be detected which may be termed the person element."

The book is filled with instances of the influence of changed conditions upon animal life, taken from his own and the investigations of others, and the variability of life in different situations seems to the author to be a vulnerable point in what is known as the Darwinian theory. He treats the subject very fairly and makes no claim to have pierced this point, which he only suggests exists, nor that he has by any means exhausted his subject—but he seems desirous of indicating paths for others to follow. He tells us that Darwin showed the possibility of discovering the path which nature struck out in order to produce her endless variety of animal forms, and of detecting the means she has employed in her task; and that under the influence of Darwin's views zoologists have begun to inquire into the true and natural affinities of animal types by the studies of comparative anatomy and embryology. They at the same time began to devise genealogical trees for the different groups, which is where the personal element comes in and renders the pedigrees doubtful.

Prof. Semper inclines to believe that the conditions which affect animal life are not of as great importance as have been attached to them, and claims that Darwin has partly modified his views on this subject. At times our author draws distinctions which require not only constant attention to enable the reader to follow him, but also a train of thought which may be called profound, such is his separation of the physiology of the organization of an animal from the physiology of its organs. Each chapter contains the conclusion which the author arrives at: "That no power which is able to act only as a selective, and not as a transforming influence, can ever be exclusively put forward as the proper efficient cause, *causa efficiens*, of any phenomenon." Among the influences which he considers as influencing animal life are food, light, temperature, stagnant water, a still atmosphere, water in motion, currents as a means of extending or hindering the distribution of species, influence of other conditions of existence, influence of living surroundings, and the selective influence of living organisms on animals, each of which is treated of in an entire chapter.

THE BERLIN MEDALS.—The medals and diplomas from the International Fishery Exhibition at Berlin have arrived at Washington, and have been delivered by the Secretary of State to Prof. Baird for distribution. Those intended for the vicinity of New York will be sent to Mr. Fred. Mather, of the FOREST AND STREAM, where their owners can obtain them. The diplomas are beautiful, as we have seen, and the cuts of the medals which we have published show that they also must be elegant.

A NEW EDITION of Westwood's "Bibliotheca Piscatoria" is ready for the press. We have received proof-sheets which show that it will be a most valuable record of all books on fishing and fish culture in English and other languages from the earliest times to the present, with occasional notes on their value, etc. An instance of the thoroughness of the work is shown in the fact that twenty editions of Dame Juliana Berner's (or Barnes) "Boke of St. Albans" are given, dating from 1486 to 1880, and the notes occupy as much space as in two columns of FOREST AND STREAM. The new edition will contain much fresh matter.

The Sportsman Tourist.

SPRING ONCE MORE.

HARK! The blue-bird sends its carol
To the winter-wearied ear,
And the low-toned red-breast robin,
Tells us sweetly it is here;
Sings the ice-free, happy brooklet,
O'er its bed of pebble stones,
While Old Winter, his faint death song
Thro' the pines and beeches moans.

Hang the bells and robes of wolf-skin
In the darkened loft away;
Swing the skates and steel-shod coaster
Up above the land-up sleigh;
Get your creel and musty fly-book
Down and look them kindly o'er,
And those rods all grim and dusty
From behind the sanctum door.

For in the *Forest*, on the *Stream*,
Pleasure waits the knightly hand;
Those who worship God in Nature
Know His great creative hand.
Hear His music in the waters,
Find His shadow in the clouds,
And a pleasure, quiet, holy,
Never known to Fashion's crowd.

Brother sportsmen, Spring comes blushing
Like a maiden full of charms,
Soft and trembling, clad with flowers,
Full of sweet and soft alarms;
Let us up and manfully greet her
With our guns and rods in hand,
Thankful for the health that fits us
For the forest and the stream.

Eagle's Nest, March 22, 1881. NED BUNTLINE.

THE WHITE BUFFALO COW.

"AP-WE-CUN-NY," said Pe-nuk-wi-um to me one evening when we were camped near Black Butte, "the young men say that there is a white cow in the band of buffalo below here." A white cow! The words sent an electric thrill all through me, and I unconsciously passed my hand along the barrel of the carbine which lay close by my side. A white cow! One of those rare albinos, so rare that among thousands upon thousands of buffalo I had never seen one of them. For a long time I had hoped to come across one of these animals, but as time passed and the buffalo kept decreasing in number, I finally concluded it would never be my lot to chase one of them. Here was a chance. A white cow was close by, and I determined to kill it or kill my horse in the pursuit.

"Pe-nuk-wi-um," I said, "let us 'make medicine,' and you tell the sun I want to kill that white cow."

"Ah, that will be good," he replied, and accordingly unwrapped the sacred "medicine-pipe," filled and lighted it, and blowing a few whiffs toward the sky and the ground, repeated the following prayer:

"Oh, Sun. Oh, World-maker. Take pity. Not far off a white cow stops; it is with many buffalo. Take pity. We are not strong. You are strong. Long ago you went behind the mountains. Be quick and get up early to-morrow morning. One white man stops here. His name is Ap-we-cun-ny. Take pity. Give him *Nat-o-yi* (that of the sun). Give his horse *Nat o yi*, so he can kill the white cow. We will not eat it. We will tan the robe and hang it in a tree. The robe we will give to you. I have said."

As he concluded and passed me the long pipe I asked him why he would not eat the meat of the white cow. "Because," he replied, "because the sun owns the white cow. He sends it from way off in the sky. It is his and we must not eat it. We must give him the robe. We must tan it soft and white and hang it up where he can see it. Then he is glad."

Taking down a yellow and red painted "medicine sack," which hung over his head, Pe-nuk-wi-um emptied its contents into his lap—queer stones, little fossilized snails, etc. Singling out one perfectly round pebble he gave it to me, saying, "Keep it. I give it to you. It is the sun's, and we call it a buffalo rock. When you wear it your horse will not fall; you will shoot straight; you will kill the white cow."

Of course during all this I kept a perfectly grave face. For it is only by seeming to believe that a person can get an Indian to talk on these subjects. I had been so successful with Pe-nuk-wi-um that he thought I believed in his religion and legends as much as any one of his tribe.

"Well, Pe-nuk wi-um," I said, after a long silence, "tell me one short story and then we will go to bed."

"All right," he replied; "I will tell you a short one about the Old Man (Old Man: a mythical person who forms the chief subject of Blackfoot legends). Once the Old Man was taking a walk. It was night, but the moon and stars were all looking down, so it was not very dark. When crossing a little prairie he heard music, which seemed to come from a hole in the ground. 'Ha! Who can be in there, I wonder,' said the Old Man to himself, and looking in he saw a multitude of mice having a war-dance, some of them beating drums and others dancing about the fire singing and brandishing spears of grass over their heads. 'I would like to dance with you,' said the Old Man. 'Come in, come in,' replied the Mice. 'Poke your head one way and another and the hole will be large enough.' When the Old Man got inside the Chief Mouse said, 'Let's have plenty of fun—let's dance all night.' 'All right,' said the Old Man; 'we will dance all night, and the first one who gets sleepy is to have his hair cut off.' 'Good, good!' all exclaimed, and then the dance commenced, each one trying to dance the best. When it was almost morning the Old Man said, 'Now, all of you sit down and drum, and I will show you a new kind of dance.' The Old Man soon became interested in his dance and forgot all about the music till he was tired; then, looking up, he saw all the Mice sitting in their places fast asleep, their heads nodding like spears of grass in the wind. 'Ha! ha! You are all asleep, are you?' he said, and taking out his knife he went around and cut off all of their whiskers, singing:

'Ki-nus-ke-ni-yah.
I-tuk-pe-nuk-si.
Oak-se-eat-ee-yah.
Muck-stonk-ee-est-ee-yah.'

"Pipe is out, Ap-we-cun-ny," said Pe-nuk-wi-um, as he knocked the ashes out of the great red-stone bowl we had been smoking; and we turned in.

Next morning we were up quite early. Too excited to eat a regular breakfast, I swalled a few mouthfuls of boiled buffalo ribs while cleaning out my Winchester carbine and filling my cartridge belt. Then I examined the cincha and sewing of my "running saddle," made of buckskin filled

with antelope hair and devoid of stirrups—a buffalo runner wanting no such death-traps to entangle him in case of a fall. Soon the horses were driven in, and singling out my favorite I bid the woman saddle it. "Saddle a horse for me," said Pe-nuk-wi-um to his women. "Yes, saddle a buffalo horse for Pe nuk-wi-um, he is going to kill the white cow," I remarked. At this there was a general laugh, for Pe-nuk-wi-um is so heavy that the best horse in camp could not carry him and run a hundred yards. "No, no," he replied. "I am only going to the top of the hill where I can see Ap-we-cun-ny shoot the white cow." By the time we were mounted all the rest were ready, and together we started out toward the herd. Some three hundred men were to run that day, many of them as determined to kill the white cow as myself. When they saw me they looked disappointed. "Are you going to run?" said some one to me. "No," I replied. "I am afraid to run after the white cow." At this they brightened up considerably, and in less than five minutes the whole party understood that Ap-we-cun-ny, who had the fastest horse in camp, was only going to look on. Pe-nuk-wi-um, riding by my side, laughed, and quietly remarked that my horse might run away with me.

After half an hour's easy ride we came in sight of the buffalo, which were feeding on the edge of a high level prairie. A convenient "coulie" ran along close to them, and entering it, we carefully approached the band. Arriving within a hundred yards of them, we slowly climbed the hill, and then the horses, catching sight of the buffalo, made a simultaneous rush at them. Soon the firing commenced, many of the Indians having no hopes of catching the white cow and starting in at the outset to make a big killing. Way up at the head of the band we could see the animal, and, with about two hundred others, I started after it. Our horses seemed to fly over the ground. An occasional bull, coming too close, was dropped to clear the way. Past hundreds of shaggy, sharp-horned animals we rode, every nerve strained, and our hearts, seemingly in our throats, beating time to the thunder of a thousand hoofs. In the excitement we jumped ditches and mudholes which in calmer moments we would never have attempted, but would have preferred to go several miles around. But no one thought of danger. Several horses fell, throwing their riders far over their heads. No one looked back to see if they were hurt. We were now within three hundred yards of the white cow. It was time to make a dash, and hitting my horse several times with a heavy rawhide "quirt," I soon left all my competitors behind. But I found that the white cow was no easy animal to catch. It seemed to know that I was close in pursuit, and left the band in order to run faster. For a time I despaired of getting close enough to shoot; but my horse, perceiving what I was after, redoubled his energies, and before long I was within easy range. Bang! The cow dropped, and as quickly arose and ran. Bang! She dropped again and arose, but this time stood still. Bang again! She dropped, and with a quivering, rattling gasp, expired. Dismounting, I unsaddled the horse to roll and rest. Then I inspected the cow, which I found to be like any other buffalo, with the exception of light, dirty cream-colored hair; but it was a *white one*, and I had added another feather to my cap. After a time Pe-nuk-wi-um's women came up, and giving them charge of the animal, I resaddled my horse and slowly rode back to camp. The news had already arrived there, and I found the lodge full of men, waiting to hear the details of the run. Pe-nuk-wi-um was holding forth, talking excitedly. "Last night," he said, "we made medicine. I asked the sun to give Ap-we-cun-ny the white cow. I gave him a buffalo rock, and he wore it in his shirt. Is it not so, Ap-we-cun-ny?"

"Ah," I answered; "it is the truth. I knew I was going to kill the white cow. I heard a voice right over the lodge before I got up. It said, 'The white cow is Ap-we-cun-ny's—the white cow is Ap-we cun ny's.'"

"Ah," said Pe-nuk-wi-um, "I heard it too."

"Hi, hi, *hi-i-i!*" muttered the listeners. "Skoon-i-taps Nut-o-yi, Ap-we cun-ny"—Strong sun power Ap-we-cun-ny's. AP-WE-CUN-NY.

Upper Marias River, M. T.

THE NORTH SHORE OF THE BAY OF CHALEUR.

A FEW lines about the fishing in the above locality, and how to get to it, may be of some interest to your readers. The point to make for first is Campbellton, N. B., a station on the Intercolonial R. R. and the head of navigation on the bay. Within a day's drive of here are the Nouvelle and Escuminac rivers, both famed for the number and size of their sea trout, permits to fish them being obtainable from Mr. John Mowat, fishery overseer at Campbellton. The best place to make headquarters at Campbellton is at the Royal Hotel, and the obliging host, Mr. Sproule, keeps a capital team and is an enthusiastic sportsman himself. An attempt has been made to stock the Nouvelle with salmon, but so far, I believe, without success, owing to the poaching propensities of the people living on its banks. To reach the streams further down the bay it will be necessary to take the steamer City of St. John, which leaves Campbellton for Gaspi Basin every Wednesday and Saturday during navigation. The trip between these points occupies about seventeen hours.

After leaving Campbellton the first stopping-place is New Richmond at the mouth of the Grand Cascapediac River, grand indeed as a salmon river, but which, also, is reserved exclusively for the use of the Governor-General. A mile or two farther on the Little Cascapediac enters the bay. This is only a fair salmon river, but full of very large sea trout. It is not leased at present.

The scenery, which so far has been very beautiful, comparing very favorably with the Firth of Clyde in general appearance, now becomes rather uninteresting, and about dinner time the steamer stops at Grand Bonaventure, at the mouth of the river of the same name. This is a large stream, leased by Mr. Domville, M. P., of St. John, N. B., but for some cause or other the catch of salmon has never been very large. After leaving the next calling places are New Carlisle, the county town of Bonaventure, and Paspebiac, the headquarters of the large fishing firms of C. Robin & Co. and Le Boutilier Bros., the genial hospitality of whose agents is well known to all salmon fishers who frequent this coast.

After rounding Point Macquereau the steamer turns into Port Daniel, a Scotch settlement situated at the head of a small bay affording good and safe anchorage. Here are two good trout streams which are not leased, and no permits are necessary to fish them. Very comfortable accommodations can be had at neighboring farm-houses at reasonable rates. Sixteen miles further the steamer passes the Grand Rabos River, a beautiful stream, but, as far as salmon fishing goes, a failure, owing to the extreme clearness of the water and the stillness of the pools. It is, however, like all the rivers on this coast, a splendid trout stream. This river is leased to a Montreal gentleman. The Little Pabos comes next about six miles further. In this river are a few salmon and plenty of trout. It is not leased and permits may be obtained from the commissioner in Ottawa.

Twenty-six miles from Port Daniel the steamer stops at Grand River, a considerable fishing village at the mouth of the river of that name. This is a capital salmon stream, as it has been well preserved for some fifteen years. It is leased by two gentlemen from London, Ont. Turning Cape Despair the steamer next reaches Perce with its famous rock. This is the county town of the county of Gaspe, and is one of the most picturesque spots on the coast. A twelve-mile ride from here brings you to the Malbaie or Barochois River, a fine trout stream, in which there are also salmon, though not until late in the season. It is not leased and permits can be had from Mr. Vibert, fishery overseer at Gaspe. Leaving Perce the steamer reaches Gaspe Basin about midnight. The rivers running into Gaspe Bay—the Dartmouth, St. John and York—are all leased to American gentlemen. Leaving the question of sport out of the matter, the trip from Gaspe to Campbellton is well worth taking, the officer of the City of St. John most obliging, being quite willing to land you on any part of the coast you may wish, and there is a very comfortable boarding house in Gaspe Basin where a visitor in search of health can live almost in luxury and recruit his strength in as pretty a spot as can be found in North America.

VIATOR.

WHERE SHALL WE GO?

MANY thousands of hard-worked, over-worked men are at this time asking the above question. Merchants, lawyers, editors, clerks, mechanics, all are looking forward to a holiday next summer, and all want to make the most of it. To get away from the heated streets of the city for a few days or weeks only to come back with a sense of lost time and money, not to say of being swindled out of both, leaves a misery on the mind where there should be only a pleasant memory.

I am led to these remarks by a letter published in FOREST AND STREAM under date of Jan. 27, requesting "Nessmuk" to indicate a pleasant and available route for a three weeks' excursion in the woods. The letter is from a Utica gentleman, who signs himself "H."

He was at Wilmurst Lake last season, and seems to have had excellent luck with the rod, but complains of land sharks, and did not find his excursion satisfactory.

"H." took in too much civilization. Wilmurst Lake is private fishing ground, and you pay for your fishing, or leave your fish at the "House." Don't do it! I would as soon go hunting tame deer as fishing in private waters. I want to go where the waters, woods, forest trees and mountains are free as the air I breathe; where I may fish, hunt, camp, paddle and cut timber, with none to molest or present me a bill.

I think I can lay out a route that will answer and will not be too expensive, while including as much solitude, with entire freedom and fair fishing, as a reasonable man can expect. I suggest the Brown's Track, Moose waters. Go in by Booneville, buckboard line, to Moose River; from there to the Forge House by buckboard, or foot it to Jones' Camp at foot of the Stillwater, and boat up the Stillwater. If you bring your own boat, and it is light, the latter route may be best, but it includes a heavy carry of over seven miles from the Tannery to Jones' Camp. The rest is easy. It is twelve miles up the Stillwater from Jones'; by the road it is thirteen and one-half miles to Forge House, foot of Fulton Chain. The first two miles, from the Tannery to the Herkimer County line, is the most execrable road I was ever on—or in—for it was between wading and swimming last summer, although $200 would have made a decent road of it; but the Pecksniffs who had charge of road matters refused to lay out a dollar. They said there were no Lewis County settlers beyond the Tannery, and they were not going to spend the county funds to accommodate pleasure seekers, ignoring the fact that there was a constant influx of visitors, who all left money at Booneville and Moose River; that these visitors kept up the Buckboard line, and consumed the supplies that were constantly going over the road to Brown's Tract via the Forge House, the money all finding its way to Lewis County, and that the guides, landlords and others who operated in the Moose River country belonged for the most part in Lewis County.

Plucky little Charley Phelps who ran the buckboard line worked like a beaver to get his parties through comfortably. This he could not do, but he did get them through safely with their multifarious traps, with no other mishap than an unavoidable coating of Browns Tract mud, which was soon cleaned off.

The road from the Herkimer County line was better. Men were at work on it all summer, and eleven and one-half miles of the road might be called quite passable. The other two miles will be very different the coming season. Jolly, energetic Tom Nightingale, of the Moose River House, has taken the matter in hand, and he assured me last September that tourists coming that way in the summer of '81 should find a respectable road to the lakes.

If you go to the foot of the chain by wheels you can hire a boat of Jim Barrett, landlord of the Forge House. If by the way of Jones' Camp hire a boat of Jones. Once at the foot of the lakes with a boat the route is all before you where to choose. I should stop a few days on Third Lake. It was the pleasantest camp and the most desirable lake of the chain to my taste. It is a salmon lake, and there is good speckled trout fishing within ten minutes' pull of the landing. Also it is within a hundred rods of Fourth Lake, which is the largest of the chain (1,970 acres), and is reputed the best for salmon trout, while there are many spring-holes along the shores that give fine fly fishing. Within a mile of Third Lake camp, and on the north side of Fourth, is the carry to the North Branch lakes. These are lonely enough, and afford fine fishing with excellent camping grounds. A week in this region would be little enough. Opposite Ed. Arnold's camp on Fourth Lake is the carry to Big Moose. One may spend weeks on and around this lake without overdoing it. But it includes four miles of carries to reach it from Fourth Lake passing two of the Branch lakes, on which there is good floating as well as fishing.

Having done Big Moose and the intervening waters come back to Fourth, row up to Fifth, which is a pug-hole of ten acres, carry from Fifth to Sixth, three-fourths of a mile, and if you are late enough for floating stop for a night or two on Sixth. It is an excellent lake for deer, but is sometimes overdone by floaters. From Sixth to Seventh, by boat, and you will find solitude enough on the latter lake to content a reasonable man. If not take the carry on the North (two miles) for Little Eagle and Bay Lakes. There you may fish from the rocks in fifty feet of clear, cold water, and, by laying bait over night and using caution, catch speckled trout of three pounds or more, with a tconly. The bait must be brought from Seventh Lake, as there are no minnows in Bug or Little Eagle. Three or even six weeks might be very pleasantly passed on the route indicated, with such digressions as information gained on the way might suggest. There are many other lakes easily accessible by this route. I have mentioned those I thought best and gamiest. Supplies may be had at the Forge House, at Third Lake Camp, or at Ed. Arnold's on Fourth Lake.

Third Lake Camp is being renovated and enlarged for next summer, and will be kept by Robert Perril of Boonville, Ky., fly maker and dealer in fishing tackle.

Ed. Arnold will probably keep the Jack Shepard camp on Fourth Lake. His charges are very reasonable, his people kindly and attentive, and he sold supplies at lower rates than common. He also is a guide, and one of the oldest and best.

Sam. Dunakin is another of the older guides and knows as many of the Adirondack routes as any guide I found there. Nearly all the Forge House guides are competent and faithful to their parties. Although I never took a guide and could not well do it, having a canoe with me that weighed only eighteen pounds, and that I would not leave behind, I found the guides intelligent, friendly and willing to give any information they possessed to one going through alone for the first time.

Last season there was a rush of tourists to the east side of the wilderness, and I found every camp and woodland hotel overcrowded. Also the Louisville route on the west side was well stocked with tourists, twenty being obliged on one night to seek lodgings in the barn at Fenton's (No. 4), on the Beaver. The only quiet section I found was on the waters of the Moose. I do not expect to find it so quiet next summer, but I can easily find all the solitude I want and all the trout I can use in the much decried Brown's Tract.

NESSMUK.

Natural History.

OUR UNIQUE SPOON-BILLED SANDPIPER.

[*Eurinorhynchus pygmæus* (LINN).]

THE U. S. Coast Survey party on board the schooner "Yukon," commanded by Mr. W. H. Dall, in whose company the writer made a voyage on the coasts of Alaska and Siberia last summer, was so fortunate as to obtain what is now the only specimen in any American museum of the curious little spoon-billed sandpiper. The skin is one of the treasures of the National Museum collection. Most of the great museums of the world are without it.

Up to the time of Nordenskjold's voyage around the north coast of Siberia but twenty-four of these birds in all were recorded as killed; how many of them are preserved is unknown. He found great flocks of them, but unfortunately the bird was not recognized, and only a few skins were secured, the great bulk of the birds having been served on toast without regard to their distinguished identity.

The form of the bill resembles that of the common spoon-bill so closely that Linnæus referred his type specimen to the genus *Platalea*, yet the bird is related structurally to the *Tringæ*, and appears like any common little sandpiper with the exception of its bill.

I copy the habitat from "Ibis," vol. v, 1869, in which is given a colored plate of the species: "Mouths of the Ganges, and east coast of Bay of Begal; Edmonstone's Id., Saugur Sand, Saugur Id., Chittagong, Arracan, Amherst in Tenasserim, Amoy, Behring's Straits, N. E. Asia (Barrow *teste* Sclater)." The species, therefore, is known from the extremities of the Asiatic coast. The exact locality of Barrow's specimen is not known. It is, therefore, interesting to have the bird from a well authenticated place. Ours was shot on the end of a sand spit on which is the Eskimo village of Port Providence, Plover Bay eastern Siberia; it was secured for us by one of the natives during the interval between our first and second visits to the Bay. On the same sand and gravel beach I shot *Actodromas minutilla* (?), *Pelidna alpina americana*, *Strepsilas interpres*, *Squatarola helvetica* and *Heteroscelus incanus*. During the months of August and September it is said that the spoon-billed sandpipers are occasionally seen on this spit and always about the same place.

While in Plover Bay on the return from the Arctic our bird was shown to Capt. L. C. Owen, commanding the steam whaler Mary and Helen. Capt. Owen at once said that the same bird was brought aboard his vessel by Eskimo at Point Barrow. As the bird is unmistakable, there can be no doubt that the species is a member of our Alaskan fauna, and Mr. Ridgway has so recorded it in his recent catalogue of North American birds on the strength of the statement made to us by Capt. Owen.

It is to be hoped that some of the parties who are to be sent to Point Barrow may collect additional skins of this curious bird as well as information about its habits. It is only necessary to remember it as resembling some of our common little beach snipe, but with a bill shaped like that of a spoon-bill. TARLETON H. BEAN.

U. S. National Museum, April 15.

WHERE THE BIRDS WINTERED—New York, April 15.—Your correspondent, John Neilson, Esq., of Quebec, one of the best informed ornithologists of Canada, in a late issue of your paper calls attention to the marked absence in all parts of Lower Canada of its customary winter feathered residents. As the weather there was not severer than in former seasons he fails to account for their absence.

Through the valuable reports of your many correspondents in the New England and Middle States I believe I can offer a satisfactory theory that will remove all cause for further speculation and set the matter at rest.

As we are all aware, the past winter in the States above mentioned has been the severest experienced for many years and the snow fall unprecedented. Attracted by this favorable condition of things the more Northern species of birds have been led to make a more Southern journey and residence during these congenial months of cold and snow. The numbers of these different species observed and their wide distribution through the sections before spoken of irresistibly lead me to this conclusion.

I myself in my snow-shoe journeys through the forests of northern New Jersey noted several species supposed to be

confined to a higher latitude, while there was quite a falling off in numbers of those native to this part of the country.

There is no doubt the migrations of birds are influenced to a great degree by isothermal conditions. After an early warm spring I have frequently found species of our more Southern birds nesting in New Jersey, attracted no doubt by the favorable state of weather beyond their customary habitat.

G. M. FAIRCHILD, JR.

A TAME GRIZZLY CUB.

OMAHA, Neb., April 9, 1881.

DURING the palmy days of California, from '49 to '56, when the miners' camp was destitute of that one essential feminine element that tends to gladden the heart of man and make even a log cabin a palace, pets of all kinds were exceedingly rare, and we were always ready to bestow our affections on anything that could be petted, from a kitten to a cub.

During 1853 and part of '54 I was camped on Squaw Creek, a tributary of Pitt River, in the northern part of California, and as it was one of those unusually dry seasons to which California is sometimes subject, thereby being unfavorable to mining operations, the most of my time was devoted to hunting During one of our tramps in the foot hills in the early part of February, my partner, Wm. S., from La Salle, Ill., as jolly a companion as could be wished for, was so fortunate as to kill an old she bear and capture one of her cubs, which he brought into camp as a present to me. It was a queer-looking thing, would weigh about eight pounds, and was more like an over-fed puppy than anything that I could compare it to. The question was what I should do with it. Could I tame it, and if so, how?

My first lesson was to teach it that I was its master This was a long and tedious operation, requiring about six weeks. Many were the hard fights we had. My course of feeding was mush made from corn meal, with a liberal allowance of sugar and cooked meats, making it a rule not to allow it meat unless cooked. Almost invariably when going to feed it I had to take a large switch with me, and only by a liberal application of the stick to its ears and nose could I touch it. Several times I was on the point of giving up, and with others saying that the *Ursus horribilis* could not be conquered; but success crowned my efforts at last, for one morning after an unusually hard fight, in which my leg and pants suffered considerably, I left him in the corner of his pen crying. On my return at noon, when going to feed him, I saw that a change had come over him, and such a change! You cannot imagine how I felt when I found that my imp of all ugliness had yielded to moral suasion, and at last I had a pet. After eating its dinner the little fellow crawled into my lap, crying much like a little child. After petting him a little I took the strap from his neck, took him in my arms, and went out to where the boys were smoking to show my pet and have him christened. By unanimous vote we named him Billy, after his captor.

From that time Billy was the pet of the camp, and in a short time had quite an extended acquaintance. He was like Mary's little lamb, for where we went Billy was sure to go.

Soon after the christening, and when Billy had been admitted to full membership of the mess, we moved camp over to the Sacramento River about five miles above Shasta City.

During the summer I had a fine opportunity to study his nature and habits. As he grew he tried to imitate us in all our ways. He soon learned to know when meals were ready; he would take his place as soon as the last dish was placed on the table, but you could not get him near until it was ready. At times sugar being scarce he would have to take his mush straight. Then we would have fun. After his first bite his charge on that mush pan was fully equal to that of the gallant Six Hundred. It was mush to the right of him, mush to the left of him, and mush above, below and all around until the last vestige had disappeared in the dirt. Another pan with a little sugar and the cloud would lift athwart his ugly visage, the usual smile assume its sway while a merry twinkle in his eye would say, "You may take your coffee straight, I will take sugar on my mush."

His greatest amusement was in tormenting a half-grown dog that we had in camp, in which he displayed a wonderful amount of instinct if not of reasoning faculties. His mode of attack was to throw himself across the dog, the cub's weight being so much the greater he could easily hold him down, then getting the dog's tail in his mouth he would give it a pretty hard nip which would set the dog yelping, and this seemed to be the height of Billy's ambition. You could see a broad grin spread over his face, and his whole body would shake with apparent laughter. This performance he would repeat two or three times during the day.

At night Billly must have a share of my blankets, and for five months I don't think that I passed a single night that my pet was not by my side. In sleeping as well as in everything else he would try to imitate our actions. Always on his back, his hind feet extended, his paws folded over his breast, and no-e pointing skyward, Billy would pass the night.

If Darwin could have seen him he would never have adopted his monkey theory.

I observed one very important fact in connection with the grizzly, that is their inability to determine objects that are not in motion. Frequently on approaching camp I would call Billy. He would take the direction of the sound running toward me. If I stood perfectly still he would pass within a few feet of me frequently so close that I could have touched him with my foot, and yet unable to distinguish me from other objects. After looking around he would begin crying and run back to the cabin. By calling him again he would repeat the movements, following the sound of my voice. He would pass to the point from which he thought the sound came, stop, sit up on his haunches and look all around for me. If I only moved a hand or foot he would come to me at once, otherwise, without seeing me move, he would, as before, run back to the cabin. This I think demonstrates the fact that they depend entirely on sight and not on scent.

I once had a fine opportunity of demonstrating this theory to my entire satisfaction. For while out hunting one morning I started a very large grizzly in a thicket. I was just on the outer edge of it and within thirty feet of the bear when I heard her grunt Stopping instantly I brought my gun to my shoulder, waiting for her to come out, which she did to my entire satisfaction. Soon her head was in sight, but not liking a quartering shot for the head I waited a moment longer, following every movement of the bear, with my gun to my face. Soon she cleared the thicket, and sitting up on her haunches she began an inspection of the surroundings to see what had disturbed her morning nap. I drew on her throat intending to break her neck. Click! and there I was, the gun had missed fire, and a huge grizzly within twenty-five or thirty feet of me. Then the study of my pet came in good play. Standing perfectly still with gun to my shoulder, looking the bear steadily in the face I had a splendid opportunity of taking the dimensions of her teeth as she opened her mouth and snapped her jaws. We probably surveyed each other for about two minutes (they were fearfully long ones) when her bearship dropped to all fours and turned from me up the ridge.

My partner Bill, coming up, we followed her for a short distance, when two more got up. He shot one of them in the shoulder. My gun again missed fire, when my old friend turned for us, and the man who says we did not make good time for tall timber is no judge. While in the tree-tops we mutually agreed that we did not want any bear meat that day, and so went to camp without any.

I kept my pet until he was about eight months old, and would weigh 130 or 140 pounds. From the time he first gave up until the day we sold him I never had an occasion to scold or strike him, nor did we at any time keep him chained up. In fact, he was as kind and well-behaved as the best settler in our land. To tell of his tricks and reasoning powers would require much time and space. My experience in this case has demonstrated to my entire satisfaction that even a grizzly bear can be domesticated if taken when quite young and properly treated.

I have always thought that one great cause of my success was in not allowing the cub to have any raw meat. We all know the effects of raw meats upon dogs, and why is it not the same upon other animals?

JAY.

GROUSE BURROWING IN THE SNOW.

NEW YORK, April 14.

WHILE the information relating to game birds perishing during hard winters is being collected by FOREST AND STREAM the following note may prove interesting enough to induce sportsmen to keep their eyes open for similar occurrences:

During the autumn and winter of 1873 I was a student at Prof. Wiggins' boarding school in the little village of Nassau, N. Y Not far from the school was a patch of woods of a few acres' extent lying along the banks of "the crick." Through this piece of woodland I frequently passed on hunting or collecting trips at leisure times when school duties did not prevent, likewise at many other times when school duties should have prevented. Here a solitary male ruffed grouse was always to be found—a big, sturdy old fellow with very black ruffs and very broad tail, and who made a noise like the dumping of a coal cart when he sprang from under some mossy log or bunch of ferns close to my feet. This species was not at all abundant in the vicinity of Nassau and I knew of no other individuals within a long distance. The old grouse in question had the pleasure of hearing my gun go off on several occasions simultaneously with his flushing; but he was a proud bird and perhaps considered the noise to have been all made by himself No other effect ever followed my shot so far as I know. I always knew just where to find him, and finally contented myself with simply hunting him up and watching his movements.

One day, after a deep snow had fallen, I hunted everywhere for this bird, but could not find him; he was neither on the sunny south slope, where the young birches and poke berries grew, and where there were lots of warm, cozy nestling places under old logs, nor was he back among the big hemlocks and beeches where the brakes offered shelter; nor by the creek among the alders; but after leaving the woods I quite accidentally flushed him out of the snow where he had been hiding, quite a way from any cover. A few days later a heavy snow fell, followed by rain, which rapidly formed a very strong crust.

Nothing was seen of my grouse for more than a week, and I supposed, as a matter of course, that he had perished, being unable to get out of the snow before the crust softened. My fears did not prove true, however, for the old fellow was soon back in his old haunts as vigorous as ever. Where he had been during that week was a mystery, until one day in the following spring, while walking near the place where he had on a former occasion flushed from the snow, I found a large amount of his excrement deposited in a regular line along the ground. On every side, for a distance of several feet, the leaves of plants that remained green—cinquefoil, clover and two or three of the grasses—had been plucked so closely that the place was easily distinguishable. He had made a short path there under the snow, just as a musquash does, and had lived more comfortably than if he had remained under the crust.

That the ruffed grouse can burrow under the snow to a limited extent, and find food on the ground, I hope to be able to prove. Other correspondents can very likely report similar observations.

R. T. M.

OHIO BIRD NOTES FOR 1881.

Hudson, O., April 9.—The past winter has been the hardest for a number of years, a great deal of snow and very cold. In the fall there were a good many grouse and quail, and not many shot on account of the deep snow coming so early, but now the quail are about used up. I heard of a good many being found frozen and starved to death.

April 22.—Snowed and rained most all night; cold; wind blowing hard from southwest. Saw a robin (*Turdus migratorius*) to-day, the first I have seen this year except in the thick woods and gullies.

Feb. 24.—Snowing and blowing hard; very cold Was over to Tinker's Creek to-day; saw a crow (*Corvus americanus*).

Feb. 27.—Raining hard; cold; snow most gone. Saw a number of robins about the house to-day.

Feb. 28.—Snowing; cold. Saw a crow, one or two bluebirds and a large flock of robins. It is reported that a large number of pigeons were flying over south of town and in store, but think it was a mistake.

March 1.—Day warm. Saw the first killdeer to-day.

March 10.—Went fishing over to Aurora Pond to-day. No sport. The ice has not started yet. Saw a number of meadow larks, redwings, blackbirds and a few purple grackle. Also saw ten mallards flying over towards the creek. No ice in the creek.

March 12.—Rained all last night; snowing to-day. Saw a leveler bird to-day.

March 13.—There are a number of sparrows about; not sure of their first coming.

March 16.—Warm; rained this afternoon. Saw a number of killdeers and grackles. There were two or three large flocks of geese flying over to-day.

March 19.—Cold and raining; creek open; large number of ducks, mostly mallards. Hanson shot a pileated woodpecker (*Hilotonius pileotus*) on the creek bottom. Saw one or two more.

March 22.—Another "blizzard" struck us yesterday; sure to rain; wind blowing hard from southwest. A flock of white swan were seen flying over to-day. Saw a woodcock to-day.

April 2.—Began snowing on the night of the 28th; snowed steadily until Friday night, the 1st; about twenty-two inches of snow fell; hard on the birds that are here; large numbers are frozen to death. On the night of the 29th large flocks of geese and ducks were flying about town lost in the storm. There has been a number of leveler birds about the house for several days.

April 8.—The ice is broken in places on South Lake. A number of geese and ducks in the open places.

BUCKEYE.

THE SCHIPKA JAW.—The fragment of the human lower jaw, discovered by Prof. Maschke in the Schipka cavern near Strämberg in Moravia, Austria, is regarded with much interest by European men of science, because it is in many respects more apelike than any human remains that have hitherto come to light. The Schipka cavern contained bones of *Bos, Ursus, Elephas, Rhinoceros, Leo* and *Hyæna*, a number of stone implements showing rough workmanship, and some incisor teeth of Ursus which were somewhat cut away on both sides at the beginning of the crown, indicating perhaps that the people who cut them did not yet know how to bore a hole into the root. A great number of fragments of bones which showed the action of fire were found. The jaw above referred to was discovered buried in some ashes in a protected place in the wall of a side passage of the cavern, near a fire place, and was the only human bone brought to light by the exploration. The specimen consists of the front part of the jaw with the incisors, one canine and two premolars of the right side still in place. The three last mentioned teeth were as yet undeveloped, but, as the front wall of the jaw is wanting, they are visible. The great size of the jaw is remarkable, for, although the development of the teeth corresponds to the first year of life, the jaw and teeth are as large as those of an adult. As is the rule in man the first premolar seems nearest being cut, then follows the canine, and then the second premolar. The jaw at the symphysis is about one-quarter thicker than in the ordinary adult. The chin is retreating, and in fact may be said to be wanting. The hinder part of the symphysis is placed obliquely, as in the anthropoid apes, and in a less degree in certain savage races, but especially in the Naulette jaw which the present fragment much resembles in many particulars. The teeth are very large and stout, and the incisors bent convex in front. The prominences for muscular attachment are well developed, implying large, strong masticatory muscles. The great size of the canine tooth is a very marked feature of the jaw, it being much longer than the same tooth in the adult European. In only one instance out of fifty adult skulls measured was this tooth found to be fourteen millemetres in length, while in the Schipka jaw it is 13.5 millemetres.

The fragment in question would seem to have belonged to a child of extremely low grade, and presenting many decided pithecoid characters.

THE FLYING-FISH.—A writer in the New Orleans *Times* says: An extract from *Nature*, published in this paper on the 27th of last month, throws doubt on the pursuit of flying-fish by the so-called dolphin, the coryphene. As I was once a witness of such a chase, accompanied by a circumstance much rarer, I append an account: One afternoon, during a voyage on a sailing vessel bound to a West Indian port, while the ship was making some four or five miles an hour, a coryphene was observed gamboling under the bows, going ahead a little, as if to show its superior speed, and then returning to its frolics. While the sailors were fastening the harpoon to a line, the coryphene sighted a flying-fish. At once it stiffened itself; its whole body quivered as if with excitement; its tail was agitated from one side to another, and it started in pursuit, bounding over the surface of the sea with leaps of some fifteen or twenty feet. Although a stern chase is held to be a very long one, this lasted less than a minute. One of the leaps brought the coryphene right under the terrified flying-fish, which seemed to fall into its enemy's jaws. The latter returned to its "playground" under the bows, and was harpooned, brought on board and cut up within two minutes after its meal. The flying-fish was taken out whole, uninjured. The coryphene is the beautifully colored fish noted for the shifting and varieties of its tints when expiring It is commonly but erroneously called a dolphin, as in the well-known verse, "The dying dolphin's changing hues." Now, in regard to the flying-fish, I have watched them on many voyages, and I can confirm the observers who describe its motion as a leap, not an act of flying. It springs out of the water, gradually rising to the middle of its course, then falling, describing a parabola just as an arrow does in its flight. I have repeatedly seen them change direction during the leap, making a deflection amounting to about a half angle, never more. But I cannot agree with Mr. Whitman, who estimates the length of their leap to be as much as 800 or even 1,200 feet. I opine that about 200 feet is a pretty big jump for one of these fishes, and, instead of forty seconds, I calculate the time occupied in a long leap at fifteen seconds, which gives a velocity of nine miles and a fraction per hour.

THE NUTTALL BULLETIN.—The April number of the *Bulletin* opens with a very interesting series of notes on "Some Birds from Arizona with a Description of a Supposed New Whip-poor-Will." These notes are based upon collections made within the past year by Mr. F. Stephens and forwarded to Mr. Brewster for examination. The same writer contributes two other articles to the same number, one of them consisting of Critical Notes on a Petrel new to North America, and the other on the Affinities of Certain Pelloptilæ with a description of a new species. Both of these papers contain new points of very great interest. In the present number, reprinting from the Ibis of Mr. P. L. Sclater's important paper on the Present state of the Systema Avium is concluded. Under the name *Puffinus borealis* Mr. C. B. Cory describes a

new species of the family *Procellaridæ* taken last autumn near Cape Cod. Field Notes on the Birds of San Juan County, Colorado, is a pleasantly written paper by Mr. Frank M. Drew, and gives an extremely attractive account of the habits of some of our Western birds. Mr. W. D. Scott presents some novel and significant facts with regard to the migration of birds which deserve the close attention of ornithologists. How far it is practicable to proceed on the hints that he gives us it would be hard at present to say, but his observations have certainly the merit of being wholly novel, and it is possible that they may open up a wider field for observation than would at first seem possible. The departments, Recent Literature and General Notes, are full of interesting ornithological news, and the number as a whole quite up to its usual standard.

PUBLISHERS' DEPARTMENT.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

No Costiveness, Diarrhœa or any Bowel Complaints where Hop Bitters are used.

THE H. W. COLLENDER CO. BILLIARD TABLES are the most perfect made. Their tables for private billiard parlors are a special feature of the manufacturers' success. Many country homes, as well as city residences, are furnished with the Collender tables. We take pleasure in commending them.

MESSRS. CONROY, BISSETT & MALLESON will move May 1 into their new factory, a cut of which appears in their new and enlarged advertisement of this week. A largely-increased business renders this removal necessary. They have introduced many new improvements in the way of labor-saving machinery, which accounts for the low prices at which they are now furnishing the trade with reels, rods, etc. Notwithstanding the large force of men working over-time, the demand is greater than the supply. No machinery has been yet invented to take the place of skilled hand work on the finer grades of rods. These are entirely made by hand.

Game Bag and Gun.

SOMETHING ABOUT SHOOTING DISTANCES.

BOSTON, April 13.

IN your late issues I have at times noted the records of some remarkably long shots made by sportsmen, notably the killing of a goose at 85 yards with No. 5 shot. It would be interesting to know if the bird was on the wing, and if so, whether the distance was measured or guessed at, and whether it was to where the bird was struck or fell. I do not pretend that it was impossible, but improbable. In the course of quite an extended gunning experience I have myself made some remarkably long shots, and for the time being thought my gun (as almost every gunner is apt to think of his own) a very superior weapon, and as a consequence indulged at impossible distances to the profit of Leroy and Hazard. Subsequently I had occasion to test a great many guns for a manufacturer at 40 yards, and the conceit was fully taken out of me. In the first place every time I faced 40 yards measured it looked to me very much longer than I had anticipated; next, after making a handsome target, say 280 to 300 pellets, No. 80, in a 30-inch circle, I was surprised to see how many plover, life size, I could mark out on that target which would have escaped unharmed. If so (and doubters had best try it) how much less chance of hitting dead at 85 yards or 255 feet.

Comparatively few gunners really know what distances are until they have measured them. Let the doubter measure his stride (generally 30 inches) and pace off 60 or 80 yards, and then look back, and, my word for it, it will be to him a surprise. I illustrate by two personal experiences. Some years since, while in Western New York, I heard marvelous stories of a breech-loader owned by the hotel keeper of the place. I examined the gun, which was a 28-inch, 12-gauge, weight about 8 lbs., and saw nothing remarkable in it. By measurement it was a half and full choke, left and right barrels respectively. On one occasion I was told of a remarkable shot from this gun—namely, putting twenty No. 8 shot on the face of a half dollar from 1¼ ozs. at 40 yards. This was vouched for by quite a number of residents, and the silver piece was hunted for but not found, very much to my regret. My amusement roused the "Ebenezer" of the owner of the gun, who angrily bantered me to bet. My reply was a wager that he should repeat the performance, fifty cents a shot, firing until he should either win or lose ten dollars, but not to put twenty pellets on the half dollar, but one single one. My experience at testing guns at that distance and with that charge gave me confidence in what I was doing. The bet was eagerly taken, of course, and the meeting took place at once. When forty yards were measured off and the gunner wheeled on his position to face the half dollar which was on top of a post, his face was a picture to see. His first remark was, "It's the biggest forty yards I ever saw," but as he had measured it himself he had to accept it. His second remark was, "I can't see the half dollar," and neither could I, but it was in position. I advised him to shoot at the top of the post. He positively declined and showed every sign of "squealing." To prevent this I offered to take a sheet of paper, draw a pencil around the half dollar, blacken the centre, and then to allow any shot even touching the outside of the ring to count for him. Well, he fired twenty times, struck the centre once and twice just touched the rim. That settled it and he refused to carry out the bet, compromising at $8.50. I would add that on the paper we drew a thirty-inch circle, and on counting the targets found them a good fair average.

And now for number two. It was at Van Slyck's landing, Currituck Sound, N. C., and a goodly lot of gunners we had. Christmas Day was the time, year, 1879, and we had proposed a grand shoot for the day, but by 10 o'clock it was too hot for sport and we all returned to the hotel to pass the day by other means. A gunner's discussion started, each one extolling the respective merits of his gun. I arrived just in time to hear one of the party remark, "I consider a duck at eighty yards as good as mine." This convulsed my sense of merriment somewhat, and I offered to put up a fowl at eighty yards for the assembled crowd to practice at: ten cents a shot, Alonzo, treasurer. The offer was readily accepted, and it was proposed to measure from the step of the store up the lot. I protested, much to their amusement, that there was not room enough in the lot to do so; and my proposition to measure at an angle across the lot was accepted, and when eighty yards had been properly run, coming within ten feet of the further corner, the general expression was similar to that of the Western New York man previously mentioned. The limit was No. 5 shot, which is the usual number used in duck shooting at Currituck. Mr. M., of Marlboro, Mass., toed the scratch first with a beautiful Shaeffer gun. My memoranda before me gives the score: M. shot 9 times; K., of East Weymouth, Mass., 2 times; N., of Mass., 5 times; C., of Boston, 2 times; and after about ten more shots from natives, a lucky shot cut the throat, and the bird redeemed his chips—$1.80 in Alonzo's bank, and he happy. I put a second one up by solicitation for a new party, and the result I herewith give you: Payne, 5 shots; Dr. Holmes, 3 shots; Dr. Kibby, 2 shots; Herman V. L., 2 shots; Moony, 4 shots; Nash, 5 shots; Van, 5 shots; Hall, 2 shots, and 2 from natives—$2.80 added to Alonzo's bank, and both fowls sold at cost price. But few shots had been fired for the second fowl before it had been demonstrated that 5's at 80 yards was comparatively ineffectual, or rather, according to my idea, 80 measured yards was too much distance for No. 5's; and as the interest began to slacken I withdrew all limit, allowing BB (buck buffets), thread-wound cartridges—anything, in fact. Then the fusilade commenced anew and the air was filled with threads, while the ground looked like a fish seine; but the gunners got discouraged, especially those using Dittmar and 6 cent cartridges; and the bird was finally floored or rather grassed by P——, the Washington market light weight, who was advanced 15 yards and opened with his 8 gauge, 14 pounder, when the worthy President of the "Limbers" (a local organization) collared the game and administered the *coup de grace*.

Such was our experience at 80 yards, and it is unnecessary, after giving the foregoing names, to say anything regarding the quality of weapons they use. It is but fair to say they were, one and all, astonished at the distance of 80 measured yards. I always am, although accustomed to measurements: and when I hear of extraordinary shots at long range it brings to my mind the two instances illustrated above.

EVERETT.

A PLEA FOR THE SINK-BOAT.

I HAVE been a subscriber to your paper since it first started and would hardly know how to get through the week without my FOREST AND STREAM. There is one point, though, on which we do not agree at all. I notice whenever you have a chance you invariably berate the "floating battery" or "sink-boat," calling it "unsportsmanlike," etc. In the very interesting article on brant-shooting at Cape Cod, in FOREST AND STREAM, now lying by me, the writer speaks of "that abomination of all true sportsman, the floating battery," and then goes on to describe the potting of brant out of sand boxes, at least first cousins to sink-boats. Now, why the battery should be an abomination to this gentlemen, who does not consider it unsportsmanliks to huddle a whole flock of fowl on the water, let them swim in under the muzzles of five or six guns, then pour a whole broadside into the flock sitting, I fail to see, unless it is for the same reason that here in Maryland, and in this county of Talbot, some persons condemn the use of batteries (although I am happy to say that the prejudice is subsiding), and that is, on selfish grounds entirely. Years ago, when good shooting could be had from the shore, those owning points had the shooting all to themselves and could say who should shoot and who should not and, with a feeling too common to human nature, disliked to see the sink-boat introduced, as their control of the shooting was gone with its introduction, as everybody was placed on an equal footing. Consequently there was a great outcry raised against the "sink" and a law passed prohibiting their use. This was some eighteen or twenty years ago. Now, mark the result. In the course of the next ten or twelve years owing to various causes, such as the increased traffic on our waters, the numerous oyster boats and canoemen plying a boat, as well as the increase of sportsmen, the wild fowl changed their habits, just as other game birds do under like circumstances. They ceased to frequent our narrow waters in any numbers, and although thousands still visited us, they kept in our wide bays and large rivers, out of reach of the shores, so that for years few or none were killed and the old race of gunners gave up in disgust. Now, I, with several other gentlemen, realizing that times and methods must change in shooting, as well as in other matters, and seeing that it was a case of giving up our guns, decoys, etc., or of changing our ways of shorting, concluded to revive the sink-boat, and after getting an act passed by our Legislature allowing their use, we have been shooting out of them for the last five years, and so far from considering them "unsportsmanlike," we have come to the very opposite way of thinking, viz., that it is the most sportsmanlike way that ducks and all wild fowl can be killed. Remember, I am only now speaking for my own section; in other localities "the circumstances may change the case" entirely. When first-class shooting can be had from the shore no one would prefer battery-shooting, as in the latter case the sport can only be enjoyed by one, or at most two, persons (where a "double box" is used) at a time. The confinement is great, and it takes a man thoroughly "up" in all that relates to shooting, and indeed, to yachting, as in this shooting we carry our "sinks" and live in our yachts on our shooting expeditions, and as the waters we shoot on are one wide bays and rivers, and our best seasons for shooting are in December, January, February and March. It takes a "thoroughbred" not to get caught by the heavy storms incident to the season. He must be a thorough enthusiast about shooting and not afraid of any wind or weather. Given these qualities there is no more fascinating sport than fox shooting.

And now to compare it to other ways of killing wild fowl, and here I will say that in thirty years' experience I have tried all methods common to the sportsman of the Delaware and Chesapeake Bays. First take "point" or "bar" shooting. Here very considerable skill is required if single ducks are shot at, but what is the usual custom in this shooting? Generally from three to half a dozen or more sportsmen are in one blind and shoot into the midst of the flocks passing, wounding and crippling two or three ducks for every one killed. The guns employed are young cannon (I have two or three celebrated "point" guns in my possession now) weighing from twelve to twenty-five pounds. Decoy shooting from the shore is better, but even then under the best circumstances you cripple more ducks in proportion to those bagged than in box shooting, have to use larger guns and the sport is much more uncertain. Now as to "hooby blind" shooting. Here you have a continual scare-crow for the ducks, as it is permanently erected on or near their feeding grounds, where the ducks can feed to-day right on the same spot where they were shot yesterday out of the "sink." Now, on the score of humanity, no sportsman that shoots but must regret the suffering incident to his sport in the wounding of more or less game this, I contend, is reduced to a minimum in box shooting. Single ducks are almost invariably shot at, they come within certain distance and, if struck, are almost always killed and not "crippled."

As to "tolling" and kindred ways of shooting it is too much like our Cape Cod friend's way of potting the brant well calculated to fill the bag, but as to sport, well—every one to his own taste. I would like to be there and assist, as I am devoted to it all, and in every variety, but think there is infinitely more sport in "taking in" a pair of canvas or redheads right and left as they "swing" to the box, dropping that gun, catching up the second and killing two more as they go off, than there can possibly be in shooting into a bunch of brant huddled together on a bar. As to the shelldrake, coots and old squaws or "soakers," as we call them here, the Maryland sportsmen pity our brothers of the New England coast who have no better game to shoot at.

We have them here by the millions, but we would almost as soon think of bagging turkey-buzzards. I have heard the opponents of box shooting, who probably were never in a "sink" in their lives, say "it is no sport," it is such easy shooting," the ducks come so close," etc. Wait my friend, "Get in the box and try." "Mark!" up comes a redhead or canvas, swinging slowly up to the foot of the box in the left side within fifteen yards; as he throws himself back to alight you rise on him. He is a dead mark and in another instant is lying dead in the water. You say, "I told you so, anybody can kill ducks that come that way," so they can, but mark again. There is but little wind, and this fellow is coming with it. Whiz, whirr, "What was that, why didn't you shoot?" "Oh, I didn't have time, he was off too quick;" exactly, but mark again. This time it is a pair of redheads; they are coming in on your right side, they come close enough. "Why didn't you shoot them?" "And what made you shoot only one barrel, and that about six feet behind the last duck?" "Why, confound them I thought they were coming to the foot of the box, but the instant I raised to shoot they darted over my head to the right at the rate of about two miles to the second." So it goes my friend, and after you have tried it a while I think you will agree with me in saying that, although almost any one who can shoot at all can kill the ducks that come singly and slowly up to the front of the box, the man who can take advantage of all the opportunities he has given him in the "sink" and can bag all or a large marjority of his "right hand shots," "darters," "down-winders," etc., etc., is a thoroughly first-class shot, and moreover he must be well practiced in this particular sport, able to shoot well off both shoulders and thoroughly quick in every way, and you will further agree that there is no kind of duck shooting that gives you a greater variety of shots, or one that requires more skill and judgment to make the largest bag possible from the chances given you.

In conclusion I will only say that I advocate the use of the boat (under the circumstances I have named: inability to shoot ducks from the shore) only as an amateur as I shoot solely for amusement and not for profit. SINK BOAT.

Easton, Md.

THE FLIGHT OF RIFLE BALLS. EXPRESS BALLS, ETC.

MT. FAIRVIEW, San Diego Co., Cal.

Editor Forest and Stream:

Your correspondent, "C.," in issue of March 17, in attempting to answer my questions about the effect of gravity on a bullet at the instant of its escape from the muzzle drifts away from the real question—a question that no one has yet attempted to answer. When the proper time comes I will give my real opinion on this question and what I consider the philosophical proof of it. But I first want to see some one else cudgel their brains awhile over it.

"C." says: "It is a well established principle of mechanics that when a body is acted on by two or more forces it does not follow the direction of any of them, but takes an intermediate course," etc.

If "C." had read my letter carefully he might have discovered that I had a little inkling of the laws of motion, the parallelogram of forces, resultant of forces, etc., etc., and that the question I raised was not what is the resultant of two forces, either constant or variable, but when does the effect of one force commence. I never denied that the ball was "acted on" by gravity at the muzzle, but whether or not that action can instantly overcome its inertia or whether force can instantly produce motion is a question that is not to be answered, either way by mere assertion.

He tries to prove it by the analogy of a person running his hand along the edges of a table, and at the same time pressing on it. He does not say that the hand falls instantly on reaching the edge. But he must mean this or there is no point in his argument. This is not the first time in history that a person has assumed a fact for the purpose of proving another exactly parallel. It is one of the neatest of all ways of begging the question and one that deceives the person using it quite as often as any one else.

Because the equilibrium of a body released from restraint before commencing motion is not apparent to the senses it does not follow that there is none any more than it follows that the first part of a ball's flight is a straight line because the senses can detect no curve. The equilibrium may last only one-sixteenth of a second, yet in that time a ball might travel seventy or eighty feet. It may even last one-tenth of a second, and yet to a person it would seem as if his hand fell instantly over the edge of the table. One-eighth of a second is probably as much as the most cultivated and practiced sense can take notice of, and very few could do that. And in one-tenth of a second a ball might be driven fifty yards.

A ball cannot be started instantly by any force except gravity. And if it can be started instantly by that it is only because gravity is acting on every molecule or atom at the same time, and no time is lost in the transmission of force from atom to atom. But can gravity overcome instantly the inertia even of an atom? And conceding that it can do this, is not as much time required for the transmission of the release from atom to atom as in the case of another force is required to transmit the force from atom to atom.

"Transmission of release" may be unphilosophical language, but there is such a thing, nevertheless. When the ball is by the barrel detained from its downward tendency each molecule or atom is detained by its neighbor. It cannot move until that neighbor is released. Such being the case, it is as impossible for me to conceive of an instantaneous release of every atom as to imagine an instantaneous transmission of force through every atom when the first pressure of the powder begins.

"C." says that "a power that is suddenly released after it has been resisted acts much more decidedly than one that takes effect gradually." I should like to see "C.'s" proof of this. Because a thing like a gun-hammer yields quickly to intense force we must not infer that its inertia was entirely cancelled; increasing the weight of it a few pounds would

quickly dispel such illusion. According to such a principle a locomotive detained by a rope and straining with all its force would shoot off at full speed when the rope was suddenly cut. Any one who has seen a tow line part on a steamtug, or had a rope break on which he was pulling with all his might, knows that this is not so. These cases are, of course, not exactly analogous to the action of gravity which acts on every molecule at once; but they are near enough to it to cast a shade of doubt on "C.'s" position on the release question.

I am sorry that "C." did not take more time, for I think he could have thrown some light on the subject. He has evidently written hastily and with too full confidence in the soundness of his position—a thing liable to make any one mistake the true point of any question. But I am much obliged to him for even attempting to answer it.

The questions are these:

1. Can gravity instantly produce motion any more than any other force?

2. Can release be transmitted from molecule to molecule any faster than motion can be transmitted?

One word about Express bullets. "Edmund G. K." need have no fears about Express bullets "reducing the inside of a deer to pulp; tearing a hole as big as a hat," etc. Of all objections to bullets calculated to spare animals unnecessary suffering, to spare the hunter frequent loss of his game and more frequent work in securing it, none proves on trial more baseless than the "spoil the meat" theory. Occasionally a deer is badly "mussed." But take an average of five, and there is not half the spoiling there is with chasing a deer half a mile with a dog, letting him lie down an hour or two and get sick, or shooting two or three more balls into him. In a deer killed and dressed at once there is not half the meat bloodshot and otherwise spoiled that there is in the other cases. The difference in the amount actually cut away by a large or expansive ball practically amounts to nothing.

There is nothing probably in hunting about which as much twaddle has been written as the effect of Express and explosive bullets. "Blowing open a grizzlie's head" as if it were a snuff box, "pulverizing a wild boar's head" as if it were a puff ball, "Express shock" as if it were a bottled-up stroke of lightning suddenly let loose, etc., etc., are only the least of their marvelous imputed effects.

It is astonishing that it never occurred to "Col. John Hills, of the Indian Army," quoted by "Nemo," that the dashing of a ball to pieces depended almost entirely on the size and shape of the hole in front of it, instead of velocity, and that the shock of a ball depends more upon its momentum and striking surface than upon velocity. If any one will run back the files of FOREST AND STREAM and other sporting papers they will find just such wonderful bullets as Capt. Hills speaks of condemned by other Indian hunters, and also by American hunters such as H. Batty, Ned Buntline and others who, it is safe to say, know what they are talking about. Read Capt. Williamson's experience with grizzlies in FOREST AND STREAM of two or three years ago and see his opinion.

The truth of all this is this: A ball that flies to flinders is far the best, provided it strikes the heart, lungs or kidneys. For those favored individuals who know how to make a deer pose for a shot and who can "put the ball in his heart" every time "on the keen jump," "at forty rods," etc., these balls are the best. But then for American game they don't need them. But "duffers" like myself, who have to take a shot just where they can get it who have to shoot at dark or brown spots in brush without waiting to see just where the heart is, who think they are doing tolerably well if they hit a deer at a long shot or when running any where in the body need a ball that has penetration quite as often as the other kind. Essential as expansion is, penetration is in the long run quite as much so. Such a ball as Captain Hills describes in "Nemo's" letter would make complete minced meat of the heart or lungs of a deer, but if it hit him in the haunch or stern would not kill him in one-fourth the time a Winchester .73 bullet would do it, and in the paunch would not be half as affective as if it flattened out and passed clear through without breaking. A ball that flies to powder will have no penetration where solid flesh or bone is to be met, and no amount of velocity will give it. To the penetration of all such balls there is a limit which cannot be passed any more than that of fine shot can. And this limit is a very short one too.

I think Major Merrill has made a mistake in his figures of trajectory. If he can get a long range ball into the centre at 100 yards on an intermediate rise of only two inches at the highest point he could do more than I ever could. He says the bore of a rifle so sighted will point nine and one-half inches above the centre at 100 yards. Unless the rifle throws downward from recoil, as is often the case, this ought to carry it at least four and one-half or four and three-fourth inches over at fifty-five yards. That is just about the rise I have always found, the drop at 100 yards being about ten inches with long range ball fired on a level.

Instead of fifty-five yards the point of highest trajectory for 100 yards will often be sixty-five yards with some rifles, and even a little over. The highest rise of my heavy rifle, with round ball sighted for 100 yards, is about sixty-eight or seventy yards, and is there one inch, and only about one-half inch at fifty yards; this with globe sights about three-fourths of an inch above axis or bore.

For the plains a rifle sighted over is all right, but for the woods and bushy ground, especially for quick shooting, running shooting, or downhill shooting, or in the dim light of evening or early morning, or with the sun on an actual front sight one that overshoots four inches at fifty to seventy yards is an abomination. Better sight every rifle level for all such ground, unless you know how to make your game strike a position and wait for you to calculate your distance—a valuable art that, judging from their writings, many seem to possess.

T. S. VAN DYKE.

SPORT ABOUT SAVANNAH.

SAVANNAH, Ga., April 11, 1881.

DURING the winter months the waters around Savannah are fairly alive with aquatic fowl of almost every description, especially on the waters adjoining the rice plantations. Among the numerous species are the canvas back, mallard, widgeon, raft-blue and green-wing teal, bard heads, bald pates, butter rail and a variety of other small ducks.

The most successful way of hunting them, in fact the only way (except by stooling), is to have a duck boat about 13x4, decked all over, save a cock-pit in the middle, and on the main deck a blind made securely of rice straw and cane tops. You sit behind this, and with your oars push the boat forward until you spy your game in the distance; then you take in your oars and lie on your left side, and by the use of a long scull oar that goes through a small hole in the stern you can scull right in their midst, especially in the early part of the season. Looking at the boat coming toward you it appears to be an old bush or bunch of trash floating down with the tide. The boat can be bought at a cost of from $25 to $75. In the early part of the season I bought a fine one of white cedar for $65, also a large 5-gauge duck gun weighing 20 lbs., together with a small breech-loader for cripples. Repeatedly I have returned to the city after a two days' hunt on the waters around the city with from 100 to 200 ducks of various species. The best waters are "Lonesometony," "Knoxborough," "Union," "Collis," "Abercorn" and "Fifemaker" creeks, also the back rivers, which are too numerous to mention.

The most successful hunt I had this winter was about the 10th of January. I put my duck boat on the steamer "W. T. Wheeless," which plies between this city and Augusta, and went up the river as far as "Parachuckla," about seventy miles from Savannah, and sculled all the way back, taking in a number of lakes and creeks, arriving in the city again on Friday evening after a hunt of about two and a half days. I bagged sixty-five mallards, twenty-four summer ducks, a few raft, eight wild turkeys and a small doe. Before reaching the city I had to take out my scull oar and stop up the scull hole to keep the water from running in my boat, it was so well loaded. One or two of the numerous professional gunners around here make a very fine living at it. One especially, a Mr. Westcot, who realizes, at his own account, from $2,000 $2,500 for six months, and I don't doubt it, for I have seen specimens of his success myself.

Some Northern men come South every winter to hunt for a living, but soon give it up, as the majority of them know nothing of the use of a gun, to say nothing about the skill in manipulating the boat, and are totally ignorant of the waters, which is a very great item in successful duck shooting.

In the spring there are thousands of snipe in the lowlands, especially when the ground is wet from rains or a freshet. Myself and a friend bagged 148 last Friday on Mr. Chisholm's plantation, and would have got more had our ammunition not given out. Quail are not so numerous in this immediate section, but a little higher up the country they are as thick almost as blackbirds. My dogs have repeatedly found eighteen and twenty coolies in a day in Jefferson, Burke or Richmond Counties, and in those counties there is little difficulty in killing them, as the shooting ground is excellent, and one has no excuse to miss a bird on ordinary occasions. The birds rise in old broom sedge fields, where there are a few young pines and stubble, also on the margins of the numerous little ponds in that section. With good dogs and a little knowledge of the country a good shot can bag easily from 75 to 100 birds in a day's shooting. It is best to hunt on horseback, as you can get over more ground in less time. I always find it the best, and never hunt quail any other way. You can very easily jump off your horse when your dogs "come down" if you don't wish to shoot them from the saddle.—R. W. A.

SPORTING SCRAPES.

THERE being a dearth of sporting news in this immediate locality, barring rabbit hunting, of which there is considerable, with fair success, it occurred to me that possibly two or three incidents which helped to embellish and relieve my rather monotonous boyhood life in the country, might be of interest, and at the same time a warning to some of your youthful readers at any rate.

By the way, that life must be an exceedingly stupid one which has not its ludicrous side, and that mind dull of perception which cannot discern and enjoy the ludicrous as it crops out now and then, here and there, in speech and act.

Our nearest neighbor was a tanner. Though his name was Washington Barcalow, a name very unlike that of the Galena tanner which has become so illustrious, yet by trade he could claim a sort of relationship to him, and by name to the Father of his Country. His son William and myself were about the same age. We had arrived at that delectable period in our boyhood when we were allowed, by the very reluctant consent of our parents, to handle firearms a little. Hence we used to practice target shooting together with an old flint-lock, hitting the bullseye once in twenty times at short range. His father was a good marksman and a fair huntsman.

His theory was, and he conscientiously practiced it, that all game should have a chance for its life; it should be taken in motion, either on the wing or on foot. A righteous theory, surely, and one which every true and honorable sportsman will scrupulously observe.

Pursuit is the cream of pleasure, and I fail to perceive how any one can find sport in stealthily crawling up, on a sitting rabbit for instance, and riddling it with shot. To my mind it is belittling to one's manhood. If it is not criminal, it is inexcusable butchery. It smacks somewhat of the "stab-a-man-behind-his-back" principle. It is anything but fair play, and as for the fun and fame that there may be in it, there is more by far in going out alone in the woods, pinning a white patch against a tree, and shooting at that. I did not think so when I was a boy. In boys, still shooting is tolerable, but not in men. Men are supposed to have outgrown the crude ideas of their boyhood, many of which savor largely of folly. I went out for rabbits Monday afternoon with a boy who was old enough and had hunted enough to know better. Though he had a double-barrel gun, with a shell in each barrel, happening suddenly on a rabbit, he jumped on him with his great cow-hide boots, instead of giving him a fair chance and shooting him in a sportsmanlike manner. He seized him by the hind legs and dragged him out from underneath his big feet, when I insisted that he should let him go and get him again fairly, or not at all. He let him go, and then discharged both barrels at him without effect, when my little single barrel breech-loader brought him to a halt. I found that one of his hind legs was badly broken, and the boy then told me that he did that jumping on him, and that was the reason why he let him go, for he thought that he couldn't get away anyhow; but even with his three legs he would have made his escape if the boy had been alone.

The unfeeling youth deserved much more than the plain lecture that I dealt out to him in anything but homœopathic doses, and I sincerely trust that no boy or man that may read this will ever be guilty of such a mean, unprincipled deed as that was. A great deal of game is never killed outright, where it is in the power of the sportsman to do so, but is miserably tortured to death, inch by inch, as if the game possessed no more feeling than the hearts of those who thus butcher it.

Apologizing for this digression I return to the episode with my neighbors. One cold, crisp January morning I wandered back to an old well on the farm, two fields away from the house. The well was almost full to the curb with water and as I looked over the curb into the well I saw a rabbit floating upon the surface. It looked as if it had not been in there long, so I climbed the curb, reached down into the well and took him out. He was yet quite limber. Right behind our house and barn there was a young peach orchard. I brought the rabbit down to the orchard and set him up as nicely as I could in the dead weeds and grass by one of the peach trees. He looked as natural as life. Then I called very excitedly to our neighbor's boy that there was a rabbit in the peach orchard behind the barn. He ran for his old flintlock, but when he emerged from the house, his father was with him armed with his own fowling-piece. I saw that my game was up. However easily the boy might be fooled the father could not be into shooting a dead rabbit. I stood my ground, however, long enough to point out the tree where the rabbit was. Mr. B. cocked his gun and, true to his theory, began to approach the tree nearer and nearer, waiting for the rabbit to leap forth. And somehow, curious as it may seem, the nearer he drew to the tree the further away from it I got, until, as he placed the end of the barrel underneath the rabbit and tossed him out from the tree a lifeless carcass, I stood trembling in my boots behind the barn squinting around the corner at the cool performance. Such a fire of indignation as burned in the orbs of that man and his son as they turned to look for the little practical joker was enough to squelch forever any boy of ordinary grit. For a long time thereafter it seemed to me the better part of valor to keep out of the way of both, and I did.

On another occasion while passing through this same orchard at nightfall on my return from a short hunting excursion I started a rabbit, fired and missed him. He ran under the barn behind which I hid in the other scrape. The barn rested on stone pillars and there was space enough between the floor timbers and the ground to enable a boy to creep under with difficulty. I loaded again and crawling under a short distance I saw the rabbit, fired and killed him. The burning wad ignited the hay and straw which had gathered there. I forgot all about my gun and game in my anxiety and eagerness to put out the fire, which I succeeded after a while in doing. I then recovered my rabbit and gun and went home, did my evening chores and retired early to bed as the custom is in country life. But I could not sleep. I kept wondering whether or no there might not be some fire still under the barn—some spark that I had overlooked. I sometimes imagined that I heard the crackling of flames. I endured my fear until almost midnight, when it became torture. In desperation I sprang from my bed and went out in the darkness and looked under the barn to assure myself that it was all right. These incidents enforce two lessons: First, never to play tricks on children that would be likely to involve the parent; second, never to be so over-zealous in any cause as to be regardless of probable evil consequences. HIX.

Batavia, Ill.

MY FIRST MOOSE.

I READ with interest and pleasure "Ned Buntline's Last Moose," in your issue of 31st March, and propose to tell you something about the first moose I ever shot or ever saw, although since that time I have killed a great many, at least between fifty and sixty, in the water and out of the water, in winter on snow-shoes and in summer in boats, as well as creeping them through tall grass and mud on the margin of lakes and rivers, and the shores of pokologans and cranberry bogs; and have called them out of the woods with a trumpet formed of birch bark, by imitating their call to their mates in the rutting season, in the early evening when they seek the low swampy feeding grounds to obtain the lily and other succulent plants, of which they are very fond.

It was in June, 1846, that an old hunter of the Rangeley Lakes by the name of Kimball (who has long since gone to the better hunting grounds beyond) and myself paddled up to the foot of Cupsuptuc Bog and camped for a canoe still-hunt in the evening. This being my first experience, the old man made me shoot at a mark with a bullet, seven rods, and I hit the spot on the tree to his satisfaction, and he said I'd do. My gun was an old single barrel—"Queen's arm," I believe he called it—a smooth bore, and carried about an ounce bullet, and, by the way, I used that same gun for many years after for all purposes—with shot for birds and small animals, and bullets for bears, deer, caribou and moose, and it seldom failed me.

We cooked our supper of trout and flap-jacks before night, so as to make all arrangements early for evening hunting, and about sunset started up the Cupsuptuc River through the bog. Our boat was a wooden skiff, just large enough to hold two persons, and the Captain, as the old hunter was familiarly called, took the stern and the paddle, and stationed me near the bow with my gun at my right hand, in the bottom of the boat, and his old rifle at my left. The plan was for the Captain to hit me with his paddle when we were near enough to shoot, and I was first to fire my gun and then catch up the rifle and give him a long shot as he made off, should we miss him at first.

We got well started up the bog before daylight left, moving very slow and still. Not a sound greeted our ears except the everlasting croaking of the frogs and the singing of the innumerable multitudes of mosquitoes, gnats, black flies, midgets and other winged insects, which swarmed around our ears, eyes and mouth, annoying me dreadfully, making the blood trickle down my face, although I had besmeared myself well with salt pork before starting. (Salt pork was then the only antidote known for insect bites.) My orders were not to move a hand or stir, but to sit up straight and not look around or whisper. This, I think, was the toughest experience I ever had—being eaten up alive without the privilege of resentment. I would have given five dollars in a moment to have rubbed my face well just once, but this could not be. The night was clear starlight, but no moon, and the captain propelled the light skiff steadily along without lifting his paddle out of the water, a feat that has to be acquired by long practice and much patience, so as not to hit the paddle against the boat, and all the way you could realize you were moving through the water was by the sound of the grass blades as they rubbed against the boat.

It had now got to be between nine and ten o'clock, and the flies still were punishing us dreadfully, when all at once the stillness of the night was broken by the sound of some heavy animal running into the water at the upper end of the bog. No electricity ever went through a body like this sound. I can only speak for myself, but I felt no more fly-bites after this. The unspeakable thrill this gave my senses I shall never forget. Captain just then turned gently the head of the skiff into a little creek and headed toward the plashing in the water. I slowly raised my old smooth-bore into an

easy position for an aim and pressed my eyes intensely through the darkness to try to discover something tangible, and presently saw what I took to be a bunch of bushes directly ahead, and soon after the bushes seemed to turn partly around. Then I knew it was a living animal, and at the same time the Captain touched my back with his paddle and I drew a bead on him and fired and instantly grabbed the rifle for the last chance; but the smoke of my discharge cut off all chance for a second shot, and I sung out, "Captain, we have lost him, for I cannot see or hear him." But Cap. pushed ahead rushingly now, and soon run the bow against a large moose wallowing in the mud in his death struggles, and after cutting his throat we paddled our way back to camp and rested until morning, when we went back and dressed him off and divided him between us. J. G. R.

Bethel, Maine, April, 1881.

DO CROWS REASON?

PORT ROYAL, Tenn.

IN your issue of February 24 "K. R. C." asks, "Do crows reason?" I think they do. I have watched the crow closely ever since I have been a shoofer, and I know him as well as he knows himself. Crows either reason or talk. If not, why do they always know what's up? A crow will sit on a limb and caw and caw and look saucily at you and allow you to approach very near him, provided you leave your gun behind; but just shoulder your gun and the argus-eyed black demon will take wing and keep out of range. Does he know what a gun is? As well as you do. And he appears to know what you intend doing with it too, as the following circumstance will show. A brother sportsman recently informed me, while discussing the cunning and sagacity of the crow, that he once attempted to "slip up" on a flock of wild geese in a field to get a shot at them; but a flock of crows got between him and the gun and, as he put it, "let me get right up on them. Never did crows let me get so near them before with a gun. Now, they knew my business in that field as well as I did—knew I was after larger game. "Do not tantalize me too much for I'll shoot, if it does make my friends mad who are approaching the geese from another direction." Bang, I went, and down came a crow and up went the geese, and then somebody was mad.

I have been amazed at the statements of some of your correspondents when they speak of the crow as the farmer's friend. With us, here in the South, they are nearly as destructive to young chickens as are hawks. They never tackle a grown fowl, but go for a brood of young chicks. The crow is a great epicure—nobody so fond of eggs as he; and he has such a hankering for young birds—will gobble up the last one he can find. But he is not a success as a depredator till spring comes and you plant your corn. Then he will take it up row by row. To shoot him is out of the question, unless you have a gun that will kill across a twenty-acre field. This is the way to deal with him then: Take hair from a horse's mane or tail, get a sewing-needle of machine size, "thread" a hair in it as in sewing, pierce a grain of corn with the needle, draw the hair half way its length through the grain and then tie it. Prepare a number of grains that way and scatter them where the crows frequent. If the crow swallows one of those grains he may swallow the grain, but he will find six or eight inches of horsehair not swallowed, but protruding from his mouth. Then you will see an energetic, lively crow—then you will see him cut tall shines. He will begin to scratch and pull and claw to get rid of that grain of corn and hair, which will attract other crows. Every crow that hasn't got a hair in his throat will be on hand, and when a large flock of them thus congregates, each one trying to see which can caw the loudest and longest, what a racket! Now that crow will have to fly—perhaps not like Prentice's "proud bird" that could

> "Soar through heaven's unfathomable depths,
> And brave the fury of the northern hurricane,
> And bathe its plumage in the thunder's howl"—

but he will have to keep on the wing, for his relentless pursuers will not cease till they have worried and picked him to death.—BIRDO.

BIRDS IN CONNECTICUT.

SOMERS, TOLLAND CO., CONN., April 11, 1881.

SPRING has surely come to us again, and with it has returned many of our birds, which make nature more complete. I am seated on the old barnyard gate, south of the barn, where the sun shines warm, and not any one to disturb the quiet seat I possess. The flies are buzzing, blackbirds are singing in the trees, robins are hopping among the cornstalk hills in the lot near by, and old Dan (I will not give his correct name, as he is known far and near) my setter, is enjoying their presence by working them up slowly and giving very good apologies for points. Here he comes now, with some of those pests of the setter which abound here in great numbers—burdocks. What is much worse to extract from the setter's fur than one or more of these dry things? All the snow disappeared from this locality some four weeks since, and since then the weather has been slowly improving. The earth is nearly settled and dry now, and we are looking for steady pleasant weather. Some few ducks have been seen to pass up the stream and stop at the head of the ponds a mile above. Last Friday two swallows made their first appearance and seemed to enjoy sailing, darting and dodging about the buildings. Saturday another was with them, and I also noticed a kingfisher sawing out his song on an old tree near the river. The presence of all these of the feathered tribe give us full assurance that spring is surely with us. We all are thankful for the change, as the winter has been a long, hard, cold one; and if we are grateful how much more so must be the poor partridge, quail and other game that has had to find food and shelter through all this long, cold winter. A good number of foxes and skunks have been trapped here this winter. I have taken no walks yet where the partridge and quail are to be found, therefore cannot tell how they have stood the winter. Some reports give us hopes of good shooting next fall. Chance, a few days since, threw me into conversation with a man that a year ago last fall made a business of trapping for the market. He said that a man came into their town, which is in this county, that had been in the business before, and told him what they could do, and proposed to go shares with him. He went in with him, and they commenced to build their hedges about the first of August, and by September 1st they had three hundred ready to set. The first month they made $106, or $53 each. They caught over 300 partridge, and sold what they could of the rabbits caught, and gave away the rest. He said they took six partridge from less than an acre of swamp brush one afternoon, where a man could not have bagged two of them with gun and dog. I don't know how truthful his statement is; I do know the locality he gave for their trapping to be one of the best about here for game. It is plain to see where our game is going. If trapping and vermin, which destroy our birds and eggs, were exterminated, we should have abundance of birds in spite of hard winters. Where are our men that can bag six or even four partridge per day with dog and gun, in our cover here and with our number of birds? I tell you they are few that can average it. I have always hunted partridge, and it is no trap work, I can assure you.

Those that have followed this swift, wily fellow know it is not. He will steal away from you every chance he has, and you and dog have got to work very hard to average four per day. You will have an appetite every night, and also appreciate your bed. The most partridge s I ever bagged in one day was nine, and these over Dan the day he was nine months old. But what a day that was. It never will be forgotten. I had hunted none for two years, and was badly "off;" Dan young, and had to be watched; but he whipped me badly, and where are the old dogs that can do much better? To be sure we found many birds that day, and had I done my duty I should have had nearer thirty than ten. Many men find fault with their dogs, when the dog will beat the gun two to one every day. I have been other days and worked just as hard, and had but my pair of partridge to show for it. I do not mention my good luck to boast, but only to compare with the snaring of these men. I am sorry to see the partridge so fast diminishing here. They are our best game birds. We all know they will take care of themselves during the winter, and are able to hold their own with the gun. I would say we always call our rough grouse partridge, so that no one will misunderstand my meaning. I have spun out much longer than I intended. ROCK.

"WHERE IGNORANCE IS BLISS."—My son Lew and his young friend Joe thought they would like to go a-gunning. Having secured the loan of a gun they trotted off for a marsh some three or four miles distant in the country, and calculated on having some sport shooting at marsh hens. Neither one of them knew a marsh hen from a turkey buzzard, never having seen one; but somebody had told Lew that the marsh was full of them, and as the mud there was not over knee deep, by wading through it he could find plenty of birds and have lots of sport popping away at them. Away they went, skipping along the road like frisky colts in their haste to reach the marsh. The morning was clear and beautiful and the exhalations from the foliage and clover fields would have been called delicious by their city friends. But what cared they for the sweet perfumes with which the morning air was charged! All such nonesense they left to those who could appreciate it. They wanted to shoot marsh hens, and had the air been as fragrant as the "perfumes of Araby" they should have enjoyed the smell of burned powder a hundredfold more. In due time they reached the marsh. As they walked along its edge a great blackbird suddenly rose up, and Lew, who was on the lookout, took aim and fired. Down came the bird, about thirty feet, but in the marsh, and out Joe waded after him. The mud was up to his knees, but he persevered until he recovered the bird.

"What is it, Lew?" Joe inquired.

"It's a marsh hen, Joe. Ain't he a thin one. What long legs he's got!"

"How strong he smells!" Do they live on fish, Lew?"

"I guess he's lived on skunks by his smell. But people say they're awful good eatin'! You carry him and I'll shoot."

They soon flushed another marsh hen, and Lew brought him down. This kind of game was plentiful, and by the time they turned toward home they had bagged about a dozen. Lew divided fairly with Joe, giving him about one-half of the lot.

On their way homeward they had ample time to examine their birds. They were all neck and legs, and, as Lew said before, "awful thin." The effluvia emitted from them was nauseating, but they hung on to them, thinking that the strong smell was caused by something in the marsh which had got on their feathers.

They entered the village with their birds flung out conspicuously, for they felt proud to exhibit such a magnificent lot of game.

Just before they got home they met Bill Somers.

"What kind of birds have you got there, Joe?" said Bill, taking Joe's bunch in his hands.

"Marsh hens, Bill. Ain't they thin?"

"Marsh hens, Joe? Phew! Skunks, you mean!" said Bill, dropping them quicker than he took them up.

"What are you going to do with them, Joe?" said Bill.

"Have them 'briled' for supper, Bill. Lew's going to keep his for a picnic."

Bill seemed lost in astonishment for a minute, and then he yelled out:

"I say, Lew, you old duffer; don't you know that them birds ain't marsh hens? *Them's pokes!*" E. MANNING.

UNTIMELY SHOOTING—Indianapolis, April 4.—A few days since I saw a man—not sportsman—walking along the street carrying a half dozen or more squirrels. This is enough to make one angry. I wish it was in my power to punish those fellows who shoot game out of season. Any man with common sense and a spark of humanity knows better than to shoot squirrels at this season of the year, especially north of the Ohio River. Every time a man shoots a squirrel now he runs great risk of starving a nest of young ones. For how can he tell whether it has not, before he brings it down, a nice little family, perhaps a week or two old in a hole in the neighboring oak ash? There should be a law preventing such fellows from carrying a gun at all. A man that will do it will shoot a farmer's ducks and chickens, and is a disgrace to the name of sportsman. The middle of May, better still the first of June, is soon enough to shoot squirrels in this section, for then the young ones are old enough to take care of themselves. If the single case that prompted this letter were the only one it wouldn't be so bad, but it is not. There are hundreds of "shooters" in every large city who take advantage of the first nice days of spring to shoot every squirrel they can find. Shame on them. Very few hunters, however, think the birds have suffered to any great extent. I noticed some time since in your Faitland, Ind., correspondent's item that he declared there were very few birds in his section. Would say for his and other's benefit that about the middle of last November a friend and myself raised nine good coveys with a single dog, and on a space not more than 100 acres within five miles of his place.—S. H. S.

IOWA DUCK SHOOTING—Hastings, Iowa, April 11.—We are located on the C. B. & Q. R. R., about thirty-five miles from Council Bluff. The West Nishnabotna River runs close to town. The duck shooting this spring has been very fine; they did not arrive till March 23, owing to the cold weather, but they came with a rush—red heads, sprig tails, mallards and teal, all at once. The river is out of its bank and spread over the bottom for a mile in width, so we can only get at them in boats as they come in from the fields and light in the river bends, among the willow and cotton woods. I bagged nineteen in two hours shooting, eighteen of them mallards; killed them all but one dead the first shot. It is almost impossible to secure cripples as the current is very strong and the brush and driftwood prevent a dog doing good work.

As soon as the river runs down we will have good shooting in the sloughs and river bends, and a little later at geese in the fields. I find 4½ drams orange ducking No. 4 and 1⅛ oz. No. 4 chilled shot make a good "duck call," with my gun, a 10 gauge, 10 lbs. We don't go much on 12 gauges here, as most of our shooting is duck and geese, although we have very fair quail and chicken shooting. The past winter was very severe on quail. Numerous crows have been found frozen.—M.

MINNESOTA NOTES.—Sauk Centre, Minn., April 9.—Following is the amendment to our game law passed last winter: "No person shall kill, or pursue with intent to kill, any woodcock, saving only during the month of July, after the third day of said month, and during the months of August, September and October, nor any prairie hen or chicken, nor any white-breasted or sharp-tailed grouse or prairie chickens, save only during the months of September, October and November, nor any quail or partridge, nor any ruffed grouse or pheasant, save only during the months of September, October and November, nor any aquatic fowl, save only between the first day of September and the fifteenth (15) day of May succeeding in any year." The foregoing will save our prairie chickens for a period of two weeks, and they will be much more difficult to kill, owing to the increased strength of their wings. This noble game-bird has received fearful persecution since the advent of the breech-loader and in a very few years would become extinct....."Old honkers have put in an appearance, and the breech-loader is in active service once more. .....We expect grand sport in the stubble the coming fall, for geese and ducks will be unusually plenty.—DELLÉ

EXTERMINATING THE HAWKS.—The Clinton County, O., Forest and Stream Association, with headquarters at Wilmington, offered a series of prizes for the destruction of hawks. The result of the endeavor is thus told: "The Forest and Stream Association of Clinton County on Thursday received and counted the hawks killed in the county and awarded the prizes as advertised. Arthur W. Johnson had twenty-two hawks and took the first prize, $10; Wm. Polk took the second of $5 with forteen hawks; W. H. Bailey third, $3, with ten hawks; Messrs. Lewis, Huddleson, Pickeral, Richardson and McGillery had twenty-seven, making seventy-three in all. The association paid eight and one-third cents each for the hawks in addition to the cash prizes. The scheme has been very successful and has resulted in the destruction of nearly 200 hawks. Our farmers and sportsmen are very anxious to rid this section of this pest and they are making strenuous efforts to secure the passage of the 'Grenier Hawk Bill,' which provides for the payment of fifty cents each, out of the surplus Dog-tax Fund, for each hawk killed in the State. There is a surplus of over $1,309 in the fund in this county, and our sportsmen and farmers, who pay this tax, very properly claim they have a right to some part of it for the protection of game, as they (the sportsmen) have no sheep, and numbers of farmers who are paying dog tax have no sheep killed, so the money lies idle while the hawks are busy. It is expected that our State Senator, Creamer, will support the bill."

LATER.—We learn that the "Grenier Hawk Bill" has passed.

CHINESE BIRDS IN OREGON—Portland, Oregon, April 15, 1881.—Hon. O. N. Denny, a former resident of this city, and now U. S. Consul at Shanghai, has sent to the sportsmen's club of this city, through Mr. A. H. Morgan, a fine lot of game birds. He shipped by the Otago 66 Mongolian pheasants, 7 Chifoo partridges and 12 Mongolian sand grouse. There were received 17 pheasants, 5 partridges and 11 sand grouse. The pheasants and partridges were placed in the hands of Mr. George Green, a thorough sportsman and bird fancier, who has a fine place twelve miles from the city, where he will turn them out. The sand grouse were sent to Clatsop beach and will be properly taken care of. They were fine birds, especially the pheasants, which were large, strong and very brilliant in plumage. If they live they will be quite an acquisition to the game birds of this State. I will keep you posted with regard to their welfare.—STANSEL.

TIM POND.—Kennedy Smith, of Eustis, Me., gives in substance the same report of the good fortune of ruffed grouse in his section of the country given by your correspondent, "Penobscot," of Newport, Me. He says these birds have wintered well from same reasons given by "Penobscot," and are unusually plenty, and if they are successful in their nesting there will be excellent sport about his Tim Pond cabins next September. For the first time the law has fully protected the trout in Tim Pond during the close season. Visitors will appreciate the fact the current season. Smith is making preparation for his guests, of which more anon.—J. W. T.

NEW YORK ASSOCIATION.—The prize committee have announced that, excepting cash, no prizes will be received after April 23, as the committee on printing must have all matter for the elaborate programme by that date. The Washington Gun Club have secured the following prizes: Emil Zeiller, of W. Sachse & Company, New York, donate two cases of Moselle wine and two of Rhine wine, valued at $50; C. W. F. Dare, N. Y., donates one baby carriage, valued at $50; John E. Lenz, Brooklyn, N. Y., a meerschaum pipe, valued at $25; Trans-Atlantic Fire Insurance Company, of Hamburg, Germany, donate through Charles H. Hibbs, assistant manager, $25 cash.

A FLORIDA LAWYER IN THE BUSH.—"Blackstone is thrown aside while the FOREST AND STREAM is consulted by the court since his return from Tampa; in fact, the *deer-skin* forms an admirable position in his library."

The editor of the *Key of the Gulf* indulges in the above, just because the United States district judge, attorney and clerk, recently went on a camp hunt from Tampa, Florida, and helped kill six deer in three days, ten miles from town, the judge killing his first deer. RIFLE.

ROCHESTER GUN CLUB.—The Rochester Gun Club has forty-five members, of whom twelve are lawyers. The officers of the club are: President, M. A. Stearns; Vice-President, J. W. Butts; Secretary, L. A. Amsden; Treasurer, Dr. C. R. Sumner. Executive Committee—H. L. Ward, M. H. Briggs, George D. Butler. Vigilance Committee—M. H. Briggs, Dr. R. A. Adams, A. Bigelow, Dr. H. S. Miller, F. L. King, S. G. Raymond, J. B. McMurrich. Delegates to the Coney Island Convention will soon be selected. The four clubs of Monroe County propose to have a tent in common at the tournament.

SUGGESTION TO WOODCHUCK KILLERS.—This woodchuck business is "none of my funeral." I take an intereresst in it only on the ground of cruelty. There is something utterly revolting to me in the murderous process of chasing an animal to death with dogs, and now that one "Jones" has struck the right chord, give him your ears. There are undoubtedly many ferrets kept for ratting purposes, at least there were some years ago. If the owner of one of these animals would take his gun (ferret) and start on a woodchuck tour through the Eastern States, charging each farmer so much a head for the dead "varmints," he would find it a better business than selling whisky at camp meetings.—DIDYMUS.

INDIANA NOTES—Cloverdale, Ind., April 11.—Snipe have made their appearance, but seem to be very wild. Was out a few days ago and managed to get three out of perhaps a dozen shots. Our quail are, I think, next thing to exterminated, caused by the severity of the past winter and by varmints. Rabbits and squirrels are numerous. A few evenings since I shot a red fox that was being teased by dogs not over two hundred yards from the house. These pests are particularly numerous, one dealer alone handling over fifty pelts the past season. Furs of all kinds have been plentiful and have proved profitable to the handler.—LA BELLE.

DO FOXES EAT APPLES?—Bethel, Me., April, 1881.—One of my boys saw a fox the other morning jump into an apple tree in my orchard and run out on a limb and take an apple that had hung on the tree all winter and jump down again and eat it at the foot of the tree and then make off. A few mornings after I tracked one from the same tree, which had probably been there to try and find another apple.
J. G RICH.

WEBSTER, MASS., April 15.—The Rod and Gun Club have elected these officers for the ensuing year: President, Henry Butterfield; Vice-President, T. F. Bigelow; Secretary, Victor Conant; Treasurer, A. E. Klebort. The officers are to constitute the executive committee. They are to have a practice Wednesdays. The club are to plant twenty bushels of wild rice around the lake for the purpose of inducing wild duck to frequent its shores.—J. B. ARLD.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*	White Bass, *Roccus chrysops.*
Pickerel, *Esox reticulatus.*	Rock Bass, *Ambloplites.* (Two species).
Pike or Pickerel, *Esox lucius.*	
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum,* etc.	War-mouth, *Chænobrytlus gulosus.*
	Crappie, *Pomoxys nigromaculatus.*
Yellow Perch, *Perca fluviatilis.*	Bachelor, *Pomoxys annularis.*
Striped Bass, *Roccus lineatus.*	Chub, *Semotilis corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Pollachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	

We also meet sometimes with the "Spick and Span" Angler, who has a highly varnished rod and a superabundance of useless tackle; his outfit is the most elaborate kind as regards its finish. He is a dapper, "well got up" angler in all his appointments, and fishes much in-doors over his claret and poteen when he has a good listener. He frequently displays bad taste in his tackle, intended for fly fishing, by having a thirty-dollar multiplying reel, filled with one of Conroy's very best retaid sea-grass lines strong enough to hold a dolphin. If you meet him on the teeming waters of northern New York, the evening's display of his catch depends much on the rough skill of his guide. The Rough and Ready Angler, the opposite of the aforenamed, disdains all "tomfoolery," and carries his tackle in an old shot-bag, and his flies in a tangled mass.—THAD NORRIS.

A CHEAP TRIP TO THE NORTH WOODS.

I WOULD say to your many readers that parties desiring a pleasant and economical trip into the Wilderness will find it a good plan to buy a ticket to Prospect, on the Utica & Black River R. R. From there they can get conveyance to any point they desire of the liverymen there, or by writing a few days in advance to J. E. S. Wilkinson or Griff Evans, of Wilmurt, Herkimer County, N. Y., either of those gentlemen will meet them at Prospect station and take them right through, and furnish guides at reasonable rates to visit any portion of the Wilderness with them.

Prospect is the best objective point for all the lakes making the West Canada Creek, viz., Jock's, Jones', Deer, Otter, Moose, Little Salmon, Metcalf, Spruce, Little Rock, Big Rock, G. Pine, Morehouse, Wilmurt (private) and the Canada Lakes, six in number; also North and South Lakes, at the head of the Black River, and many other lakes and streams, well stocked with the finest brook trout in the world.

The expenses of a two weeks' trip through this section need not be over five dollars per week after leaving Prospect, including carriage of self and pack as far as horses can travel. This would also pay for guide if the party numbered five or over. All of which goes to show that a fine time may be had in the woods by parties that are not blessed with a large bank account just as well as though they were millionaires.

This locality is receiving a good deal of attention from State Game Protector Dodge, who resides at Prospect. A. E. Jones and a party, who have just returned from a fishing trip to Jock's, Jones' and Little Salmon lakes, report the fishing good, and not a sign of a deer having been killed in that region during the closed season, which makes the boys believe that next August will open the finest season for deer-hunting known for a long time. And the main reason is that, with a few exceptions, the guides and resident hunters are in accord and willing to co-operate with Game Agent Dodge and see that the laws for the protection of fish and game are enforced. Occasionally a "smart Aleck" tries to get the best of the law, but sooner or later they come to grief. On the 30th of March Dodge seized a box containing forty-four trout in transit from Morehouseville to Fulton Market, New York. The trout weighed thirty pounds, which you see made them a nice average lot to reach New York April 1 and bring a fancy price.

But the "fancy price" will rather be on the other side now, I fear, as the shipper will have to come down with twenty-five dollars for each trout, which is a little higher than the best quotations even on the first day of April. The same week Dodge captured a fellow for "crusting deer" up in the South Lake region, took him before Justice Garlock, of Grant, and "squared him off" to the tune of fifty dollars, which satisfied the young man that he had got deer-hunting enough to last him until the season opened. This active and energetic work on the part of the State Game Protector is having a good effect. Many who have been quite indifferent to the game laws now come out strongly in favor of protection and show a willingness to assist in enforcing the law. All of which I believe will please the many readers of your valuable paper as well as ZAOK.

THE SPANISH MACKEREL.

(Cybium Maculatum.)

LOVELY with all their spangled dyes,
Fairer than flush'd autumnal skies,
With golden drops their sides aglow,
Tinted like the rain-cloud's priamy bow,
The gorgeous Spanish mackerel roam
The rolling, yeasty world of foam;
Now, glittering o'er the waves they skim;
Now, lost in deep abysses swim.

When fields are green and woods of June
Are vocal with the song-birds' tune,
When weeping willows, a fair group,
Full foliaged, o'er the meadows droop,—
When hazels their pale catkins ope
By rivulet edge and turfy slope,
Then swift those rovers of the deep
O'er all the Northern surges leap.

Far off the headlands of Montauk,
Above the hovering gull and hawk,
Far off the isles of Orient,
Where the Sound's breaking waves are spent,
And by the rough New England shore,
Where the vexed tides' incessant roar,
Their gleaning schools flash far and wide,
Disporting in the crystal tide.

Pursuing their erratic way,
Keen as a tiger for its prey,
They follow fast by isle and cape
The fish-school that hath no escape,—
Follow where'er the blue seas roll
By sandy spit and pebbled shoal,
In open bay and spacious Sound,
Where'er the dying prey abound.

Most beautiful in shape and hue
Of all that haunt the waters blue,
Fairer than plumage of the bird
Or fur of the wild forest herd;
Remorseless are they as the grave,
To all the tenants of the wave;
No speed or cunning may avail
When these marauders shall assail.

And yet a cruel fate prepares
For them its treacherous, wily snares;
The fishers, with their fleet of boats,
Outspread their meshes and their floats.
The yacht sweeps down with bellying sail
As stoops the sea hawk in the gale,
And glittering squid and trailing line
Tear them reluctant from the brine.

ISAAC MCLELLAN.

THE TARPON.

"Harness me down with bands,
Curb me with bit and rein
For I scorn the power of your puny hands
As the lightning does the chain."
—CUTTER.

YOUR correspondent "Al Fresco," an esteemed personal friend, says I must make contribution to the columns of your wide-spread and valuable paper, as from the mouth of two or more witnesses is the truth established.

Once upon a time, passing along the wharves in the city of Jacksonville, Fla., a schooner in front of the Carleton House attracted my attention. She was getting ready for sea and had a goodly number of passengers for so small a craft, and as I drew near I discerned they were citizens of Jacksonville bound for the "snapper banks." "Al Fresco" was of the number. I was invited to join them. Nothing loth I sped to my boarding house to say good-by to wife and borrow a blanket, and within ten minutes was with them, having procured a proper line on my way from a friend at the "Club House."

The party, chiefly landsmen, consisted of the Rev. Mr. Tully, Judge Randall, of the Supreme Court, with merchants, lawyers, "Al Fresco" and myself, eighteen in number. We dined while in the river St. Johns *(en route)*. To meet the steward's requirements we divided into three parts, 1, 2 and 3 respectively, as the table would only seat six. First meal: No. 1 came to the first table, followed by No. 2, second table; then came No. 3, third table. Our next meal set, No. 3 was entitled to the first table, No. 2 second and No. 1 last. Our third meal, No. 2 was to come to the front, etc.; but the first meal was the only one the order was observed at. The second meal only six of all classes came to the call, and thereafter but three maintained their ground and their rations. Your correspondent, "Al Fresco," was among the first to succumb. As for the "Domine," before the vessel crossed the bar he with several others made up a purse of $50, begging and pleading to be landed; but it was no use—we started "to go a-fishing." Three or four times a day for three days did the "Domine" poll the party for a return (no majority each time). We reached the banks at midnight—first day out—and anchored. At daylight every line (save one) awaited the order (a prize purse awaited the captor of the first snapper) to cast, but it was no go. "Al Fresco" was somewhat excited; he took the lead and made a cast. In a moment all was explained; the schooner had drifted off the banks. We up anchor and by 11 A. M. struck a fine coral reef of thirteen fathoms. Our lines were all ready and into the water by the time the anchor was overboard. Within the first minute the deck of our little schooner was covered with the sparkling beauties, with scales of pearl covering a body of carmine, and eyes of purest pink. Such were the snappers, averaging about twenty-five pounds each. It was my good fortune to kill a thirty-pound grouper, a superior fish for the table. We had snapper chowder at once and black fish in abundance for the fry-pan. It was laughable and amusing to me to see "Al Fresco casting up his accounts and hauling up his snappers at one and the same time. He is an expert at both.

Our sympathies for the landsmen marred in a measure the full enjoyment of the "fish."

Mr. Editor, did you ever go in search of one of those "fabulous gardens of the great deep," where submarine plants grow in magnificent luxuriance and whose avenues are teeming with the "finny tribe?" Last June we formed a party of four "to go a-fishing" after snappers "Al Fresco" was accorded the leadership by common consent. Says he (to the Captain): "I can put you right on the banks. Your course lay nor' by nor'east from the light till you strike fifteen fathoms, distance about twenty-five miles. At that point the snappers are very large, and there is an abundance of submarine plants," says he to us—"tropical sea fern, sea coral, sea fans, etc., etc.; and as I have promised some specimens to a friend, will get them there." We were making about eight knots, casting the lead every thirty minutes for character of bottom as well as depth. Two of us, with six hooks each to our lines, sought for the "marine plants." We kept it up three days and three nights, eight knots and no stops. The "garden" (only one-quarter of an acre) was not struck. Went fifty miles seaward and cruised up and down. Thirteen fathoms was our greatest depth; still 'twas exhilarating, and we returned pleased with the trip.

Excuse this divergence. My subject was the Tarpon—king of all game fishes throughout the world. I am indebted to that true lover of the sport, "Al Fresco," for the information that induced me last August "to go a-fishing" after large game. I was residing temporarily in Jacksonville, and almost daily the doctor would call upon me. As the "mouth gave utterance to the fullness of the heart," the theme most frequent was "the gentle sport." I had frequently made mention of the enjoyment of taking black bass eight and one-half pounds each from my own wharf at Orange Mills, and "Al Fresco's" invariable reply was: "Why, man, you have been catching minnows." 'Twas provoking, to say the least of it, to thus have my game fish disparaged. "Go down to the mouth of the river and fish," says he. Toward the close of July I began preparation. "Al Fresco" assisted me in making some snoods. He frequently remarked that my hooks were too small (they were the size of butcher hooks and would support a whole beef), and that my lines were too small (I thought they would hold a mad bull). All being ready, I started alone for the steamer to take me to "the fishing" (my friend could not accompany me). Meeting a "sportsman" on the way, I wanted him to join. We reached the mouth of the river St. Johns 6 P. M. The tide being favorable, went immediately to fishing. My hooks were at once broken and my lines were as cotton thread. My companion's outfit was very different from mine, and loaned me a duplicate line ('twas like a bed cord, and the hook like an anchor). Our catch for the evening was four "red bass"—lightest, twenty-three pounds; heaviest, thirty-six pounds. Next morning at 4 A. M. was again upon the "fishing ground," and as the sun's rays made golden sheen of the ocean swells our fishing began.

After killing one thirty-seven and one forty-two pound red bass I felt—yes, 'twas touch and go. My hook was set, and, Mr. Editor, three hundred feet of my line went out like streaked lightning. My hands were badly burned. My comrade seized my line at the auspicious moment and aided me. Three hundred feet away I witnessed the most magnificent spring (10 feet) into the air that my eyes ever looked upon. "What's that?" I cried out. My comrade knew the fish. "A tarpon," was his reply; "watch your line—don't let it snarl—let me play him." He reached the water, head foremost, describing a parabola, and off again with lightning speed. An additional two hundred feet of line, and again that grand acrobatic spring into mid-air. With an angry shake of the head again he plunges into the water, and the maddening rush continues. Six hundred feet away we see him in his third spring, and he was checked, and his return was with like speed, undiminished, and with the same grand agility and power in his mighty leaps. At his fifth bound he broke my hook. Mr. Editor, words fail me to give adequate description of the might, power, agility, speed and gameness of this grand monarch, whose scales are from two and a half to three and a half inches in diameter and of purest pearl. Cutter's "Song of Steam," with which I have headed this article, seems appropriate:

"Harness me down with iron bands,
Curb me with bit and rein;
I scorn the power of your puny hands
As the lightning scorns the chain."

Or imagine a person in the wilds of Arabia, with lariat in hand. Making his cast a wild Arabian steed is lassoed. The noose fails to tighten. How puny his efforts to check his victim. Or conceive a party making a cast and fastening securely the rear car of a lightning express train. How utterly futile the effort to check the train. A locomotive under a full head of steam, with throttle wide open, on a down grade, is somewhat analogous in power to the grand king of game fishes.

Oh, how I did want a twelve-foot salmon rod made of split bamboo, of double strength and weight, with a Frankfort reel that would hold six hundred feet of 11-thread laid line. Methinks the music of the spheres would be discounted in the orchestra of sweet sounds thrilling from that reel.

Mr. Editor, inform your English sportsman that this great king can be had for the taking, and you can assure him that he is as far the superior of the salmon as the salmon is the superior of the perch. Here he is to be found, in this Italy of America, where the orange bloom exhales its perfume and where the fish most do congregate. "Al Fresco" and myself would take pleasure in adding pleasure to all lovers of the most loveable of sports.

Within an hour after my return (was gone eight days) "Al Fresco" called on me. He asked no question, but greeted me with, "Didn't I tell you that you had been catching minnows?" Yes, Mr. Editor, I acknowledged then and there that my eight-and-a-half-pound black bass were but minnows.
Putnam Co., Florida. J. P. POPE.

BETHABARA WOOD.—In your issue of March 31 I notice an inquiry from R. J. H., Harts Falls, N. Y., regarding the greenheart and Bethabara woods. Of the former I can say nothing, but of the latter I can speak with surety. I have a Bethabara wood 10 oz. rod, and have taken several large bass with it—have given it tests that would break any other wood rod I know of, same weight. The best and handsomest rods I ever saw are made by John McCubbin, Scotland, and I find they are made (with the exception of the butt) of this same wood, although it is known by a different name there. It is very elastic and will bear a great strain, and, if properly kept, will be perfectly straight at the end of the season.—G. P. KIMBALL.

It is also used for bows and called "Royal wood."

A TRIP FOR BASS IN KENTUCKY.

MOUNT STERLING, Ky., April 18.

THE skies are clear, but the signs are not "in the Neck." But a mysterious word passed from the Judge to Ticket Agent Parker, of the Lexington and Big Sandy Railroad, and from Coonie Jones, the jeweler, to the Doctor, that bass would bite. So the Doctor invited Grocer Thompson into the counting room as though he would pay his bill, and the same question was put and like answer returned, and in two hours the buck wagons were loaded with sundries of camp life, tent, mess chest, rods, etc. After a slight delay in repairing the minnow seine, we were off for Licking River, in Bath and Rowan counties. Nothing occurred to mar the ride through this fine Blue Grass country, covered with its greenest of green carpets, with short-horn herds grazing on every hillside. Here and there were plenty of plowed land, with hands planting corn or preparing the tobacco fields. We passed by the famous "Hamilton's Flat Creek herds," which contain some of the choicest blood of Europe and America's short-horn stock. Fifteen miles on our road and the scene changes. The country is very poor —plenty of oak timber of fine size, soil of an ashen color, grass thin and stunted. We soon came to the famous "Confedrit X Roads." Did not see anything of Isaacer McGavitt or Deacon Pogrum. Reckon they were resolved in solemn conclave to ascertain how to obtain a drink. We now turned down the river some miles to Giese's Dam, the only one in the Main Licking, which was constructed for a fish trap, but afterward put to grinding corn meal, "a more noble and glorious purpose."

We arrived at the Dam about 4 o'clock, pitched camp, and bought some eggs of a small boy at twenty cents per dozen. Upon remonstrating at such a price, the lad said they were worth more than that, as he had to "break up the old yaller hen to git 'em." He appended that "eggs was powful scace." While supper was being cooked we made valuable progress by adjusting our tackle and surveying the river, which tumbles over a low dam about a hundred yards long, placed at the head of a rapids, thus making some beautiful boils and eddies to catch bass and "salmon" in.

We were aroused at daylight next morning hastily, and dressing, we then gathered our rods and shoved the ferry scow into position and anchored, with a dug-out for a tender. All were eager for the first fish, which fell to the Judge, a ring-eye five inches long, then a ten-inch bass to Jones, then another to the Doctor, then another to the Judge. Breakfast was announced, but such fun could not be left, so we continued until we had eight fine fish, not large but fair size—and who but a hungry, enthusiastic angler can tell how good those fish tasted, killed and cooked to a turn inside of two hours!

The next day we divided, two of us going over in the dug-out to the opposite shore, where we found one of our long, gaunt mountaineers perched on the end of a projecting timber, with a long stout pole cut from the natural growth, with a chalk line attached, fishing as solemnly as a kingfisher waiting for his breakfast. He cast a look of pity upon us as we threw full fifty feet to some favorable looking eddy or swirl or smooth patch of water. Then reeling in and recasting he, hearing the alarm of our Meek's reels slowly unkinked himself, stuck the end of his pole into an empty auger hole, and proceeded to take a nearer view of our "trix," and relieved himself thusly: "Wal, I low it won't take much of a fish to break that buggy whip thing of yourn." I good-naturedly informed him the fish that broke that rod would have to be near as long as he, and just then I felt that well known savage jerk that all know so well, and the fun began. This way, that way, then out of the water two feet high, and the little rod swayed and quivered as if it would part in a half dozen places, but in two minutes I reeled in a fourteen-inch bass, whipped and subdued, as passive as a chip. Our mountain friend gave a low, long whistle, gathered his old coffee pot under his arm, pulled up his line, and somewhat imitated the Arabs upon a certain occasion. And right here let me say, of all rods I ever used (and they are many) a split bamboo is the best. I shall never look for a better. The cost is considerable at first start, but it is economy if one fishes twice a year, and then the comfort and assurance one feels with them in hand!

We caught sixty-two bass, and one red-horse twenty inches long. The bass were not large, but made fine sport. We had all we could eat and brought twenty home with us. Saw plenty squirrels, but the season is closed until May 15, and no member of Sterling Fishing and Shooting Club, I trust, will molest game in close season. VAN.

VERMONT NOTES—Ferrisburgh, Vt., April 2, 1881.—A Westport, N. Y., correspondent of our local paper stated a couple of weeks ago that game-protector Liberty, of Elizabethtown, had made a seizure of nets in Pennsylvania. From last weeks' issue of the same paper I cut the inclosed slip, by the same correspondent: "The suit brought against game-protector Liberty, of Elizabethtown, by Byram, of Peru, for seizure and confiscation of Byram's nets, was tried in Plattsburgh last week, and resulted in a verdict for plaintiff of $55 and costs." Cannot your old Keeseville contributor tell us how it happened that a game protector is successfully prosecuted by a violator of the laws? Why such things should be is a mystery to us, who are anxiously watching the workings of protection on your side of the lake. If it is impossible to frame a game or fish law without a hole through which the poacher may crawl out and get top of the heap, we might as well give up the good but losing fight first as last.

I inclose another slip from the same correspondent's items. What are the fish which have been caught near Valcour? I am very sure that our fish commissioners have never placed any land-locked salmon in Lake Champlain, and as sure that if anything of the salmon kind has been taken in the lake it must be the true salmon, the results of the planting of the salmon fry in the Winorski and Lewis Creeks in 1875. Later some land-locked salmon were introduced in some of the smaller lakes and ponds in the northern part of the State, from which they could not possibly reach Champlain. Perhaps the blue fish, salmon herring, etc., which from my drawing Mr. Hallock took to be of the salmon kind, have just reached the Valcour fishermen. I cannot learn that this beautiful and well-flavored fish had ever been caught in Champlain till within ten years, or twelve years at the utmost, and as far as I know is never caught now but in winter by fishing with a hook through the ice.—R. E. R.

THE slip which our correspondent incloses is as follows: Who can tell what they are? "It is reported that land-locked salmon of good size are becoming plentiful in Lake Champlain, several having been caught during the winter near Valcour. These waters were stocked with land-locked salmon five or six years ago by the Vermont State Fish Commission, and it seems that they may yet become one of the most valuable fish of our lake."

THE TENNESSEE FISH LAW.—Our Tennessee friends intend making their State, in the language of a valued correspondent, "the grandest angling Eden in America." The Nashville *Banner* says:

"One of the important measures passed by the General Assembly was the enactment of a general law for the protection and preservation of the food fish of Tennessee. For this great benefit to the State and its citizens they are much indebted to the tireless and potent endeavors of the Fish Commissioner of Middle Tennessee, Col. George F. Akers, who has worked faithfully to secure the passage of the bill."

The new law referred to provides that it shall not be lawful for any person to catch, kill, destroy, or take fish in or from any of the waters of this State by any means otherwise than by angling with baited hook and line and with trot line; provided that none of the provisions of this act shall hinder or prevent the Commissioners of Fisheries, or their agents, from taking fish from any waters, at such time and in such manner as they may deem proper, and to them only, for the purpose of stocking or restocking the waters of the State; and provided further, that this act shall not be construed so as to prohibit the use of a hand or minnow net in taking small fish or minnows for bait.

It shall not be lawful for any person to place any trap, of any kind whatever, in any stream, or in the mouth of any stream or in lake or pond which has any outlet to any stream either in high or low water, thereby preventing the free ascent and descent, up and down, to and from said waters.

It shall not be lawful for any person to molest, disturb or damage any fish during the spawning season, or to disturb any fish eggs or young fish in any of the said waters in this State.

Any person violating the sections of this act shall be guilty of a misdemeanor, and on conviction thereof shall be fined not less than five nor more than twenty-five dollars, and shall forfeit all boats, nets, seines, gigs, spikes, grab and snatch hooks, and all other contrivances used in violating the provisions of this act, which contrivances will be sold at public acution by the sheriff of the county in which the offense is committed.

CATFISH AS FOOD—Quincy, Ky.—Dr. Sterling wanted to hear from some of his southern friends on the above subject.

First, the doctor is badly mistaken in regard to size. The regular yellow catfish of the Ohio River grows to a very large size. The father of the writer once caught a yellow cat that was 6 feet long, weight 127 pounds. Last summer one was taken that tipped the beam at 115 pounds within a mile of this place, and one was taken about five miles above that drew 185 pounds was taken in the summer of 1878.

We also have the blue or channel cat, as we call them, but they do not grow so large; one was taken Feb. 27 that kicked the scale at 42 pounds; it was injured some way and was barely alive when taken.

The blue and black cats are the fish we catch the most of in our creeks. They are quite a game fish, make a hard fight and will take any kind of bait from the common eel worm up the scale to the fly. The writer while fishing last season for bass hooked a blue cat in very unexpected water. He was at the foot of a riffle fishing with very strong tackle, wire snood, etc., and was using a large sunfish as bait. All at once the line ran out at a very rapid rate, and after some further maneuvers he was finally landed—a five-pound cat. I never caught nor saw one caught in so swift water. They covet still, deep water, around old roots or logs, and prefer a mud bottom. They take the hook with ease and are caught in great numbers around here. They are one of our best table fish, being very free from bones, and are a rich, tender fish. They are cooked like other fish of the same size, but after they get above 25 pounds they are best stewed. I am sure if the doctor could get a dish of this fine fish, stewed by some of our Kentucky cooks, he would never say they were coarse and inferior again.—D.

THE GREENWOOD LAKE SPORTSMEN'S ASSOCIATION have arranged to erect a handsome club-house this season on the upper part of Greenwood Lake, Orange County, N. Y., where for some years they have owned a valuable property. Among the members of the association are Messrs. H. O. Havemeyer, W. O. McDowell, C. Olcott, A. S. Roe, H. C. Cooke, Daniel E. Starr, C. H. R. Doringle, P. M. Millspaugh, C. A. Olcott, H. Griswold, John Underhill, E. A. Wallis and the Rev. A. H. Young. For a number of years these gentlemen and their colleagues have enjoyed camp life, boating and fishing on Greenwood Lake, and so well have they become attached to the attractions of the locality that the erection of a commodious club-house has been decided upon. The building will be complete in all its appointments and architecturally attractive, and measures are to be taken for its immediate erection, so that it may be in readiness for use early in June.

A FISH WITHOUT AN ENGLISH NAME.—There is a fish in Pyramid Lake, and sometimes in the river, which the Indians call couyonie. They weigh about 2½ pounds and resemble the whitefish. They have been caught weighing as high as four or five pounds. They come up as far as Wadsworth in the summer to spawn. Alvaro Evans says the couyonie is the best fish in the river. Comparatively few people know anything about the fish. Pains will be taken to secure a few specimens for the California Academy of Sciences. Old anglers say they never saw a fish of the same kind in any other waters. It may be that the couyonie is a species of fish peculiar to the Truckee and its lakes. If some of the fish sharps in San Francisco get their eye on a specimen its true species may be determined.—*Reno, Cal., Gazette.*

When you have a fish with no name call it "trout," no matter if it is not a bit like a trout. It is the fashion, and you might as well be out of the world, you know. America suffers from Old World names applied to new things, and can't suffer any more; so don't be original and get a new one for a new fish when good old names, as trout, salmon, etc., are plenty.

OHIO FISH LAW.—The following was recently passed: "Under a penalty of a fine from $50 to $100 it is forbidden to catch any fish for salting, packing and selling from the 1st of June to the 1st of September. The fine goes into the Common School Fund. The owner of every dam across any river or creek in the State must keep a chute or way open for the passage of fish. When he does not do so, such passage may be made at his expense. Fishing by seine or net, or in any other way than by hook and line, except for minnows, is prohibited, except in the Mercer county Reservoir, Laramie Reservoir, in Shelby county, and Lake Erie. The penalty is from $10 to $50, or imprisonment from ten to sixty days. Fishing of any sort, except in bodies of water containing as much as a thousand acres, is prohibited during the spawning season—from April 1 to June 15.

SALMON NOW GOOD.—The *Pacific Life* calls the attention of all salmon lovers to the excellent condition of the salmon now in the markets. They are more delicious at this season than they are later on in July and August. In these latter months the salmon are ready to spawn, and the flavor of the fish has in a great measure been lost in the nourishment of the eggs. Just now they are in prime condition, and would be relished by all who desire to enjoy salmon at their best.

PROBABLE EXTINCTION OF GRAYLING IN MICHIGAN.—A correspondent writing from Bay City says: "I fear the grayling are all killed by anchor ice in the Au Sable and Manistee rivers. I saw one of the residents a few days ago, and he said there were millions of them dead. I shall go as soon as the weather will permit If you desire I will let you know the result."

Fish Culture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

[CONTINUED.]

THE SECRETARY then read the following paper:

HABITS AND FOOD OF CARP.

BY H. D. M'GOVERN.

IT is with pleasure that I place before you some of my experience with fishes, more particularly the carp, during the past year. In the carp I have taken great interest, and have been, I am glad to say, successful in developing their growth in our New York State waters My first mention willbe of a lot of eighteen-months-old carps, thirty-five in number, placed by me in a pond prepared for them. The pond was three feet in depth, there being a bottom of mud or fine loam of six inches. Some of my carp would turn the scales at two and a half pounds previous to placing them in the pond, which was constructed for observation and fed from springs. In the early part of January I kept an air hole open in the ice which had accumulated on the pond, and fed the fish by means of a wooden spout, one foot square and four feet long, inclosed in a large sheaf of cathead and closed at the opening with a wad of salt grass to keep the frosty air from entering the tube or shaft. When I wanted to feed my carp I would remove the wad grass and drop my food down the aperture, after which I would obscure the light from the opening by throwing a coat over my head, and would then be rewarded by seeing all fish within range of the opening at the bottom. By this means I could ascertain the food most relished by the carp. And here it is well to say that they disposed of oat meal dough and a dough of rye meal mixed with chopped cabbage more quickly than any other kind of food given them. My shaft worked well until the temperature fell to zero, for then, notwithstanding the covering of reeds or cat-heads, it closed up, and I was compelled to cut holes in the ice and remove all the particles remaining.

After the opening was cleared I would drop in food, and as the fish were not shy they would come to the opening and hover around after eating. Then suddenly you would see a fine carp turn over on its side and, as if attracted by magnetism, come to the under part of the ice and there stick fast. I extricated some few, which you will see on exhibition in the market, with my other fish on Mr. Blackford's stand. I could have saved more of them, but, to use an old fishermen's phrase, I could not see the point of wasting a mackerel to catch a sprat. Now, gentlemen, I am inclined to think that a carp pond should be at least four feet deep, with a foot of soft bottom, making in all five feet. I say this only for our Northern waters, and would not recommend feeding in the months of December, January and February as I think the fish I have mentioned would have gone in the mud and be safe now had I not given them the habit of being fed in frosty weather. They are a fish that I can assure you will withstand any amount of handling in moderate weather, and live longer out of water than any other fish I have ever handled. Some time ago I took an eighteen-months-old carp from my pond—its weight was about two pounds—folded it in a piece of wet bagging, brought it to my home, No. 288 Fulton street, a distance of four miles, and laid it on a slab, while I partook of dinner. I then started with it for New York, and arrived at Mr. Blackford's stand two hours and thirty minutes from the time the fish was taken from the pond. I placed the fish in one of the tanks, and in presence of many of the market men the carp swam off as if it had only been changed from one tank to another. There was no swooning nor cause for resuscitating. I would still further inform those who may have carp in their ponds not to be astonished if, after placing them in one pond, at the lapse of a month or two they find them in an adjacent one having no seeming connection with the first. The fact is, the carp will jump three feet, and then like an eel wriggle its way over damp grass, and make its way to other waters. This has been my experience, and having had, previous to its introduction from Germany by Professor S. F. Baird, but very little knowledge of the fish. I suppose some of my associates in this body are still in the same position of uncertainty in regard to the carp as I was in previous to my personal investigation.

Mr. ANNIN—My experience with carp has been that I received seventeen from Mr. Blackford and have only one left.

A MEMBER—I would like to ask if we have not had the carp in the Hudson River for years? I have heard of their being caught their quite often, but do not know if they are the same as the so-called German carp.

Mr ROOSEVELT—I have seen many hundreds of the carp in the Hudson. They seldom grow above a pound in weight, but in Ohio they have a carp which weighs several pounds, as high as seven, I think.

Prof. GOODE—The fishes spoken of are not the German carp which has lately been introduced. The latter are best for warm waters, especially in the southern States. In the national carp ponds at Washington there are now two hundred of the original carp brought from Germany some four years ago; many of them are so large that they cannot be put in an ordinary wash-tub. The smallest of them will weigh over fifteen pounds. So great has been their growth in America that the Germans have applied for some of the stock to improve their own. A carp sent to Texas when only a few inches long grew to eight pounds in one year.

Mr. MATHER—I collected all the accounts of the growth of carp in America and read them before the Central Fishcultural Society at its last meeting at Chicago. It was published in FOREST AND STREAM of January 27 of this year and will soon appear in the report of the Society referred to, of which I have the honor of being corresponding secretary, and I will be pleased to mail that report to any members of this Association who may apply for it.

Mr. ROOSEVELT—I forget what that large carp in Ohio is called. I gave some account of it in a book of mine, published many years ago.

Prof. GOODE—The President probably refers to some of the "carp suckers," which from their superficial likeness to the carp are so called. They are common in the Ohio Valley and occur in the great lakes. They were called *Carpiodes* by Rafinesque and belong in the family *Catostomidæ* or suckers, and not in the family

Cyprinidæ, where the carps are. There are half a dozen or more species, which are locally known as spear fish, moon carp, etc.

Mr. MILLER—We have quantities of Ohio carp here at times in Fulton Market. They are slightly red.

Mr. BLACKFORD—The fish referred to is the Lake Sheepshead, *Haploidonotus grunniens*, and not the one referred to by Mr. Roosevelt and Prof. Goode.

Mr. MILLER—I once had a Hudson River carp which lived two days out of water in the bottom of a barrel, and when put in an aquarium he swam off none the worse for it.

Mr. PHILLIPS—The fish which is called carp in the Hudson is simply an uncolored gold fish.

Mr. MATHER—Mr. Philips is correct. The mark which distinguishes the true carp from the gold fish is the fact that the former has a barbel or beard attached to each side of the upper jaw, near the angle of the mouth, while the gold fish has none. The Hudson carp has no barbels.

Mr. PHILLIPS—I once went up the Hudson to gather these carp for the Smithsonian at a time when it was claimed by some that there were good carp in the Hudson. A gentleman of color professed to be able to get them in quantity and I employed him. He brought in an ungraceful fish which, as he promised more, I threw away; but no more were forthcoming, and I was forced to return without the specimens.

Mr. MATHER—You will find the Ohio carp figured in the first annual report of the fish commissioners of that State for 1875 and 1876. It has the rays of the front part of the dorsel in exceedingly elongated.

Dr. HUDSON—Among the carp distributed by Prof. Baird are three varieties of one species. There is the scale carp, which is covered with scales; the mirror carp, which has a few large scales in different parts, or perhaps a row of them along the back, and the leather carp, which is naked. Mr. Hessel thinks the latter are best, and Prof. Baird thinks that all the carp in America are tending to the nude variety and will eventually become so.

Mr. ROOSEVELT—In Europe they have worthless varieties of carp as well as good ones.

Mr. BLACKFORD—If you will take a walk through Fulton Market some morning you will hear the cry, "Here is your German carp!" but so far there have been no true carp in the market. There have been several different fishes sold as the German carp here, among them the fish called "Buffalo" in the West. I have not eaten them and do not know how they would compare with the carp.

Mr MATHER—I have eaten both fishes, and while they are neither of them what we would call first-class fishes, the carp are the best of the two. I have eaten carp that were very good and carp that did not seem so good. The German often cook carp in beer or with a beer sauce, which no doubt is excellent to those who are accustomed to it, but did not strike me as being a delicate combination. The carp has a more solid texture than the Buffalo fish. The excellence of the carp lies in the fact that it grows in waters which produce nothing edible, and in the inland portions of the south and other parts where there are no good fish.

Mr. ANSIN—To what class does the Buffalo belong?

Prof. GOODE—It is also one of the *Catostomidæ* or suckers. There are two genera now, according to the latest authorities, the *Ichthyobus* of Rafinesque and the *Bubalichthys* of Agassiz.

Mr. MORGAN—Will the carp take the hook?

Mr. ROOSEVELT—We read of its doing so in Walton and the older angling books, modern ones do not say much about it.

REPORT OF THE OHIO COMMISSION.

THE fifth annual report of the Fish Commission of Ohio for 1880 calls attention to the lack of fishways on the streams, and insists that no one has a right to so obstruct the passage of fish by means of dams.* During the year covered by the report more attention was given by the commission to the propagation of whitefish than any other, on account of their commercial value. Six and a half millions were artificially hatched at the Toledo hatchery, in charge of Mr. E. D. Potter, last spring and planted at various points in Lake Erie. The testimony of the pound fishermen along the south shore of Lake Erie is, that the supply of whitefish, resulting from the several annual plants of millions of the young, is steadily increasing, and the catch of last year, notwithstanding the unfavorable weather for fishing, bears testimony to the value of the efforts to increase the supply.

A new hatchery was established last summer, and the estimate of the superintendent was that in each of the hatcheries, Toledo and Sandusky, there were no less than five million of whitefish eggs. In the report of Superintendent Potter to the commissioners he states that the hatch of the past year has resulted in the production of a hardier and more matured fish than they have had before, and that while in some seasons a loss has been sustained in the transportation of the fry there was none in the past year. Of land-locked salmon about 20,000 were hatched and distributed, and of brook trout 45,000. A few of the eggs of rainbow trout, *Salmo iridea*, were received from California and 1,000 fry placed in a small spring-brook near Toledo.

A chapter on the carp, its growth, spawning, making ponds, etc, concludes the report.

* The Legislature has just passed an act requiring fishways to be built where needed.

THE RACES OF CARP, THEIR HISTORY AND HABITS.*

By RUDOLPH HESSEL, Supt. U. S. CARP PONDS, WASHINGTON, D. C.

I.—THE SPECIES AND VARIETIES.

THE carp, *Cyprinus carpio*, of the family *Cyprinidæ*, has a toothless mouth, thick lips, and four barbels on the upper jaw. In place of the usual teeth of the mouth there are a number of stout teeth on the pharyngeal bones, which are arranged in three rows. It has one single dorsal, which is longer than the anal. Both these fins have at their origin, on the anterior edge, a strong ray, which is serrated in a downward direction. The caudal is of semi-circular shape, and the natatory bladder is divided into two sections, with connecting air-passage. The scales have an entire edge, and the body is compressed on the sides. The general color of the back and sides is a dark olive brown, the abdomen of a whitish yellow or orange tint. The coloring depends, as with all fishes, partly upon the age and season, partly upon the water, the soil, and also upon the food of the fish.

Be it remarked that the carp, which has occasionally been compared to the buffalo fish, has no resemblance to it, with the exception of the similarity of their coat of scales; neither does the flesh of the buffalo fish ever come up to the excellence of that of the carp.

The carp was, in all probability, originally introduced into Europe from Central Asia many centuries ago, and is now common in most of the large rivers. In some parts of Europe, principally in Bohemia, Austria, Southern, Central and Northern Germany, it has become domesticated.

The carp is alleged to have been imported into England in the year 1504. In Austria, which possesses the most extensive carp fisheries in Europe, the culture of the carp can be traced as far back as the year 1227. The Emperor Charles IV. of Germany, by granting sundry privileges, favored the establishment of ponds in his dominions, and the monks were especially assiduous in the culture of fish in ponds. As early as the first half of the fourteenth century Bohemia had its first large carp pond, and the culture of this fish progressed in that country, as also in Poland and that district which now comprises German Austria; also in Upper Lusatia, Saxony, Silesia and Bavaria. A celebrated establishment for carp culture, with large, extensive ponds, was located, as early as the fourteenth century, near the town of Wittingau, in Bohemia, Austria. The first beginning of it may be traced back to the year 1367. At that time the Lords of Rosenberg called into existence and maintained for centuries these establishments on a scale so extensive that to this day they are the admiration of the visitor, the main parts having survived, while the race of Rosenbergs has long been extinct.

The manor of Wittingau suffered greatly from the calamities of the Thirty Years' War, and with it, in consequence, its fish culture. The latter only recovered the effects of it after passing, together with the large estate of a rich monastery of the same name, in the year 1670, into possession of the Princes of Schwarzenberg, their present owners. The extent which carp culture has reached on these princely demains will be seen from the circumstance that their artificial ponds comprise an area of no less than 20,000 acres. The proceeds amount to about 500,000 pounds of carp per annum. The ponds of the Prince of Schwarzenberg are probably the most extensive of the kind on the globe. They are usually situated in some undulating lowland country, where small valleys have been closed in by gigantic dams for the purpose of forming reservoirs. Similar establishments, though not equally extensive, are found in the provinces of Silesia and Brandenburg; as, for instance, near Breslau and Cottbus, in Peitz and Pleitz, which I visited last year. In Hesse-Cassel, Hanover, Oldenburg, Mecklenburg and Holstein there are also many hundreds of ponds, none of them covering more than a few acres, but almost every large farm possessing at least one of them.

It will be easily understood that after such an exclusive culture in ponds, continued through centuries, as also an existence in open water, where the *Cyprinidæ* were left more to themselves, a number of varieties or rather genuine species *Cyprinus carpio*, showing striking differences from the races, were developed, these races, though derived directly from the original type, just as with our domestic animals. They are divided into three chief groups:

1. *Cyprinus carpio communis*, the scale carp, with regular, concentrically-arranged scales, being, in fact, the original species improved.

2. *Cyprinus carpio specularis*, the mirror carp; thus named on account of the extraordinarily large scales, which run along the sides of the body in three or four rows, the rest of the body being bare.

3. *Cyprinus carpio coriaceus, sive nudus*, the leather carp, which has on the back either only a few scales or none at all, and possesses a thick, soft skin, which feels velvety to the touch.

The two last named are distinguished from the original form by a somewhat shorter and stouter, but more fleshy body. It is rather difficult to decide which of these three species is the most suitable for culture. There are some districts where only scale carp are bred and mirror carp are not valued, as there is no demand for any but the former in the market, as, for instance, in Bohemia, in the above-mentioned domain of Wittingau. Again, in other districts, as in parts of Bavaria and Saxony, etc., for the same reason mirror carp or leather carp only are bred. There is, in fact, no sufficient reason for making any distinction among these three varieties, for if they are genuine types of their respective species they are indeed excellent and desirable fish.

The assertion which has been made at times that the scale carp is better adapted for transportation than either the mirror or leather carp by reason of its coat of scales which would protect it more efficiently from the accidents incidental to transfer, as also against inimical or hurtful attacks in the ponds (the mirror carp having very few and the leather carp no scales) is not correct. In transportation scales are not only inefficient for protection, but they frequently cause the death of the fish, especially in transporting the so-called breeding-fish, for if a scale be torn off in part only ulceration will ensue, and the fish of course will die. Again, should any scale be lost the bare spot will very soon begin to fester or develope confervaceous growth and the consequences will be the same. On the contrary, the leather carp, which, oddly, enough like the frog, is destitute of covering, will bear a great deal more illusage and injury whether young or old than a scale carp. The smooth, slippery skin of the leather carp suffers much less from friction during transportation than the scale carp, and any slight wound will heal up more easily, as the epithelium will cover it immediately and the formation of a new skin can progress under its protection. I have often had the opportunity of making such scars upon the skin of the mirror carp and even more so on that of the leather carp. They are the effects of an injury from the sharp edges of the heron's bill, the bite of a pike, or some other hurt; and I never saw anything of the kind on a scale carp, for if one of these be wounded it almost invariably dies.

The carp will sometimes cross with some related species of the *Cyprinidæ*, for instance, *Carassius vulgaris*; and, in consequence, hybrids have been engendered, which certainly in resemble the genuine carp so much that it is often difficult for the student as well as for the professed culturist and experienced fisherman to immediately recognize them. Such fishes are valueless as food on account of their bad and very bony flesh. One of the hybrids mentioned in the *Carpio kollarii—Cyprinus striatus*, which was formerly regarded as a separate species. It is a cross between the carp and *Carassius vulgaris* (crucian carp), a very poor and bony fish, which, in Germany, is sometimes called "poor man's carp." Some varieties exist of this common fish. The latter has even been dignified by a specific name of its own, *Carassius gibelio*.

The spawning season of the crucian and the true carp coincide, and, where kept together, hybrid races may readily be formed; that period including the time from the month of May until August.

In order to determine this question, I myself managed to bring about such crosses by placing (1) female common carp with male crucian carp, and (2) female crucian carp with male common carp, in small tanks, constructed with this end in view; (3) I also put together female *Carpio kollarii* with male common carp; this for the sole purpose of testing the capability of propagation of the *C. kollarii*, which had been doubted. In the two former cases I obtained forms analogous to the *Carpio kollarii* sometimes approaching in appearance the true carp, at others the crucian carp. In the third case, however, having placed ripe *Carpio kollarii* together with *Cyprinus carpio*, I obtained a product with difficulty to be distinguished from the genuine carp. I took the trouble to feed them for three years, in order to try their fitness for the table, but their flesh was exceedingly poor and very bony, and could not be compared by any means to that of the common carp.

Considering, then, the whole extensive tract of country devoted to fisheculture in Central Europe, where crucian carp are to be found from Italy to Sweden and Norway, from France to the boundaries of Eastern Siberia, considering the many who cultivate on a small scale and the owners of badly stocked ponds, with their different doubtful productions, how often do we find in the markets or ponds very nice crosses which have been propagated through from three to ten generations and which are sold for carp! There are many small sheets of water in Germany, France, Austria, Italy, Holland and Belgium, and probably also in England, the proprietors of which imagine, in good faith, that they have stocked their ponds with good, genuine carp, which, in reality, through careless selection or ignorance, are hybrids which may even have been cultivated for two or three generations. In some ponds in Switzerland, near the Lake of Constance, some crosses of *Abramis brama* were found as late as twenty years ago.

2.—THE HABITS AND THE MODE OF REPRODUCTION.

The carp is partial to stagnant waters, or such as have a not too swift current, with a loamy, muddy bottom and deep places covered with vegetation. It inhabits now most of the larger and smaller rivers of Europe, particularly the Elbe, Weser, Rhine, Danube, Po, Rhone, Garonne, Loire, then the Bavarian and Swiss lakes, the Lake of Constance, &c., even salt water seems to agree with it very well. I have taken it in the Black Sea, where its weight often amounts to from fifteen to twenty pounds. It is also found in the Caspian Sea in great numbers, and is known there by the name of *Sassan*.

It is an advantage that the carp is able to live in water where other fishes could not possibly exist; for instance, in the pools of bog meadows or sloughs. However, it is not by any means to be inferred from this that the best locality for carp ponds of a superior kind could be in such situations. The presence of too much humic acid is unfavorable to the well-being of the carp, as we shall see presently in the chapter upon the establishing of fish ponds.

The carp lives upon vegetable food as well as upon worms and larvæ of aquatic insects, which it turns up from the mud with the head; it is very easily satisfied, and will not refuse the offal of the kitchen, slaughter-houses and breweries, or even the excrement of cattle and pigs. I propose to enter further upon the subject of feeding it when I speak of its culture in ponds.

In the moderate zone, that is to say in Central Europe, the carp will, at the beginning of the cold, season seek deeper water to pass that period in a kind of sleep. This will sometimes occur as early as the beginning of November, if the winter should set in early; and it is to be remarked that they will retire at an earlier period in ponds than in rivers. They do so always in groups of from fifty to 100 and more. They make a cavity in the muddy ground, called a "kettle;" in this they pass the time until spring, huddled together in concentric circles with their heads together, the posterior part of the body raised and held immovably, scarcely lifting the gills for the process of breathing, and without taking a particle of food. They do not take any food from the beginning of October, and continue to abstain from it, in some countries, until the end of March, and in colder districts even somewhat later. It will not answer, however, to depend on this habit when transporting them for propagation in the spring or winter time, more especially young carp one or two year old. The fish will arrive in a worn and hungry condition, and must be kept in a tank constructed on purpose for observation, where it has no chance to bury itself in the mud; here it will sometimes take a little food. At such times I generally make use of boiled barley, or rye flour converted into a kind of tough paste by the addition of hot water, and with this I mix a little loam and rye bread; but I continue the feeding only until I can judge from the looks of the fish that they have recovered. Of course, the food is followed with the carp which I imported from Europe for the purpose of breeding in the winter of 1876–77. It is a most striking fact that the carp, though it does not take any food during this winter-sleep in its natural retreat, does not diminish in weight, while, in the so-called "winter-chambers" it does so to a remarkable degree. These "winter-chambers" are large tanks, 1,000 to 5,000 square feet in size or less; they are sometimes walled in with masonry, sometimes they are constructed of wood. Fishes intended for sale are kept in them for a few weeks or months during the winter.

The carp does not grow in the winter. Warmth alone seems to exercise a favorable influence upon it and to promote growth. It only grows in the months of May, June, July and August, and does not appear to continue doing so in September. The slight increase in weight which takes place during the latter month seems to grow out of an accumulation of fat which is being deposited around the entrails. In ponds which contain plenty of food and healthy water, in an ordinary year, the growth and increase of weight in the year will be represented in figures as follows:

	Per cent. of original weight.	Per cent of growth.
May	10–15	13
June	35	31
July	36	34
August	20	18
September	6	4
Total	110	100

If the weather in the month of May be mild and warm from the beginning a better growth may be expected, amounting, as in June, to about 30 per centum. This month (May) is decidedly of great importance for the growth of the fish during the current year, for, in proportion as the fish has grown in the short space of one month, it will take more food in the following ones as the increase of its growth and consequent wants will demand. Culturists, therefore, consider the month of May as being the most important of the whole period of the carp's growth. The above-given calculations, of course, are limited to ponds in which no artificial feeding is resorted to, but in which there is sufficient food by reason of the good quality of the water and soil which produces it.

In small ponds, situated in parks or gardens, which possess favorable soil and river-water, the increase of weight will be even a little greater. Feeding is recommended, for such small ponds (covering only half an acre) cannot produce sufficient food themselves. On the whole, feeding is a make-shift, as will be seen presently, and which in very large ponds of more than from 20 to 1,000 acres should not be made use of.

The above calculations are only admissible for Central Europe, from the Adriatic to the Baltic and the North Sea; in countries further north, as in Sweden, the growth of carp is less, as, on the contrary, in more southern countries that Central Europe, for instance, in Illyria, Dalmatia, Southern Italy, Southern Spain, and partly, also, Southern France, the result is more favorable still. There is a milder and warmer climate, an early spring, a very warm summer and autumn and a late winter which, in addition, is mild and short, combine to exercise a favorable influence upon the thriving condition of the fishes.

In these warm climates the fish becomes lively at a much earlier season, if it does at all pass the winter in that lethargic state, without taking any food, than it does in the countries of the northern parts of Central Europe.

The pond-carp of Central Europe generally leaves its winter retreat when the rays of the spring sun have warmed the water thoroughly, while at the same time it begins to seek for food at a somewhat earlier period in rivers and lakes. At the beginning of the month of March the eggs have developed themselves considerably in the body of the fish, and it only needs a few weeks of warm weather in

they rise more often from the depths below to the surface. Two or three or more of the male fish keep near the female; the latter swims more swiftly on a warm, sunny morning, keeping mostly close to the surface, followed by the males. This is called "*streichen*"—running-spawning—and is more frequent in warm than in windy and rainy weather. The female prefers spots which are overgrown with grasses and other kinds of aquatic plants, such as *Utricularia*, *Nymphea* and *Alisma*. The male fishes follow close to the very water's edge, as far as the diminished depth will allow them. They lose all their timidity and precaution, so that they may be taken quite easily. They lash the water in a lively way, twisting the posterior portion of the body energetically, and shooting through the water near its surface with short, tremulous movements of the fins. They do so in groups of two or three males to one female fish, and forming an almost compact mass. This is the moment when the female drops the eggs, which immediately are impregnated by the milter. As this process is repeated several times, the female drops probably only from 400 to 500 eggs at a time, in order to gain resting time, so that it will require days and weeks before it has given up the last egg.

The eggs of the carp are adhesive, not detached, like those of the *Salmonid,e* these latter lying loosely on the ground, while the former adhere in lumps to the object upon which they have fallen. As soon as the egg has left the body of the fish it swells up a little, the mucus, which surrounds it, serving as a means to fasten itself upon some aquatic plant, stone or brushwood. Those eggs which have no such object to cling to are lost. I found numerous eggs on the reverse sides of the leaves of the *Nymphaea* and their stems, the *Phellandrium* and *Utricularia*, but the greater number of them I discovered on the *Festuca fluitans*, which among fishermen is known generally by the name of "water-grass." Its narrow, long, strap-shaped thin leaves spread softly over the water's surface, as also its numerous branches in the water afford to the fish the sought-for opportunity to deposit its eggs upon its tender leaves. The seeds of this grass are an excellent food for the carp. This may be regarded as a useful indication to be acted upon in the construction of ponds.

The eggs will develop themselves quickly, if assisted by warm weather. As early as the fifth or sixth day the first traces of dusky spots, the eyes, will be visible, and toward the twelfth, or at the latest the sixteenth, day the little embryo fish will break through its envelope. This rapid development takes place only in shallow, thoroughly-warmed ponds, or in such as were expressly constructed for hatching and called breeding ponds. If these ponds are deep, and consequently their water is colder, the hatching process may require as many as twenty days. In from three to five days the young fish has absorbed the yolks, and seeks its food. If the breeding-pond be productive enough to furnish the necessary food for so many young fishes these will grow very rapidly. I shall return to this subject hereafter.

I remarked above that the carp prefers stagnant or slowly-running water with a muddy bottom, and that it lives upon vegetable as well as animal food, aquatic plants, seeds, worms and larvæ of water insects; it is therefore no fish of prey. It does not attack other fishes, and has no teeth in its mouth, but only in the throat, and is, on account of its harmlessness, an excellent fish for the culturist, as well as for stocking large lakes and rivers in general.

3.—THE GROWTH AND SIZE.

Its growth differs, according as the fish inhabits cold or warm water, a river, lake, or pond, finding plentiful food therein, or being fed. An additional factor is the quality of the soil, whether muddy or stony. In cold water, or such as has a stony ground, the carp will not progress favorably. For this reason, the statements concerning its normal size, attained to in a certain given time, differ widely. Very naturally it will exercise an extremely great influence upon the thriving of the fishes, whether the pond contains a great number or only a few of them; whether it is over-stocked, as culturists term it, or whether there are only a proportionate number of fishes in it, according to its capability of producing food. Other considerations remain to be mentioned—namely, is the pond provided with supplies from brooks falling into it, or are the fishes to be fed? The latter course is almost indispensable in the culture of trout. The expenses incurred in this case diminish the income of the culturist; if not resorted to the result will be the same, as the value of the fish will be smaller. This feeding is needless with the carp, if it be cultivated judiciously in suitable ponds, and for this reason alone the culture of the carp is preferable to that of the trout.

In rivers and lakes it grows larger, although the same fish; for the reason, probably, that in a larger space, which at the same time yields more sheltered retreats, it escapes from the pursuit of man more easily than in regular, artificial ponds, and finds more plentiful supplies of food. The question of the species, or I would rather say the race, is of great moment, particularly in respect to carp-culture in ponds.

A favorable result may be expected from the culture of this fish wherever the necessary water is to be found, be it in the north or south, and that, too, as well in ponds as in open lakes and rivers.

The normal weight which a carp may attain to in three years, whether it be scale-carp, mirror-carp or leather-carp, is an average of from 3 to 3¼ pounds; that is, a fish which has lived two summers, consequently is 18 months old, will weigh 2½ to 3½ pounds after following. The carp may turn out to be even more favorable in a warm year, or if only a few fishes have been placed in a pond, as we shall see further on, in the chapter treating of pond-culture and the operations of the culturist.

Carps may reach a very advanced age, as specimens are to be found in Austria over 140 years old.

The increase in length only continues up to a certain age, but its circumference will increase up to its 35th year.

I have seen some common carp in the southern parts of Europe—in the lowlands of Hungary, Servia, Croatia, Wallachia, as also in Moldavia and the Buckowina—which weighed from 30 to 40 pounds and more, measuring nearly 3½ feet in length by 2¾ feet in circumference.

Old men, whose credibility and truthfulness could not be doubted, assured me and gave the most detailed accounts of the capture of this species of fish in former years, giants, which weighed from 50 to 60 pounds, and which they had seen themselves. During the Crimean war, in 1853, a French engineer officer, stationed at Widdin, on the Danube, in Turkey, killed a carp by a bullet-shot, some distance below the city; this fish weighed 67 pounds. I had some of its scales in my possession, of which each had a diameter of 2½ inches. Their structure indicated to a certainty that the age of this fish could be no more than 24 years at the most. It is a well-known fact that two large carps, weighing from 42 to 55 pounds, were taken several years ago on one of the Grand Duke of Oldenburg's domain in Northern Germany. They had been kept in some particularly favorable water, productive of plentiful food, and had been used as breeding fishes. These two specimens might, from their size, be calculated to be comparatively very aged fishes; it was proved that they were only fifteen years old. If we may credit the chronicles kept centuries ago by old families, and especially by the monks, who had taken possession of all the best localities along the banks of the beautiful Danube, then still greater giants had been caught, and that in the waters of the Danube itself. A chronicle of the monastery of Melk, in Austria, refers to a carp weighing 78 pounds, which had been captured on Ascension day in 1520. Another record speaks of a carp which had been taken in the third decennium of the present century in the lake of Zug, in Switzerland, and which weighed 90 pounds. These giants are certainly only wonderful exceptions, but still these facts are encouraging illustrations that it is possible for such large specimens to grow up in favorable water. All the countries, where these large fishes have been found and which are situated between the Black, the North, and the Baltic seas, are pretty nearly such as have a late spring and a long, cold winter. Near Widdin the Danube has been frozen repeatedly. There the carp passes from five to seven months in its winter sleep, during which it does not grow. If this fish thrives so well in the countries which have such a very cold winter (on an average they have the same winter temperature as Boston, Chicago, Milwaukee, Pittsburgh, Philadelphia, New York, Baltimore and St. Louis), where the rivers have not enough food for these fishes by far, their level being regulated by dams, which are a subject of constant complaint of the fishermen, how much more could they thrive in the waters of this country, with their great riches of food? But if we take into account the rivers of the mild south and southwest of the United States, what success may not be expected for this fish in those regions?

If the carp finds food in superfluity it will grow much more rapidly than the above statement indicates. This gives an increase of from three to three and one-half pounds in one year and six months; but this is only a normal one, the food consumed being of an average amount. If the fish obtain food very plentifully it will grow more rapidly. In this case, again, it is to be considered that the waters of the milder climates of this country possess this advantage—scarcely to be judged of or estimated at its proper value as yet—that the fish may be able, during three-quarters of the year, or even the whole year round, to take food, and will omit the lethargic winter sleep conditioned by the cold winter. There is scarcely a comparison to be made so far as the carp are concerned between the rivers of this country, so richly supplied with food, which it will not be compelled to seek for under a constant strife for existence, and those of the much poorer waters of the Rhine, Elbe, Rhone, etc. In the waters of its native country, in Central Europe, after its first wakening from the long winter sleep, it seeks most diligently after the contents of the seeds of the *Nuphar luteum* and *Nymphea alba*, the yellow and white water-lily, the *Phellandrium aquaticum*, *Festuca fluitans*, etc. The waters of the United States abound in all these plants and numerous others, the seeds of which will serve the fish as food; for instance, the wild rice (*Zizania aquatica* and *Z. fluitans*), the well-known Tuscarora rice or "water oats" with its great riches of seeds, and many others, which will yield food profusely and which European waters do not possess, thus giving a great advantage to the American carp-culturist. And then there is the culture of fish in ponds. There are culturists in Central Europe who, wishing to see the fish grow more rapidly, take the trouble to feed them with soaked barley, which they occasionally throw out in different places, and by so doing they have had a very full success, the fish growing larger, that is, more quickly, than when not thus fed. By producing the above-named wild or natural water plants in carp-ponds they will be perpetuated, and the grains which have fallen to the bottom of the water will form an ample article of food for the first spring days, if we do not prefer to give them the almost worthless offal of the slaughter-houses. I do not advocate the so-called artificial feeding of this fish where the ponds themselves yield food in ample abundance, a consummation toward which the Tuscarora rice will largely contribute.

Let us once more consider the fact of its extraordinary increase of weight of about 110 per centum in the exceedingly short space of four months, for during the cold winter time, when ice thickly covers rivers and lakes, nature banishes it into its temporary tomb, which it chooses and digs for itself, to hold its winter sleep in. This fish needs fifteen or eighteen months of growth to gain, according to a low estimation, the weight of three pounds without being fed. But much more satisfactory results are frequently arrived at when favorable circumstances combine, and it will reach a greater weight. There are some culturists who obtain in the same space of time fishes of four pounds weight; of course they possess warmly situated ponds, which thaw very early in spring, and perhaps they assist nature in some degree by feeding the fishes. I have done so myself in two successive years which were exceptionally warm, when I fed the fishes with the almost worthless malt-refuse or "grains." They increased visibly and attained to the above-mentioned weight in the same space of time.

This fifteen to eighteen months of the actual time of growth transpires during a period of three years and six months, as intervening months of winter sleep are to be included during which the growth is interrupted.

I will not recur to what this fish promises to become in the milder regions of the South, where neither ice-bound water nor cold temperatures force upon it the lethargy of the winter sleep, or, may be, the whole year, including the mild winter, for the most vigorous and rapid development, not as in Europe, the sparingly allotted four or five months.

It is not to be doubted that the carp will arrive at the weight of from 2½ to 4 pounds in one year in those warm climates, when in colder regions it requires two years and six months. I do not think that I am mistaken in this; I am ready to stand by this assertion, which the future will surely verify.

I believe I have said all that is most desirable for the culturist to know concerning the carp and its natural history, and I will now treat of its culture in ponds, rivers and lakes, as also the construction of the ponds.

[This article will be published entire in succeeding numbers of FOREST AND STREAM].

HOW BLACK BASS SPAWN—Florida, April 6.—Your correspondent, "Gringo," in your issue of March 10, is right in his surmises as to how black bass spawn. This I know from personal observation: About three weeks since, near a small lake that I stocked with them some four years ago, my attention was attracted by a large bass throwing its tail and fully one-third of its body out of the water. After seeing this movement repeated I looked for the cause, and walking out on a tree that had fallen into the lake I got very near him, which was not at all alarmed at my approach. The water was about three feet in depth. Very soon a smaller bass came up to the other, and, heads together, they swam rapidly around in a circle directly over the bed which I noticed just under the tree where I stood. This they did several times and separated. The female lay on her side and floated or rose to the surface throwing her tail and body out of the water as I first described, sinking gradully again. The male now swam rapidly toward her with wide distended mouth, and grasping her body pressed her from the bed, which settled upon the bed. He then sank to the bed and ejected the milt, making a rapid motion across and over the bed as if spreading everything evenly. This operation continued, I should judge, for nearly an hour, and during that time he must have grasped her five or six times. I noticed that she finally shrank from his approach, acting as though she had been used too roughly. To me it was an interesting study, and I think it fully corroborates "Gringo's" ideas. I notice he offers to give his bass to any one who wants. I do not think he will get a better food fish, as I think I could have proved to him to-day had he been at my table where I had a six-pound fellow nicely baked.

My carp are thriving. They will be two years old in June. Do you think they will spawn this spring? The accounts I get in relation to them in this matter conflict. GEO. E. RIXFORD.

Very likely the carp will spawn this year. Please inform us of the result, and their size.

TENNESSEE.—Mr. James E. Warner bought 100,000 eggs of the brook trout from Mr. James Annin, Jr., of Caledonia, N. Y., and has established a hatchery in Northern Tennessee, on a stream emptying into the Cumberland River. Mr. Warner says: "If the Legislature will not appropriate a small sum of money for the purpose of establishing fish hatcheries, I am willing to undertake the hatching of any variety of fish eggs for any individual or persons, at the *actual cost* of hatching them, as I have a good hatchery, well appointed with every requisite necessary for practical work, and it has a capacity of over two million eggs."

SMELTS IN FRESH WATERS OF FLORIDA—Jacksonville, April 6.—I see considerable said about smelts breeding in fresh water lakes. Would say they are very abundant in all our fresh water lakes down in Eastern Maine, also in New Brunswick, and in some lakes grow to a large size and they never go to the salt water. Appear to be the same species as those we take in salt water.—G. A. B.

TEXAS—Austin, April 5.—The Legislature has created the office of Fish Commissioner on a sound basis, making an appropriation of $5,000 per annum, and giving him a salary of $1,500 per year.—HASTINGS.

Balmy sleep, good digestion, rich blood, elastic step and cheerfulness in Hop Bitters.

The Kennel.

FIXTURES.

April 26, 27, 28 and 29, at New York City.—Westminster Kennel Club Fifth Annual Bench Show, American Institute Building, Third avenue and Sixty-third street. Entries close April 11. Charles Lincoln, Superintendent, No. 138 Fulton street, or P. O. Box 1,500, New York City.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. L. R. Stayton, Secretary, Pittsburgh, Pa.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

THE LAVERACK SETTERS IN AMERICA.

LEATHERHEAD, in his article on the Laverack setters in England, refers to but few of the purely bred dogs and bitches of this celebrated breed which have been imported into and bred in the United States. Mentioning Pride of the Border, Fairy, Petrel and Thunder, and one of the latter's gets, he gives no further account of the now quite numerous list, comparatively speaking, in the country. We fancy this array of Laverack setters in the United States will astonish our cousins over the water, especially the stock of Messrs. Higgins, Goodsell and Snellenberg, and the day may not be far distant when, as with a particular family of short horns, the English may come to this country for their Laverack blood. Without claiming that our list is absolutely perfect in minor particulars, it is in the main correct. A change of ownership of a few of the dogs may have caused us to err in this respect, and one or two of the younger ones named may have died. Of the Laverack imported setters they were as follows:

Pride of the Border from E. Laverack's kennel by C. H. Raymond.
Pedigree from E. Laverack's kennel by C. S. Wescott.
Pride of the Border II. from E. Laverack's kennel by C. P. Parker.
Aldershot from J. R. Robinson's kennel by E. A. Herzberg.
Don Juan from H. F. Grant's kennel by J. H. Goodsell.
Young Laverack imp. in utero, Fairy, from E. Laverack by C. H. Raymond.
Fairy from E. Laverack's kennel by C. H. Raymond.
Fairy II. from E. Laverack's kennel by C. P. Parker.
Magnet from E. Laverack's kennel by C. S. Westcott.
Pearl from P. R. Llewellin's kennel by L. H. Smith.
Petrel from P. R. Llewellin's kennel by "
Peeress from P. R. Llewellin's kennel by "
Victress from P. R. Llewellin's kennel by "
Ruby from E. Laverack's kennel by Dr. Gautier.
Pickles.

Of these, Pride of the Border, Pedigree, Fairy and Victress are dead. The list subjoined gives those of the imported ones alive and those bred in the United States, with the details, name, color, sire and dam, date of birth and name of breeder:

PURE LAVERACK SETTERS OWNED BY J. C. HIGGINS, DELAWARE CITY, APRIL 1.

Dogs—Young Laverack, L B, Blue Prince-Fairy, 1874, E. Laverack; Pontiac, B B, Pride of Border-Petrel, 18-8, J. C. Higgins; Not Named, B B, Pontiac-Fairy II., 1880 J. C. Higgins.

Bitches—Petrel, L B, Prince-Lill II., 1873, R. P. Llewellin; Petrel II., B B, Pride of Border-Petrel, 1875, J. C. Higgins; Petrel III., L B, Carlowitz-Petrel, 1879, J. C. Higgins; Princess Petuel, L B, Carlowitz-Petrel, 1879, J. C. Higgins; Countess Petrel, B B, Carlowitz-Petrel, 1879, J. C. Higgins; Fairy II., L B, Victor-Blue Daisy, 1875, E. Laverack; Fairy III., L B, Pontiac-Fairy II., 1880, J. C. Higgins.

PURE LAVERACK SETTERS OWNED BY J. H. GOODSELL, N. Y., APRIL 1.

Dogs—Carlowitz, L and W, Pilkington's Dash-Countess, 1873, R. P. Llewellin; Don Juan, B B, Tam O'Shanter-La Reine, 1879, H. F. Grant, Esq.; Duke of Beaufort, B B, Pride of Border-Fairy II., 1878, C. S. Westcott.

Bitches—Daisy Laverack, L B, Thunder-Peeress, 1879, J. J. Snellenberg; Carlena, L and W, Carlowitz-Princess, 1879, M. Von Culin.

OWNED BY C. H. GOODSELL, N. Y.

Dog—Planet, L B, Carlowitz-Petrel, 1879, J. C. Higgins.

OWNED BY A. H. MOORE, PHILADELPHIA, PA.

Dog—Thunder, B B, Pride of Border-Fairy II., 1877, C. S. Westcott.

Bitch—Lady Laverack, B B, Thunder-Peeress, 1878, J. J. Snellenberg.

OWNED BY J. R. HENDRICKS, PITTSBURGH, PA.

Bitch—Lora Laverack, B B, Young Laverack-Petrel II., 1880, J. C. Higgins.

OWNED BY COL. HUGHES, DALLAS, TEXAS; IMPORTED BY C. P. PARKER, PHILADELPHIA.

Dog—Pride of Border II., L and W, Blue Prince-Cora, 1875, E. Laverack.

OWNED BY G. W. LANDENBERGER, PHILADELPHIA; IMPORTED BY C. S. WESTCOTT.

Bitch—Magnet, B B, Victor-Blue Daisy, 1880, E. Laverack.

OWNED BY J. W. BLYTHE, BURLINGTON, IOWA.

Dog—Shatto, B B, Pride of Border-Petrel, 1878, J. C. Higgins.

OWNED BY A. C. WADDELL, TOPEKA, KANSAS.

Dog—Laverack Chief, B, W and T, Pontiac-Fairy II., 1880, J. C. Higgins.

OWNED BY HERBERT F. DEANE, MILWAUKEE, WIS.

Dog—Pride, B, W and T, Pride of Border-Petrel, 1878, J. C. Higgins.

OWNED BY JOHN GALE, OROVILLE, CAL.

Bitch—Lulu Laverack, B, W and T, Carlowitz-Petrel, 1879, J. C. Higgins.

OWNED BY MRS. VON CULIN, DELAWARE CITY.

Bitch—Princess Nellie, B, W and T, Pride of Border-Petrel, 1878, Mr. Van Culin.

OWNED BY THEO. MEYER, JERSEY CITY, N. J.

Bitch—Rose Laverack, L B, Young Laverack-Petrel II., 1880, J. C. Higgins.

OWNED BY L. H. SMITH, STRATHROY, CANADA.

Bitch—Pearl B B, Prince-Lill II., P. R. Llewellin.

OWNED BY J. H. WHITMAN, CHICAGO, ILL.

Dog—Charm, L and W, Pride of Border-Fairy, 1874, C. H. Raymond.

Bitch—Diamond, B, W and T, Pride of Border-Ruby, 1875, Dr. Gautier.

OWNED BY C. H. RAYMOND, MORRIS PLAINS, N. J.

Dog—Brough, L and W, Pride of Border-Fairy, 1875, C. H. Raymond; Roderick Dhu, B B, Pride of Border-Fairy, 1875, C. H. Raymond.

Bitch—Fate, L and W, Pontiac-Fairy, 1880, C. H. Raymond.

OWNED BY DUDLEY OLCOTT, N. Y.

Dog—Guy Mannering, B B, Pride of Border-Fairy, 1875, C. H. Raymond.

OWNED BY E. A. HERZBERG, BROOKLYN.

Dog—Aldershot, L B, Emperor Fred-Blue Cora, 1878, J. R. Robinson, Esq.

OWNED BY GEORGE B. CLASON, MILWAUKEE, WIS.

Bitch—Pickles, Land W, Prince-Lill II., 1873, R. P. Llewellin.

OWNED BY J. J. SNELLENBERG, NEW BRIGHTON, PA.

Dogs—Dick Laverack, B B, Thunder-Peeress, J. J. Snellenberg; Mack Laverack, L B, Thunder-Peeress, J. J. Snellenberg; Prince Laverack, L B, Thunder-Peeress, J. J. Snellenberg.

Bitches—Peeress*, L B, Prince-Lill II., J. J. Snellenberg; Peggy Laverack, B B, Thunder-Peeress, J. J. Snellenberg; Pet Laverack, B B, Thunder-Peeress, J. J. Snellenberg; Lea Laverack, L B, Thunder-Peeress, J. J. Snellenberg; Comassio, B B, Thunder-Peeress, J. J. Snellenberg; Maple, B B, Thunder-Peeress, J. J. Snellenberg.

OWNED BY W. P. STEELE, PIERMONT, N. Y., IMPORTED BY DR. GAUTIER.

Bitch—Ruby, red, Cora, E. Laverack.

OWNED BY DR. C. A. STARK, MILWAUKEE, WIS.

Dog—Count Noser, Carlowitz, Princess Nellie, Von Culin.

OWNED BY MONTVIEW KENNEL CLUB.

Bitch—Daisy Dean, L W, Pride of Border, Ruby, Dr. Gautier.

OWNED BY CHAS. S. LINCOLN, WARREN, MASS.

Dog—Planet, L B, Pontiac, Fairy II., 1880, J. C. Higgins.

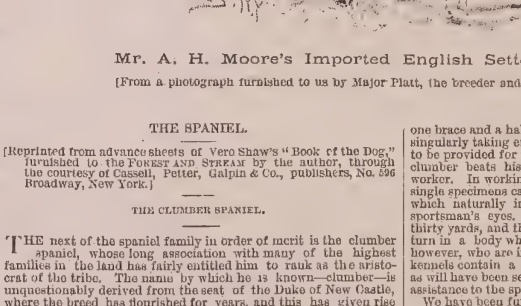
There are two purely bred Laverack setters bred by C. H. Raymond, Esq., Pride of Border-Fairy dogs, of which we cannot procure the information we would like. One Ranger, is owned in Canada, and the other, a bitch, Etoile, once owned by Mr. E. Quimby, of Morristown, N. J.

The dog Penn, advertised in the stud as a Laverack, is not a purely bred setter of that name; his pedigree does not claim such, and is given as 13-16 Laverack and 3-16 Field Trial. He is out of Fussy 7,203, bred by G. Lowe, Esq. (Leatherhead) by Fletcher's champion Rock.

Ruby, of Dr. Gautier's importation, it is settled, we believe, is a purely bred Laverack setter. There was a dispute on this point not long after the importation of Pride of the Border and Fairy, but it is conceded now that she was bred by Mr. Laverack. We give her pedigree in full:

Ruby

Mystery			Cora				
Jett (b, w & t)	Duchess (blue)		Dash (blue)		Moll (b, w & t)		
					Sting (blue)	Belle (b w & t)	
Moll	Sting					Rock	Cora



*Since the above was in type we learn that Peeress is now the property of Mr. Bailey Harrison, Tilsonburg, Ontario.

COCKER SPANIELS.

BY LEATHERHEAD.

VISITORS at shows during the past few years could not have helped noticing the beautiful spaniels at all times exhibited and, taking the Birmingham and Kennel Club shows of the last two seasons, there is a deal to indicate that the breeds have greatly improved in appearance at least, from what we can recollect of spaniels in earlier days. There are no breeds better calculated to receive development than spaniels, as, according to my ideas of breeding, there is no greater proof of a long-established breed than when we see it predominate over another breed when the two are crossed. For instance, a dropper between a pointer and setter will resemble the purest breed parent of the two, and, if the parents are both equally well bred, the produce will be more nondescript in appearance than if, for the above-mentioned reason, there was a leaning to one side The foxhound, the bulldog and the bloodhound are all remarkable for having the predominance in a cross, and their line is more difficult to work out than a strain of any other breed. This, I maintain, is accounted for by the fact that they have for a number of years been breed into their own lines, and, consequently, these lines are very strong. In my travels about, not particularly at shows, but through the country, I have been struck with the appearance of the spaniels in different districts, and, after a lapse of ten or a dozen years, I have thought it remarkable that the same sort of spaniel is seen about the streets of towns, as one can easily recollect, at earlier visits to the town in question. It returns to one's memory that the saddler of the town or his son had a spaniel that was generally seen basking on the pavement, a liver and white dog, flecked with a good, short, thick coat of silky texture, and with a fair amount of feather, but hardly like the show dogs in this particular. It also occurs to your memory that you could have bought the saddler's dog or any other spaniel in the town for about two pounds or fifty shillings, and in the same quarters you do not find them much more expensive than that now, while you can see the very counterpart of the saddler's dog doing about the same as he used to do, namely, basking on the pavement. Now, considering the results that usually follow when dogs are allowed the freedom of the streets, and that care and attention have a natural tendency to raise value, it is somewhat singular that these spaniels continue to reproduce themselves in their own likeness to a remarkable degree. One cannot believe that their blood has always been kept pure, but it would seem that the strength of the sort is so great as to stand a fair amount of mongrelising with no very marked effects. How would it be if some of the sorts I allude to, were taken up and carefully bred, and I refer more particularly to the Devonshire? Years ago they were very good, and many sportsmen kept teams of them. They were, of course, bred with every care and attention, and were medium sized, but very heavy dogs for their inches, and capable, by the force of their own weight, of pushing through covert of any growth or thickness. It was the most popular dog of a sport-loving country, but as battue shooting and such like innovations usurped the place of rough shooting, so have the teams or kennels of spaniels died out, and the breed has continued, as I have stated above, by mere hazard, as, for instance, by the saddler of the town having one, a neighboring farmer another and may be a sporting publican a third. They are always good ones for rabbit shooting in furze-brakes, and for the roughest sort of shooting, or the above individuals would not keep them, and from all I have seen of them I do not think the best of them are to be beaten for gamefinding, or for their untiring pertinacity in working for a gun. I was asked a short time ago by a gentleman in Alsace to get him a spaniel that had won prizes at shows, and that could work blackthorns and hillsides of strong cover in a style he had heard English spaniels could do. I asked whether the show or working qualities were to be of the greater importance, and the reply was in favor of work. I then recommended two Devonshire cockers, dog and bitch, that could be bred from, and I took good care from the quarter I applied to that they should be the best that could be bought for money. At Brussels show last year this gentleman almost wrung my hands off with thanks, and told me that the dog of the brace was the best to kill game over ever seen in Alsace. He was sent to me on trial, and by the style he set to work I could tell that he was a good one in five minutes; but he was a mannish-looking little dog, with no great amount of coat, at least it looked worn with work, a heavily-marked liver and white, rather short in the head, long ears well set, and the best part of him was his legs and feet. I have seen better-looking ones possibly quite as good, and I think that such extraordinary merit as these spaniels possess should be cultivated by the sporting people of Devon in the same fashion as that adopted by breeders of other strains of spaniels.

The beautiful Sussex spaniels and the very-attractive looking black ones may be quite as good as the Devonshire cockers for all I know, but I have never seen them at work, as I have the Devonians; and as I know that nothing can beat the latter for that utter disregard for brambles and thorns, so essential, according to my idea, in the character of a good spaniel, I have constantly recommended the Devonshire cockers when the requirement has been work. I think, too, that when the slipshod way in which they have been bred is considered they give indications of being a wondrously old breed, as one never sees anything but a liver, or liver and white, and there is a stamp running through them that cannot be mistaken. Something very contrary to this is perceptible in higher circles of spaniel breeding, as of late there has been seen a liver-colored one, a black one and a liver and white one taking prizes on the same day, and all belonging to the same litter; and there has also been an instance of a cocker and a water spaniel being shown in such respective classes, although they both belonged to the same litter. What does this mean? and are we to infer that this is the result of keeping up a breed or of manufacturing one? Either in breeding setters, pointers or other sorts it is well known that "Leatherhead" is dead against the manufacturing policy, as he believes that any breed can be improved and maintained from its own sources and more especially when such breeds show the preponderance of strength if they happen to be crossed with other sorts. I fully admit that the spaniels seen at shows, such as have been bred for points and beauty, are any amount in front of the Devon or Welsh cockers on the score of appearance, but I think it should be ascertained that the modern high breeding of spaniels has been all that could be desired for retaining the intrinsic merit of the spaniel such as we know him to be as a sporting dog. The Devon cocker is born with sport in him. He will hunt of his own accord when he is only three months old, and it seems so instinctively in them to hunt that I have known an old bitch take off her litter of puppies as soon as they are able to run, and teach them to hunt rabbits in a furze brake. I should like some one to tell me, from actual experience, his candid opinion as to the best breed of spaniels for work, and I think it would be a good plan if some sort of trials were established to test the question. It would help breeders, and it would guide show committees as to the right distribution of their classes, for at present I think the cocker classes are altogether on a wrong footing. It does not appear altogether clear what a cocker is. We have Sussex classes, black classes, and for cockers, and the latter division is allowed to comprise any liver and white spaniel. My idea is that some of the liver and white families are really more distinct and further apart than the Sussex are from the black ones, and, if so, is there any reason why they should not be separated? The Devonshire spaniels are, in my opinion, certainly worthy of more attention, and those who are fortunate enough to own some of the best representatives of the breed might do very well for themselves by bringing such a useful sort into notice. They might urge show committees, in their own county at least, to give classes for Devon spaniels only, to be no other color than liver or liver and white, and to have been bred in the county, from county stock. I commend this suggestion specially to both the Devon and Cornwall Chambers of Agriculture, as at their annual show dogs are made an adjunct, and some of the Devon and Cornish farmers are the best breeders of these spaniels. Very often one or two are kept on a farm purposely to hunt rabbits, and if they are not always the best broken ones, they are undeniable for work, and will face furze, brambles or thorns of any growth in quest of game. They will also keep on hunting from morning till night, and if they look a bit fagged at the end of a long day, the sight of a gun the next morning will make them, if anything, too lively again, as they are excitable to a fault, and no one could give a Devonshire spaniel too much work to keep him in good working trim.—*Bell's Life.*

Mr. A. H. Moore's Imported English Setter Dog "Darkie."

[From a photograph furnished to us by Major Platt, the breeder and former owner of "Darkie."]

THE SPANIEL.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

THE CLUMBER SPANIEL.

THE next of the spaniel family in order of merit is the clumber spaniel, whose long association with many of the highest families in the land has fairly entitled him to rank as the aristocrat of the tribe. The name by which he is known—clumber—is unquestionably derived from the seat of the Duke of New Castle, where the breed has flourished for years, and this has given rise to the impression among sportsmen that the clumber spaniel owes his existence and origin to some early member of that illustrious house. This is scarcely the fact, however, as we learn on the authority of Daniels that the breed was imported into this country by a Duke of New Castle, who acquired them from the Duc de Nouailles many years ago. It is nevertheless equally certain that the breed was for a long time treasured at Clumber, and that it was extremely difficult for outsiders to gain possession of a specimen.

As regards his origin little can be said, as it is veiled in obscurity; but it may be remarked that certain authorities have argued in favor of there being a remote cross of the foreign basset-hound in the clumber spaniel, though as far as our experience goes the supporters of this theory have hitherto failed to substantiate their statements by an appeal to facts. However, this theory has found its way into print, and may therefore be given merely as a theory which has been propounded, and without any intention on our part to support it. A great deal might be said on the antiquity of this variety by those who are disposed to attach importance to the possession of this attribute, for Edmund de Langley, who wrote in the fourteenth century described the spaniel as coming out of "Spayn," and being in color white and tawny, with a large head and body. It therefore appears to us that it would require a very slight stretch of imagination to connect the ancient spaniel alluded to by Edmund de Langley with the solemn-looking but patrician clumber of the present day. Nor would this reasoning in any way detract from Daniel's statement that the strain of clumber has originated from some dogs procured from the kennels of the Duc de Nouailles. On the contrary, it seems to be a support to it, as it is extremely likely that his dogs would resemble in many respects the breed that, according to the "Maister of Game," existed in Spain in the fourteenth century. Many authorities, no doubt correctly, connect the clumber spaniel with the old setting dog, who was included by Dr. Caius, in his spaniel chapter, under the title of index or setter. In the present day, however, the duties of the clumber spaniel unquestionably lie more in the direction of covert shooting than driving birds in the open, especially as both setters and pointers can readily be found who can manage the latter business far better than the short-legged spaniels can.

In consequence of the jealously with which the clumber strain was formerly guarded by the Dukes of Newcastle, it was a difficult matter to procure a specimen years ago, and, therefore, indifferent clumbers fetched very high prices when in the market. Of recent years, however, dogs of this variety can be more readily procured, and their value has sensibly diminished. In addition to the high value which their rarity placed upon the clumbers, the fact of their being for years very much in-breed brought about the inevitable result, and signs of constitutional delicacy began to appear, which have remained characteristics of the breed ever since. It is not so much in the cases of the older dogs that this objection can be raised against the Clumbers, for a matured dog of this variety usually keeps hale and hearty to a ripe old age, and increases in sagacity and value as the years roll on. It is in their puppyhood that young clumbers are peculiarly susceptible to the ills to which puppyhood is especially heir. As a rule, they suffer terribly from the ravages of distemper, and most breeders of clumbers are on thorns until their valuable stock have safely passed through this ordeal. Fellows or jaundice they also are very subject to, and if it appears in an aggravated form the malady is usually fatal to the invalid. In spite, however, of the difficulty experienced in rearing dogs of this description, the clumber has always been a popular spaniel with sportsmen, and his character fully entitles him to the respect which he has won himself from the highest in the land. Following on the Duke of Newcastle, the names of Earl Spencer, the Duke of Westminster, the Earl of Abingdon, the Duke of Norfolk and the Duke of Portland, have all been identified at one time or another with kennels of this breed. The latter nobleman has at the present time a large and unusually strong kennel of clumber spaniels; but, as they do not appear often at dog shows, the public have but slender opportunities of judging their merits, and comparing his Grace's dogs with those from better-known kennels. Mr. R. S. Holford, of Tetbury, formerly showed some excellent specimens of the breed, and Mr. Statman is also well known in connection with the ownership of many good dogs, nor must that old breeder, Mr. Foljambe, be omitted from the list.

In addition to his aristocratic associations, the clumber spaniel has much to recommend him to the general body of sportsmen, who, as a body, are more inclined to value a sporting dog on account of his own intrinsic merit than because he has been the recipient of patrician patronage. In covert shooting of a certain description the clumber is almost unsurpassed by any breed, and a peculiarity in the breed is that the pure-bred ones, almost without exception, hunt mute, which enables them to draw close up to their game without disturbing it. On this account clumbers are very frequently worked with bells attached to their collars, as by the help of these they can gradually drive the game forward, and the guns can more readily tell their whereabouts in the covert. These spaniels can be worked in teams of any number upwards of one brace and a half, and when this practice is resorted to it has a singularly taking effect, in addition to which good sport is certain to be provided for the guns if any game is in the covert, as the clumber beats his ground most thoroughly, being a very close worker. In working in teams they show but little jealously, and single specimens can readily be broken to retrieve and take water, which naturally increases their value very considerably in the sportsman's eyes. The range of a clumber should not exceed thirty yards, and they should be broken to down charge, or to return in a body when the shot is fired. It is not many sportsmen, however, who are in a position to work a team of clumbers as few kennels contain a sufficient number to enable them to do so, but, as will have been seen above, a single clumber spaniel is a valuable assistance to the sportsman engaged in covert shooting.

We have been furnished with the following notes by Mr. A. W. Langdale, who has devoted considerable attention to the clumber as well as to the Sussex spaniel, and has kindly sent us his ideas for publication:

"This beautiful spaniel is believed to be the oldest known breed of dog genus spaniel, and was preserved many years ago most strictly. The Duke of Newcastle's name has always been associated with the clumber, as it was from this nobleman's estate the breed took the name. Through in-breeding a few years back they almost looked like disappearing, but now, I am glad to say, that in the Duke of Portland's, Lord Arthur Cecil's, Earl Spencer's, and many other sportsmen's kennels, may be found specimens as good as, if not better than, ever were. They are often used for covert shooting in teams of nine, and being naturally mute when at work are of great value, as they can work up close enough to a pheasant to almost clutch him.

"As regards the various points, of course the head comes foremost; this should be decidedly heavy and at least seventeen or eighteen inches round, with a deep stop and a flesh-colored nose, a freckled jaw and lemon markings of such an even nature that you could not at first sight tell the off from the near side of the head. The lower jaw recedes, as in most spaniels, so as to give the appearance of being anything but square. His fore-legs should be short, strong and so put on that when, as is often the case, they descend or jump down steep banks or walls, they stand the shock it must give them from their weight; the feet must be large, and put together closer than that of his water brother. Length of body is a great point, but not less is the depth of his girth fore and aft, so many specimens do not see nowadays with good fore-legs set on nice and low and the hind ones decidedly lofty. The ears should be squarer than those of the Sussex, and should not be feathered below the leather; the stern, when at work, is carried about level with the back, but when going to covert or at exercise you cannot see a prettier sight than their flags carried at about the same angle as a lancer's pennon on the slope. The coat should be thick and smooth—curl is decidedly objectionable—and, lastly, the color should be white with lemon or very pale orange markings; the fewer of these about the body the better. Weight for dogs varies from fifty-seven to sixty-five pounds, but the bitches run much lighter, the heaviest I ever saw scaled being my own Libnah, and she pulled down fifty pounds."

The head should be large, long and massive, flat at the top, and with a decided occipital protuberance.

The muzzle wide and powerful looking. In this respect we differ from the views expressed above by Mr. A. W. Langdale.

The nose large and flesh-colored.

The eye moderately large, light hazel-colored, and rather deeply set.

The neck long though very powerful, and free from all throatiness.

The shoulders very strong, which gives a clumber a heavy appearance in front.

The ears should be large in size, and rather long, lying close to the head, wide at the top, but not lobe-shaped, like in the Sussex. They should be feathered slightly.

The body should be very long and well ribbed up with a deep chest.

The fore-legs should be short, straight, well feathered and immensely heavy in bone. In fact it is one of the chief characteristics of a clumber to be exceptionally powerful in his fore-legs.

The fore-feet should be large, moderately round and well feathered like the fore-legs.

The loins should be thick and powerful looking.

The hind-legs short, not much bent and heavy in bone.

The stern set on low and carried downwards, and should be docked.

The color lemon-and-white throughout, the latter color, of course, predominating. If a dog is marked as described by Mr. Laugdale it is naturally an extra advantage to him in competition.

The coat should be silky, but quite free from any curl, which is a most objectionable feature in a clumber spaniel's jacket. Though profuse the coat should not be too long, as it would interfere with a dog when at work in a covert

In general appearance the clumber is a slow, heavy-looking dog, though his expression betokens intelligence, and he has a thoughtful look which cannot fail to attract.

The specimens we have selected for illustration in our colored plate is Lapis, the property of Mr. T. B. Bowers, of Hunts Cross, Woolton, near Liverpool, though formerly owned by Mr. W. Arkwright, of Sutton Scarsdale, near Chesterfield. Lapis was bred by Mr. W. Arkwright in 1875, and measures as follows: Length of head, from tip of head to occiput, 10½ inches; girth of scull, 18½ inches; girth of chest, 29 inches; girth of loins, 25 inches; girth of fore-arm, 8 inches; weight, 60 pounds; height at shoulder, 18 inches. During his career upon the show bench Lapis has been successful in carrying off the following prizes: First and cup Chesterfield 1876; second Agricultural Hall, Bristol; and Alexandra Palace, 1877; first Blaydon-on-Tyne, first Bristol, first Crystal Palace, and first Darlington, 1878; first Burton-on-Trent and first Darlington, 1879.

Following our usual custom we now conclude with

STANDARD OF POINTS FOR JUDGING CLUMBER SPANIELS.

	Value.
Head, skull, muzzle and eyes	10
Ears	5
Neck and shoulders	5
Chest	5
Body and loins	10
Legs and feet	5
Color and coat	5
General appearance	5
	50

WESTMINSTER CLUB'S SHOW.—The promise for the coming bench show is of the most favorable character. The entries number over 1,000, and everything is progressing smoothly. The Moorefield Kennel, of Philadelphia, have entered twenty-nine dogs, including the champion English setters Leicester and Thunder, the champion pointers Lady Romp, Ruby, Rose, Banjo and Donald, the champion Gordon setter Bob, the champion Irish setters Berkley and Loo II., the champion pug young Scoty, the English setters Rosy Morn, Temple Bar, Lass O'Gowrie, Luna May and Lady Laverack, the pointers Ls Guy, Countess Bang and Guess, the Gordon setters Stella, Mona and Lady Rapid, the Irish setter Raleigh, the Italian greyhounds Pearl and Cream, the pug May, the field spaniel Dash, and the Skye terriers Scottish Queen and Jack. The St. Louis Kennel Club send the champions Bow, Faust, York and Clyth, and also Jessamine, Trinket Trap, Spanway and Lassie. The Toledo Kennel Club send the champion Gordon setter Grouse, the Gordons Chaug, Lang, Venus, January, Toot Tad and Sam, the spaniel Blondy, and the beagle rival. Mr. Edmund Orgill's will be represented by the champions Rush, Belle and Rue, and by Rocket, Rowell, Rhona, Rap, Rival, Rill, Riot Rowett, Random and Royster. The Lachine Kennel will send six cocker and field spaniels and Irish terriers. Among the first is the black cocker Benedict, by Champion Batchelor, out of Negress. Among the Irish terriers is Kathleen and her son, both of which have won numerous prizes in England and Ireland. Mr. J. C. Higgins, of Delaware City, has entered the English setter Dashing Monarch, which took second prize at the Eastern Field Trials last year, and the pure Laverack setters Pontiac, Petrel II. and Fairy II. Miss May Callendar, of Albany, will send the champion Irish setter Rory O'More, and Mr. Frederick A. Taft, of Dedham, Mass., has entered the Gordon setter Dorr, winner at the Nebraska Field Trials. Ex-Gov. Samuel J. Tilden, will show the mastiff dog Wallace, winner of first prize as a puppy at Birmingham, and the St. Bernard dog Askin, winner of first as a puppy at New York last year. Thomas Nast, Jr., has entered the greyhounds Flush, Nellie, Dunder and Blitzen. Mr. A. Newbold Morris has offered a solid silver fruit-stand of the value of $50 for the best foxterrier dog or bitch, the donor's Gamester not to compete. Another gentleman has given two silver collars and a silver coupling cham for the best trace of black and tan setters. Superintendent Lincoln reports that the arrangements for the well-being of the dogs, and the pleasure of visitors are to be much superior to those of any previous exhibition in this city.

EASTERN FIELD TRIALS CLUB.—The Executive Committee of the Eastern Field Trials Club, held their regular monthly meeting Thursday afternoon. The following gentlemen were present: Messrs. Donner, Pentz, Connolly, Grainger, Hall. The committee on revising the running rules of club reported that they had drafted a set of rules, but it would take too much time to lay them before the Executive Committee at this meeting, and therefore they suggested that a special meeting be called for the purpose of discussing them. It was decided to do so, and also to have them printed, and a copy sent to each member of the club. A bushel of a peculiar kind of peas which are good food for quail was presented to the club by Mr. J. C. Rodes, of Alabama. Mr. Bates was ordered a vote of thanks. It was decided to plant a portion of Robin's Island either with sorghum or broom corn, and also to plant the peas, as they afford good cover as well as good food. A meeting of the club was then held. In addition to the Executive Committee the following gentlemen were present: Messrs. Ryer, Hamilton, Danforth and Spooner. Mr. James Watson was elected an honorary member. The following gentlemen were nominated for the position of Treasurer, the election of whom will take place at the next meeting: Messrs. R. C. Connell, George T. Leech and W. A. Coster.

DUKE, JR.—Newark, N. J. April 16.—*Editor Forest and Stream:* You make an error in your answer to "Jappin" in this week's paper, because Hamilton Thompson's Duke was not the sire of Lester's Bang, and Mr. R. Lister knows this well. The sire of Bang was a red Irish setter, Duke, Jr., which I sold to Mr. F. J. L. Lane, of Newark, who sold him to Mr. Batcholar, of South Orange. The full pedigree of Duke, Jr, should be in Arnold Burgess' Kennel Stud Book. Pedigree of Duke, Jr.: By Hamilton Thompson's Duke (Baug-Belle), out of H. Thompson's Bess, out of black and tan bitch, imported; no pedigree. I published the full pedigree of Hamilton Thompson's Duke in FOREST AND STREAM between 1876-77. Mr. Batcholar entered Duke, Jr., in the New York Bench Show catalogue as being out of my Belle when he knew that a black and tan bitch was his dam. I sold Duke, Duke, Jr., Dick, Belle and all the rest of Thompson's dogs as I bought half interest in Mr. J.'s kennel.—W. HUMPHREYS.

DEXTER—LITTLETON, N. H., April 11.—I send you with this a photograph of one of the best dogs I ever followed, and this is saying a great deal. For forty years I have followed the hounds, and listened to their music among our dear old mountains, and in that time have seen a great many noble dogs that I never can think of but with pleasure. This dog, Dexter, in the month of February, started on a hunt on his own account, and caught his fox and started home with him in his mouth, and would have brought him home, but a mischievous boy threw clubs at him and took the fox. He is the property of two friends of mine, and we have splendid times with him and Punch, a cross of a fox-hound and a beagle which belongs to me. They frequently bring in fifteen rabbits in an afternoon. This is the liveliest sport we have, and gives us the sweetest music under the sun, and at the same time beats a man's skill with the gun. B. W. K.

COCKER CLUB—Whitestone, Long Island, April 20.—The postponed meeting of the Cocker Club Committee will take place on Thursday, April 28, at 3 P. M. The place of meeting will be announced in FOREST AND STREAM of that date, as it is not yet known where a room can be obtained. Notice will also be given at the show. There will also be a general meeting of the members of the Cocker Club on Thursday evening at 8:30 P. M. Members whose names are on the published list, and who are unable to attend will please arrange for sending their proxies if they desire to have their votes recorded. At this meeting the Standard Committee will report, the committee for 1881 be elected, the club be organized and other necessary business be transacted.

GEO. D. MACDOUGALL, Secretary.

Whitestone, L. I., April 20.

KENNEL NOTES

**** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Daisy Scott—Mr. C. E. Scott, Schnectady, N. Y., claims the name of Daisy Scott for his one year old Gordon setter bitch pup, out of Thompson's Bess by Doan's Tom.

Scott—Mr. G. S. Thomnson, Foxboro, Mass., claims the name of Scott for one year old setter pup, out of Bess by Doan's Tom.

Lowell—Claimed by Mr. W. G. Root, McIntyre, Pa., for his Irish setter bitch, purchased from Mr. Blyth. Her markings are red, with a little white on tips of toes. Got by Joel from Gipsey.

Teresa Ann—Mr. W. F. Mickle, Onondaga Valley, N. Y., claims the name of Teresa Ann for his black and tan bitch, out of his Fan by J. Gladstone's Rex Nevis.

General Fry—Mr. B. D. Francis, Brooklyn, L. I., claims the name of General Fry for his black and tan Gordon setter dog, whelped April 16, 1880, Rushmore's St. Laurent (Border Lily-Dr. Aten's Glen) out of Lawrence's Freal (Belmont's Fan-Sanho).

Don Bruno—Mr. B. D. Francis, Brooklyn, L. I., claims the name of Don Bruno for his black and tan Gordon setter dog, whelped November 8, 1880, Rushmore's St. Laurent (Border Lily-Dr. Aten's Glen) out of Lawrence's Freal (Belmont's Fan-Sanho).

Jennerfield—Mr. B. D. Francis, Brooklyn, L. I., claims the name of Jennerfield for his black and tan Gordon setter bitch whelped April 16, 1880, Rushmore's St. Laurent (Border Lily-Dr. Aten's Glen) out of Lawrence's Freal (Belmont's Fan-Sanho).

Sir Wilfred Lacaster—Claimed by Mr. W. W. Taulman, Nyack, N. Y., for his Gordon setter dog, black and tan, whelped Aug. 15, 1881, out of Luther Conklin's Fan by Cortlandt's dog.

Count Gordan—Claimed by Mr. J. L. Valentino, Nashville, Tenn., for black and tan Gordon pup out of Mr. Martin's Gordon bitch Fanny, by a noted Gordon dog, private stock.

Zero—Claimed by W. H. Miles, Jr., for puppy recently purchased of Mr. Kirk.

Lord Wilf—Mr. Emerson Gaylord, Chicopee, Mass., claims the name of Faithful for liver and white pointer dog, whelped Dec. 9, 1880, by Goodman's Rattler (Ranger-Bess) out of Goodman's Zip (Snapshot-Fanny).

Cap Plunket—Mr. C. W. Patterson, Beaver Falls, Pa., claims the name of Cap Plunket for his dog pup.

Bess—Mr. Charles O. Woodbury, Methuen, Mass., claims the name of Bess for his dark liver and white pointer bitch puppy, whelped Dec. 30, 1880, by Sam out of Countess Nell, bred by Mr John L. Martin, Milford, Mass.

BRED.

Dot-Lofty—Mr. W. J. Embry's (Columbia, Tenn.) setter bitch Dot to Mr. Clarence K. Dean's Lofty (champion Prince-Leda).

Mollie-Coin—Mr. S. T. Mammond's (Springfield, Mass.) Ethan Allen setter bitch Mollie (Boss-Cosey) to Mr. Frank B. Fay's (Boston, Mass.) Coin (Leicester-Rose) April 12.

Elcho—The following bitches have visited champion Elcho: Lhian, owned by Wm. Z. W. Ripley, Rutland, Vt., 23d of March; Dr. Wm. Arvin's Gordon setter Noreen (1st at Dublin 1880), April 6; a bitch owned by M. Wadsworth, Bennington, Vt., April 8, and Dr. Wm. Jarvis' Rose, April 11.

Thorn-Flute—Mr. I. C. Bishop's (Monson, Me.) beagle bitch Thorn (Victor-Lucy) was bred to Mr. N. E. Elmore's (Granby, Conn.) Flute (Rattler-Trip), April 14.

Baron-Sport—On 10th inst., Mr. Waycotte's (Toronto) Sussex spaniel Sport to Mr. J. F. Kirk's imported Sussex spaniel Baron.

Blue Belle-Dashing Monarch—E. W. Jester's setter bitch Blue Belle (Rattler-Waddington's Daisy) to Mr. J. C. Higgins' Dashing Monarch, April 11, 1881.

Belle-Rocket—Mr. Ed. Orgill's pointer bitch Belle (Flake-Lily) to same owner's Rocket, April 12.

Belle of Anchorite-Joe, Jr.—Mr. J. Louis Valentino's black, white and tan bitch Belle of Nashville to Mr. G. W. Campbell's champion Joe, Jr.

Gretchen-Kentuck—Mr. A. Winter's Gretchen (McLeod of Dare ex Brunhilda) to Mr. Kentuck (Berkley ex Kirby.)

Mattie Lyle-Jersey Boy—P. Healey's (Gloucester City, N. J.) setter bitch Mattie Lyle to same owner's Jersey Boy.

Scrap-Rory O'More—Mr. M. G. Evert's (Rutland, Vt.) bitch Scrap to champion Rory O'More, of Rory O'More Kennel, Albany, N. Y.

WHELPS.

Norah O'More—Rory O'More Kennel, Albany, N. Y., Irish setter bitch Norah O'More (Berkley-Tilley), winner of 1st prize at New York, 1880, whelped ten puppies, six dogs and four bitches, April 12, by champion Rory O'More.

SALES.

Ben, Jr.—Mr. J. C. Bishop, Monson, Me., has sold to Mr. A. McDonald, Rockland, Me., Ben, Jr., whelped Feb. 23, 1881, out of Belle (Fan-Chase) by Ben (Diana-Reno).

Leader—Out of same litter as above; sold to Mr. Henry Stevens, Guilford, Me.

Ray, Jr.—*Editor Forest and Stream:* In your issue of April 7, in the report of sale of I. V. P. Hoxsie Ray, Jr., to I. L. Thomas is an error in should be O. T. Thomas. Yours respectfully, O. T. THOMAS.

Daisy—Mr. G. S. Thompson, of Foxboro, Mass., has sold to Mr. C. E. Scott, of Schnectady, N. Y., the Gordon setter bitch pup Daisy, one year old. Daisy is out of Bess by Doan's Tom. Bess is out of Thompson's Queen Bess.

Pete II.—Mr. Charles F. Kent, of Monticello, N. Y., has sold to Mr. George M. Tiffany, of Hartford, Conn., the black pointer dog Pete II. *Nellie*—Mr. Chas. F. Kent has sold to Mr. Edward Odell, of New Orleans, La., the red Irish setter bitch Nellie (Plunket-Carrie).

Dash—Mr. Chas. F. Kent has sold to Mr. Edward Odell the red Irish and English setter dog Dash (Doctor-Nelly).

Belle-Music Whelps.—Dr. A. McCollom has sold a brace of pups out of Dr. J. Symington's imported Belle by Dr. J. W. S. Arnold's Music to Geo. H. Everall; also one bitch pup to Chas. M. Wray, all of this city.

Pearl.—Mr. A. H. Moore, of Moorefield Kennel, has sold to E. W. Jester, St. Georges, Del., his imported Italian greyhound bitch Pearl, bred by Wm. Bruce, Esq., Bankside, Falkirk, Scotland. Pearl is by Deerstalker ex Spicy Queen. She took 2d to Mr. Moore's Cream, at Pittsburg, Pa., 1880, and is akin to Weetower and Daisy, noted winners in England and Scotland. Mr. Jester intends using her as a brood bitch. She is entered at the coming New York show by Mr. Moore, and is to be delivered to Mr. J. after it is over.

Rex-Italia Whelps—E. W. Jester has sold to Mr. T. H. Murray, Raleigh, N. C., three bitch puppies; also to Mr. Edward P. Kirby, Jacksonville, Ill., one dog pup out of Italia by Rex, Italian greyhounds, whelped Feb. 2, 1881.

Rose-Elcho Whelps—Of Dr Wm. Jarvis' (Claremont, N. H.) Rosa's last litter, whelped Dec. 6, 1880, by same owner's Elcho, Mr. Thos. Blyth, of McIntyre, Pa., has purchased a dog; Mr. F. G. Bixby, Boston, Mass., a dog; Mr. Leander Lee, East Saginaw, Mich., a dog, and Chas. S. Keller, of Washington, D. C., a dog.

Rory O'More-Magenta Whelps—From Rory O'More Kennel, Albany, N. Y., a pair of red bitches, six weeks old, by champion Rory O'More out of Magenta, to Mr. Wm. Canning, Georgetown, D. C.

Rory O'More-Queen Bess Whelps—From Rory O'More Kennel, a red bitch, eight months old, by champion Rory O'More out of Queen Bess, to Mr. Wm. H. Cox, Newport, Ky.

Frost II.—Capt. C. E. McMurdo, of Stadwell, Va., has sold to Mr. Macdougall, for a gentleman in Canada, the lemon and white setter bitch Frost II., by Gladstone-Frost, she by Leicester-Victress. Frost II. was broken by Capt. McMurdo, is a grand field bitch and very handsome. She was bred to Count Dan (Carlowitz-Queen Bess) before leaving Stadwell. Price was $250.

Budge—The Lachine Kennel Club, Whitestone, L. I., have sold their imported 4½ pound Yorkshire terrier Budge, by Cavanagh's Dreadnaught, to a gentleman in Memphis, Tenn.

IMPORTATIONS.

Cockers—The steamer Romana from Hull, England, which has just arrived in this port, had on board a brace of black spaniels consigned to Mr. E. B. Goldsmith, Forwarding Agent for the Kennels of Messrs. C. B. Cummings & Son, South Acworth, N. H. The following description of the brace has been kindly sent by Mr. Goldsmith, which, although rather long, we publish in full:

The dog Brush II. by champion Brush out of champion Rhea. Brush and Rhea are considered to be the best brace of black spaniels in England by long odds. Brush is illustrated in Stonehenge's book, "Dogs of British Islands," and is winner of over seventy prizes and cups. Rhea is winner of 74 first prizes and cups. Brush II. is of an intense ebony black color, not a white hair on him, and with the exception of weight (which is a little less) measures very near in his sires (Brush) inches. Flat coat, low build, long-headed dog of fine appearance, and as to his head, legs and feet, I have never seen them equalled. Blackie II. by champion Beau out of champion Blackie. Beau has won, since July, 1880, when he was exhibited for first time, ten first prizes and two second. Blackie is sister to Brush, and has won fifteen first prizes and cups, and is less than three years old. Blackie II. is somewhat smaller than Brush II., flat coat, long lean body, strong legs and feet, and such a head and ears as I would have made to order; and her color is the finest jet black, with a most beautiful polish. In fact she is a bitch of any amount of substance and of rare quality. The brace were bred by Mr. Arthur H. Easten, of Hull, England, one of the most successful exhibitors of black spaniels in that country. As the black spaniel is all the rage in England and fast coming in style in this country, this brace ought to prove a valuable acquisition to Messrs. Cummings & Sons' Kennels.

DEATH.

Quail—New York, April 11.—My setter dog Quail dropped dead yesterday without a moment's warning, being in apparently good health. I had, however, noticed during the past week a difficulty in his breathing in going upstairs or in jumping around in play. I think the cause must have been heart disease. Can you perhaps enlighten me?

F. O. DE LUZE.

Your surmise is probably correct. Nothing but a post-mortem could positively determine.

KENNEL MANAGEMENT.

128. W. M. G.—My setter bitch, sound in every particular, is annoyed by a continual jerking of the left fore-leg. Very nervous in same shoulder. Age. She has chorea—St. Vitus' dance. Careful attention to her general health with plenty of exercise in the open air may improve her condition. A pill of nux vomica, ½ grain; valerianate of zinc, 1 grain, and quinine 2 grains, given two or three times a day, will also aid her recovery.

129. WANNALAMIT.—The dog has mange, and should be treated accordingly. You cannot, however, cure him if deprived of proper exercise, and care in feeding and kenneling.

130. Doc.—I have a setter gyp 8 months old that sucks eggs. Can either you or any of your readers tell me how I can cure her? Ans. "Doctor" a few eggs with cayenne pepper, and leave them for her to suck.

131. E. G. C., Norwalk, O.—What is the best method to dry up a bitch's milk after having a litter of pups. Is it best or necessary to cut off the tip end of a pup's tail in order to have it straight and not curl. Ans. Rub the teats with camphorated oil twice a day, and gradually remove the puppies. Docking the tail is now out of fashion.

Use Hop Bitters once and you will use no other medicine. Test it.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SKIRMISHERS' PRIZE.—The conditions of the new Travers prize at Creedmoor, in accordance with the suggestions of Major Gen. Hancock, have been fixed as follows: Skirmishers' Match, to be shot at Creedmoor, during the ninth annual Fall Prize meeting of the National Rifle Association. Conditions—Open to members of the regular army, navy, marine corps, national guard, volunteers or militia of any country, State or Territory. Competitors to be in uniform (jacket, cap, trousers, belt and cartridge box or belt). Distance 600 to 200 yards; second-class targets. Weapon, any military rifle, except repeating rifles. Competitors form in single rank, in squads, in rear of the 600-yard firing point, opposite the targets to which they are assigned, each having his ammunition in his cartridge-box or belt, and to be numbered from the right. At command of the officer in charge, the man in each squad whose number is called advances to his firing point (600 yards) and loads. At the bugle call, or other signal, each competitor then assumes the double time and advances toward the target, taking his alignment from the guide designated until a second signal is sounded, when he halts, assuming any position he may, and continues loading and firing in his discretion until the next signal, which will be given twenty seconds after the command "halt," when he rises and again advances in double time until the signal "halt and commence firing" is again sounded. When the competitors arrive at about 200 yards from the targets the signal "skirmishers in retreat" is sounded, when they face about and return over the same ground, firing as before, the rifles to be carried on the right shoulder in retreating. Five halts are made in advancing and five in retreating, competitors firing as they please, not to exceed twenty shots in all, but must fire at least once at each halt. Upon arriving at the 600-yard firing point the signal to "cease firing" is sounded, when the markers examine the targets and signal the total number of hits upon each, as follows: 80 many bullseyes, centres, inners and outers. The practice is continued in this manner until all the competitors have fired. Five points will be deducted from a competitor's score for each failure to fire at least one shot at each halt, for each shot fired after a signal to cease fire has been sounded, or for each shot found on his target in excess of twenty. A competitor firing on a wrong target will be at once debarred from further competition. Entrance fee, 50 cents for each entry. Re-entries permitted to the extent that time and target accommodations will allow in the discretion of the Executive Officer in charge of the match. Prizes—1st, gold badge or other prize, presented by Mr. William R. Travis, costing $100; 2d and 3d, $30 and $25, respectively; 4th and 5th, $10 each, offered by General Hancock; 6th, 7th, 8th, 9th, 10th, 11th, 12th, 13th, 14th and 15th, $5 each, offered by N. R. A.; 15 prizes, cash and badge, $250.

MARKSMAN'S BADGES.—At their last regular meeting the Directors of the National Rifle Association, on motion of Judge Gildersleeve, adopted the following:

"WHEREAS, The decision of the military authorities of the State of New York to discontinue the further issue of marksmen's badges to its National Guard will result in so largely impairing the skill in rifle practice which they have attained as to call upon the National Rifle Association to do what it can to supply their place, it is, therefore,

"*Resolved*, That the President be requested to ascertain from the Adjutant-General whether National Guardsmen, qualifying at their own expense in matches of this Association (as was allowed prior to 1880) will be recognized by the State as 'marksmen,' and whether, if the National Rifle Association should decide to continue the issue of the marksmen's badges to those so qualifying without cost to the State, it will be permitted to use the die for the purpose of having them made."

If it is made to apply to the whole State the offer of the N. R. A. is a generous one and should be accepted.

In accordance with this resolution the following letter was sent to Adjutant-General Fred Townsend:

General: The decision of the State authorities to discontinue the further issue of the "Sportman's Badge" to the National Guard of the State of New York, as regarded by the National Rifle Association as inevitably tending to greatly impair not only the interest in that important part of the soldier's duty, the use of the rifle, which it has sought to create among the National Guard, but

also, in its opinion, to largely diminish the military efficiency of that organization. The Association has, therefore, considered it to be its duty (if the State, from economy or other cause, withdraws the badge), to endeavor, if possible, to offer a badge of some description in its place on its own account. I would esteem it a favor if you would inform us as to whether, in case such a badge should be so provided, the State will recognize scores made by National Guardsmen in the matches of the National Rifle Association, or of any other regular Rifle Association at 200 and 500 yards, as qualifying them "as marksmen" in the manner allowed prior to 1880, it being understood, of course, that they be at their own expense for transportation, ammunition, &c. Also whether or not the National Rifle Association will be permitted to use the die now in the possession of the Department of Rifle Practice for the purpose of manufacturing marksmen's badges at their own expense. It is desirable, for many reasons, to keep up the Game badge, and if the State does not intend to issue them hereafter it would seem as if there could be no objection to the National Rifle Association undertaking to do so. I have the honor to be, General,

Yours very respectfully,
(Signed), WINFIELD S. HANCOCK, Pres. N. R. A.

To Major-General Frederick Townsend,
Adjutant-General N. G. S. N. Y.

BOSTON, April 16.—The spring shooting shows the result of careful practice during the winter, and the return of fine days does not show any of that rustiness which is to be met with in many ranges where the marksmen lie fallow all winter. The attendance to-day at Walnut Hill, light in the early morning, was largely increased by the midday train, and the pavilion had a fair showing of riflemen in the afternoon. In the early stages of the shooting the snow on the ground before the butts prevented good sighting and the participants complained of blindness. Later on the warm sun disposed of the white mantle. The wind at noon was blowing quite a little gale, although steady, the dial indicating, between 9 to 10 o'clock, west. The targets stood out boldly from the crevice of the fine a week ago, on a dark background. Later on in the day the wind changed several points and came in fitful gusts, requiring constant change in windage. The sky also became overcast and better work was accomplished. The following are the best scores from among a large number of entries:

Record Match (Massachusetts Target).

A C Gould	10	11	11	10	11	10	12	12	—77
E Bennett	12	12	10	11	10	10	12	—77
J A Gorham	11	9	11	11	12	11	11	—77
G B Frost	11	10	11	11	10	11	12	—76

E Emerson	4	4	4	3	5	4	5	4	—41
J Baldwin	2	4	4	4	4	3	4	4	—35

THE MAGNOLIA GALLERY, Boston, has been well filled day and evening and the best work of the season has been done. Cram still leads in the Badge match. In the Forest and Stream match Mr. G. C. Arthur has a lead of two points over Harris, who follows for 245. The Pistol match is still very popular, and Mr. Dunn leads. Mr. Williams is at champion's mantlet, while Ames is a good third. The Forest and Stream match will close this month and it looks now as if Arthur would be the successful winner of the elegant trophy offered for the best five scores. The week's summary in all the matches follows:

Badge Match.

Cram	49	49	49	49	49	—245
Drew	48	48	48	48	49	—241
Harris	48	47	48	46	45	—234
Mayo	4	5	5	4	5	5	5	5	5	—47
White	4	5	5	4	5	5	5	4	5	—47
Twiss	5	5	4	4	5	5	4	5	4	—46
Merrill	5	5	4	4	4	5	4	5	5	—45

Forest and Stream Match.

Arthur	49	49	50	49	—247
Harris	49	49	49	49	—245
Farnham	49	48	49	48	—241
Cummings	47	48	48	48	—229
Gilman	47	47	47	47	—225

Pistol Match (Ready-Measurement Target).

	Inches.	Inches.	Inches.	Totals.
C Dunn	5 7-16	6⅝	7⅛	19 7-16
J H Williams	7 15-16	7⅞	8	23 15-16
J Ames	8¼	8⅞	7 15-16	24 9-16
H Mayo	9⅜	9⅜	8½	27
J C McCoy	10 1-16	10⅜	10⅝	30 15-16
F Worth	11½	11 1-16	12½	34 9-16
T Tryon	11½	12⅛	9⅛	31⅞
T Brown	11⅝	10⅜	10⅛	32⅞
J Mead	12⅛	11⅜	9⅛	32⅝

MAMMOTH RIFLE GALLERY.—Amateur Badge Match.—The work in this match has commenced in good earnest. The following are the best scores:

W Williams	35	36	36	37	37	—181
D P Holder	35	35	36	36	37	—179
C Leon	35	33	33	32	31	—164
F B Whitmarsh	32
S M Wiswell	31
J Wolff	27	29

Amateur Pistol Match.

W Williams	44	48	53	—145	C Edwards	27	23	47	—102
J R Scott	38	45	57	—130					

Limited Badge Match.

C Edwards	36	36	37	18	35	—162	C R Bartlett	36	36	37
W M Norcross	35	36	36	36	36	—179				

Forest and Stream Match.

W H Harrison	39	39	39	39	—195
D N Sherburne	39	38	38	38	38—191
N W Arnold	37	38

Experts' Pistol Match.

J H Williams	66	69	69	—204	W Gardner	52	55	60	—167
E Wilder	64	66	67	—197	W Harrison	47	57	64	—162

The shooting in both the above matches has been remarkably good during the week, Harrison has increased his score 3 points, D. N. Sherburne two points.

GARDNER, Mass., April 14.—The Gardner Rifle Club have elected the following officers: President, H. C. Knowlton; Vice President, C. O. Bent; Secretary and Treasurer, F. E Nichols; Executive Committee, G. F. Ellsworth, S. P. Hildreth. At the last shoot by the club, distance 200 yards, off hand, there were two scores to each man. An inch ring and Creedmoor target was used. The totals were as follows:

	R	C		R	C
J N Dodge	184	93	F H Knowlton	146	89
G F Ellsworth	168	92	A Matthews	142	87
H S Pierce	165	91	G G Goodale	142	86
J E Newton	152	88	C Merritt	121	83
S B Hildreth	150	88	Wm Austin	110	83

HOPKINTON, Mass., April 14.—The Sportsmen's Club have had a practice at their grounds on the Woodside road. A Card rotary trap, with an 18 yards rise, was used. The following is the score made: William G. Story 26 out of 55, Chas. H. Rose 26 out of 54, F. E. Tucker 29 out of 49, Nat Remick 9 out of 25, James Braithwait 8 out of 10, Fred Ward 26 out out of 25, C. E. Claflin 17 out of 35, S. A. Smith 15 out of 25, Elmer Temple 18 out of 29, E. R. Rose 5 out of 10. In shooting five pairs of balls between Smith and Stone, the latter broke them all. The contests for the season of shooting make the following order: C. H. Rose, W. G. Stone, F. Wood, 1st; F. Wood, C. H. Rose, F. E. Tucker, 2d; Elmer Temple, F. Wood, C. H. Rose, 3d.

AT Wakefield, Mass., Saturday evening, April 9, on an illuminated target, T. Baxter, of Stoneham, made the most remarkable shooting on record. Starting with two sighting shots, for which he received bullseyes, he made four clean scores of seven shots each, making thirty consecutive bullseyes.

THE spring meeting of the Massachusetts Rifle Association will probably take place at Walnut Hill June 16, 17 and 18. The opening long-range match will probably commence at Walnut Hill Wednesday, April 27.

NEW YORK, April 15.—The club Knickerbocker Club, Col. H. G. Litchfield, President, shot a match with the Brooklyn Amateurs' Club Friday night at the New York Ride Gallery, Capt. Rocke as captain of the ten men from Brooklyn and Capt. H. Oehl of the New Yorkers. Very good holding was done as the scores will show:

Brooklyn.		New York.	
Case	46	Joiner	45
White	47	Fenning	49
Anderson	47	Smith, jr	45
Hull	43	Miller	47

Hazzelton	46	Hall	32
Falco	46	Oehl	45
Rocke	44	Brown	46
Total	451	Total	457

ALBANY.—Three matches were shot at Rensselaerwyck range April 14. Whilst the condition of the weather was not all that could be desired, some remarkably good scores were made. Major Fitch showed that he still maintained his steadiness of nerve by winning all the matches. The scores are given below:

Life membership match—200 yards.

Wm E Fitch, Bal. S	5	4	5	5	5	4	4—32
Royal I Green, S. M	*2	4	5	4	4	4	4—32
James I Miles, Bal. S	4	4	4	5	5	5	4—31
Theodore Mosher, Bal. S	4	5	4	5	5	4	4—31
G H Charles, Bal. S	4	4	5	4	4	4	5—30
J Haugdon Wood, S. M	*2	4	4	4	4	4	4—30

W T Miles, Bal. S.....3 4 4 4—19

* Allowance to military rifles.

SCHUTZEN NOTES.—On Monday, May 2, a grand champion shooting match will take place at the Newark Schuzen Park, Newark, N. J., under the following conditions: Entrance $10, 100 shots each shooter, distance 200 yards, off hand, ring target, 23 centre. The first best receives 40 per cent. of the entrance fee, the second best 30 per cent., the third best 20 per cent., and the fourth best 10 per cent., open to all citizens. Shooters are cordially invited to participate. As it is expected that a great many shooters will come, the match will open at 11 o'clock in the morning.—A.

JAMESTOWN, N. Y., April 9.—At the meeting of the Chautauqua Sportsmen's Association, on the Marion range, yesterday, some pretty good shooting was done for this place. Mr. H. V. Perry, the President of the association, has, of course, the best record, 100 shots each shooter, distance 200 yards, three scores of 10 shots, or 30 shots, to constitute the prize string; 10 shots each week and no re-entries allowed. Out of ten men who have shot yesterday, seven of them scored above 40 in the possible 50, as follows: S. N. Ayres, 48; A. Fresser, 45; R. H. Harris, 44; S. V. Fenner, 43; Dr. A. F. Ward, 42; Hon. W. S. Cameron, 41; H. W. Watson, 41—B.

NEW ORLEANS, April 10.—The first of the Denver prizes, a magnificently-mounted stag's head and antlers, having been the occasion of much good practice on the part of the New Orleans riflemen, a second gift has been received from the Denver shooters. It is a buffalo head and horns, a fit ornament for any sportsman's room. The last contest for it took place to-day on the New Orleans Rifle Club ranges. The distances were 200 and 500 yards—200 yards off-hand, five shots each man each range, military rifles, five men on each team and Creedmoor rules to govern. There were five entries—two from the Continental Guards, two from the Louisiana Field Artillery and one from the Washington Artillery. Battery C of the Louisiana Field Artillery was the winner, as the following score will show:

Battery C, Louisiana Field Artillery.

	200 Yards.					500 Yards.

THE TRAP.

TOPEKA SPRING TOURNAMENT.—We are in receipt of the programme for a grand spring tournament at Topeka, Kansas, April 26, 27 and 28. Four prizes add up about $5,000 in cash, besides three guns and other prizes. We notice that there are not two prizes wherein the birds and rise, etc., are the same. Ground traps and English rules are introduced. We find purse No. 14 to be $1,000, 50 birds, 3 ground traps, English rules, entrance $100, open to the world. Entries will be made by Gwynne Price, Fred Erb, Jr., J. M. Hersey, W. H. Eller, Jos. Block, J. H. McGee, E. Werk, Bingham Davis, etc. Also purse No. 18, 50 birds, 21 yards rise, entrance $100. Entries will be such noted shots as Haworth, Fred Erb, Jr., Hersley, Eller, and many others. The special prizes are as follows: Parker Bros. breech-loading shot-gun, value $125; Fox breech-loading shot-gun, value $110; Baker breech-loading shot-gun, value $100; 12 cans Orange Lightning powder; 1 Osgood canvas boat; 1 Cook's & Bro. canvas boat

ling beyond the flanges, and to this wood the plank is fastened after the frames are faired thoroughly by the adze. The frames are spaced 20 in., and in wake of the lead intermediate ones are introduced timbers up to 3 tons-and-a-half stringer plate. The least freeboard is 3 ft. amp the rudder head 13 ft. forward of the stern. The mast is 52 ft., deck to hounds, and bowsprit 13½ ft. outboard. Hoist of mainsail, 28 ft. Total area of sail, 1,044 sq. ft., being nearly twice as much as that of some ten tonners she may meet, and even a third larger than the latest narrow-legged machine of only one season ago. Accommodations (the Evolution has about equal to a 24-ft. sloop; save in height, which is 7 ft. The cabin floor is only 2 ft. wide, and if the side lockers are turned into berths for the night there is only a few inches between. The length is limited by the "racing rule," which ends being too fine for any door at all. As a tonnage cheater and a good mechanical job the Evolution is without a peer. As a good serviceable yacht for the money she is simply grotesque. Yet there are many who insist that her room is the outcome of following natural laws, and are blind to the fact that her construction is due to nothing beyond a clumsy, silly-brained way of matching upon fictitious size by a rule utterly devoid of the faintest trace of sense. The day that such a logical rule of measurement is introduced in its place will also see the Evolution consigned to the mud to rot. We suggest as a fitting tribute to the memory of the noble band of 34 who have given such a housewarming a year's lease of life, a plate with their names engraved prominently affixed to Evolution's deck with this inscription:

Here lies the Evolution,
Thirty-four tons' contribution.
To our modern naval science
These wonders bid defiance;
They thought such a fool perfection
Became a national question,
Tonning twice the rest of the fleet,
'Twas after all nothing great she should beat.

THE NORSEMAN SCHOONER.

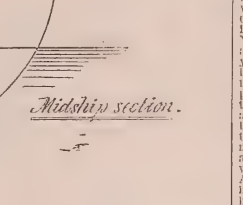
DURING the winter months the Pollion Bros., Brooklyn, have been busy on one of the few odd jobs in the way of yacht building undertaken in New York this year. Like shipbuilding, the business is confined to a few hands, and these have driven away from the neighborhood. Through whose fault we will not say, though exorbitant wages exacted by trades unions, the prevalent opinion that it is a duty to get rich on a single contract a year, a persistent neglect to conform to modern ideas concerning the model and fittings of yachts, and, we may add, the lack (with one or two exceptions) of any "practical" man who has made his mark at whittling out success-ful boats, all contribute their quota to sending orders away from home. Of contracts for half a dozen large schooners placed by New York owners this year, one solitary one has been secured to the city's water front, and that because the same parties last year built the Norna, a ship which pleased Mr. Goelet's fancy so that he preferred going to the same builders himself, though choosing to overlook the real source of Norna's model. It cannot be said that Townsend's proposals to combine the best points of other vessels, the results however not being very encouraging. His want of success is attributable to rather too much advice from many cooks, and could he but free himself from the dogmas of the light draft beamy school in his large schooners, give them less of the tub in shape and more ease all around by reducing beam, increasing depth, hanging some of his ballast outside and cutting down rig accordingly, the prospects of the Pollion's turning out something for the world to admire would be materially heightened. We are no counselling the building of "plank on edge," but would like to see preference given to a type not altogether box with the bilges dubbed away, but an easy ship, by far the superior of the customary clumsy affairs we launch as soon as any one speaks of cruising, and on the other hand are not much superior to a sandbag, long-nosed nondescripts like certain of our racing schooners, in many of which, knowing nothing better, we take such unwarranted pride. A foot or so less beam and one added to depth, with a 10 to 15 tons ballast outside, would have made all the difference in the world, a faster boat, better in a sea, snugger in rig and handsomer to the eye, while in practice no one would have missed the difference in beam, of which there is now more than practically available for an economic distribution of accommodations below.

It has been stated that the craft now launched bears resemblance to Dauntless, then again to Sappho, and so on. No such likeness exists. The Norseman, for that is her name, is manifestly an attempt to blend what her modeler took to be the best points of Intrepid and Norna, and similarly to Dauntless is apparent all over. The attempt, though, certainly seems to have miscarried, for the new schooner is not the equal of either of the two excellent ships which emanated from Mr. A. Cary Smith's drawing-table. Imagine a barrel-like mid-ship section carried fore and aft, giving a "plump body of breadth," or nearly so, a short, hollow bow, the turn of the bilge run clear up to the knight-heads, making a hard convex flare above; sit rather broad and ample quarters, running into a nondescript overhang, with the counter of a "down-Easter," a very long floor and, as a redeeming feature, a clear run; couple with all this a plump post, moderate rocker, gulpe fairly well cut away, a strikingly homely cutwater and a handsome sheer thoroughly spoiled by a straggtish rail, failing to rise correspondingly at the ends; give to the yacht spars which in their stepping and proportions might well be matched on for those of Intrepid; finish off in very plain style inboard, not forgetting paint-bedabbed bulwarks; sky lights very properly snug in dimensions, and a broad, clear deck platform—and you have this latest addition to the fleet of the New York Y. C., a schooner presenting nothing new or radical, very far from being a beauty, but withal a tolerably fair sort of ship for all-round work, like a great many others which have preceded; good enough, perhaps, and all that an owner not *au fait* in such matters may desire in his ends.

Ship there seems little to find fault with, though old-fashioned notions prevail in some minor points of fittings and finish, and the water-front artist has been indulged in his usual spurge of clumsily-conceived "curlyque" ornament about the bow. Perhaps this is hardly deserving of praise about this ship is her strong and well-finished job of rigging. Whether a round sum was paid for the work or whether the "boss" is a constitutionally honest man, his job will speak for itself wherever seen, and we do not hesitate to commend others in need of a rigger's services to give the Pollions their preference. Any one good to look at his neat leather eyes and his conscientious serving. There was no shirking or scamping while he was about, and no one can say that the Norseman shows Cheap John aloft. Let us hope she will fall into hands that know how to appreciate such honest work and how to keep it up to man-of-war standard.

The schooner is 131 ft. over all, 112 ft. water-line and 107 ft. keel, with a beam of 25 ft. and 11½ ft. depth of hold and drawing 11 ft. of water as expected, to carry 80 tons ballast on keel, mainly outside, 10, though that is still an open question, no one having figured either displacement or weight of hull, such matters being left to good luck. Keel, stem and post of selected white oak, the former 30 in. deep, below rabbet amidships. Frames of oak, 6x9 in. at floors, tapering to 6x7 in. bilge, moulds. Locust stanchions for the bulwarks above plank of oak, on sides 8 in. and on bottom 2½ in. Ceiling of yellow pine, 3½x6 in. Deck beams of yellow pine, 4x12 and 6x10 in., the deck being handsomely laid with 3x3 in. white pine, edge-fastened. Planking of yellow pine, 3 in. thick, of oak, 3½ in. thick. Bulwarks are 30 in. high and coamings and deck fittings of the usual mahogany. The interior decorations will be correct in style, rich, yet chaste, a fact which is very seldom to be observed in our large schooners of late years, when passengers incorporate their notions of unerretricious and inappropriate decoration, "slathered about loose," with longshore ideas borrowed from gorgeous hotel parlors and palatial barber shops. In employing an architect to design the interior lastity the owner of Norseman certainly took an intelligent view of the matter, leaving such matters to the clumsy and "loud" conceptions of a steamboat artist is all wrong, and the legitimate designer's work is always worth the money in the end, as the finest vessel may be spoiled in appearance by the bad taste of persons not up to the work of employing in the decorating of a mansion or house on shore. If Mr. Goelet had also called to his side a competent designer to shape Norseman's hull he would have obtained even more for his money. The spars of the new ship are of moderate dimensions, cruising rather than racing being kept in mind, as shown by the old-fashioned plan of ballasting adopted—only about 20 tons, we believe, to go between the bents, the rest in pig lead stowed high up on the floor. This makes an easier ship at sea, and for cruising under snug rig is actually preferable to outside ballast, a craft of so large a size. The masts are if the builders probably felt into this way of ballasting simply because accustomed to nothing else and too old to change their ideas in conformity with modern experience. The mainmast is 99 ft.; foremast, 90 ft.; both topmasts, 45 ft.—very fair sticks, it may be added, but ready to come down when not wanted aloft. Bowsprit, outboard, 20 ft.; jibboom and flying-jibboom in one, fitted to house, 18 ft. and 6 ft., with a short pole beyond to stow the jib-topsail. Mainboom, 74 ft.; gaff, 35 ft.; gooseneck, 32½ ft. and gaff the same. The masts are if and 29 in. in partners. Anchors, 600 and 800 lbs., with a galvanized Perley capstan to do the heaving. For steering a No. 4 Wells' power gear will be used. The canvas of Norseman is being stitched by a Provincial concern and it is to be hoped will turn out something better than a fair at for a whaler. Mr. Goelet will take his old skipp r out of the Haze, recently sold, and Capt. John Cauly will no doubt keep his new charge up to the mark in the way of white decks, taut rigging and clean brass work. The cost of the new schooner may be set down in the neighborhood of $55,000.

SMALL CRUISING YACHTS.



Editor Forest and Stream:

We sadly want an improvement on the existing catboat, and in my mind the wide keel-boats building in this section are no real advancement. No attention having been given to cutting down the inverted surface they require larger sails than the easier bodied ones drive them. Some time ago my attention was directed to these small boats, and for amusement I made a draft of a 20-ft. L. W. L. boat. I will briefly give you my reasons for the style I adopted. A 20-ft. boat under any circumstances will be used nine times out of ten for afternoon sailing, and it will be very seldom that the owner will care about staying aboard beyond a night or two. Now, in my mind cabin accommodations are not worth the loss of other qualities, which common sailing, etc., I don't want every boat to sail round me, but I want to hold my own with the best of them. You claim your boat will exceed them in a breeze, and so she will, but I want a boat to excel yours in rough work, and to beat them in light and yet to have an honest craft, unexcitable.

In my mind it is possible to combine these qualities, but the only way to do it is by making an easy boat to drive, and then by making her capable of carrying all the sail necessary. This can be brought about by moderate beam, but only by bringing the centre of gravity down by making the proportion of ballast to displacement very large. You will readily see that if I have a boat with her C. G. below the centre of buoyancy, I can on a foot less beam outcarry you in proportion to driving power required to produce a certain speed.

My feeling more less beam is offset by my boats having a ratio of ballast to displacement. Ballast divided by displacement, 0.40, while your boat is, ballast divided by displacement, 0.33.

This on a proportion of length to cube root of displacement of 4.75, while yours is 4.3. Increasing your boat to agree with mine on L. W. L., you have:

	Yours.	Mine.
Displacement, tons	3.25	2.39
Ballast	2,420 lbs.	3,583 lbs.
Boat	4,841 lbs.	1,500 lbs.
Area M. S.	10.53	7.46
Ballast: displacement	0.33	.70

I believe with proper care a 20 ft. boat, half decked, can be built and only weigh 1,500 lbs., including spars, which I should probably have made of paper by the compressed pulp process, and my idea be borne out by the opinion of one of the best builders here. This is the point I put all stress upon, and it is the only way to make a safe, honest, uncapsizable boat beat a centreboarder in any weather. The elements in my design are briefly these: Length, L. W. L., 20 ft.; beam, L. W. L., 5.3 ft.; beam, extreme, 6 ft.; draft, 3.75 ft.; freeboard, 19 in.; displacement, 2.39 tons; area, M. S., 7.46 sq. ft.; length of forebody, 10.70 ft.; length of after body, 9.30 ft.; radius of construction circle for cycloidal after body, 1.8; ballast on keel, lead, 3,580 lbs., and none inside.

I like the shape of your boat very much, and she should be an able, comfortable little craft. It is a great pity, however, that she has to be so heavy in her build. If something could be saved in weight there and added to ballast she would be wonderfully improved. I hope the people who are going to build from the lines will lighten her scantlings. CRUISER.

The remarks of our correspondent concerning the advisability of saving weight in hull and adding to ballast are sound. But in the design for small boat published in this journal recently, racing was not kept in view so much as cruising. By building lighter and using more thorough fastening a good deal might be gained in the direction pointed out without losing strength. We adopted heavier scantling than necessary in figuring the centre of gravity so as to be on the safe side. Our design was also intended as a cheap boat both as to ballast and frame.

QUAKER CITY YACHT CLUB.—There is a good deal of life among Delaware yachtsmen and the leading spirits are pushing things in a way we like to see. The Quaker City Y. C. will make an extended squadron cruise to the southward in July and join the Baltimore fleet, and if is even said that a voyage to New York waters is contemplated. This, we hope, may come to pass. Of course the smaller boats will sail through decacy by mule power, but there'no owns many fine cabin sloops which should try the outside voyage much to the instruction of their crews in many ways and to the "glory" of their handsome club burgee. No doubt many of the club are well enough aware of the attractions of the Chesapeake for cruising, without our calling attention to the beauties of the rivers, bays, the broad-mouthed rivers, expanding estuaries, historic old towns, the teeming commerce picking its way up to the monumental city and the genuine swell of the sea heaving in past the roads and felt for many miles up the bay. There you can have river, lake and sea just as you choose, and rods and lines need never be dry nor guns allowed to rust. The Chesapeake is a paradise for tar and sportsman alike.

LAUNCHED.—Mr. Ogden Goelet's new schooner was launched from Pollion's yard, Brooklyn, April 20. She is 150 ft. long, 26 ft. beam and 11 ft. deep. Said to cost about about $30,000 complete.

INTREPID.—This schooner Mr. Lloyd Phœnix refused to sail in the Nice regatta on account of the old Y. R. A. rule of measurement being in force.

COOPER'S POINT YACHT CLUB.—The club now has a change of its length rule under consideration.

CANOES IN ENGLAND.—The London *Field* has the following in a recent issue: "That canoe sailing, apart from racing, is becoming increasingly popular may be inferred from the number of these craft which have been built during the last few years, and the fact that very few are 'for sale;' and it is not surprising that this should be so when we remember the varied use to which these craft should be put —namely, pleasure, sailing, match sailing, paddling, cruising on almost any waters, camping and sleeping in, fishing, shooting, &c., and working alone or in squadron. Their cost is comparatively small, and their 'keep' trifling.

"Their handling in a race is by no means mere 'boatmanship,' and it would take a crack yachtsman all his time to keep a canoe bottom downward and get her best speed out when first attempting to sail a sailing canoe in a club match."

THE AMERICAN CANOE ASSOCIATION.

THE ASSOCIATION BOOK.

Editor Forest and Stream:

Since last fall the Secretary of the American Canoe Association has enrolled nearly one hundred members who reside in widely separated localities of the United States and Canada. The West has shown great enthusiasm in the new impetus given to canoeing by the Canoe Congress which met at Lake George, N. Y., last August. The Cleveland, Ohio, the Detroit, Mich., and the new organized canoe club of Minneapolis, Minn., which has a membership at the start of sixty-two canoeists, have not yet been enrolled. These and the Toronto Canoe Club just organized and two or three other new clubs have yet to come into the Association. As the object of the Association of reuniting canoeists in perfecting the present association becomes understood applications for membership increase, and we hope to have a large addition to our numbers, as the time for the great gathering at Lake George approaches. The Racine boat Co.—Hoopes Kane & Co., of Chicago, Ill.—have notified me that they will contribute a beautiful canoe, which will be put up for a prize at the regatta, and Mr. J. H. Rushton, of Canton, N. Y., has informed me that he will send a prize canoe costing $100. Hoopes reports me that one or two Canadi n canoe builders are instructing canoes to be sent to the August meeting; others will send prize paddles, etc. A Canadian fleet of canoes will probably reach the Canoe Islands, lake George, about the 9th of August. The meeting will commence August 11 and the races will take place during the week of the meeting week. The regatta Committee is now being made up and will be issued as soon as the rest bbutors of prizes send in their written propositions to the Secretary.

The chief object I have in placing this communication before your readers at this time is to call their attention to the fact that the "Association Book," which is to contain the list of clubs and members enrolled in the American Canoe Association, will be issued within a few weeks. It is very important for the encouragement of this work of uniting canoeists in brotherhood all persons who desire to promote the pastime of canoeing that every true friend of the cause shall unite with the pioneers in this enterprise and join the association during the first year of its life and struggles. We are working hard to attain our object. We have nearly one hundred gentlemen's names on our list, all "good men and true." If the Canoe Congress lately organized in the West join our company our numbers will exceed two hundred. All this will have been accomplished within eight or ten months from the meeting of the first Congress. The American Canoe Association is an accomplished fact already. Those who may be holding back to see if this enterprise is to be a successful one before uniting with it need fear no longer, but they can now help on the work by joining us himmediately. The association's annual dues are but one dollar. There are no assessments levied upon the members. Any man of little pecuniary means can join us as well as the merchant prince. Ours is a thoroughly American institution. If there is any element of aristocracy in it it is only the element of its ecstability. Sporting men, precisely, will have no part with us. We encourage all that is del gthful and pure in the study of nature. We are a band of campers, cruisers and explorers. We draw our amusements from pure fountains which e tc ichings are enobling—not demoralizing. The rapid advance made in the last few years in canoeing as a gentlemanly pastime within the past year is surprising to the veterans. The builders are turning out craft which are marvels of gracefulness in lines and are wonderfully strong and durable. I sent to England for the catalogues of her canoe builders. The answer was, "there is not a canoe builder in Great Britain who publishes a catalogue or an illustrated circular." Yet there are seventeen hundred "Rob Roy" canoes on the Continent alone, besides the fleets of canoes in England and Scotland. Three years ago we were behind the Mother Country in the art of constructing canoes; just look at the American Traveling Canoe of Indiana, the beautiful craft of the Racine Boat Co., and examine W. H. Stephen's canoes, the young builder of Rahway, N. J. Send to each of the above builders for copies of their catalogues, each one of which is almost a work of art in itself. We are now in the infancy of our trans-Atlantic brothers in these matters. They admit it in the letters they send me. If all this has been accomplished in so short a time, what may we not expect from our builders in the near future, when they add a real "love" for their profession to the purely pecuniary interests which impels them to the work. We may be honestly proud of our American builders. When educated gentlemen go to the bench and handle the tools we may expect much from their intelligent efforts and, like shrewd business men, they advertise their craft all over the continent. When all the actually accomplished, let our ordinary canoe cruisers come under the flag of the American Canoe Association immediately, so that their names may appear in the first annual Association Book as pioneers in this enterprise. By inclosing the sum of two dollars in the form of a bank bill or money order to me the sender can become a member of the American Canoe Association. Of the above amount one dollar is the initiation fee and one dollar covers the first annual dues for 1881.

The Association circular, which contains the Constitution and By-Laws of the order, will be sent to any person desiring it, if he will address the Secretary at Lake George. NATHANIEL H. BISHOP,
Sec. Am. Canoe Association.

The above appeal requires no special indorsement from us, as we believe all canoeists will readily respond to Mr Bishop's suggestion. "In unity there is strength," and combined action is so much to the advantage of each individual of an association that we feel certain the next meet on Lake George will see one of the largest fleet of canoes ever assembled. Even last year the racing and camping were entirely successful and thoroughly well managed. With the experience gained the coming assemblage may be looked forward to without fear of failure, as it is no longer an untried experiment, but a well considered plan, indorsed by popular approval. A very fine lot of prizes will be contributed, making the races worth traveling for. Not the least agreeable will be the feature of sociability about the camp fire in the evenings, the swapping of yarns and experiences, the learning of kinks from each other, and a spread of that fraternal spirit essentially characteristic of a body of men engaged in furthering ends at once honest, moral and strengthening alike to body and mind. We therefore bespeak for the energetic Secretary of the Association favorable and immediate action upon his letter by all interested.

HARTFORD CANOE CLUB.—*Editor Forest and Stream:* Our organization was formed last year, and we open the second year with every anticipation of a successful season, and hope to make the river lively with our craft. Our officers are: Commodore, R. P. Way; Vice Commodore, J. H. Spangler; Secretary, A. W. Dodd; Treasurer, W. B. Davidson. Our constitution is as follows:

ART. 1. Name and Object.—This club shall be called "The Hartford Canoe Club," and its object shall be the promotion of health and pleasure.

Art. 2. Canoes.—A canoe in order to be placed on the club list and to be entered for races must be a boat sharp at both ends and not more than thirty-six inches in width on deck. It may be propelled by sail or paddle or both; but one must be capable of being efficiently propelled by a double-bladed paddle.

Art. 3. Membership.—Any person may become a member of this club who has been elected by a three-fourths vote of the members, and who has thereupon paid his initiation fee and annual dues for the ensuing year; none but canoe owners shall vote at club meetings or be eligible for office.

Art. 4. Officers.—The officers of the club shall be a Commodore, a Vice-Commodore, a Secretary and a Treasurer. They shall be elected by ballot, at private signal, at a meeting of each year, and shall hold office until their successors shall be elected.

Art. 5. Initiation Fees and Dues.—The initiation fee shall be $1.50, and the annual dues shall be $1, payable in advance to the Secretary or Treasurer.

Art. 6. Club Signals.—The club signal shall be a pointed burgee, fifteen inches long and ten inches wide, of blue ground, with the letters H. C. C. in yellow.

ART. 7. Private Signals.—Each canoe shall have a private signal, rectangular in shape, a drawing of which shall be filed with the Secretary. The club signal shall be carried at the mainmast head, and the private signal at the dandymast head

ART. 8. Amendments.—The constitution may be amended on the recommendation of the members at the annual meeting.

YACHTING NEWS.

NEW STEAM YACHT.—D. J. Lawlor has about finished the large new steam yacht for Com. F. H. Peabody, and owing to press of business has been obliged to refuse an order for a duplicate vessel. He has now contracts for a passenger steamer, a couple of large cruising schooners and much other work besides. Mr. Peabody's steamer is pronounced a very handsome model, and high speed is expected of her, although seagoing qualities have not been sacrificed seriously for this purpose. She is 92 ft. long, 16 ft. beam, and 8 ft. draft. Keel sided 10 in., amidships and tapered to 6 in. at ends. Both keel and keelson are in one length; floors are double, and selected timber has been used throughout. The workmanship is of Lawlor's best, frames

all planed smooth on faying surface, and great care has been taken in obtaining a fair ship. The engines are by W. Webb, of East Boston. They are compound 22 and 15, with 15 in. stroke. Boiler is of the tubular type, 7½ ft. diameter and 10 ft. high. The wheel is 9½ ft. diameter. A speed of 15 knots or 18 miles is expected. She is schooner rigged with the following spars, made by Bentley & Bailey: Mainmast, 48 ft.; maintopmast, 27 ft.; foremast, 44 ft.; foretopmast, 23 ft.; main boom, 39 ft., and gaff 34 ft. There is also a square yard, 40 ft. long on the fore. Lawlor has turned out models for a dozen yachts or more this winter, among them one for the new sloop of Mr. W. S. Eaton. He has also done a vast amount of overhauling and alteration jobs, and built several smaller sailing yachts, of which mention has already been made in the columns.

THE EVOLUTION.—Mr. W. Baden Powell writes very truly in the London *Field*: "The practical amateur yachtsman must view this design with mingled feelings of pleasure, alarm and hope; for it is indeed a pleasure to be instructed in the ingenious modes of construction developed in the design before us—a pleasure to see that the warnings sent forth by the amateurs who 'jumped' at the proposed alteration of the tonnage rule, and which were pooh-poohed by one or two 'authorities' as mere 'bogies,' are herein realized; alarm they feel lest Evolutions should increase and multiply, and create so powerful a pile of vested interests that alteration of the rule which fosters such craft would be impossible. And they hope that the Evolution may be successful, make a clean sweep of the prizes, and clearly demonstrate that, so long as the present rule is law, you have only to go on in one direction—length—for success.

But what must be the feelings of the professional yacht architect? Simply alarm; for the value of theories as to lines and pet midship-sections fades away as length increases, till the design and construction of a racing machine becomes a problem and work to be solved and carried out by the mechanical or practical engineer, who, with the assistance only of the sail-maker, will produce the latest idea in aquatic plows."

THE ANNUAL CANOE REGATTA.—*Editor Forest and Stream*: W. E. Welch, C. E., Surveyor of the Lake George Canoe Club, assisted by Messrs. L. Barber, R. E. Archibald, O. B. Lockhart and James Kirkpatrick, completed the survey of the regatta course of the American Canoe Association for August, 1881. This party of gentlemen volunteered their services for the work. A plan of the course will soon be drawn and sent to Commodore W. L. Alden, of New York. The survey was made upon the smooth ice of the lake, and will afford a correct distance course. N. H. BISHOP.

Lake George, N. Y. Secretary A. C. A.

BUFFALO YACHT CLUB.—We learn that the club is considering a new measurement rule, and may possibly adopt a "three dimension" rule. Western clubs are evidently wide awake to the necessity of a change from the length rule, at least for cabin yachts. Hingston Bros., foot of York street, are building a steam yacht for Capt. Hutter, of Cleveland. She is 100 ft. over all, 16 ft. beam, and 10½ ft. deep; steel boilers and double direct acting engines. The Knobloch Bros. have in hand a steamer 80 ft. long for Erie owners, which they hope to launch in May.

SAN FRANCISCO YACHT CLUB.—The following officers were elected for the year 1881: Commodore, C. H. Harrison, yawl Frolic; Vice Commodore, J. D. Spreckels, schooner Consuelo; Secretary, Chas. G. Yale; Financial Secretary, Frank Thibault; Treasurer, A. W. Follansbee; Measurer, Matthew Turner, sloop Nellie; Directors—H. R. Bowie, schooner Nellie; W. Letts Oliver, yawl Emerald; I. Gutte, schooner Chispa; J. A. Magee, Jr., John Rae Hamilton, sloop Clara.

FIXTURES.—As suggested in these columns, the Dorchester Y. C. has changed its sailing date to June 18, so as not to interfere with the Marblehead union regatta on the 17th, and the Boston Y. C. has selected the 16th for a similar reason.

PRESENTATION.—Mr. F. E. Peabody, the retiring Commodore of the Dorchester Y. C., has been presented with a token of appreciation by the club in the shape of a handsome yacht clock and barometer combined.

AMERICAN CANOE ASSOCIATION.—The colors adopted by the association consist of a pointed red pennant with horizontal white stripe through the centre carrying the letters A. C. A. in red.

HOLLOW SPARS.—Lawley & Sons are furnishing hollow spars for Mr. Paul Butler's sloop Wilful, a hollow topmast for Mr. Cabot's Madcap, and also several similar sticks for New York owners.

JULIA.—This sloop, 33 ft. long, built in New York nearly twenty years ago, has received a keel in place of her board, and has been sold to Boston owners for the very respectable sum of $650.

BOSTON YACHT CLUB.—Has now 225 members, 27 schooners, 52 sloops and 6 steamers. Prizes to the amount of $800 and over are offered for the June union regatta.

HUDSON RIVER YACHT CLUB.—The club have opened their new house, foot of Seventy-fourth street, N. R. They have fixed their annual racing for June 6.

SLOOP WANTED.—The attention of owners of small sloops is called to our advertising columns, through which a sale may be effected.

ALICE.—Mr. W. Lockhart's schooner Alice, now at Leighton's yard, East Boston, has been altered from a board to a keel.

Answers to Correspondents.

☞ **No Notice taken of Anonymous Communications.**

C. F. R., Lexington.—Your inquiry will receive early attention.

S. F., Hollidaysburg, Pa.—There is a letter for you at this office.

J. B. L.—For anemometer address J. Tagliabue, 66 Fulton st., N. Y.

A. B. T.—Your letter has been forwarded to the canoe builder in question.

E. F.—An article on light drafts and sharpies has been deferred for want of space.

O. W. F.—Nothing else published about catamarans than the paper recently sent.

W. H. B.—Plans for two-tonner delayed on account of previous orders. Have been sent.

CANTON.—For catalogue of engineers, guide books, etc, write to Van Nostrand, 27 Murray street, N. Y.

W. T. F., Danbury, Conn.—Write to Hartley & Graham, Maiden Lane, New York. They import the gin.

L. Q.—The patent does not seem of much practical value, though inventor is sanguine. Want of funds prevents introduction.

S. A. McL.—The contract with Brentano has expired. Kemp's Yacht Designing, $25. Kemp's Yacht and Boat Sailing, $10.

R. M.—No other publication makes a specialty of yachting all the year round. Brentano's Magazine is now devoted to chess only.

X. Y. Z.—Too late to do anything more than keep him quiet and prevent him from using the foot until healed. He will keep it clean by licking it.

E. C. F., Boston.—Mr. J. Matthew Jones, we presume, meant the common ferret. There is enough of spunk in the ferret to clean out the woodchuck.

J. D. H.—For model, engines, etc., address Peck & Snyder, Nassau st., below Beekman, or Hadfield, 73 Liberty st., for heavier material. Mention this paper.

T. E., Lawrence, Mass.—We know nothing of the party beyond having corresponded with him. You can learn of his trustworthiness by inquiring of his townsmen.

S. B., East New York.—You will see changes in the game law duly reported in our columns. We have no knowledge of such a law as you mention having passed.

G. G.—Think you can cannoe the Rappahannock from a village by that name in Fauquier county, easily reached by rail. Write to the P. M. for definite answer.

A. B.—There is ample testimony in favor of the boats you mention. Dry and stiff. You are safe in chosing either. Send to makers for descriptive catalogue.

BOY.—For Shadow canoe see cut and figures in issue of March 17. She is a decked boat belonging to the "paddleable-sailing" class. Good for cruising and open water.

V. A. T.—The yacht in question has three beams to length, has outside iron and is considered stiff and able. If you do not object to her draft, will suit your wants. She is very well built.

J. A. S.—Both boats you mention can be recommended for all that is claimed for them. It is a matter of individual preferences between them. They are extensively used throughout the West.

G. A. G.—Cannot recommend the plan of edge fastening outer plank instead of depending upon a regular frame. The article was probably not written by a practical person. Too heavy and too expensive.

H. and Others.—For cuts of canoes and sneakbox with dimensions see issue of March 17. Only book on boat building is Nelison's revised by Kemp. Send to Van Nostrand, 27 Murray st., N. Y. Price about $1.50.

H. R. S.—To give directions for building a boat would involve writing a small volume, and life is short. Send to Manning, 53 Beaver street, for Nelison's "Boat Building" Price about $1.50, or consult with local boat builders.

SNEAK.—For cut and dimensions of sneak-box see issue of March 17. Could not help you by further explanation, as it is a matter of handling tools. See Bishop's "Three Thousand Miles in a Sneak-box," Lee & Shepard, Boston.

J. M. S.—We have no designs of 30 ft. boats such as you want. Inquire of local builders. Think Mr. Clapham's boats might answer your purpose. Nelison's Boat Building is the only book on the subject. Price about $1.50. Can be had of Manning, 53 Beaver street.

M.—The book coming nearest to your wants is "Kemp's Yacht and Boat Sailing"—replete with valuable information and data generally on building, handling and care of small boats. Price $10. For Walton's "Model Yachts," send to E. P. Dutton & Co., N. Y. Price about $1.50. Vanderdecken does not treat of building.

J. W. D.—Shadow canoe will come nearest your description, or one of the "paddleable sailing canoes" of builders advertising in this journal. Any style will last longer than you will probably have use for her with proper care. They are light, but tough. Do not like paper canoes. Not in the market now. Unremovable keel for windward work. Centreboard is in the way and leeboards not very efficient.

W. H. D.—The yacht would be drier and larger with a raking stem starting with the load-line as a basis to build from. Also involves shorter bowsprit outboard. Jib-topping mast would forward you can get along with a single jib and have larger mainsail. For bad weather use mizzen and jib only. Weight of anchors depends much upon service to be seen. Ordinary working anchor, say 25 lbs; best bower 40 lbs, and for extensive cruising a spare anchor stowed below, say 50 lbs.

A. J. S.—For waterproofing canvas the following is recommended: To 6 ozs. hard yellow soap add 1½ pint of water and when boiling add 5 pounds of ground spruce ochre, ½ pound patent driers and 5 pounds boiled linseed oil, or less quantity in same proportion. Another recipe is to take ½ pound sugar of lead and ½ pound of powdered alum, dissolve in bucket of pure water and pour off into another vessel. Steep the canvas in this, soaking well and letting dry naturally without wringing.

COMMODORE.—Yacht-racing in England is carried on according to different principles. Races are not mutual admiration affairs, confined to one club. They are open to all comers, almost without exception. They are public, the same as our "union regattas." Entries could easily be limited by specifying "recognized," or, to draw the line closer, "recognized Incorporated," or else publish list of clubs admitted. Limiting entries to a single club is baby's play, left us with many other old-fashioned features from the sport's youthful days. Time we progressed a little.

SUSQUEHANNA, Wheeling, W. Va.—Will you be kind enough to inform me of a mixture that will color silk-worm gut "mist color," for leaders or casting lines, so that it will not injure the strength of it? Also, the mixture to stain gimp? Ans. Take an earthen jar with a quart of cold water; put in it one dram of logwood and six grains of copperas. Boil about ten minutes, and, after allowing to stand two minutes, then immerse the gut two and a half or three minutes—not more—and throw it into clean, cold water to rinse; wipe it dry then, holding one end in the teeth and the other in the left hand; rub it with a piece of India rubber. All bad pieces will break if rubbed well; then stretch at full length in bundles and wrap in paper.

W. S., Sharon, Mass. 1 What kind of ponds do land locked salmon thrive best in? 2 What month to buy spawn? 3 What is their size at one year old? Ans. We have delayed answering this in order to get an answer from Mr. Charles G. Atkins, of the U. S. Fish Commission, Bucksport, Me, who is the best posted man in America on the fish in question, as he has taken their eggs for years. Mr. Atkins writes us as follows: Land locked salmon thrive best in deep ponds and lakes of very pure water with clear bottom and fed or drained by large brooks or rivers of pure water with abundance of gravelly rapids. 2 They spawn a little in October, but mostly in November. 3 Cannot tell size at one year old exactly, but in six months they get to be from two and a half to four inches long, and in eighteen months from six and a half to nine inches long. These are the sizes that I have found among the wild fish in their native haunts on the Schoodic Lake, Maine

H. H., Drummondville.—1. Is there any good trout fishing, fly only, to be had in Ontario? If so, where and in which month? 2. How can silk or hempen fishing lines, both worn and new ones, be waterproofed? Ans. 1. Plenty of it. We could not enumerate all the places. Try the vicinity of Peterboro, or streams emptying into Lake Simcoe any time between June and September. 2. Hempen lines we know nothing of. To waterproof a silk line the following is given by Norris: "To a quarter of a pint of a 'double-boiled cold-drawn' linseed oil, add about one ounce of gold size. Gently warm and mix them well, being first careful to have the line quite dry. While the mixture is warm, soak it therein until it is fully saturated to its centre, say for twenty-four hours. Then pass it through a piece of flannel, pressing it sufficiently to take off the superficial coat, which enables that which is in the interior to dry well, and in time to get stiff. The line must then be hung up in the air, wind or sun, out of the reach of moisture, for about a fortnight, till pretty well dry. It must then be redipped to give it an outer coat, for which less soaking is necessary. After this wind it again, but tightly; wind it on a chair back or towel horse before a hot fire and let it remain for two or three hours, which will cause the mixture on it to 'flow' (as Japanese term it) and give an even gloss over the whole. It must then be left to dry as before; the length of time, as it depends upon the weather and place, observation must determine upon. By this means it becomes impervious to wet and sufficiently stiff never to clog or entangle, the oil producing the former quality, and the gold size (which is insoluble in water) the latter, while the co-mixture prevents the size becoming too hard and stiff."

—Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[*Adv.*

BRAIN AND NERVE FOOD.
VITALIZED PHOSPHITES.

Composed of the **NERVE-GIVING** principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It **prevents** debility and consumption. It strengthens the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 300,000 packages.

For sale by druggists or mail. **F. CROSBY, 664 and 666 Sixth Avenue, N. Y.**

Eastern Field Trials Club Third Annual Running Meeting

COMMENCING ON THANKSGIVING DAY, 1881.

ROBIN'S ISLAND STAKES, OR EASTERN FIELD TRIALS DERBY,

Open to all puppies whelped on or after April 1, 1880. Prizes: First, $150; second, $100, and third, $50. Forfeit, $5; $10 additional to fill. Nominations for this stake to close positively on Oct. 1, 1881.

PECONIC OR ALL-AGED STAKES,

Open to all setters or pointers. Prizes: First, $250; second, $150; third, $50. Forfeit, $5; with $20 additional to fill. Nominations to close positively on Oct. 1, 1881. To this stake will be added by the club a special prize of $100, or a silver cup of equal value, at option of the winner, for the best pointer competing in the stakes.

MEMBERS' STAKES,

Open only to members of the club, and each entry to be owned and handled by the member making the nomination. Prize to be a piece of plate of the value of $100, and such prize to be known as the EASTERN FIELD TRIALS CUP OF 1881.

JACOB FENTZ, Secretary. P. O. Box 274, New York City.
Special prizes to follow others according to their value.

J. OTTO DENNER, President.

ROUDREN'S PATENT COMBINATION

Jack, Dash and Fishing LAMP.

For NIGHT HUNTING Deer and other animals, SPEARING Fish. Indispensable on any Boating, Yachting or Camping Trip.

Not affected by Wind, Rain or Jolting. Burns Kerosene safely without a chimney. Throws a powerful light 100 feet ahead. As a DASH LAMP for CARRIAGES it has no equal. Fits on any shaped dash or on any vehicle.

PRICES.

Dash Lamp.....$5 00

For Sale.

Water Cress & Brook Trout.

AQUETONG TROUT and CRESS FARM.

Messrs. Thompson Brothers offer for sale Fresh Water Cress in one-half peck baskets, cut fresh every morning, and delivered in New York city between 9:30 and 12 o'clock at any point below Twenty-third street, at 50 cents per basket. We have constantly on hand, in our ponds, Brook Trout, from the egg to three years old, all sizes, for stocking private ponds or streams. Can supply private parties, hotels or restaurants in New York to a limited extent with fresh brook trout in their season every morning, leaving our ponds at 6 A. M. and arriving at New York at 9:30 same morning. further information apply to

THOMPSON BROTHERS,
Aquetong Trout Farm,
New Hope, Bucks County, Penna.

Lake Massawiepie For Sale.

Mr. Addison Child, of Childwold (South Colton P. O.), New York, offers for sale 3,000 or more acres of choice natural forest land, flushed with deer and other game, embracing the above lake, stocked with salmon and spotted trout, and seven tributary ponds of 18 to 80 acres each, delightfully situated in the southern part of St. Lawrence County (see Colton's Atlas), and within thirty hours' travel of the cities of New York and Boston. Being the head waters of Grass River (itself a noted trout stream) they are under the absolute control of owner, and offer rare facilities for natural sport or multigenerous fish culture. Any party or club wishing to establish and preserve a park for sporting and social recreation may address as above for details.

ABINGTON.

AT PUBLIC SALE, ON THURSDAY MAY 19, 1881, THE MOST MAGNIFICENT ESTATE IN VIRGINIA, OPPOSITE WASHINGTON CITY.

This superb estate, consisting of four hundred acres, with mansion house, superb park of ten acres, terraced grounds, fine fishing shore, only one mile from the National Capital, will be sold at public auction May 19, 1881.

To market-gardeners, stockmen, livery stablemen, and especially capitalists seeking investments, as well as wealthy men desiring the grandest country seat in all this section, Abington offers a wonderful chance. It will go dirt cheap.

For particulars, terms and pamphlet, address THOS. J. FISHER, Real Estate Agent, No. 1223 F. St., Washington, D. C. Circulars can be had of FOREST AND STREAM. Apr14,4t

COUNTRY PLACE FOR SALE—Main house, 40 by 18; extension, 36 by 16; hardwood finish; marble mantels; hot and cold water; stable, hennery, etc.; two acres lawn; fruit and shade trees. Price $6,500; cost $11,000; $1,500 cash. For sale or to let, house 178 Griffith St., Jersey City Heights. For sale six acres near two railroads, Closter, N. J. For sale 9 acres on western slope of the Palisades, Tenafly, N. J. Money loaned to build. Apply to E. R. WILBUR, 40 Fulton Street, P. O. Y., between 10 and 12 A. M. Mar10,1t

FOR SALE.—A fine Parker gun; No. 12, 30-inch, 8¼ lbs., pistol stock, Damascus barrels, sole leather gun case, 68 metal shells and all loading implements; $180. Original cost, $225. W. Y. CLARKE, Government Printing Office, Washington, D. C. Apr17,3t

FOR SALE.—Keel sloop "Comfort," built by Wallin & Gorman, and launched May, 1880; 36 feet on deck, 5 feet 8 inches draft, 12 feet beam; completely fitted throughout in hard wood; fast, able and sound; built and furnished complete in every respect; is in perfect order and requires nothing. Sold only on account of want of time for use. Price reasonable. At in every respect. Apply to THOMAS LORD, 889 Broadway. Apr17,4t.

FOR SALE.—For want of use, will sell 1 Ballard long-range rifle, sights, etc., complete, $60; 1 Maynard long-range, sights, etc., complete, $45; 1 Maynard mid-range, sights, etc., complete, $35; 1 Springfield (U. S.) cal .45, sights, etc., complete, $16; 1 Stevens rifle, 24-inch bbl., cal. 32, $15. All the above, very little used and in perfect order, sent C. O. D. with privilege of examination on payment of express charges. W. L. FISHER, West Northfield, Mass. Apr14,2t

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the sea on of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Bromfield House, Boston.

Hornbeam Rods
A SPECIALTY.

W. HUNTINGTON,
WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON, as above.

THREAD-WOUND, LONG-RANGE
SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 60, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

20 Sent, Post-paid, for $1.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in tin canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Sporting and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 70 Wall Street, N. Y.**

ANSWERS TO CORRESPONDENTS..... 257

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, April 28.

A NEW NORTH CAROLINA CLUB.

THE quail grounds of North Carolina are to Northern sportsmen what the grouse moors of Scotland are to English sportsmen. The number of strangers who visit that State for sport is yearly increasing. If the people of North Carolina are wise enough to protect their own interests by restricting the excessive killing of their game, this influx of sportsmen tourists will be unabated, and the advantages accruing to the residents undiminished.

Among the game centres of the State one of the most inviting is Gaston, in Northampton County. Quail are abundant all about for an area of thirty miles, with other birds in goodly numbers, and ducks and geese on the Roanoke from October to March. Within that compass there is not a pack of hounds, and foxes and deer are in consequence numerous, and the pursuit of them successful. Our valued correspondent, Col. Goode Tucker, of Gaston, whose many fox chases in his hale old age have been recorded in the columns of the FOREST AND STREAM, proposes to organize a club of sportsmen, with headquarters at Gaston. Riding by the old Gaston Hotel one day, it occurred to him that here was just the spot for a yearly rendezvous of congenial spirits. The hotel is a substantial brick structure, with accommodations for fifty guests, and was built before the Greenville & Gaston Railroad collapsed. It is now unoccupied and somewhat out of repair, but can be put into good condition at a small expense.

Col. Tucker's project is briefly this: He wishes first to organize a social hunting association of twenty members, ten of whom shall be from the North and ten from the South, and our friend proposes to banish politics and political opinion entirely from the association. The shares are fixed at $100 each. The fund of $2,000 will be used to purchase the hotel building, with several acres of very productive land belonging to it, to make necessary repairs, build stables, dog kennels, etc. The preliminary labor Col. Tucker offers to assume himself, without charge, and the general management of the property, after the association is formed, also placing at the service of the club his pack of seventeen well-trained hounds. It is further proposed that the association shall be governed by a board of managers, to be elected by the members, and other matters to be determined by the will of the members.

This necessarily brief outline of Col. Tucker's plan is sufficient to show its inviting character. The opportunity to secure an excellent club house in a fine game district is one not often found, and we do not doubt that some of the readers of the FOREST AND STREAM will avail themselves of the advantages offered. The names of gentlemen who wish to associate themselves in the enterprise may be sent to us, and we will gladly endeavor to promote the speedy formation of the Gaston club.

Col. Tucker is one of the best known sportsmen of the Southern States. His fund of field reminiscences, adventures and anecdotes is inexhaustible, and to gather with himself and comrades, after the sport of the day, to listen to the stories of men and things in the past would be to us one of the most enjoyable pleasures of a stay in the club house. This in itself would repay us for the trip.

THE KITTY HAWK BAY CLUB.

THE organization of the "Kitty Hawk Bay Sportsmen's Club" will be regarded by a large number of gentlemen sportsmen throughout America as a progressive and timely movement toward the preservation of our choicest varieties of wild fowl and the rarer species of game fish, which, if properly protected in the localities which they frequent during their migrations, would for many generations to come afford hunters and anglers rare sport, combined with opportunities for mental repose and bodily invigoration so much needed by the overworked in all our large cities.

The ruthless destruction of canvas back, redhead, black head and teal ducks in the waters of Currituck, Kitty Hawk Bay, North Carolina, during the month of October, 1880, by natives and market-shooters who employ batteries by day and fire by night, is a circumstance greatly to be deplored. During the period mentioned canvas back and redhead ducks were slaughtered by the thousands and packed in barrels, only to decompose before reaching market. Such a general and wanton destruction as this of our very choicest wildfowl is shocking to the sensibilities of every true sportsman, and cannot often be repeated without the most serious consequences.

It is plain that these shooting grounds must pass into the possession and control of well-managed club organizations, or a marked decrease and rapid extinction of game, now so abundant, will surely follow.

The various clubs heretofore organized in this section have found it difficult to secure legislation favorable to their interests, chiefly because the clubs themselves have owned comparatively little territory or shooting privileges. The Kitty Hawk Bay Club, owning as it does nearly fifty thousand acres of land and controlling a water frontage of over fifty miles, will, by reason of its vested rights, become a leading factor in obtaining such legislation as is now needed for the preservation and protection of game. We hardly need urge the importance of this matter, as judging from the character and standing of the gentleman projecting this club its success in every direction would seem already assured. Certainly, with telegraphic facilities already established at Kitty Hawk and the early completion of the Norfolk and Elizabeth Railroad, the matter of communication is most satisfactorily settled, and the distance from New York is now covered in about twenty-three hours instead of eighty hours as was formerly the case. The latter advantages will be greatly appreciated by members of the club living in New York, as they have rarely if ever before been combined with such unusual opportunities for really first-class shooting and fishing as are here offered. That the great future value of these vast acres of our choicest fowl and fish is beginning to be appreciated is attested by the very general inquiry and demand for these properties (since they were secured for the Kitty Hawk Club) by parties at the South as well as at the North. The variety of shooting ought to satisfy almost any sportsman, as it includes canvas back, redhead, black head, widgeon, teal and other kinds of duck. Swan, geese, brant and snipe, deer and bear are also plentiful, and the waters abound with bluefish, Spanish mackerel, mullet, sheep's head, sea trout, spot perch, striped and black bass, oysters and diamond back terrapin.

We have ever deemed the question of game preservation one of national importance, and have felt a growing interest in this region, whose very remoteness and inaccessibility, rather than the intelligence of its people, have combined to protect and secure from extermination its vast, varied and almost numberless flocks.

A CANADA ANGLING CLUB.

IT gives FOREST AND STREAM much pleasure to note the proposed formation of an angling club, which will have its headquarters at Lake St. Jean, at the head waters of the Saguenay, where most excellent winninish or land-locked salmon fishing may be enjoyed. The enterprise is projected by a gentleman well known to the anglers of Canada and of this country, who knows the country thoroughly, and whose enjoyment of the sport to be found there has prompted him to devise a means whereby others may share the same. The purpose of our friend—who has already, we believe, secured the land—is to build a suitable house for the accommodation of the club members while on the ground, and to put this in charge of a man who shall live there the year around, keeping a cow, poultry, etc., and cultivating a vegetable garden, all for the benefit of the club's table. There is room for from ten to fifteen rods, good sport being assured. The season extends from June to September 10, being best in July and to the middle of August.

The expenses of building the house, making roads and other necessary preparations, will cost from $1,000 to $1,500. There will be either ten or fifteen members, and if the latter number, the entrance fee will be $100; if there are only ten members, the fee will be $150. The annual dues for the maintenance of the property thereafter, $10. Each member will be allowed to invite one companion to accompany him. The fares from New York to the grounds will not exceed $60 for the round trip, and supplies can be obtained at Quebec. Besides the angling attractions of the country, there are several varieties of game in abundance and within a short distance from the club house. The surrounding country affords bear, beaver, martins, minks, cariboo and moose.

We commend this movement to the attention of our angling friends, being confident that they will avail themselves of the opportunity here afforded to secure—a share in the advantages offered. We may add that the enterprise is due to the efforts of Mr. J. U. Gregory, of the Department of Marine and Fisheries, Quebec, a gentleman for whose many courtesies American anglers have been indebted in the past, and whose name is a sufficient guarantee of the success of the club. Further information of the conditions of membership in the club may be obtained on application to the Secretary, W. A. Griffith, Esq., Quebec, Canada.

AN EXAMPLE FROM THE SOUTH.

THOSE who supposed grit and enterprise to be absent among Southern sportsmen were completely taken aback by the bold, well executed and successful venture of a New Orleans yachtsman in sending his vessel two thousand miles and more in search of the best of her class to sail in the New York Bay regatta last year. Others who imagined that our friends from Dixie could teach us nothing in the way of mechanical contrivances of a nautical sort had occasion to modify their opinions when Mr. Israel's crack, Susie S., went over the line. There is, to the honor of New Orleans and Southern yachtsmen be it said, as live a spirit of the true sort, as much and more "go ahead," as good and better management, as keen and keener competition, as honest sailing, more method and far greater public interest manifested among all classes than in any city of the North. We are not surprised, therefore, at the offers made with liberal hand to induce a visit from the higher latitudes, and live in hope that the owners of some of the fastest and smartest of our "open boats" may find the time to ship their racers around to Lake Ponchartrain. Those who own craft of the second order may as well stay at home, for it takes a live ship, a quick crew

and a very fair allowance of good luck to keep abreast of a Southern flyer tooled by a native skipper and worked by a crew used to their waters. The dates for the races have been considerately left open to be filled in accord with the wishes of the strangers expected. The prizes exceed anything of the sort ever offered in the North, and apart from the credit attached to winning a well-fought match, are inducement enough to travel a long distance, and will cover the expenses of the undertaking. In the modeling of fast shifting ballast boats New York thinks she has taken the lead, and in our waters there is little or nothing to dispute her well-established fame. But it was a Southern-built crack that first "took down" our vanity, at least on Lake Ponchartrain last year, when Cydnus most unmistakably beat the smartest of the Northern importations, and we have a little score to wipe out in that direction. Unlikely to succeed in raising attractive purses for a public "Bay regatta" at home, will not some of those devoted to racing open boats show hitherto unseen colors among the fleet of the Crescent City this summer? They will have no cause to regret the trip from any point of view, and may bring home with them some conceptions of what a live and wide-awake yacht club owning open boats may be when animated by a sportsmanlike spirit and controlled by men of broad views and intelligence. We quote with pleasure a letter from Vice-Commodore Harris, S. Y. C., and commend a consideration of the matter to all interested:

The Southern Yacht Club decided April 18 to offer in the "Inter-State Regatta" under its auspices, to first-class boats (over 25 ft. and not over 28 ft.) a prize of $1,000, if one yacht from your city will compete; $1,200, if two yachts will enter and $1,500, if three or more will sail. We are anxious to have your fast ones down here and will fix the date of regatta to suit the convenience of intending visitors. Yachts in this class allow one another 5½ seconds per foot per mile. Arrangements for the transportation of yachts and crews can be made at advantageous rates, and you can guarantee a hearty welcome and every attention from our people.

EDWIN HARRIS,
Vice-Commodore S. Y. C.

THE NEW YORK FISH COMMISSION.

GOVERNOR CORNELL vetoed the appropriation for fisheulture last year, but fortunately the Commission has surplus funds enough on hand to bridge over by a severe economy the time when a new appropriation may be available. If it were not for this the results of former years' labor might have been entirely lost. Now that the season approaches when the subject is again brought before the Legislature, the New York *Times*, the *Sun* and the Brooklyn *Eagle* have taken up the question, and beseech the Governor not to repeat the veto. On this point the *Times* said:

The Governor took the ground that it was contrary to public policy to allow an appropriation for such a purpose to become a fixed annual charge on the State, and that as he conceived the purpose of the appropriation in restocking our depleted streams with fish to have been fully accomplished, there was no need for further prosecution of the work. In point of fact, the propagation of food fishes in the waters of this State, as of other States, is still in its infancy. There is not a State in the Union possessing any extensive habitat for fish which does not make an annual appropriation for fisheulture, and New York is the first in which any objection has been made on the score that the money cannot be profitably expended. Private enterprise will certainly not provide for keeping up the supply of shad in the Hudson River or for carrying on the proposed breeding of Spanish mackerel for the Long Island shore any more than it will do the work of the United States Fish Commission in distributing German carp by the thousand throughout the entire country. There are, it is true, private persons who breed their own trout, but the streams of the State will not be replenished by that agency. The entire business properly belongs to the State and national Governments, and we have yet to hear of any public protest in regard to the non-productiveness of the small amount of money which it requires.

It is not that the Governor had doubts as to the benefits which fisheulture has already accomplished, but he seems to think that after a stream is once stocked that should be enough. He should remember that our increased population requires an increase of nets, and that shad cannot be kept in the Hudson without artificial culture. The *Times* further says:

If an appropriation is to be made this year, it would be wise if a certain amount of the sum granted by the State should be used for fisheulture on Long Island. Long Island possesses certain natural advantages which no other portion of the State enjoys. The artificial propagation and rearing of trout has always been very successful here. Trout seem to find their natural food in the Long Island streams, and grow with wonderful rapidity. But it is not for trout alone that Long Island would serve as a nursery. Since the United States Fish Commission has found that Spanish mackerel can be reproduced without any trouble, the waters of the Sound could be made to abound with this excellent fish. Last year Spanish mackerel were almost entirely wanting in the waters adjacent to New York, their absence being attributed to the dumping of refuse in the Bay. In the Sound they were exceedingly scarce, the whole number of pounds of Spanish mackerel received last year in the wholesale markets of New York being only 235,130, whereas it should have been four or five times as much. From having on one side a protected shore line Long Island presents certain advantages for the construction and maintenance of experimental hatcheries for Spanish mackerel, and there are the best reasons to suppose that just as cod can be reproduced so can Spanish mackerel and striped bass be largely increased in numbers From Long Island all the southern and southeastern counties in the State could be supplied. With the appointment of a Fourth Commissioner, Mr. E. G. Blackford, it was distinctly understood that some efforts should be made toward fisheulture near New York City. For all these reasons, the principal ones being that money thus given by the State serves a useful purpose—that of giving food to the people—and because for every dollar expended the return is a thousand-fold, it is hoped that Gov. Cornell will not withhold his consent to an appropriation to be employed in such a legitimate way.

There are so many things to be said in favor of the good work done in the past by the able Fish Commission of New York, and so little against it, that we do not at all despair of seeing the Governor convinced that an appropriation for the purpose of increasing the food supply of the people is money well invested.

IT IS AN ENCOURAGING SIGN OF THE TIMES that a Western newspaper, long notorious for its scurrilous and abusive attacks upon gentlemen of unblemished character and reputation, has announced that it will no longer permit its columns to be made the vehicle of "personalities." The lame attempts at explanation and excuse by which this announcement is accomplished are so feeble that they might excite feelings of amusement were it not so pitiful a spectacle to see a person compelled to struggle and squirm in such a humiliating fashion as does the writer of the paragraphs in question. He assures his readers that he has "endeavored to publish a gentleman's paper," and tacitly asks their sympathy for him in his struggles to this end, and in his notable failures. It is certainly to be hoped that his efforts hereafter may be more successful than they have been. We cannot but feel a certain pity for one whose course has been such that he is now obliged to go about to the different individuals whom he has vilified and, humbling himself with cap in hand, to abjectly apologize for his unwarrantable conduct in the past. Though, to be sure, in such a case the humiliation is not so deeply felt as might be supposed, since long before such shameful attacks as those referred to could have been made or permitted, all self-respect and pride must have been lost; and it is a suggestive circumstance in this connection that the sudden determination to wash and be clean was not a voluntary resolution of the individual himself, but was, on the contrary, a tardy concession to the emphatic demands of numerous outraged subscribers.

We are glad, for the credit of American journalism, that the torrent of reckless abuse which has so long poured from this source is to cease, and we shall watch with some little curiosity the continuance of the endeavors to publish a gentleman's paper. That these efforts will be attended with any very marked degree of success is, under the circumstances, scarcely to be hoped for; but there is such abundant room for improvement that we may, perhaps, look for some change for the better.

FISHCULTURE AND EVOLUTION.—At a recent meeting of the Illinois State Natural History Society, Prof. S. A. Forbes made the statement that the time was past for arguing the truths of the doctrine of evolution; that scientific men substantially agreed that, if it was not in all cases proved to be truth, it in most of them approximated so closely that its entire truth could be safely assumed; and that they agreed that it was easier to believe than the theory of special creation. On every hand the naturalist found evidences pointing in this direction, and he instanced some of his own observations upon the development and anatomy of fishes.

In speaking of the development of fishes he referred to the work of the fisheulturists, and objected to the theories of some that all or any fishes could be indefinitely increased without regard to the numbers captured or to their competition for food with other fishes. He claimed that this was a contradiction of the accepted theory of natural selection, and that the protection of fishes was as important as their culture. He explained how the food supply of the fishes was diminished by the drainage of swamps, the restriction of the overflow of streams by dykes or levees and other works of man, and doubted if the supply could ever be made to equal that of the country before its subjection to civilization.

HON. W. B. WELLS, of Ontario, died April 8, in Toronto, of paralysis. Judge Wells was born at Maitland, in the County of Grenville, October 3, 1809, and commenced the practice of law in Prescott in 1832. He was actively interested in politics, and was three times elected to represent Grenville in the Canadian Parliament. In the year 1852 he was appointed Judge of Kent, and filled this position with ability and honor for twenty-seven years, resigning it two years ago, when he went to Toronto, where he has since resided. Up to within a short time he has enjoyed excellent health, and his death was sudden. He was struck down by paralysis on Monday and died the following Friday.

To the sportsmen of the last generation Judge Wells was known as a brilliant and versatile writer on subjects treating of the rod and gun. He was a frequent contributor to the old *Porter's Spirit*, and under the pseudonym *Cinna* contributed to the *British Whig* a series of interesting "Sporting Sketches." He was also the author of a book on field sports, which was highly thought of in England.

AS IF THE GAME OF NEW JERSEY had not suffered enough from forest fires last spring and bitter cold and snows last winter, fresh reports of destruction now reach us. Extensive forest fires are raging in Sussex county, New Jersey, among the pines, and it is feared that unless they are promptly checked by rains much game may be destroyed.

Nor are the fires confined to New Jersey, for in the mountains of Pennsylvania, near Port Jervis, the forests are on fire. There has as yet been no loss of life so far as reported, but much property has been destroyed and probably a large amount of game has perished.

The Sportsman Tourist.

THE FRANKLIN CLUB AT REELFOOT.

IT has long been the custom of the "Franklin Hunting and Fishing Club" to spend a couple of weeks of every fall in shooting and fishing at Reelfoot Lake, situated in the extreme northwest corner of this State, and within a short distance of the Mississippi River. This lake is twenty-five or thirty miles long and from four to eight miles in width, with numerous arms or inlets extending in every direction, many of them to a distance of three or four miles. These arms are favorite resorts for ducks and geese, the water being shallow and their appropriate food abundant. Patches of tule and bonnets impede somewhat the headway of the sportsman's watercraft—generally a dug-out—but give many good stands for shooting the game in its flight, and here the best bags are generally made. The lake is studded with the remains of gigantic cypress trees, still standing straight as arrows, but limbless, and all showing more or less the effects of fire on their charred and blackened bodies. This feature is so constant and gives such a sameness of appearance as to make it necessary for the uninitiated to have guides. The depth of water does not generally exceed ten feet, and where it is only three or four feet in depth the bottom is covered with moss, furnishing vast amounts of food for waterfowl and such fish as live on vegetable diet, besides giving shelter and protection to the small and growing fish against their large and rapacious brethren. Sportsmen from St. Louis, Cincinnati, Louisville, Nashville and all portions of Tennessee and Northern Mississippi meet here, some camping out, others finding accommodations at Carpenter's Hotel, kept especially for sportsmen, and furnishing comfortable quarters, good, substantial fare and kind attention, with guides and boats for all comers at a rate sufficiently moderate to be within the reach of men of modest means. On the opposite side of the lake from Carpenter's stands a beautiful and well-built club-house, the property of some Nashville gentlemen who, with their friends, make annual pilgrimages to this Mecca of Tennessee sportsmen.

We left Nashville at five o'clock P. M. Nov. 11 by rail, and the trip from Nashville over the Northwestern Railroad is always made pleasant by the courtesy and attention of the officers and employes, who extend every desired and proper privilege to sportsmen in the way of transporting and caring for baggage, dogs, minnows, and the hundred and one impedimenta belonging to a company on a camp-hunt. The road may be left either at Union City or Hickman, both of which places are provided with excellent liveries. We stopped at the former place, and, after a drive of twenty miles, reached the lake at 3 P. M., near Carpenter's Hotel, and immediately crossed in boats to a narrow strip of land known as "Long Point." Here we made camp, and before night had our tents up and our quarters made as comfortable as a house. Our camp was about thirty yards from the margin of the lake, looking southward, while toward the north and east we were sheltered by a dense canebrake protecting us against the biting winds whose visits were in store for us.

Every duck known to Western waters may be found here, and, in some seasons, in numbers almost incredible. It seems to be a favorite stopping place between their Northern habitat and their southern points to which they migrate. Their stay is sometimes a question of food, and sometimes of weather. Geese were very plentiful last fall, and large numbers remain here during the entire year, rearing broods of young. The native goose is much heavier than his migratory brother from Canada, and possessed of an amount of solid sense which, in the human being, would lead to fame and fortune. Swans are also found here, although not in great numbers, but here, as elsewhere, extremely shy and difficult to shoot. The water turkey (cormorant) is here in force, and is a fearful destroyer of fish. They work in concert, and with system and sagacity. Forming a long line, beating on the water with their wings, diving and making hideous noises, they drive the schools of fish toward the shallow arms of the lake, devouring such numbers as to make their name a synonym for gluttony. The bird of freedom, too, seems to like this spot as a home, and during the hunting season the great numbers of wounded ducks and geese lighten his labors in procuring food. In the woods wild turkey and deer abound sufficiently to repay those prepared to hunt them. Fur-bearing animals—the beaver, otter, mink, raccoon and muskrat—are taken in great numbers by trappers, who lead lives of exposure and hardship during the winter months.

The weather on the day following our arrival gave promise of good fishing, and after breakfast we set out for the "drift," some half a mile from camp. This is a portion of the lake in which there is an occasional live cypress growing, among which numbers of fallen trees and logs have drifted and become so wedged and woven in as to defy removal by winds and currents. They are sufficiently scattered to allow canoes to penetrate in almost any direction, and afford the fish security against every device except hook and line. There were four of us, and from 10 A. M. until 4 P. M. we caught thirty-seven black bass, many of them going over four and none under two pounds. Although the next morning was much colder, we determined to fish again, and from 9 A. M. until 1 P. M. caught twenty-five—Capt. P. taking the largest, five and a quarter pounds. The weather was now getting colder every moment, our lines standing up from the corks like wire, and not a man with fingers enough to put a minnow on a hook. As we started for camp, Col. W. had a bite, and did not get off in company with the rest of us. The fish carried his line about the roots of a large cypress stump, and the Colonel, intent on the capture of his fish, stepped on to the stump, but after a short struggle his hook was released and the fish gone. On turning to enter his boat, imagine his feelings to find that the wind had blown the boat thirty or forty feet away, and it was still going. His first thought was to make a cast with his hook and sinker, and he landed them in the canoe and drew out his landing net. His next cast was more fortunate, the line lodging in a split on the edge of the boat and holding where the sinker had reached, enabling him to reel it in. The situation was suggestive to a man of a contemplative turn of mind—water ten feet deep, wind blowing half a gale, thermometer far below freezing point, and camp half a mile away.

The weather continuing to grow colder, our party gave their attention to hunting, with fair success. On the 17th of November Capt. P. and Jno. C. went up one of the arms a distance of two or three miles, to what is known as the "Huckles," a famous stand for ducks and geese. But few birds were seen, and by 12 o'clock they found the ice making so rapidly between themselves and camp as to render their

escape only possible through great exertions, and indeed men of lighter physique or less pluck could not have made the return trip. Shooting from boats was now out of the question; the ice too thick to force a boat through and not strong enough to bear the weight of a man. We were in for it, and had to wait for a thaw or for ice strong enough to bear us.

Most of the parties at Carpenter's Hotel had left for their homes, as had those encamped where wagons could reach them, but we were completely isolated and determined to bide our time. We discovered an air hole of some acres in extent about half a mile from camp and near the terminal point of our peninsula. By dragging boats over the strong ice and working through the thin places, Col. W. and John C. reached the further side of the opening where ducks and geese had congregated in large numbers, while Capt. P. and I remained on the shore. Here, by dint of perseverance and defiance of an amount of cold that would have congealed an Esquimaux Indian, we managed to bag fifty or sixty ducks and three or four geese per day, losing at least as many more that fell on the ice where we could not reach them. On the 23d the ice became strong enough to justify us in venturing across the lake with bag and baggage, and this we did. Our tents were pitched within a 100 yards of a trapper who lived in an old boat and plied his vocation for six or eight miles up and down the lake. To him we were indebted for much kind assistance in making our escape from our imprisonment.

He made us a sled upon which we moved our baggage that could not be packed in the boats, and when everything was loaded we presented rather an Arctic appearance as we strung out along the ropes with which we drew them over the ice, and I am able to record the solemn and still painful fact that the slippery side of that ice was uppermost and that it developed a wonderful dexterity in its motions. After great labor, much fatigue, innumerable falls and several breaks through thin places we reached a point within a 100 yards of the hotel shortly after nightfall, leaving everything on the ice until morning. After a supper at Carpenter's, we retired to clean beds and slept the sleep of the innocent. Wagons were waiting us early next morning and we left for Union City, reaching our homes in due time, and so far from being the worse for wear, feeling that we had gained in health, strength and vigor. Klem.

Franklin, Tenn., 1880.

ANTELOPE HUNTING IN COLORADO.

OUR starting-point was the ranch on the Fountaine, fifteen miles north of Pueblo. Our destination, Chico, a dry creek some thirty miles to the eastward, from the bed of which rise numerous springs called by the natives "water holes," where the antelope came to drink. Our outfit—blankets, provisions, rifles, ammunition, etc.—was packed in a large covered wagon. There were three of us in the party, Harry, who was to drive the mule team because he had seen service; Dan, a New England boy, who had been in the country long enough to learn the ranges and the manner of hunting, and myself, a "tenderfoot."

At sunrise we were on the move, Dan and myself leading off on the "broncos" as guides and advance guard of our "wagon train." It was quite necessary that some one should pick out the best path for the wagon, as the country was quite rolling, and we were to strike directly across it. The Fountaine Valley reminds one of New England. Its clumps of cotton-wood trees are similar to our silver leaf poplar, and and its groves of wild plum interlaced with huge grape vines much resemble our black alder swamps.

These thoughts were quickly dispelled, however, on mounting the opposite bluff and seeing spread out before us as far as the eye could reach, a brown and sere desert, not a tree nor even a shrub, except the clump of cactus and sagebrush, and patches now and then of prickly pear, and occasional tufts of buffalo grass about the color of an "old fog," and cropped closely by the fine teeth of the sheep. Huge turkey-buzzards wheeled in the air, watching with keen eye for the carcass of some sheep that had succumbed to age or disease, or, perhaps, for the remains of the coyotes' last night's meal. Cotton-tail rabbits scampered before us from cactus to cactus, while occasionally a jack-rabbit leaped out from beneath the horses' feet and bounded off with the speed of the wind until he had placed a safe distance between himself and our party. Now we came upon a prairie dog village with its hundreds of holes, each one resembling the frustrum of a cone, the entrance at the top being ten inches or a foot above the level of the ground. On the rim sat the dogs upon their haunches, chattering like so many magpies, ready on our nearer approach to dive into their holes.

All the morning we traveled toward a butte which seemed only a few miles from us at the start, but which was really only a few miles from Chico. This we reached about 1 o'clock, but seeing a cabin some distance further on we concluded to push ahead, for there we were sure of water for ourselves and beasts. No one thinks of locating in that country except by never-failing springs. Although the cabin was deserted we found the spring, and after quenching our thirst, and watering and picketing our animals we gathered dry sagebrush enough for Dan to cook our dinner, which we relished keenly after our ride of nearly thirty miles.

After lunching we drove down the Chico about three miles to an old abandoned "doby cabin," close by a number of water holes, which show signs of antelope, and here we concluded to camp for the night. We had heard before starting that there were plenty of ducks in some of the water-holes, and had brought along our guns hoping to bag a few. After tramping three or four miles and crawling up to numerous water-holes without seeing a duck or a sign of one, we at length came to a larger one, and following the same tactics, crawled up to it on our hands and knees, keeping between us and the pond a large cottonwood, and hugging the earth so that our buttons fairly plowed the ground. The pond was packed and we were within thirty yards. Dropping down, we laid two cartridges on the ground before us, and together poured six barrels into the thickest bunch of them. Such dashing and splashing, and such noise of whirring wings as the great flock rose straight in the air never greeted my ears before. Cramming in our other cartridges we gave them a parting shot as they were about separating into smaller flocks, bringing down a few more. The pond being narrow, all the birds were easily poled ashore, and we found on counting up that we had thirty-four of the largest and fattest gray ducks I ever saw.

The next morning we took our stands at different water holes. Dan in a crib, or foundation, of cottonwood logs, built cob-house fashion by some rancher; Harry fifty rods farther down the valley, behind a big stump, and myself about equidistant between the two, with an old bench from the "doby" for a blind. We had waited nearly an hour when a band of antelope made their appearance on the bluff some four miles away, their sides glistening in the morning sun like so many silver dollars. They halted ten minutes or more, seeming to take a survey of the situation, and then galloped toward us at a rapid rate. Every now and then they would stop short, throw their heads in the air, and gaze about them as if to assure themselves of their entire safety, and again dash forward at their old pace. Thus they approached until within three hundred yards of us, when they slacked up to a walk and I counted twelve in the band. They were making directly toward my stand. Keeping so low down that their horns were only visible until they were near enough to shoot, I carefully raised my head. Within fifty yards of me were twelve of the finest animals of the deer kind it was ever my lot to behold, each one seeming to dare the others to go near, as they walked round and round nearly in a circle. The end of my rifle all the while had been resting on the bench in front of me. Clutching it more firmly, and glancing along the barrel, at the same time making a short sharp whistle to bring them to a stand still, I singled out a large buck and fired. Down went a fine fellow, while the rest bounded toward the bluff. Three or four more shots at the running band only crippled one, which, however, led the whole band until they were out of sight. We carried the killed animal to the "doby," and had hardly regained our places when a band came over the bluff further up the valley and headed directly for Dan's place of concealment. When they were yet a thousand yards away, the report of a rifle rang out sharp and clear, and they wheeled and galloped back to the plains. It did not sound like Dan's gun, and appeared to be a longer distance off.

Although greatly surprised, I kept my place until it was repeated on the next band, and then went up to Dan's crib to find out the cause. Dan was walking back and forth in a towering rage.

"Did you shoot, Dan?" said I.

"Shoot! Do you see that cabin up there," pointing with his finger to a "doby cabin" some half a mile up the valley.

"Yes."

"Well, old Sykes and his two sons live there, and a meaner crew can't be found between Denver and the Spanish Peaks. The old man is in the calaboose for shooting a fourteen-year old boy in Colorado Springs, and the boys dare not show their heads in Pueblo. Every band of antelope that comes down from the west one of the boys goes out and shoots across, and turns back to the hills. Now if they do it again I'll show them a trick worth two of theirs, or my name ain't Dan. I'll put a ball so close to him that he'll think he has had a pretty loud call."

"Suppose you kill him?"

"Well, everybody in the country would be glad, and it would save the 'cow punchers' the trouble of hanging him to a cottonwood, which they will surely do if he stays in the country much longer."

Another band showed themselves in a short time, and while they were yet a long distance off one of the Sykes walked out a hundred yards or more from his cabin and sent a bullet whistling across them, sending them scampering back to the bluff.

"That's what I call a dog in the manger," said Dan, worked up to fever heat again.

Grasping his rifle and laying it across a log he blazed away, and down dropped Sykes.

"You have killed him," said I.

"No, I haven't, but he don't want any more; see him crawling on his hands and knees through the sage brush. He is all right."

And it proved to be the case, for when within fifty feet of his door he sprang to his feet and ran for dear life to cover.

"Now we have cooked him we will have some good shooting, for the day is hot and they will come in certain," said Dan. We kept our places until nearly two o'clock, when we had ten fine antelopes, making with the three fine bucks Harry had killed, thirteen. With these we loaded our wagon and started for home, where we arrived about midnight. Don't think that we needlessly slaughtered them, for the ranchers along the Fountain Valley were very glad to change their diet of corn bread and bacon for delicious, juicy antelope. J. M. B.

MINNESOTA SPORT.

AMONG the many happy hunting grounds, Clear Water Lake, on the branch line of the St. P., M. and M. Railway, sixty-three miles from St. Paul, Minnesota, is one of the best. The lake is an irregularly formed body of water about six miles long, and from one to two miles wide. It abounds in gravelly points and marshy bays, and each year from September 15 until the lake is closed with ice it is a favorite resort of the toothsome teal and its larger and warier brother the mallard.

Each returning year finds me there on some lone point which guards the passage between contiguous bays marking up and down that the leaden messengers of death within my faithful "Parker" may be sped at the adventurous duck that seeks a passage from one feeding place to another. Large bags of game do not always reward me for my visits there, but the place is quiet and retired, is almost unknown to the pot-hunter and good passes are abundant where the sportsman can see his game, a mere speck in the distance, can watch it increase in size until he can name the genus and species of the feathered balls which are shooting toward him, and can make his shot and know that whatever falls is due to his gun, and is a legitimate trophy of his luck or skill.

On an early October day last fall I piloted a party of three to this bourne from which no sportsman ever wants to return.

There was Pat B, the blushing, modest Pat, who says there is no sport in shooting glass balls (his average on the vitreous spheres is a fraction over one in ten), but who loves to shoot ducks (in a crowd). He has a first-class retriever that learned to steal from the half breed who first owned him, and Pat actually believes that every duck his dog brings him was shot by him and, therefore, that he knows how to shoot ducks—a decided delusion, but fondly hugged by him just the same. There, too, was Jim B., who has French blood coursing through his veins, and who is, therefore, a hunter by instinct, and there was the subscriber, as ardent a lover of a gun and dog, green fields and shady woods as ever lived. We left St. Paul at seven o'clock A. M., and after a three-hours' run on the cars reached Clear Lake section. Mine host, Blackburn, of the Clear Water Hotel, with his team of fat ponies, met us at the depot, and stowing ourselves, baggage and dogs in his commodious platform wagon, we started for the lake, thirteen miles distant. The day was a jewel, even among the many lovely days a Minnesota autumn brings to us, and we were a merry party as we bowled along the faultless natural road toward our destination. An occasional mallard in the little lakes along the way excited the sanguine Pat, but as our experience of him was that he was not very successful with ducks, we held him in the wagon and passed on that we might have an evening's shoot at the lake.

We had engaged accommodations at the farm-house of Mr. Ross, a veritable hunter's home, made so by the ever watchful kindness of his excellent wife and accomplished and pretty daughters. Arriving there, we were warmly greeted, and soon after, hunters' style, we were on our way to the pass, a ridge of land between two lakes, distant about a quarter of a mile from the house.

We found Frank W., a romancer (with all the name implies), a New Yorker, a spinner of tales, an initiated Col. Sellers, at Mr. Ross', and he said there were millions of ducks about the lake. Of course we knew there were not when he said there were, so we trudged along to the pass rather dispirited. The aggravating Pat sarcastically said, "This is a fine place to bring a man," and the quiet Frenchman sniffed in the air and forced it out again with a sound very much resembling "No ducks here." As luck would have it, just as we reached our stands a single mallard passed over rather high, and Pat scored an "unaccountable" by dropping it as prettily as one could wish. Then loudly blew he his horn, and smiled he his healthiest smile, and he said, "I told you so;" and, as Jim B. shortly after commenced his pile with a bronze-head we were a happy trio and thought we had struck 'em just right.

It was rather early for the evening flight and, as I had some doubts of getting any ducks while in the vicinity of Pat's dog, I took a skiff and rowed across the lake to a point covered with low bushes, where the unreliable W. said he had bagged nineteen mallards the evening before. I found it a darling point for a sportsman. The flight was mostly single mallards, but they came low, against the wind, and as they winged their flight within range they grew upon the vision until they appeared to be as large as geese. And when the little pellets which were hurled from my gun found a vital spot they came down into the clear water with a splash and a bound, as if they were hurled from some heavenly howitzer. I bagged seven mallards before dark. Then came the invigorating pull for home, the merry music of the waters as they dashed against my boat, and as the deepening gloom of night fell over the waters, blotting the shore from sight, the feeling crept over me that I was alone in the world. The inky waters of the lake glistened like the dreamed-of seas which the phantasy of nightmare sometimes conjures up; and the flapping mud-hens were demons gloating on my loneliness. But the shore was soon reached, and a few moments afterwards I was seated at Mr. Ross' hospitable board plying the knife and fork and listening to the romances of W——, vouched for by his "Old Bill Jones," the genial Pat, and laughed at by all the rest. As my companions together only secured five ducks I was accused of picking up the ducks they had wounded and lost. The penalty of greatness easily submitted to under the circumstances.

After supper, cards (old sledge) in which the ladies joined, and then bed with dreams of all the feathered tribe—they being the hunters and I the hunted, the only retribution the poor things can ever get with man.

The following day was clear and warm, and small bags were scored. Pat and Jim began to get anxious about their business, and started for home, leaving W—— and myself sole monarchs of the lake.

That evening the elements let themselves loose. Old Borens sought southern climes, and whistled and howled about the house in a manner quite ridiculous for an October visitation. The next morning the blizzard was upon us. A hurricane of snow filled the air with driving whiteness and all living things sought such shelter as they could from its fury. About three o'clock in the afternoon the storm lulled, and I started out through drifts of snow to my waist, for I knew the lee shores would swarm with ducks and that I could relieve my mind of the bloody thoughts which the howling winds had engendered by imitating its stealthy march, *sans* its bluster, and by dealing out destruction upon the unsuspecting mallards that would be feeding out of the reach of the wind. The noise of the elements and the snow-muffled ground favored the hunter and doomed the ducks. I made a bee line from the house to the lake, and peering over the bank felt the indescribable thrill of pleasure which the sight of a mob of bobbing mallards within easy range must ever give the sportsman. My first barrel surprised them in the water, and the second crashed through the startled swarm as they rose in the air. Three birds were bagged at this shot, and soon after Dan, Mr. Ross' son, and I got in four barrels at another flock, and bagged seven birds. Ten heavy mallards in less than half an hour satisfied me, and the load was a heavy one to pack home through the deep snow and against the strong wind.

The following morning furnished me the finest sport of the hunt. The wind had changed into the South, and I chose for my stand a little point near the house. I hardly had my blind completed before a green-head swept down upon the wind and was dropped sixty yards away upon the thin ice which had formed about the shores of the lake during the night. Now came the test of Pat's dog, and nobly he proved himself an all-weather hunter. Every foot he made toward the duck was gained by breaking the ice before him. Yet he never hurried back nor flinched the cold until he laid his duck at my feet. The noble dog repeated this ten times before I was signalled for breakfast, and you may be sure I rewarded him with a good square meal when we reached the house. A mallard is regarded as a very cunning bird, and they have to be hit hard to be retrieved in open water. On this morning I did not lose a duck, however slightly hit. When one of the beauties came down it broke the ice, but the rebound sent them forward on the solid ice, and then they were helpless. It was very ludicrous to see the old fellows frantically pounding the thin ice with their heads, no doubt wondering why they did not disappear beneath its surface.

Thus ended my fall hunt at Clearwater Lake for 1880. It combined several elements of true pleasure, pleasant companions, a hospitable stopping place, fine weather for game and a fairly filled bag. It furnished pleasant memories for the long winter evenings which followed, and it heightens the anticipations of the coming time, when stooping low behind my blind, with every nerve strained, with beating heart and bounding pulse, I shall watch again the coming flock until it passes within range, and the waiting fingers, responsive to the moment, presses the trigger and the shot is made.

Hunt.

Natural History.

NEW CATALOGUE OF NORTH AMERICAN BIRDS.

MR. RIDGWAYS' paper on the nomenclature of North American birds is by far the most important of the shorter ornithological works that has appeared in this country for many years. It is a complete revision of the last Smithsonian List, published in 1859, and is brought down, as nearly as such a work ever can be, to date.

Three catalogues of the birds of North America have been issued previous to the one now before us, and of these the only one which has had any general circulation even among ornithologists is that of 1859, which was based upon the work of Baird, Cassin and Lawrence, published as Vol. IX. of the Pacific Railroad Reports. Another one entitled, "A Catalogue of the Birds of North America," by Robert Ridgway, forms part of the proceedings of the United States National Museum III. This last is in fact the basis of the present one, which, however, has been much modified, and in many ways changed and corrected, and to which a new introduction has been written.

The present list contains no less than 226 species and recognizable races which have been added to the North American bird fauna since the year 1859, while sixty-two names contained in the old catalogue of that year have either been reduced to the position of synonyms, or have been removed from the list as not occurring within the region to which it refers. Of the remaining 698 names over 300 have been more or less changed orthographically and otherwise, so that in the present list only 395 of the 760 names given in the old catalogue are retained in the nomenclature of the day.

Only those forms which are regarded as distinct species are in the present catalogue distinguished by separate numbers, the races or varieties being marked by a letter of the alphabet—*a*, *b*, etc., under the number of the species. There are 764 numbers in the list of 1881, and 160 sub-species or races, so that the catalogue in reality contains 924 names.

North America, as understood in the present list, includes the entire continent down to the Southern border of the United States, Greenland, the peninsula of Lower California, with the outlying islands of Guadalupe and Socorro. The bird fauna of these two islands is essentially Nearctic in character, only two species of Neotropical birds being found on them. A number of species, known only from Audubon's description of them, are retained in the list, and reasons, which will commend themselves to every one, are given for failing to throw them out. One great difficulty encountered by Mr. Ridgway in the compilation of this catalogue consists in the adoption of trinomials for the designation of forms, which, while differing from the typical stock, has not yet become so differentiated as to merit a specific appellation. In other words, the determination of the question; when does a certain form cease to be a variety and become a good species; where shall the line be drawn between species and a sub-species, variety or race, is an extremely difficult matter, and one which has to be decided anew in the case of each different bird.

That this is a point about which individual opinions are extremely likely to vary is evident enough, and it is not to be supposed that all of Mr. Ridgway's decisions will be accepted by ornithologists, but all will feel sure that the work has been carefully done, and that the determinations have not been made without reasons which seemed good, and at the time convincing, to the author of the present list.

For the benefit of those of our readers who, while they are interested in birds and more or less familiar with the nomenclature of the older authors, do not keep up with the progress of ornithological science, we print below a few of the more important changes of the generic and specific names of our more common birds.

Hylocichla is substituted for *Turdus* in that section of the thrushes of which *Turdus mustelinus*, Gmel., is the type. *Merula* is substituted for *Turdus* or *Planesticus* in that section of the thrushes represented by *Turdus migratorius*.

Turdus nævius has become *Hesperocichla nævius*.

Helinaia has been changed to *Helonæa*.

Helmitherus has been changed to *Helminthotherus*.

Collyrio has been changed to *Lanius*.

Hirundo horrorum is now *H. erythrogastra*.

Cotyle has become *Cotile*.

Chrysomitris is changed to *Astragalinus* for that section of the American goldfinches of which *C. tristis* is the type, while the generic name *Chrysonitris* is applied only to *C. notata* and *C. pinus*.

Spizella socialis is now *S. domestica*. All of the Juncos heretofore regarded as mere varieties have been elevated to specific rank.

Melospiza melodia becomes *M. fasciata*; *Goniaphæa* becomes *Zamelodia*; *Cyanospiza* becomes *Passerina*; *Euspiza* becomes *Spiza*; *Corous americanus* becomes *C. frugivorus*.

Pica melanoleuca hudsonica is *P. rustica hudsonica*, while *P. nuttalli*, so long regarded as a variety, is given specific rank. *Cyanurus* has become *Cyanocitta*; *Chætura pelagica* or *pelasgia* is now *C. pelasgica*. *Antrostomus nuttalli* becomes *Phalænoptilus nuttalli*. *Picus albolarvatus* has become *Xenopicus albolarvatus*. *Otus* and *Brachyotus* are united in the genus *Asio*; *Strix* is changed to *Aluco*; *Syrnium* is changed to *Strix* for the barred-owl group, while the great gray owl is placed in a genus *Ulula* by itself.

In the *Falconidæ* there are some changes of name which we have not the space to enumerate, and in the herons we notice the adoption of a number of generic appellations long since proposed by Prof. Baird, but not generally accepted until the publication of Mr. Ridgway's paper on this group a year or two ago. Among the Ibises the white and scarlet species are removed to the genus *Eudocimus*, while the glossy and white-faced are called respectively, *Plegadis falcinellus* and *P. guarana*.

The rosy spoonbill is *Ajnja rosea*; the killdeer plover, *Oxyechus vociferus*; Wilson's plover, *Ochthodromus wilsonius*; the mountain plover, *Podasocys montanus*; and the Wilson's snipe, *Gallinago media wilsoni*. The old genus *Tringa* is separated into *Arquatella*, *Actodromus* and *Pelidna*, and certain of the specific names are changed, not only here, but among the godwits and other waders. The grass, gray or upland plover is no longer *Actiturus bartramius*, but *Bartramia longicauda*.

In the *Anatidæ* there are a number of changes. *Cygnus* has become *Olor*; *Anser* (in part) *Chen*; *Branta*, *Bernicla*; *Bucephala*, *Clangula*; the genus *Somateria* is separated into *Polysticta*, *Lampronetta* and *Somateria*, while the old term *Œdemia* now includes *Œdemia*, *Melanetta* and *Pelionetta*, and *Erismatura dominica* has become *Nomonyx dominicus*.

Among the remaining groups a number of important changes in nomenclature appear, most of which, however, are of interest only to the ornithologist, who will, of course, at once supply himself with a copy of the present work.

In a very full Appendix to this catalogue, Mr. Ridgway furnishes a condensed analysis of the changes which have taken place in North American ornithology since 1859. This extremely important portion of the work includes a list of species eliminated from the catalogue of 1859; a list of the species and races described or added to the North American fauna since 1859, with references to the first description or first North American record of each species; a list of North American genera, which have been described or added to the fauna since 1859, together with those whose names or orthography have been changed since that date; a list of the species included in the catalogue which have not yet (according to the records) actually been taken within the prescribed limits; a list of (chiefly) North European species which occur only as stragglers in Eastern North America, or regularly only in Greenland and adjacent portions of the continent; a list of Palæartic and Oceanic species occurring only in Alaska and other parts of the Pacific Coast; Palæarctic species occurring both in Greenland and Alaska, but not recorded from any intermediate point in North America; a list of tropical American species occurring only in southern portions of the United States; an enumeration of valid species described by Audubon and Wilson which have not since been met with, and of which no specimens are known to exist in collections; a list of untenable species and races of North American birds described since 1858; a list of exotic species attributed to North America by various authors apparently on insufficient evidence; a partial list of foreign birds introduced into the United States and those which have been captured after escape from confinement.

From the summary which we have given of the contents of the present paper it will be seen that there is compressed into a very small space a vast amount of information of the greatest value to the ornithologist. We have here collected matter which was originally scattered through hundreds of volumes, journals, proceedings of scientific societies and the like, and the service which Mr. Ridgway has performed in collating and arranging this material cannot be overestimated. The author of this list, too—standing as he does in the first rank of American ornithologists—was just the one to have undertaken this laborious task, for his name gives us the assurance that the work has been well done, and that a mature and ripened judgment has been brought to bear on all doubtful points.

BREEDING OF THE GREAT HORNED OWL.—The following slip is from the Cayuga (N. Y.) *Chief*, and is interesting. The local science of Cayuga is, however, at fault when it states that this species is supposed to "incubate later in the season." *Bubo virginianus* is one of the earliest birds to nest in this latitude, and the eggs are usually deposited by the middle of March. The extract is as follows: On Thursday morning C. K. Durbin, son of Thomas Durbin, taxidermist, while out on a hunting expedition, succeeded in capturing a large horned owl, while on its nest. Two little owlets were in the nest, which are the queerest creatures we have seen. They are evidently but recently hatched, and are covered with down, but destitute of feathers. They cuddle together in the nest, uttering sounds not unlike a young chicken when seeking the comfortable shelter of its mother's wings. The mother owl had evidently laid in a good stock of provisions for her young, for in the nest were found eight mice, a rat, a rabbit and a robin. The capture is quite important as a contribution to natural history, inasmuch as the species were supposed to incubate later in the season. The family are alive and may be seen at Durbin's greenhouse.

CANADA BIRDS—Bowmanville, April 14, 1881.—I send you a few notes on the winter and early spring birds observed by me in this section of this country during the past winter. I am inclined to ask with my friend, Jno. Neilson, what has become of them? Who can give the information? That we have had a very severe winter there is no doubt, but I do not think this accounts for the scarcity, as most of our Canadian winter birds, and especially those of the Quebec district, are of the most hardy kind and not likely to be distrirt, are of the most hardy kind and not likely to be district, are of the most hardy kind and not likely to be frightened by any amount of cold, as long as food was plentiful. I have seen but one solitary specimen of the woodpecker tribe, and they are usually one of the most common of winter birds, and but once have I observed any crossbills.

Below I give you a list of the winter kinds and the date of the first spring arrivals:

January 17, Shore Lark.
" 21, Hudsonian Chicadee.
February 24, Pine Grosbeak
March 3, Crossbills, Blue jays, Bufflehead, pintail duck.
" 4, Red-shouldered Buzzard.
" 5, Buldhead Eagle, Cedar birds.
" 13, Crows, purple grakles.
" 14, nuns, downy woodpecker, red-tailed hawk.
" 20, blue birds, robin.
" 25, hermit thrush.
April 9, song sparrow, ground or field sparrow.
" 15, wild pigeons, golden winged woodpecker, meadow lark.
" 16, peregrine falcon.

Most of my observations have been made under difficulties this winter, as we have no woods near the town, and my time is generally taken up by my business.—AU SABLE.

MIGRATING HERONS—Pawtucket, R. I., April 21, 1881.—*Editor Forest and Stream:* Yesterday I was snipe shooting on Valley Falls Flats, in Rhode Island, and saw what I supposed to be a flock of geese flying very low, but soon discovered them to be blue heron; there were twenty in the flock. Now I have had a good deal of experience in shooting and have never seen them in such numbers before. Will you please inform me if it is not a very unusual occurrence for this part of the country.—G. W. PITCHER.

We saw once such a flock as this observed by you. It was in the gray of the morning in April, and we were rowing out to the ducking ground, when we observed twenty great blue herons, and about a quarter of a mile behind them nine more. The birds were coming from the South across Long Island Sound and were about half a mile from the north shore of the Sound when they were seen.

FLORIDA NOTES—Halifax Inlet, E. Florida, April 17, 1881.—We sometimes see the osprey or fish-hawk escape the pursuit of the predatory eagle by ascending high into the air. Apparently the eagle, *Haliætus leucocephalus*, cannot or will not ascend so high, for, at a certain elevation, she abandons the chase. The osprey only occasionally adopts these tactics. Perhaps only when the fish she carries is light enough to allow the upward flight, or it may be only the older birds, which have acquired by many contests this cunning.

A specimen of the marsh hen, *Rallus longirostris*, was brought in lately, with its bill caught between the shells of a clam; so imprisoned, the bird had been drowned by the rising tide.

Four specimens of the shell of the paper nautilus were brought in from this beach lately, after a storm. It has been doubted by some whether this species occurs on the coast of Eastern Florida, but specimens are found here every winter, sometimes containing the animal.—S. C. C.

TAME QUAIL.—Dover, N. J., April 20, 1881.—Last summer Elias Crater, living between Succasunna and Flanders, drove a mowing machine over a quail's nest. He took the eggs home and set them under a bantam. Nine were hatched. A cat killed one, but did not disturb the rest. The hen would wander with them in the daytime, but always brought them into the kitchen to sleep. I saw them a number of times when small. Yesterday I saw the only surviving two (males). They are fine, large, healthy birds, and are allowed their freedom and go in and about the house just as an ordinary fowl would.—A. C. C.

GREAT NORTHERN DIVER.—West Milford, W. Va.—On the 13th inst. I killed a great northern diver (*Colymbus glacialis*) on our mill pond, which measured thirty inches in length and three feet and nine inches from tip to tip of wings, and weighed eight and three-fourths pounds. I believe it is a very rare bird in this section. Will some of the correspondents of this paper state whether it is common in the northern part of the United States and what is the usual size of the birds.—B. D. R.

The loon is common in the North, especially on the sea coast, during the spring and fall migrations.

ALBINO ROBINS.—A milk-white, red-breasted robin is exciting considerable interest among citizens of Sewickley, Pa., where she has been discovered building a nest, assisted by a male robin of normal color, save that he has a white head.

MAINE.—Lincoln, April 16.—A fine specimen of a white-headed eagle (*Haliætus leucocephalus*), measuring eight feet from tip to tip of wings, was caught in a trap in this vicinity recently, and is now in possession of our local taxidermist. —F. C. P.

Game Bag and Gun.

"BLACK POWDER" EXPLOSIONS.

LAST Thursday morning there was a terrible explosion at the Dittmar powder works at Binghamton, New York. The buildings of the manufactory were shattered, and their stone foundations distributed over an area of half a mile. The trunks of trees were twisted off and others torn up by the roots; many thousands of panes of glass were broken in all parts of the city, and the shock of the explosion was felt for thirty miles around. And this tremendous explosion was that of "black powder which had been stored on the premises." Mr. Carl Dittmar told the reporters that the first and minor explosion was caused by the spontaneous combustion of a barrel of nitro-sugar; and then explained to them, as they in turn dutifully explained to the public:

"The Dittmar powder first took fire and was consumed in a slow blaze which reached the black powder in about five minutes, when the terrific explosion which startled the inhabitants for many miles around took place."

There is a flavor of simplicity and ingenuousness about that statement which leaves no room to question its entire veracity. Mr. Dittmar is now engaged in the manufacture of blasting explosives; the "black powder" part of the story reminds us of a similar curious circumstance attending the Park Place, New York, explosion last year. On the morning of the 30th day of last June a tremendous shock startled Park Place, and a dense volume of smoke was seen pouring from the Dittmar powder company's establishment. Amid the concourse of firemen, police and excited citizens, a news-

paper reporter of our acquaintance made his way into the smoke-filled building. The windows and doors were blown out, fragments of desks, chairs and other furniture littered the room, wall partitions had been demolished, and scattered about were the *dejecta membra* of an iron safe.

"What caused the explosion?" inquired our friend of one of the firm, the venerable presiding deity of the place.

"Explosion, sir!" was the reply; "there has been no explosion here."

That man had missed his destiny. He came into the world too late. The cans of "Dittmar Sporting" were so many ignoble snuffers of his genius. On the field of battle, his troops slain and the remnant in retreat, amid the carnage and disaster of the day, he would have achieved magnificent victory by a sublime and resplendently brazen negation of defeat.

But let us tell the story. Mr. Dittmar says that the disaster at Binghamton last Thursday was caused by the spontaneous combustion of nitro-sugar. Now it will be remembered that nitro-sugar entered into the composition of the so-called "sporting powder," and such particulars as we could gather of the Park Place explosion, seemed to us to point to a like spontaneous combustion of the "sporting powder" stored in the safe. We accordingly examined the depositions of the Dittmars regarding the affair, and found that here, too, the explosion was caused not by Dittmar powder, but by *black rifle powder!* The story as told to the officials (men being brought up to swear to it in due time) was briefly this: One Robert J. Howe, of Baychester, N. Y., on the morning of June 30 brought into the office of the Dittmar Company a keg of black rifle powder "containing nine or ten pounds," where he wanted to leave it until the afternoon, when another man, one Martin Sneider, was to come in from Rosedale, N. Y., whom Howe was to meet at a hotel and to whom he was to deliver the powder. An employee of the company took from the can, to carry home, a portion of this powder brought into town for another man; then he swears he put the can "in an iron safe and closed the safe doors nearly shut" and left the office, and shortly afterward returned to find a pile of papers on top of the safe on fire. "The burning papers fell off from the top of the safe between the door, which was partly open, and the inside of the safe, which contained the powder. When the fire had been burning about two minutes the keg of powder exploded." "This was the first time that Mr. Howe ever brought any powder in[to] said store." The outline of this account was sworn to by Andrew J. Parker, one of the firm, July 2. The porter, who put the powder into the safe, was produced to swear to that fact July 7, and the man Howe duly furnished his corroboration July 9.

"And did you accept this tale?" we asked the officials.

"Well," was the reply, "it was sworn to, and we had to accept it."

There is still another story of the Dittmar explosion at Neponset, Mass., some years ago, when a workman who had made a headlong aerial flight over the landscape was afterward shown not to have been fired out by the explosion, but to have been a flying-machine monomaniac projected into space by his own fatal invention. The explosion of Dittmar powder at the time was simply a coincidence.

When the Greek playwriters had put their hero into seemingly inextricable positions of danger, it was their practice to introduce a god upon the stage to help him out. It was the duty of one of the stage assistants at the appointed time to wheel on the deity. As such a deity-manipulator Carl Dittmar, had he lived two thousand years ago, would have achieved immortality.

A CALL TO REFORM.

I WISH to call the attention of the sportsmen of the country to the following lamentable state of affairs, and to earnestly inquire of them how long they propose to allow the dealers in game to dictate to our legislative bodies what laws shall or shall not be passed for the protection of our fish and game. Why, right here in the good old Commonwealth of Massachusetts—and the blush of shame mantles my cheek as I write—it is utterly impossible to obtain the slightest concession from the clique who have organized for the purpose and by some means manage to control the votes of a majority of our very "Honorable General Court" when the subject of game protection is before the House. So powerful an influence does this clique wield that not a word or syllable that is inimical to their interest can be incorporated into any act or resolve. In vain do our most enlightened sportsmen, year after year, strive to obtain the legislation so much needed to restrict the selling of game to its proper season. In vain are their earnest efforts to put a stop to the nefarious traffic. They are defeated at every turn, and the ruthless destroyers—for they alone are the guilty ones—of millions of our choicest game birds not only smile at our distress, but flaunt in our faces from every huckster's stall the bloody corses of their victims. Again I ask how long shall this thing be? How long will the sportsmen of America submit to the wanton destruction of the noble game they profess to love so well? How long will they supinely fold their hands and allow these traders in the blood of our "slaughtered innocents" to dictate times and seasons for their unholy traffic, regardless alike of the threatened extinction of our game, the wishes of our resident sportsmen and the solemn protests of those of the Western States, upon whom the evil results must chiefly fall? I am in almost daily receipt of letters from the West urgently calling upon us to put our shoulders to the wheel and to move heaven and earth to secure the passage of laws that will prevent the sale of game out of season, for, as an old friend from Iowa writes, "so long as you of the East legalize the sale of dead bodies, just so long will there be found unprincipled marauders to rob the grave-yards, if need be, to supply the demand." I am exceedingly pained to say that the old Bay State is not alone in perpetrating this great wrong upon her sister States of the West. Therefore the greater need that her example—as oftentimes of yore—should lead aright, and I sincerely trust that the day is not far distant that shall see our sportsmen awake from their criminal apathy, and, united as one man, arise and sweep from our statute books these objectionable laws and place in their stead protective enactments that shall secure to our children's children the inestimable privilege of enjoying the healthful, ennobling sports of the field. I do not propose to enter into an elaborate argument upon this subject. In fact, argument is entirely out of place, for the only question at issue is: Shall we tamely submit to the dictum of these cormorants and allow their desecrating hands to utterly destroy the last vestige of our once bountiful supply of game in order that a few paltry dimes may be clutched within their [illegible]dy hands. God forbid that argument should be needed here. Brother sportsmen, the solemn responsibility of this great wrong rests upon you. Ponder well these words of warning and awake from your lethargy ere it is too late to save our beautiful forests from utter desolation and our broad fields from becoming a desert waste.

Springfield, Mass. SHADOW.

A HUNT IN WEST VIRGINIA.

AS very few sportsmen do ever come whhere to hunt anything except deer and wild turkeys I have an idea that they think we have no partridges; but if so they are mistaken. On Wednesday of last week four of us made up our minds to go up the country about eighteen miles and stay a day or two for the shooting, not that we have not plenty of birds around here, but as we knew this ground pretty well, we wanted a change. So we started one morning about three hours later than we had agreed upon. I had my colt, Nat, had his horse and Tip and Jim got the wagon, or at least what was a wagon once, for it is now in its dotage. Then we had to take some dogs, and, as each man thought his dog or dogs were the best, we had to take them all, namely, Rover and Don, belonging to Tip; Dash and Bruno, belonging to Nat, and Grand Duke (who, by the way, has been mentioned in your columns before this), who belongs to the writer. After we had traveled safely for three miles the wagon broke down, which did not surprise me in the least; but as I was driving, of course the others said it was my fault, so I let Nat take the reins, but something else breaking in a very short time, he also resigned his responsible position and took a back seat. At last we arrived at friend Dick's, where we received a hearty welcome in true Virginia style. After talking hunt a good deal and helping a pretty girl to knit, the hum of the spinning wheels made me feel sleepy, so we all turned in, with the expectation of having a good day's hunt on the morrow. But, as the old darkey says, "Blessed am they who 'spects little; 'cause why—they ain't gwine to be disapp'inted."

When we opened our eyes after a sound sleep it was pouring, and we felt like using some of Bret Harte's favorite expressions, but as we were supposed to be very good young men we refrained from giving ourselves away, especially as our friend who had taught us knitting the night before was within earshot. After eating a tremendous breakfast out of spite for the bad weather, we strolled to the barn to see after the horses. But the weather soon drove us into the house, for the rain was coming down as if the prayer of the countryman had been answered who prayed: "Oh, Lord! take the stopper out of the bottle of the universe and pour down Thy blessings upon our heads. Amen."

Now we will draw a curtain over the proceedings of that day knowing you will not miss much. But the next morning being clear and beautiful, with a soft, blue haze lying on the distant mountains, and a crispness in the air which made one feel like a gallop over the fields, and our spirits having gone up in proportion, we started, after a great deal of time being lost in fixing our traps, which, by the way, should have been done the day before.

In front of us lay field after field, stretching away to the hills, and beyond these the high mountains of the Alleghany range towered up toward heaven losing themselves in the blue sky, as if God had opened the gates of heaven to let them enter. On we went drinking in the beauties of the scene till at last the dogs came to a stand, and then all other thoughts gave way to the excitement of the moment. After getting sixty birds our ammunition gave out, and we were forced to return home starting up covey after covey on the way. When we arrived at the house we found everything just as it was when we left. The pretty girl was still knitting, her mother spinning and the fire blazing brightly. It certainly was a picture that will live in my memory for some time to come. After supper one of the neighbors came in to know if we would like to go coon hunting, and as usual we entered into the thing with all our hearts. So we got some hounds belonging to our host and went out into the blackest night I ever saw, trusting to luck to find the right way; but, as we ran into first one fence and then another, we soon found it was "no go," and sent a boy back for some rich pine wood to be used as torches. After a little while we got a possum, but, as no coons were around, we were about to turn back, when the hounds suddenly started up a fox, and then we were all excitement. We ran and ran, but the dogs were much too quick for us, and as we were on the top of a mountain we built a roaring fire, knowing full well that the fox would double and come back very near, which was the case, as it passed not fifty yards from us; but the hounds were tired, so we sent off post haste two miles for more dogs, and while we were waiting for them I looked around me. The scene was truly grand; for, as Bret Harte says, "the roaring camp-fire, with rude humor, painted the ruddy tints of health" on all the hunters' faces who were gathered around, making a tableau few would care to miss seeing, while an old sportsman was telling a wonderful story of an adventure he had had in his youth. "But as he spoke, from clustering pine and cedar a silence seemed to fall, and the fir-trees, gathering closer in the shadows, listened in every spray," while I stood as if it were all a dream, watching the torch of the man who went after the dogs appearing and disappearing in the distance like a Will-o'-the-Wisp. It certainly was like fairyland. The fire crackled, the blaze went up high above us, casting a weird light on the trees, while they in their turn cast queer looking shadows which lost themselves in gloom. The baying of the hounds grew fainter and fainter in the distance, till they died away altogether, only to begin again, coming nearer and nearer every instant, till, by the time they reached us, the other dogs had arrived, so we put them on the trail and soon had the fox cornered. The dogs stopped baying and we rushed to the rescue. There was another scene fit for any artist. The fox had run down a ledge of rocks till it could go no further, then suddenly turned back, as if to retrace its steps, but finding us too near for any chance of escape in that direction, he paused a moment as if weighing his chances of life, and without a moment's warning leaped into what appeared to us infinite space. We stood on the rocks holding our torches above our heads and peering down into the black darkness beneath us, and yet while we gazed, uncertain what to do, the voice of a dog arose in one sharp bark from the depths below. We held our breath to listen, "while a silence seemed to fall," but it did not last long, for in a moment the noise of a struggle among the leaves came up to us. A bark, a groan, and then all was still as death. While our torches flickered and glared in the darkness, throwing an unsteady light on the surprised faces of our party, there we stood looking at each other as if the earth had opened and swallowed up our fox, till one of our old hunters brought us back to our senses by saying, "Well, boys, we may as well try and get down in that ere hole or we will stand a good chance of going home minus a fox." So after a great deal of trouble we reached what seemed to me at the time to be a bottomless pit, but what turned out to be a kind of bear's den; not that there were any bears in it; oh, no, but there on one side lay a tumbled mass of fur which might have been taken for one. It was the dog and fox all in a heap, the former holding on to the throat of his enemy. We soon got him off, and while one of the party shouldered the fox we tried to find an easy way out. But it was "no go," so we scrambled up the best way we could and went home pretty well tired out. The next day it was raining very hard when we started for Berkeley, and we felt like again quoting from the countryman who prayed, after it had rained more than was needed, "Oh, Lord! When we asked you to take the stopper out of the bottle of the universe we did not mean for you to lose it. Amen." But in spite of the loss of the stopper we reached home in safety, and then began the fun of relating our adventures, without any regard for the size of the stories.

Berkeley Springs, W. Va. VICTOR.

METHODS OF TRAPPING BEAVER.

IN the fall of 1866, with one companion of congenial taste, I took passage on the steamer Wabuno (since foundered, as stated in the FOREST AND STREAM,) to the outlet of the Seguin River, thence by canoes to the numerous lakes and tributaries on the headwaters of that then unknown stream. Supplied with six months' provisions and the necessary camp equipage of hunters and trappers, we pitched our tent. This was made of poles arranged in the form of a rail fence, corner-thatched with hemlock boughs, a temporary protection for provisions and utensils. The location selected was between waters of the Seguin and Magvetawan Rivers.

We began operations by building a log cabin, dimensions about twelve feet square, roofed with troughs of hollow cedars, choosing trees six to eight inches in diameter. After cutting and splitting in lengths sufficient to reach across the roof we laid one cover with hollows up and the next with hollows lapping over the edges of first cover, thereby forming a roof which never leaked, and strong enough to bear any fall of snow with safety. We were now ready to commence our business of trapping; to illustrate some of the means resorted to will be my aim in this article. The beavers there were not of the domesticated kind; but the bank and house beavers which at that time were quite plentiful on the north shore, and there is no record of their cultivating the acquaintance of civilized people that I am aware of. If any readers of the FOREST AND STREAM should attempt to make a practical application of hints offered here, it is my sincere hope that the results may be more satisfactory than some tests I have made of so-called hints of trappers, who claim to make trapping easy to all. For trappers earn their bread, and perseverance is absolutely necessary to their success, as any man experienced in the business will testify.

Descriptions of beavers' dams and conical two-story houses, built in the shallow water near the head of the ponds, have been often given and are familiar. After finding fresh cuttings of timber near the dams, showing the presence of beaver, begin operations by cutting a channel through the dam one foot wide and the same in depth; take two sticks about two feet long and the size of the finger, and sharpened at both ends; plant them firmly in the trench, inclining up stream, the points about six inches apart and just below the surface. Set the trap opposite one point and one foot further up stream, six inches under water. If too deep, fill with stones to the required depth. The beaver, when visiting the break to repair it, will first attempt to swim through the channel, and, swimming against the sharp points, will involuntarily throw out all fours to stop further progress, and will be caught by the hind foot, which is directly over the trap.

Another method is to set the trap in the trails leading to fresh cuttings on the banks, or find where a tree is partly cut, setting the trap near the stump, as the beaver will usually finish his work the succeeding night. The trap should be set on the outside of the trail, as the feet of the beaver will be placed there in traveling, making two rows of tracks several inches apart. Do not use a green stick for a stake, as beaver will make short work of it, and you will thereby lose both game and trap. Use seasoned hemlock or tamarack, which will not be cut, or tie firmly to a stone with the inner bark of basswood.

Beavers cut their winter wood late in the fall, first felling small trees, usually of birch, and cutting in lengths from twenty to thirty inches, which wood is placed evenly on the bottom near the houses and furnishes food after the ice shuts them from the banks, and is carried into the houses, stripped of the bark and carried outside, where it is strewed around promiscuously, where it may be seen in the spring, or by cutting through the ice in winter.

After this food has become water-soaked and stale you may begin winter trapping. First ascertain if the houses are occupied, by looking down the chimney, as it is termed by trappers, which is the opening left in the top of the house for ventilation, and is thickly interlaced with twigs. The breath and warmth of the inmates keep it open through the snow, and it is covered in unoccupied houses. Approach carefully, and when satisfied that the family is at home you may stamp against the walls with your snowshoes, and by listening at the chimney as the frightened beavers take to the water you may count the number; then you will afterward know when all are captured. The beaver will then take refuge in other houses, of which there are usually several in each dam. In traveling to and from the house under the ice there will be a hollow space formed, which you may locate by pounding on the surface until it gives back a hollow sound. Cut a hole near this channel, and take three poles, one dry and two fresh, green birches, one inch in diameter; plant them firmly in the bottom in a triangular form, and one foot apart, projecting through the ice. Set your trap, placing the ring on the dry pole; lower the trap with hooked poles, allowing the ring to slide down with the trap to the bottom, placing the trap between the green poles. The beaver, when finding the fresh wood, will first cut them near the ice, and, finding them fast at the bottom, will attempt cutting there, which will end in his being caught, if the directions have been properly followed. I have caught beavers by this method in eight feet of water.

Still another method is by cutting into the channel near the house after driving the beavers out, and following them from house to house, making it impossible for them to return. Watch the openings in the swift water above until driven

there for air, when they may be shot or speared from the banks. This method to be successful must not be attempted when the ice is higher at the shore than on the surface, as that affords breathing places which will be taken advantage of in preference to the openings described heretofore.

Experiments, which were the results of long experience, and which have been successful, were always considered secrets of the trade and jealously guarded, but such secrets are of no great importance except to experienced hunters and trappers; for you may explain just how to cast a fly, or how far ahead to aim on a ruffed grouse, and then it takes years of practice and a natural tact and fondness for the sport to make the information of any practical use. H. C. W.

Wellsville, N. Y.

SHORE AND INLAND NOTES.

LEHIGH VALLEY, Pa., April 13.

I HAVE been summoned to the beautiful town of ———, in the Lehigh Valley, by a friend who is anxious that I should accompany him on a fishing trip to a stream not far distant, where he has always enjoyed good fly fishing quite early in the season. I am promptly at his side, but to-day it is raining in torrents, and I must content myself with looking out of the window at the dull clouds as they roll over the hill-tops, and be impressed with the not very good prospects for the morrow.

Before leaving Philadelphia and stopping in at Krider's to replenish my stock of flies, leaders, etc., etc., I met Capt. Bond, of Long Beach, N. J., and, anxious to learn anything of interest from Tuckerton Bay, questioned him regarding the fowl in his waters and the effect the freezing of the shoal places has had upon the feed of the ducks. The Captain tells me that when the ice broke up it carried off all the vegetable matter with it, pulling it up by the roots, and thus leaving no food for the fowl. "Geese and brant have been plentiful enough, but have not stopped long in Tuckerton Bay." The black duck shooting is being ruined, he states, by the night shooters and "pond watchers." "Captain Sam Shords and his boys and Captain Billy Gaskill and his boys following this sort of work every favorable night. The consequence is," said Bond, "the black ducks are yearly decreasing in numbers, and soon will not come into the bay to feed."

I found Captain Clay and Dan Wells just about starting on a yachting trip down the Delaware River to the bay for ducks and snipe. They will go down as far as Prime Hook and Slaughter Hook marshes.

Last week Mr. Geo Fitler had a shot at a swan, a short distance below Philadelphia, but it was a long one, and the bird was not killed. This swan is the second one that has been seen so near the city for many years. One of our river men killed several wild geese near Tinnicum's Island a few day ssince. This is considered a "ten-strike and a spare."

To break the monotony of the dull, rainy day your correspondent ran up to Mauch Chunk to inspect the trout ponds of Mr. Alex. Leisenring, and to pass an hour or two with the genial sportsmen of that place. At the Mansion House we were shown a very well bred red Irish setter belonging to the worthy landlord, Mr. J. S. Weibert. The dog, we are told, is of Capt. Silsbey's breeding. Mr. Weibert owns another very fine setter we once had the pleasure of shooting over when she (Kate) was in the possession of her former owner. We looked at a number of very fair native setters belonging to the sportsmen of the neighborhood. Some are famous for ruffed grouse, and their owners kill not a few of these noble birds every season, as the valleys and hillsides in this section of the country abound with them.

The quail of the Lehigh Valley have been completely destroyed by the snows of the past winter, but we are pleased to know that a few gentlemen have clubbed together and housed between one and two hundred birds, which will furnish the stock for the coming breeding season.

We were luckily present at feeding time, when we reached the trout ponds of Mr. Leisenring and witnessed the commotion made by two or three thousand hungry fish, as the attendant threw upon the water the minced liver with which they were fed. Mr. Leisenring has two ponds—in one there are twelve or fifteen hundred fish, at least fifteen inches long—in the other a like number, averaging eighteen to twenty inches. One of the fish we saw Mr. John Leisening stated was twenty-six inches from tip to tip—Mr. Blackfort should have this monster. The ponds and trout we understand are for sale and can be bought at a very low price.

To-morrow, if the weather will permit, we will try the trout in ——— Creek, but the prospect, as I look out of the window, is a forlorn one. HOMO.

GAME NOTES FROM MANY QUARTERS.

California.—Our quail season closed on the 15th of last month, and we have lots of them left for breeding purposes. I am glad to see that a war of extermination is begun against the hawks; they are a terrible scourge and I never miss an opportunity to kill one of them, although our California quail always frequent much heavier cover than the Eastern quail do.—H. M. B.

Colebrook, N. H.—The game of this part of the State has wintered unusually well. Some crust hunting has been done near the settled locations. Tom Chester writes that "around the First Connecticut Lake the natives are killling deer at a great rate, and the hotel men there are encouraging it to all appearances." Sportsmen will contribute to their own pleasure by increasing the price per day for Magalloway guides. The pork barrel began to look low, and a party of them ran down and killed one moose recently. Tom Chester in one of his excursions after fishers found where they had been digging in the snow. Investigation revealed an old bull moose that had died before snow came last fall. The horns measured 3 ft. 7 in. spread, and had a great number of points and brow antlers. F. J. Gamsby, of this town, has caught fifty-eight foxes since last October.—NED MORTON.

Weedsport, N. Y.—Woodcock, snipe and plover are coming in.—DON.

Osbornville, N. J.—Whole bevies of quail were found here frozen to death after the snow went off.—J. W. J. O.

PITTSBURGH, Pa., April 21.—Ducks are beginning to arrive on our rivers; some fair bags have been made. A few arrived within the city limits, but they did not stay long, as they came to the conclusion that they had found an unsafe place, as every gunner in the city almost was out after them.—N.

MINNESOTA—Camden, N. J.—I have just come in from a ten days' sojourn in Minnesota. What a grand State it is, with its rare and bracing air! Ducks and geese are very thick, and I found some very good gunning ground in a section of the State in which I had entered some land twenty-seven years ago, only to find the land—then a wilderness—now on the St. Paul & Duluth Railroad, and near the former city. I came through with Gen. Gibson, of Montana, of the Regular Army. He told me of catching a nine-pound trout in the Missouia River, Montana. I took the liberty of telling him you would be glad to get his experiences by "flood and field," and he said he would gladly avail himself of your pages. —J. M. S.

STATEN ISLAND—Brooklyn, April 18.—A friend and myself made a flying visit to Staten Island last Thursday to try our luck. After a tough fag day, cold and windy, we found twelve birds, of which we bagged eleven. Birds very wild—only getting two points out of the lot. We hunted down wind.—SNORE.

WESTERN NEW YORK—Buffalo, April 17.—Spring is still very backward and fishermen are catching large quantities of the blue and yellow pike through holes in the ice, which still covers Lake Erie to the depth of nearly three feet, as far as the eye can reach. The first Wilson's snipe of the season was shot here on April 15 by Jake Swartz, an irrepressible pursuer of fin, fur and feather. A few specimens of the white bellied swallows have made their appearance, and the mountain ash trees in and about the city are alive with flocks of the cedar birds. Beyond this everything has a January-like aspect, with sharp frosts every night.—C. L.

WEST VIRGINIA—West Milford, April 19.—I seldom see any communications in FOREST AND STREAM from our State, and I am aware that our sportsmen are not so much interested in this section as in many other States, nevertheless we are taking more interest of late years than formerly. Our game laws are good enough, if enforced, and of late are generally observed in regard to fish and birds; no fish taken except with rod and line. Our river is pretty well stocked with pike, perch, catfish and a great variety of the sucker tribe. Ruffed grouse (here called pheasant) and quails are our principle game birds; grouse, I think have wintered well; quail suffered much from continued snows, probably 60 per cent. saved. We will have no shooting now for three years; expect plenty by that time, if the following winters should be favorable. We had no good shooting last fall, on account of winter setting in so early.—E. D. R.

WHO SHOT "OLD ALEX."—Confluence, Pa.—There appeared in the Pittsburgh *Post*, Sept. 18, 1880, an article signed "J. C. B., Confluence, Pa.," in which he stated that until within a couple of weeks a buck, familiarly known as "Old Alex.," roamed in the mountains near Confluence, Pa., defying the skill of our own as well as Pittsburgh's most noted marksmen. But by good fortune it fell to Mr. Ed. W. Watson, of Alleghany, to kill his buckship; and the writer of the article ends by saying that shot would settle all controversy as to who killed "Old Alex." Now I wish to correct the above by saying, "Give honor to whom honor is due," as we dislike very much to see any one wearing laurels not their own. At the above mentioned time "Old Alex." was not alive, as he was shot by R. T. C. Stephenson, of Burgettstown, Washington Co., Pa., with a rifle, distance 110 yards, the deer on the dead run at the time he was shot. He was killed in Fayette County, this State, on the 9th day of December, 1876, at 7:15 A. M., on the farm then owned by Silas Butler, but now in possession of Mathias McClintock. For the past two or three years before he was killed he was often seen pasturing on the farms of Squire Tice, Jonathan Butler, L. P. Shipley and Wm. Rickner, who are among the oldest settlers; and who, upon seeing him dead, pronounced him the famous deer known as "Old Alex.," and would testify to the same, if necessary. Stephenson has the horns and hide in his possession yet. We write this merely to show that Stephenson did shoot the old and only original deer known as "Old Alex.," and that Washington County is entitled to the honors of his death, and not Alleghany. If "J. C. B." will go back to the files of the ROD AND GUN, then published in New York City, in February, 1877, he will find an account of his having been shot by Stephenson.—G. C. BUTLER.

DETROIT NOTES.—This is the first day in which there has been felt a genuine touch of spring. Yesterday (April 17), witnessed a tremendous fall of rain, which began about 3 P. M. and continued unceasingly for a period of fifteen hours. When I came down town this morning the air was balmy, the grass between the curb and the sidewalk in the city parks and on private lawns had taken on a lively green, which twenty-four hours before was not visible; singing birds made pleasant music; the pavements were warm and dry, and there was in the city a kind of business quiver that made me think spring had indeed come at last. We of Detroit, in common with you of New York, have had a distressing winter. An old hunter told me not long ago that no such severe winter as that just ended had been known hereabout since 1841. The fall of snow was enormous—hunting was out of the question, except during the season of deer, and fishing through the ice was practically abandoned, even the most enthusiastic fishers having found themselves unable to brave the extraordinary severity of the weather.

I can look out of my window nowadays and see considerable flocks of wild ducks flying up the river Lake St. Clairward, though at this moment the river is chocked with ice floating Erieward. Shooting is going on rather lively.

It is reported that several Marquette sportsmen intend to erect a hunting box at Sixteen-Mile Lake. They could not select a better spot for such a purpose, as there is in that region an abundance of game and speckled trout. Trout fishing, says a waggish friend, is rather slim just now—the snow and ice darken the water so much that they can't see to bite. CHARON.

A LOON-Y PERFORMANCE.—Last Saturday afternoon we had a rather animated shooting tournament in this place. It was one of those impromptu affairs that succeed in drawing a large crowd without any preliminary advertising. It had been announced for several days that a fellow calling himself "Wild Jim." would on that afternoon give an exhibition of his marvelous dexterity with the rifle. Some time before the hour named for the show on "The Island," a solitary loon, (*Colymbus glacialis*) was seen in the river near the bridge. Immediately as many as a score of men ran for their guns, and the fun commenced. At least forty rounds were fired at him before he succumbed. The bombardment was kept up for more than half an hour from both shores and the bridge, which was crowded with spectators. There must have been four hundred persons attracted to the spot by the shooting. It was bang here, and bang there, and bang yonder, and sometimes several simultaneous bangs every time the loon's head broke the surface. Every miss was a signal for a succession of groans from the crowd, and when he was finally hit by some lucky fellow on the west shore, the shouts of applause were deafening. "Wild Jim's" shooting of glass balls and walnuts that followed this free entertainment was a tame thing in comparison.

Wild ducks and geese have been flying here this week in large numbers, and many have been shot along Fox River. There is hardly an evening but we hear the cackle of geese flying over our village. It gives one the "gun fever" to hear their monotonous cackle, and large coveys of ducks like the rush of mighty winds. HIX.

MASSACHUSETTS WILD FOWL SHOOTING—Pocasset, Mass., April 13.—Spring shooting affords us much sport at times. This bay—Buzzard's—lies in the way of many migratory fowl. The best shooting places are, "Back of Marshnee," "Hog Island Narrows," Cataumut Beach and some points on the western shore. Brant favor Cataumet Beach, and sometimes are killed "Back of Marshnee." "Back of Marshnee" is the passage between Marshnee Island and Toby's.' Coots, loons, shelldrakes and many other species fly up through this passage on their way North.

A party of three camped for a few days near Cataumet Beach. They were too early for the coots, but got some shelldrakes, and had a grand time notwithstanding the cold weather. In a week or two the coots will come, and though poor eating they afford fine shooting. In season I have seen thirty boats lying between Marshnee and Toby's islands. The coots fly in flocks ranging from a few pair to thousands. The time of shooting is from daybreak till an hour or so after sunrise. The afternoon shooting begins at about 4 P. M., and lasts till it's too dark to see. A southwest wind is best as the birds then try to cross over the cape—Cape Cast. If they fly too high then the gunner whistles them down. I have known them to pitch down to the water from a height of more than 200 yards on hearing the gunner's sharp whistle. At these times they often fly very close to one's boat and are quite difficult to hit. After they are whistled down they go up the bay a short way, and then turn and come out, thus giving two shots. In this way many are killed in one day. Loons give good point shooting, but they are tough in every sense of the word. Our winter ducks have left. MERGUS.

THE WAYS OF REYNARD.—Pittsford, Rutland Co., Vt.—I see in issue of Feb. 24 an article in regard to foxes relieving one another when hard pressed by the hound. My experience has not been the same as your correspondent's. On Feb 21 I was out and started one fox, and another was routed by the voice of the hound, and both foxes came over the runways on which I was standing at the same time and from different directions. I shot at the stray fox and he dropped in his track. I then attempted to serve the other likewise, but my second barrel missed fire, and on he went. When the dog came up he saw the fox I had killed, and made a rush for him to shake him as he always does three or four times before he is satisfied, but just as he opened his mouth to take him in he discovered it was not the fox he was after. He threw up his head and commenced circling for the other trail which he soon struck, and away he went in pursuit. This was conclusive evidence that this dog had a nose keen enough to discern the difference between the scent of the two foxes. In about an hour I killed the fox the dog was after, and found both were males. In all my experience in fox shooting, during which time more than 150 foxes have fallen to my gun, never to my knowledge has a stray fox relieved the one started by the dog, and never have I owned a dog that would not start and chase a pregnant fox as long and well as any other. We have nothing but red foxes here, with gray ones it may be different. With a dog that has not a keen nose no doubt such a change could take place.—E. S.

FIFTY-DOLLAR GUNS—Bowmanville, Ont.—I saw in the FOREST AND STREAM of some weeks ago (I cannot just call the number to mind) an article entitled "The Best Fifty-dollar Gun," in which the writer seemed to think that it is impossible to get a pair of Damascus or laminated steel barrels on a fifty-dollar imported gun. I am inclined to differ with him. I think that any imported breech-loader that is represented as having these barrels really has them. The barrels turned out in a factory are by no means uniform in quality nor free from flaws. The barrels of these cheap guns are, without doubt, genuine Damascus or laminated steel, but they are rejected barrels; and in some hundreds of these guns, that I have had opportunities of examining, I never remember seeing one without one or more flaws, either inside or outside of the barrels. This is the secret of their cheapness; not because they are stained imitations, as many suppose, for it is impossible to figure the barrels of a gun by staining to represent twist of any kind where the fraud is not apparent on the surface. If any one wants a good fifty-dollar gun let him patronize one of our own American gunsmiths, and he will get value for his money every time, not in Damascus barrels, however. AU SABLE.

MIGRATORY QUAIL.—The Rockland, Me., *Express* reports that a pair of Messina quail have been seen in the west part of Brunswick where a portion of the flock imported last year was liberated. The same paper says that "Dr. Stevens has in his stable at North New Portland a deer that is a curiosity in that section. It was taken in the Dead River woods near Flagstaff. Woodmen and hunters who have seen it say they never saw the like. The ears of the animal are nine inches long, and its tail is like a young colt's. It completely answers the description given by books of the mule deer of the eastern slope of the Rocky Mountains."

Mr. Everett Smith writes to the Portland, Me., *Argus*: "The quails liberated and known to have bred in Maine last year, migrated south in the autumn, but may be expected to make their appearance here in May, and commence nesting in the fields in June. In reply to inquiries about these birds, which always nest on the ground, I will quote a paragraph from the report of the Commissioners of Fisheries and Game for 1880:

NOTE.—A quail's nest may be identified by the *number of eggs*, from 8 to 15 to each nest. None of our native field birds lay so many.

Farmers are requested, when finding nests in hay-fields, to leave a square yard of grass standing about it; or, if mowed over, to place some small branches around and over the nest, so that it may not be deserted. See article on Quails, page 36.'

"It is hoped as full a record as possible shall be kept of this attempt to introduce quails to the avifauna of our State, and I would therefore request that any observation of these birds be communicated to me at the above address.

A FORMIDABLE PIECE OF ORDNANCE has recently been submitted for our inspection. It is the invention of Mr. Fayette S. Giles, well known to the sportsmen of America as the founder and leading spirit of the Blooming Grove Park Association, and consists of a breech loading six barreled rifle, so contrived that one, two or three barrels may be discharged at once, or the entire six "turned loose" simultaneously. It is claimed that the arm will give the same pattern at 500 yards with bullets as that usually attained at 30 yards with shot from a choke bore, the penetration being equal to that of an Express rifle. The object of this polygastric gun is, in short, to provide the gunner with an arm equally fatal to the squirrel on a stump and the grizzly on a mountain peak.

THE WINCHESTER EXPRESS IN INDIA—Poonah, India.—*Editor Forest and Stream:* Having lately seen several let

ters in your very interesting paper on the subject of hunting rifles, and as inquiries are being continually made on the same subject in the columns of the *Asian*, our only sporting paper, especially one or two lately on the merits of the Winchester Express rifle, may I be permitted to say that from all accounts this weapon appears to me to fulfill nearly all the conditions required of a perfect sporting rifle. Its one defect, however—the smallness of its charge for the comparatively large calibre—will prevent its general adoption, I think, in this country. When that is remedied and the gun is made to take the usual English .500 Express charge of 120 to 160 grs. powder, and 340 to 390 lead, the days of the double rifle will be numbered, for in addition to the advantage of having a reserve of five shots in the repeater against one in the double-barrel, the price of a really good double rifle would buy several repeaters.—SEPOY.

A CUBAN QUAIL SNARER.—Havana, Cuba, April 9.—Our colored sportsman arms himself with a bag and a long cane pole with a lasso of horsehair at the end and a little dog to find and flush up the quail. As soon as flushed the dog runs after them, barking as if his life depended on it. The flock generally light in the first tree; then the dog keeps barking, and as soon as the negro comes up he joins in the bark, and with his pole he will put the loop over the bird's head and take him to bag, often catching most of the flock before they find out that it is not all noise. This style works best early in the season when the birds are quite young. In this way of catching the birds this season they have taken them all near the small villages. I wish that your game law could be enforced here.—J. W.

KITTY HAWK BAY CLUB.—Another large tract of land in Currituck and Dare counties, North Carolina, is to be taken up by a club for shooting and fishing grounds. The Kitty Hawk Sportsmen's Club has secured the purchase and lease of 25,000 acres of the far-famed sporting district on the Carolina coast where the shooting includes canvas backs, redheads, black heads, mallards, teal, brant, geese, swan, snipe and deer, and the fishing comprises black and striped bass, Spanish mackerel, sheep's head and mullet.

SEABOARD SHOOTING ASSOCIATION—Portsmouth, Va.—At a recent meeting of the Seaboard Shooting Association the following officers were elected for ensuing year: President, Dr. H. F. Butt; Vice-President, James M. Binford; Secretary, H. G. Williams; Treasurer, A. C. Freidlin; Executive Committee—Dr. H. F. Butt, H. G. Williams, E. V. White, A. C. Freidlin and James F. Carr.

BOWMANVILLE, Ontario.—Our spring has opened in earnest, and the duck shooting has commenced, but as yet the bags made are neither heavy nor many. I have seen no snipe nor woodcock, but expect them in very soon. Wild pigeons not seen so far this spring, which is a very unusual state of affairs as some always come in, though often in small numbers compared to what I have seen in years gone by.—AU SABLE.

WILD PIGEONS.—The wild pigeons are about seventy miles west of Atoka, Indian Territory, nesting; set in about one week ago. Large body of them reported.

QUAIL FOR SPRINGFIELD.—The Rod and Gun Club, of Springfield, Mass., have received and let loose two hundred and twenty of the four hundred and twenty quail purchased by them, and are in hopes that the balance will arrive soon.

Camp Fire Flickerings.

By the way, that reminds me—

APROPOS of the stories published recently in FOREST AND STREAM on squirrel shooting, I send you the following to find if anything similar has come within the observation of the fraternity.

One morning last fall, one of our gunners, armed with what "Byrne" would call a "woodchuck gun," was out in the bottoms west of town after squirrels. A number had already fallen to his unerring aim, when, observing a squirrel working toward him, he sat down on a log to wait. He had hardly seated himself when a noise in a tree behind caused him to look around. What was his surprise to see a big coon about ready to descend. Thinking this a chance to obtain the wherewith for a coon pot-pie, our Nimrod raised his rifle and fired. By the way the coon kicked he was evidently hard hit, and struggled to retain his grip on the tree. But his coonship was not destined to become a hungry man's meat, for immediately coon No. 2 came out of a hole above, and snatching his wounded brother by the wool, gathered him in to a place of safety.—ANON.

THIS comes from MACON, Ga.: I read with much interest in FOREST AND STREAM of March 31, a very good article on turkey hunting by "Splasher." He writes about killing four out of five turkeys at one shot. This calls to mind a story an uncle of mine told me some years ago. This uncle was from North Carolina, and was, when a young man, very fond of sports, and I have listened to some marvelous stories from his experience with the game of North Carolina. There was in his neighborhood a man who was notoriously trifling and lazy, disagreeable and offensive in many ways and, in fact, a "dead beat and a sponge." On one occasion he approached one of his neighbors and requested that he would allow him to use his gun for a day or two—stating that a large flock of turkeys were near his house, and he having baited them could kill several of them at a shot. His neighbor, thinking the opportunity to get rid of him a good one, readily consented; told him he would load the gun for him, and going into his house put in about three charges of powder and shot—enough, as he supposed, to burst the gun and kill the man. As the fellow shouldered the gun and marched away the owner of the gun congratulated himself on ridding the community of the vagabond. Several days after, to his amazement, the man came to his house with the gun, and in response to his questions about the turkeys entered into a graphic description of how he saw the flock approaching, how they came up to the trench, and he, taking aim, fired. "And did you kill any?" "Yes," said he, "when I came to, I picked up seven."—J. H. J.

[We wonder if that uncle could not be induced "to tell another."—Ed.]

The vigor of youth given to the aged and infirm by using Hop Bitters. Try it.

Sea and River Fishing.

FISH IN SEASON IN APRIL.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*	White Bass, *Roccus chrysops.*
Pickerel, *Esox reticulatus.*	Rock Bass, *Ambloplites.* (Two species).
Pike or Pickerel, *Esox lucius.*	
Pike-perch (wall-eyed pike) *Stizostedium americanum, S. griseum*, etc.	Warmouth, *Chenobryttus gulosus.*
	Crappie, *Pomoxys nigromaculatus.*
	Bachelor, *Pomoxys annularis.*
Yellow Perch, *Perca fluviatilis.*	Chub, *Semotilis corporalis.*
Striped Bass, *Roccus lineatus.*	

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Pollachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	

We have also the Literary Angler, who reads Walton and admires him hugely; he has been inoculated with the sentiment only; the five-mile walk up the creek, where it has not been fished much, is very fatiguing to him, he "did not know he must wade the stream," and does not until he slips in, and then he has some trouble at night to get his boots off. He is provided with a stout bass rod, good "strong" leaders of salmon-gut, and a stock of Conroy's "journal flies," and wonders if he had not better put a shot just above his stretcher fly.—THAD NORRIS.

SMELLING BLUEFISH AT A DISTANCE.

THE following letter from Dr. D. Webster Prentiss, Professor of Materia Medica in the National Medical College in Washington, to Prof. G. Brown Goode, of the U. S. Fish Commission, contains an idea new to us, and we hope to have a chance to verify the odor of a school of bluefish and locate them by the odor alone, when summer comes, without reliance on the leaping of the fish when feeding, or on the presence of screaming gulls. He writes:

PROF. G. BROWN GOODE: WASHINGTON, D. C.

Dear Sir—Visiting Nantucket last summer (1880), I was present on the South Beach when several fishermen came in with bluefish in their dories. In conversation with one of them I asked how it was on the broad ocean he knew where to fish. "We smell them," was his reply. I looked incredulous, and he added, "But strangers won't believe it." I certainly thought at the time that it was a "fish story." The next day, sailing up the harbor of Nantucket to Wauwinnet, I saw a flock of gulls hovering over a particular portion of water, screaming and diving into it. I asked the skipper what they were after and was informed there was a school of bluefish at that point feeding on the young menhaden, which they drove to the surface, and the gulls were attacking the small fry from above. Shortly after, passing near the spot, I noticed a peculiar fresh odor, something between the smell of cucumbers and watermelons.

On the return from Wauwinnet down the Nantucket harbor we again passed through a school of bluefish, and a line was cast and one caught. On board the yacht was a party of twenty-five or thirty ladies and gentlemen. Just after the fish was caught one of the ladies remarked, "I smell watermelons; where can they be?" I noticed the odor very strongly, and several others of the party also spoke of it and conjectured as to its source, coming to the conclusion that a sloop in the distance must be carrying a cargo of watermelons Such, however, was not the case. The day after this occurrence I joined a party for a trip—bluefishing—out to the "riffs" at the northeastern extremity of Nantucket. On reaching the fishing grounds the captain of our yacht called attention to a smooth surface on the water a short distance ahead and explained that a school of bluefish had recently been there feeding upon menhaden, the smooth appearance being caused by the oil liberated in chewing up the young fish. He further remarked, as we approached the spot, "If you will notice now you will smell 'em." In a few moments I perceived this same odor of watermelons. "Do the bluefish smell like watermelons?" I asked. "Yes, that is the smell, and we always know in that way when we are near a school of them."

After this, while beating back and forth along the "riff," I was reminded frequently of fresh-cut watermelons, and each time we had evidence of the presence of bluefish in the catch, either on our own yacht or another on the same course. Thus, from being utterly skeptical of the story of the South Beach fisherman, I became a thorough convert to the belief in the reality of a peculiar and easy recognized odor betraying the presence of schools of bluefish. This odor, as nearly as I can describe it, is as already stated, that of a freshly-cut watermelon and combined with fresh cucumbers. Whether it is an emanation from the bluefish, or whether it is produced by the mangling of the small fish which they make their prey, I am unable to say. The odor, however, is certainly not the same that the bluefish gives out after being taken from the water, and I am inclined to the belief that it owes its origin to the small fry upon which it feeds.

There are three ways in which schools of bluefish are tracked by the fishermen in their pursuit: first, by the flocks of gulls which hover over them, feeding upon the menhaden which they drive to the surface; second, by the spots of smooth water caused by oil escaping from their mangled prey (this, however, only indicates that the bluefish have recently been at that point); third, by this peculiar watermelon and cucumber-like odor. D. W. P.

WEIGHING VS. GUESSING.

AMONG the many departments of a paper like the FOREST AND STREAM there is hardly any more interesting to the angler than the advertising columns. He scans them closely from week to week, and in every issue his attention is sure to be called to some useful article pertaining to his craft. But for once, at least, there has appeared an advertisement against which we most earnestly protest, as it is so antagonistic to one of the most valuable pleasures enjoyed by the angler.

It says, "Weigh your fish on the spot." Great heavens! Mr. FOREST AND STREAM, when you knock Piscator's privilege of guessing at the weight of his fish, and guessing as high as he pleases, by producing a pocket scale that tells the exact truth, you are depriving him of one of his most inestimable privileges. Measuring was in a degree an infringement of his prerogatives, and he was obliged to resort to innumerable quibbles to circumvent its accuracy, one of which was insisting that the fish he caught made up in thickness what they lacked in length. He would say, "I do not doubt that the system of calculating weight by first finding the length might, in many cases, prove nearly accurate, but mark the unusual breadth and thickness of these fish. Why, man, the ordinary twelve-inch trout is a yearling in comparison to these nine-inch fish in my basket. You must invent a system that takes into consideration not only length, but breadth and thickness, before it approaches anything like correctness in all cases. Besides, did you ever feel a fish so firm and solid as this one?"

Measuring was bad enough, but against weighing, oh, shade of gentle, truthful Walton protect us! When we return from a day's sport and with radiant smile display the result of our skill—"Isn't that a beauty?" "What will he weigh?" Well, three pounds and a half. "Hardly," says Mr. Matter-of-fact. "Oh, yes, easily." Mr. M.-o-f. unfortunately is the possessor of a pair of pocket scales, and unceremoniously attaches them to the jaw of the fish in dispute, and the record is two pounds and a quarter.

"It's devilish queer," says Mr. Piscator, "but that is the biggest I ever saw to weigh so little," and he immediately proceeds to impeach the veracity of the scales. They have the stiffest springs, the appearance of the graduate is faulty, and they show no mark of ever having been officially inspected. No, it will never do to ring in on an old traveler such a plaything as that. It is not half as accurate as the old-fashioned style of weighing Western hogs, which was to take a rail, balance it across a stump, put the pork on one end, and in a basket attached to the other end place stones until the pork was hoisted; then guess at the weight of the stones, deduct the basket, and there you are, so much per pound.

These scales are robbers of the angler's reminiscences. They will dwarf a five-pounder into a fingerling quicker than the angler can fill his creel in his mind. For the dealer they may be necessary in order to protect his trade from any exaggerating tendency he may have to overstate weight; but so far as the angler is concerned they are an encumbrance and a nuisance that ought to be abolished.

He can tell no fish stories with a clear conscience and unblushing perversion of the truth, with the evidence of Scales staring him in the face. He is not so lost to all moral restraint as to misrepresent when he knows he is going to be smoked out. He is the most genial and unselfish person in the world. He will not keep secret a good place where the trout or bass may be captured, but he will brook no infringement on the cherished privilege of weighing his fish to suit himself.

A scale that will at least double the weight of the fish caught seems to us to be the great desideratum, and such a one might be made which would meet the approval of the angler and put money into the purse of the inventor. Its sale should be restricted to those who go a-fishing. But even then the demand would test the capacity of any manufactory. Some capricious people would perhaps cry out, "Leave the angler alone for over-estimating the weight of his catch. You cannot give him any points in that game." Very true, but fortify him with a pair of patent duplexers, and he will observe more strictly the commandment treating of this particular point. There is nothing mean about him, for he will let the scales do the lying for him, and attach the charge of perjury to the manufacturer.

Dr. Johnson's drive about a fool at one end of a rod and a worm at the other was ignorance, but for a vicious attack on anglers the scales promenade away with the sweetmeats.

E. E. M.

THE TROUT STREAMS OF CORRY.

CORRY, ERIE COUNTY, PA., April 3, 1881.

ACCORDING to law, trout-fishing began on Friday in Pennsylvania; but from the look of the landscape around here not a trout will be caught, or even fished for, for many a long day. With snow from twelve to twenty inches deep on a level, and the nights so cold that the morning sun, from sunrise to eleven o'clock A. M., doesn't even cause a drop of water to fall from the pendent icicles draping the eaves on the east and south sides of our houses, it don't look much as if any disciple of Walton would attempt to catch the speckled denizens of the sparkling (frozen) brooks; and if they were so rash as to wade through the snow, whether the fish would be visible is a mooted question.

We have here in our vicinity and near neighborhood some of the best trout streams in America; and an hour's ride on the railroads will bring us to brooks and streams literally crowded with trout, which are almost as anxious to be caught as the famous fabulous pigs of our childhood's days, which our nurses used to tell us ran about with knives and forks in their mouths, crying, "Eat me, eat me." Whether these streams will continue to be as numerously stocked with trout by natural production is a somewhat mooted question, as the catch is so very large annually, and the smallest is taken home as eagerly as the largest, and counting one in numerical luck and boasting equally with the larger ones. I often have wished, when I have seen the creels emptied by so-called sportsmen that there was a law forbidding the catching of trout of less than half pound weight. Then we should not only have trout in their prime, but every one could spend a day catching something of epicurean value.

In my boyhood days, when I used to "whip the streams" of grand old Kent (Eng.), and in the moonlight nights would see the pounders and such sized trout jumping up to the hackle, or the white moth, or whatever "fly" was in season, and occasionally land one of them. There was not only sport in it, but in the quietude of those summer nights, with no noise except the gentle hum of insects, the distant warble of the nightingale, or the rippling of some natural or artificial waterfall of a foot to four in height, there was a delightful communing with Nature and Nature's God, which did the heart good, and made those who could appreciate it better and happier men.

The season this way is very backward; not so much as to temperature, for our forest verdure does not begin to put forth generally till May; but by this time the snow is generally gone, and the roads alternate with mud and frozen roughness. But now sleighing is yet good, and logging and wood-hauling carried on with just as much vigor as as though it was mid-winter. Speaking about logs and wood, reminds me of the immense quantity of timber cut and hauled this winter, which will naturally give increased impetus to that army of workers who are continually prophesying a dearth of lumber and corresponding exorbitant prices. But I notice that each year as it passes brings no sensible diminution to the eye; and as one passes through the country, whisked along by the fast traveling railroads, there are still to be seen acres upon acres, miles upon miles, leagues upon leagues of forest and woodland, beautifying the sides and crowning the

summits of our mountains, bordering the banks of our streams, hiding from sight the otherwise miasmatic swamps, and dotting here and there the fertile valleys and plains, like oases on a desert plain. It will be many, yes, very many years before the supply of lumber will be so scant as to create a dearth; and long before that time something else will be invented so that we shall not have to depend upon it for our building materials. The heaps of sawdust will ere then be manufactured again into boards, and all refuse now thrown aside will be made valuable as the original log, without the trouble of resawing.

Up here, nestled among the summits of the Alleghenies, we residents fear no such famine, and contrive to build and saw, and clear our land; and fish (I was going to say clear—for the way they are caught would suggest it) our streams; and while in the spring's enjoyment of angling, the summer's pleasure of picnics, the autumn's appetizing over the luscious fruit, we are either thinking of the health-invigorating chase of the deer in his sheltered glen in the coming mid-winter's frosty time, or telling stories of adventures and hair-breadth escapes in the past, when, lost in the "big woods," ears were frozen and toes nipped, and but for the perseverance and friendship of companions we would have been sleeping the sleep that knows no waking. J. HOOK.

A VETERAN ON FISHING TACKLE.

OUR friend and correspondent, Mr. Alex. Mosely, editor of the Richmond (Va.) *Whig*, is an angler of long standing. It has become so much his habit to fish that he will probably do it as long as he can lift a rod. This is what he has to say of fishing tackle in the *Whig*, and its delivery must have been a relief from exasperating politics. He says: "It is a great comfort to an angler to be able to feel that all his tackle is perfect and can be relied on in all emergencies. But we know of no mode of acquiring this desirable conviction except by buying of those who are masters of their business and in all respects trustworthy. In these regards we know of no house superior to that of Abbey & Imbrie, 48 Maiden Lane, New York. They know by actual tests all the requirements—the necessities and luxuries of the fraternity. We do not mean by this that they are the only trustworthy persons engaged in supplying sportsmen's needs. Conroy we hold to be worthy of all confidence, and doubtless there are many others equally reliable.

"One has only to examine the advertising columns of FOREST AND STREAM to be impressed with the vast amount of industry, skill, talent, enterprise and genius, and *philanthropy* (emphatically) devoted to this task of supplying the needs and luxuries and augmenting the pleasures of the sporting community. We say *philanthropy*, with emphasis—for those who thus toil for the enjoyment and happiness of their fellow-beings cannot be enemies of their kind. But admit that self enters as an element of the motive; in an enlarged sense it may be truly affirmed that self—if not a virtue in itself, is next kin to it, and is the basis and prompter of all the virtues. A good man does good deeds because it makes him feel good, and promotes his happiness; the wicked man, from the same selfish consideration, does evil things, for his heart, as the willow to water, inclines to evil. But whatever the motive, all these successful workers for other people's happiness are entitled to high commendation and hearty thanks.

"No industrial art has made greater progress during the last three or four decades than that devoted to the wants and luxuries of sportsmen. Forty years ago Conroy was almost alone in New York, and his establishment of that day would, this day, be deemed not above twentieth rate. But while he has grown and expanded and kept abreast with the age, a host of other kindred and splendid establishments have burst into existence; and every article for sport on flood or field which genius can devise or inventive want suggest may now be had. The clothier and the shoemaker have come to supplement the gun and tackle stores, and, by their ingenious fabrics for excluding cold or wet, merit and receive the plaudits and thanks of the same admiring constituency. And to the good repute, profit and pleasure of all—producers and consumers—the taste and appetite of consumption keeps pace with and stimulates the genius of art—thus mutually aiding and benefiting all. Onward and upward is the order of the day—*Sic itur ad astra!*"

PROTECTION OF SMELTS AND ALEWIVES.—The following laws have recently been passed in the State of Maine and published in the Waterville *Sentinel:*

CHAPTER 67.

An Act to amend section eleven, chapter seventy-five of the Public Laws of eighteen hundred and seventy-eight, relating to the taking of smelts, entitled, "An Act to regulate and protect fisheries and the propagation of fish."

Be it enacted, etc., as follows:

Section eleven of chapter seventy-five of the public laws of eighteen hundred and seventy-eight, is hereby amended by striking out the word "November," in the fourth line, and inserting in place thereof, the word "October," so that said section as amended shall read as follows:

SEC. 11. No smelts shall be taken or fished for in any of the tidal waters in this State, in any other manner than by hook and line, between the first day of April and the first day of October in each year, under a penalty of not less than ten dollars, nor more than thirty dollars for each offense, and a further penalty of twenty cents for each smelt so taken, and all weirs for the capture of smelts shall be opened, and so remain, and all nets of any kind used in the smelt and tom-cod fishery shall be taken from the water on or before the said first day of April in each year, under a penalty of not less than twenty, nor more than fifty dollars, and a further fine of five dollars per day for each day that any such weir or net remains in violation of law: but weirs which have catch-pounds, covered with net, the meshes of which are one inch square in the clear, or greater, shall not be subject to the provisions of this section. Provided, however, that dip-nets may be used from the first day of April to the twentieth day of April.

[Approved March 15, 1881.]

CHAPTER 77.

An Act for the protection of Alewives.

Be it enacted, etc., as follows:

SEC. 1. No alewives shall be taken, killed or fished for in any waters within the jurisdiction of this State, between the fifteenth day of July of each year and the first day of April following, nor at any time in non-tidal or non-navigable waters, by means of any net other than the ordinary hand dip-net, under penalty of ten dollars for each offense, and one dollar additional for each fish so taken or killed.

SEC. 2. This act shall take effect when approved.

[Approved March 16, 1881.]

PROTECTION OF BLACK BASS.—Manchester, Iowa.—I notice in your issue of April 7 a communication from Chattanooga, Tenn., by H. H. Sneed, in which he speaks of black bass fishing, and, among other things referred to, says the best time of the year to catch the bass in this river is from April 1 to June 1. On the same page (193), from Savannah, Tenn., dated March 21, another says: "Bass bit well last week." And still another on the same page—"They are about to commence the bass fishing in the Potomac." I am not at all surprised that the largest bass are caught and that the black bass bite well in April and May. In our county and in Iowa these months are the spawning months, and any boy, with his basswood pole and a red piece of flannel on his hook, can take them off of their spawning bed. I believe that Iowa is the finest bass fishing State in the West, but it is because April and May are the close months and our bass streams are watched. Any man who is found with a black bass in his possession during these months (April and May) is fined ten dollars and stands committed until the fine is paid. In the Potomac, W. H. R., in his communication, says: "Any one wanting to have a good bass fish had better strike the falls." Yes, no doubt of it. They have gone there to produce their young and the falls prohibit their advance. The sportsman is invited to go and take them and destroy millions of the young. Iowa protects her trout, black bass, wall-eyed pike and all the fish in the lakes placed there by the Fish Commissioners, and in four years the increase has been many millions in the rivers of Iowa. The success of the trout in our county, Delaware, to which I called the attention of the readers of the FOREST AND STREAM about October, 1880, still continues. The brood planted in our waters in June, 1877, now weigh three pounds, and have twice spawned. The fish batch of 1879, placed in the stream by Col. Shaw, are spawning now, and weigh one and three-quarter pounds.

The stream is about three miles long and is perfectly alive with trout. It is fed from large springs and is lined with water-cresses, which furnish food in the shape of insect life. But this is the eleventh day of April, and the snow is two feet on its banks, and is snowing hard, as it has been for twenty-four hours. S. G. VAN ANDA.

RESTIGOUCHE REGION, N. B., April 16.—When I tell you that there has been horse racing on the ice on the Bay Chaleur near Campbellton, within a few days, you will know that icy chill winter still clings to us, though further south the Nova Scotia rivers are free from ice, and a few salmon and trout have been taken there. The Miramichi and Nepisiquit rivers are but partly clear of ice. The Micmac Indians at the missions near Campbellton are bringing some fur and quite a quantity of small trout. The trout are caught through the ice at the lakes that lie back in the interior. The waters in the streams here are quite low, and will continue so until we have heavy rains, and unless these rains come abundantly we may expect another poor season's fishing. The letters of your correspondents who have been engaged in the late controversy over the salmon and trout fishing in the maritime provinces were, we should say, written by parties who spend but a few weeks here each season, who make what might be called flying trips through the country, and those letters, by resident sportsmen are regarded in the light that the practical farmer regards H. G.'s book "What I Know About Farming." Mr. J. R. Hamilton, M. P. P., for Bonaventure County, Quebec, is about forming a stock company to build a large hotel at New Carlisle, on the Bay Chaleur, and in immediate vicinity of good angling waters, which will be kept open for use of guests of the proposed hotel. There is also a fine beach for sea-bathing quite near.—STANSTEAD.

THE BEST FLY ROD.—An "Amateur" writes: "As it appears impossible to get an opinion as to which of the different trout fly-rods (except split bamboo) is the best, those in charge of the Fly-casting Tournament would confer a great favor upon fly-fishers in general by calling upon the different makers to send their best (wooden) rods to be tested by appointed judges, and their judgment published. In the meantime your judgment upon those you have used will be greatly appreciated."

"Amateur" asks too much. A rod which just suits one man's strength and style of work would be pronounced too stiff, long or weak for another. This is something which all men must decide for themselves. We think that rod-makers should allow a trial before purchase. If buyers demanded it they would do it as readily as gunmakers do. Our correspondent should get some angling friend to select for him at first until he knows just what he wants. We have seen elegant rods which did splendid work in other hands which were too limber in the second joint, or had some other fault for us. Write to our advertisers of rods, and get their views. Perhaps some will send several rods to select from.

FISHING IN GEORGIA—Decatur Co., Ga.—The fishing season is in full bloom. As our streams abound with succulent catfish of every variety, perch of all species, the largest of rock bass, the finest of chub and pickerel in abundance, the disciples of Izaak Walton can enjoy themselves to their hearts' content.

The waters of Flint River, flowing at our very doors, swarm with the species of fish above enumerated, and when not too swollen from the heavy rains that are visiting us at this time one need not go elsewhere to enjoy the luxury of good fishing. West of us is Spring Creek, through whose limpid waters glide the largest of voracious pike, rock bass, chub, bream, yellow, pea, gold, warmouth, and speckled perch, suckers and cat fish. It is the happy fishing ground of the angler where he can choose for himself just the kind of fish he wishes to dine upon, and catch him too. This stream empties into Flint River twenty miles below us. At its mouth rock-fish are caught, weighing at this season from ten to fifty pounds. Set hooks are used, baited with suckers or bream. Now and then one is caught by bobbing. Here, too, bream, pike, chub, and the various perch family are caught more abundantly than at any other point on the creek. A catch of one to two hundred pounds a day can be easily made by one man.

We are organizing an expedition for that point now. In the sweet by and by I will tell you all about it.

O. G. GARRY.

THE RANGELEYS.—Rangeley, Me., April 20.—*Editor Forest and Stream:* The season for fishing will be late. Two feet of snow still cover the ground, and the ice in the lakes is unaffected by warmth. Owners and superintendents of camps are hauling in supplies and making improvements anticipating an increase of visitors. The boat builders have turned out double the number of boats the past winter of any previous season. Samuel Farmer, of the Borden House, Phillips, has erected a wing to his previously large hotel to accommodate his friends whose name is legion. At his house all are made to feel at home, and charges are moderate. Mr. Farmer has had a large experience in the Rangeley region as hunter and angler, and can give sportsmen "points." Besides, he possesses literary talent of a high order, which it is hoped he may be induced to exercise for the benefit of readers of FOREST AND STREAM.—WAKEFIELD.

NOT FRESH—Chicago, April 15.—*Editor Forest and Stream:* Inclosed herein you will find a remarkable fish story, which appears quite fresh. Perhaps you may consider it worthy of space in your paper.—R.

Our correspondent will find the story published in FOREST AND STREAM of September 5, 1878, p. 101. It is "fresh" compared to some of the stories which are now traveling about the country, but hardly fresh enough for us.

WEEDSPORT, N. Y.—We are about one mile from Seneca River and four from Cross Lake. We used to have good fishing, but the fish pirates are taking them all in nets. I counted five fykes within a half mile.—DAN.

CALIFORNIA—Gilroy.—Fishing commenced on the first, and we have heard of some good creelsful being taken by the Messrs. Holloway, Paine, Cameron and others; but, as for ourselves, we have not had much luck as yet. John Holloway tells of a terrible fight he had with a nine-pound salmon trout, which only gave up after fifty minutes of hard struggle over one quarter of a mile of river. He was a beauty to look at.—H. M. B.

A LARGE SOUTH-SIDE TROUT.—Mr. G. Chichester, of Patchogue, L. I., with an eight-ounce rod, caught on the 13th a 2½ lb. trout below the flue at the west pond.

DR. HENSHALL'S BOOK.—In our notice we spoke of this as being a work on the "Fresh-water Bass," omitting the adjective "black" "before the bass." This has occasioned the Doctor many letters of explanation to show that he did not include all fishes called bass in fresh water. He confines himself to the two species called black bass and which are distinguished as "big mouth" and "small mouth" and other names in other localities. The book is now in press.

Fish Culture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

[CONTINUED.]

THE SECRETARY then read the following paper:

A CONTRIBUTION TO THE BIOGRAPHY OF THE COMMERCIAL COD OF ALASKA.

BY TARLETON H. BEAN, M.D.

THE cod fishery of Alaska has nearly ended its second decade, yet we did not know positively until the summer of 1880 what species is the object of that fishery. Most writers have referred to it under the name of *Gadus macrocephalus*, which was created by Tilesius for the Kamtchatkan cod, the figure of which suggests that it was based upon a deformed individual. Cope, in 1873, described the young of the common Alaska cod as *Gadus auratus*, from specimens collected by Prof. G. Davidson at Unalashka. Steindachner, in the Proceedings (*Sitzungsberichte*) of the Vienna Academy, lxi., 1, 1870, adopts the name *G. macrocephalus* for a large cod taken in Decastris Bay; in this example the length of the head is contained exactly three times in the length of the extreme end of the pointed caudal peduncle. The same proportion may, however, be found in any place where large numbers of *Gadus morrhua* are taken, and it is only a matter of individual variation. The Commissioner of Fish and Fisheries, Prof. S. F. Baird, with a view to investigating the fisheries and the fish of Alaska, sent the writer to that territory to collect specimens and statistics during the summer of 1880. Thus, for the first time, an opportunity was gained for comparing the Alaskan cod directly with that of New England and of Europe, and for determining that the commercial cod of both oceans is the *Gadus morrhua* of Linnæus. I have not seen the species from Kamtchatka, but there is no probability that it is different from the Alaskan. It is a matter of daily experience to find long-headed and short-headed cod in the same school off the New England coast, the length of the head being one of the most variable characters. A series of cod, showing just such variation, has lately been received from Alaska by the National Museum.

Golden cod, red cod and other algæ forms are as well known at the Shumagin Islands as they are around Cape Cod and Cape Ann. Even the beautiful lemon-yellow fish, which occasionally are found in the Ipswich Bay schools, are duplicated in Alaskan waters.

Nor does the similarity between the commercial cod of the two oceans end with external characters which are taken into account in determining specific relationship, for we find a wonderful resemblance in habits and in their food. Thus the shore fish about Kodiak make their appearance in schools similar to ours—first, the "herring school;" next, the "lant school;" then the "capelin school," followed by the "squid school" and the "winter school." Besides these there is an abundance of bank fish, which are always larger than those previously named. All of the food-fish of the cod here mentioned are exceedingly abundant. The herring is not identical with the common sea herring of the Atlantic, but it is wonderfully like it. The lant is closely related to one of our New England species; the capelin is the same as ours. The squid has not come under my observation.

The cod come on the rocks in twenty-five to thirty fathoms about Kodiak to spawn in November and December, just as they do in the East, and these spawning fish will sometimes lie perfectly still on the bottom and refuse to take the hook. Young cod swarm near the shores, just as they were observed to do in Gloucester Harbor after the experiments of the U. S. Fish Commission with artificial propagation. On the 13th of July, 1880, our seine took young cod at St. Paul, Kodiak Island. We dredged numbers of them near our anchorage at Belkofsky, on the peninsula of Aliaska, July 23, 1880, averaging one and one-half inches in length. On the following day young cod of the same size were found in the stomach of a large one of the same species caught near Oleny Island in seven fathoms of water. On the first of October, in the harbor of Chernofsky, Unalashka Island, the cod fry were very abundant and had reached a length of inches. At Iliuliuk, on the north end of the same island, young cod of the same length were seined at various times from Oct. 6 to Oct. 18; they fairly swarmed around the wharves, eagerly biting at anything in the form of bait and readily fastening themselves on hooks intended for much larger fish.

The resemblance between the Atlantic and Pacific cod-fishing grounds is strengthened by the presence in Pacific waters of a genuine pollock—not the fierce, cod-devouring tyrant of the East, but a prettier, weaker relative, greatly loved and grievously persecuted by the cod. We have not yet heard of a haddock. (*Melano-*

grammus), hake (*Phycis*), or of a cusk (*Brosmius*) in Alaskan waters. The only members of the cod family definitely known are the true cod (*Gadus morrhua*), the tom-cod (*Microgadus proximus*), the polar-cod (*Boreogadus saida*), the "wachna" (*Gadus wachna*, Pall.?) and the pollock (*Pollachius chalcogrammus*). Wherever the true cod is found occurs also the halibut (*Hippoglossus vulgaris*), the same as the Atlantic species. These two prime fish are associated; they come almost to the doors of the fishermen and are present now around the shores of Alaska in the profusion which attended the infancy of the Cape Cod fishery.

DISTRIBUTION.

The cod seems to be entirely unknown as far south as San Diego, California. A circular sent by the Chief of the Bureau of Statistics to Mr W. W. Bowers, Collector of Customs at San Diego, elicited the following response: "I referred the circular to Dr. G. W. Barnes, the president of a society of natural history, and to various fishermen, but cannot ascertain that the codfish is known to exist in any of the waters adjacent to this port." On the Heceta bank, north-northwest from Cape Oxford, Oregon, cod are found. The Indians residing on that coast report this fish as quite abundant in the summer months, and they are said to be large, solid and delicious.

J. L. McDonald, in a book entitled "Hidden Treasures, or Fisheries Around the Northwest Coast," states that "cod are taken in very limited numbers off the Farralones; they are lean and very poor and resemble the jaundiced cod on the Grand Bank."

James G. Swan, in a report on the food fishes of Cape Flattery, Washington Territory, writes that "the cod of the North Pacific is not found in abundance at Cape Flattery; occasionally it is brought in, but it is by no means common. It seems to inhabit the deep water of Fuca Strait, and for that reason is seldom fished for, except occasionally some of the older fishermen will try during very fine weather to take fish in eighty fathoms. Further up the sound and in Hood's Canal and a few other localities the *Gadus* is taken, but it is small, evidently a young fish. Although its existence is well known to residents on Puget's Sound, it is not taken in sufficient quantities to be relied on as a food fish."

Mr. H. A. Webster, Collector of Customs at Port Townsend, Washington Territory, writes thus to the Chief of the Bureau of Statistics: "The cod, I believe, is always present in the waters of Fuca Strait and Puget Sound, but in such limited quantities that catching has not been pursued as a business, and the knowledge of their habits is very limited. Young cod, about the size of shad, have been somewhat abundant in Puget Sound during the winter months. Cod weighing from four to six pounds have been taken during the summer months by Indians at Nee-ah Bay ..... The presence of small cod in the winter months in Puget Sound and at the mouth of the Strait of Fuca in such status that large quantities may be found in the neighborhood of Cape Flattery—say west of Tahosh Light and south from Vancouver Island.....No efficient search has been made off the coast of Washington Territory for this valuable fish."

At Sitka Indians brought a few cod to our vessel in June, 1880. The cod were reported abundant and readily caught, but the halibut, the many fine "lass" (*Sebastichthys*, several species) and "rockfish" (*Hexagrammus*) seemed to have greater popularity Mr. A. T. Whitford told me that the cod spawn in the vicinity of Sitka in spring, and that they have a remarkable number of eggs. We bought a fine cod twenty-six inches long for ten cents here.

At Port Mulgrave, Yakutal Bay, we took but one cod in the harbor during the day spent there, this one was large but sick. Good fish are to be had in the deeper water outside. Nothing but handlines were used from the vessel.

Capt. J. Haley reports cod very abundant on the Hoochenoo bank in Chatham Strait. The bank extends from Hoochenoo Point to Point Santee. He also states that there is a bank off Peint Gardiner, and that there are banks on the east shore of Baranoff Island near Poghibshi Strait, also that small cod are abundant in Prince Frederick's Sound.

While on a visit to the Aleut village near Graham Harbor, Cook's Inlet, we were told by Mr. Cohen that cod are present there throughout the year. On the 6th of July on Refuge Cove, Port Chatham, Cook's Inlet, a great many fine young cod were seined. It was in Port Chatham that we first saw capelin schooling. Plenty of excellent cod were caught with lines from the vessel.

Around the island of Kodiak cod are very numerous. On the 9th of July while the "Yukon" was lying at anchor in the harbor of St. Paul schools of these fish were seen swimming about her. These were fine, lively fish, evidently the first of the summer run, which Mr B. G. McIntyre informed me had not yet begun. Young cod were seined on Wooded Island, July 13. Between Kodiac and Unalashka are the extensive and well-known banks Portlock, Seminoffsky and the Shumagins, which have furnished the great bulk of the cod so far taken in Alaska.

There are cod banks in the vicinity of Unalashka. We had no difficulty in catching all we wanted with a small trawl line or with hand-lines late in July. Native fishermen at Iliulink were bringing in bidarka loads of beautiful fish, most of which were very large, to dry them for use in winter. The wonderful abundance of young cod three to four inches long was a feature here in October.

Cod have been reported as far west as the island of Atka of the Aleutian chain.

Cod have been reported abundant in Bristol Bay; they appear to be uncommon in Norton Sound, though occurring again more abundantly further north as far as the ice line. The eastern portion of Behring Sea may yet furnish important supplies of cod in suitable depths, since there is an abundance of its favorite food—notably sand launce, capelin, smelt, herring and pollock, which last is probably the "whiting" spoken of by Seeman as occurring abundantly in Hotham Inlet, Kotzebue Sound

At the island of St. Paul cod are taken rarely, the fur seal having a monopoly of the catch.

At St. Lawrence Island Messrs. Maynard and Elliott caught cod on the 22d of August, 1874.

The great fishing grounds of Kamtchatka are in the Okhotsk Sea and the Sea of Kamtchatka.

We were informed by one of the whaling captains in Plover Bay last September that he has caught cod off the heads of Marcus Bay, East Siberia, in latitude north and about longitude west. Off Indian Point (Cape Tchaplin), East Siberia, a little further north than Marcus Bay, we were told by Eskimo, who came aboard the vessel, that they sometimes take cod at that point.

In the Arctic Ocean we saw no traces of the *Gadus morrhua*, its place being supplied to some extent by myriads of small polar cod (*Boreogadus saida*), which, like the pollock, has the lower jaw longer than the upper. On the 19th of August, 1880, in latitude 69 deg. 45 min. north, longitude 166 deg. 35 min. west, we saw great numbers of young *Boreogadus* from an inch to an inch and a half long swimming under the tentacles of a *Cyanea*-like jelly-fish.

COMMON NAMES.

J. G. Swan writes that the cod is called "Kadatl by the Makah Indians. The Sitkas call it "Sacht." A Kodiak Eskimo, to whom I showed one of the fresh fish, told me that they knew it as "Ahmo-doc." The Russian name for the species is "Treska"—a name pretty widely known in the territory. It is worthy of remark here that natives generally distinguish closely the "Wachna" from the "Treska." To the fishermen generally the fish is known as "the cod." Men who have come to the Alaskan grounds from New England have brought with them the terms "rock cod" and "kelp bangers" for certain individual varieties. "Rock cod" are the variously colored algæ fish, exactly similar to those known by the same name at Gloucester. "Kelp bangers" are shore fish that frequent the kelp, as their name suggests. "Wachna" is a term applied to several species, among them the tom-cod and a species very different structurally from this.

SIZE.

J. G. Swan reports that none but small cod occur in Puget Sound and Hood's Canal. I measured several fresh ones at Sitka which were bought from Indians; one taken May 30 was 562 millimeters long, two others secured June 12 were 435 millimeters and 542 millimeters respectively. Capt. J. Haley informed me that he purchased 10,000 fish in two weeks from Indians on the Hoochenoo cod bank which averaged three pounds each when dried. The largest he saw weighed thirty pounds. He saw a few young fish. A cod caught by us in the harbor of Port Mulgrave, Yakutal Bay, June 24, measured 870 millimeters. It was stout and heavy, but sick In Port Chatham, Cook's Inlet, two healthy fish among a lot taken July 5 measured 723 millimeters and 750 millimeters, and of these was a spent female. Off Marmot Island (Portlock Bank) on the 8th of July we caught with hand-lines in a very short time preceding dark twenty-six cod, fine, plump and healthy, averaging not less than twelve pounds. Capt. D. C. Bowen, who passed twenty-five years on the eastern fishing banks, gave me the following information about the shore fish around Kodiak:

First comes the "herring school," consisting of medium size fish, continuing from May 1 to June or July; then the "lant school," short, thick, well-meated, but not so large as the herring school, June to July. After this the "capelin school" of good-sized fish about equal to Newfoundland cod, July to September. Last the "squid school," averaging twelve pounds each. All of these are shore fish, the bank fish are always larger.

Capt. J. C. Caton, who is well acquainted with the Shumagin fishery, says that in 1867 the "Sanborn" took 60,000 fish averaging 2½ lbs. ready for market. Now vessels will average eighty tons (60,000 fish) of 2½ lbs. each. Capt. C. told me that none of the fish are so large as the George's cod. Capt. Andrew Anderson informed me that when he was master in the "Wild Gazelle" in 1873 she took on Seminoffsky Bank 93,000 fish in three months, averaging 2½ lbs. dressed. In 1874 she caught 97,000, averaging 3 lbs. Capt. H. R. Bowen, of St. Paul, Kodiak, gives the average of the shore fish there as six pounds, and says that the largest weigh fourteen pounds. Thomas Devine, in charge of McCollum & Co.'s fishing station at Pirate Cove, Shumagins, gives me as an average of the fish there something between eight and twelve pounds, the largest weighing fifty pounds.

On the 19th of July I saw many fish brought in to this station by dorymen One of the men had 157 for his day's catch, none of them being less than twenty-six inches in length, and many of them weighing not less than thirty pounds, the smallest weighed about eight according to my estimate. Prof. George Davidson, assistant to the U. S. Coast Survey in his report on Alaska states, that in north latitude 53 deg. 30 min., west longitude 164 deg. 10 min., in fifty to sixty fathoms of water, many cod were caught from his vessel, the largest being thirty-seven inches long; several reached thirty-six inches; the finest was thirty-six inches long, twenty-three inches girth, and weighed twenty-seven pounds, was very fat, etc., etc. In the New York *Times* of July 15, 1879, is found the following extract from the report of Capt. White of the United States Revenue Marine Service, who was on duty in the Alaska waters in 1878: "One day when sounding south of Kodiak, wishing to lay in a stock of codfish, I ordered the sails set back, and prepared twenty lines with four or five hooks to each line. Puget Sound clams were used as bait, and in two hours we caught 250 fish weighing thirty to forty pounds each."

From Dr. A. Kellogg, of San Francisco, surgeon and botanist of one of the Coast Survey's expeditions, I have the following memorandum: "I copy from my diary verbatim the very brief note made on the spot relative to the cod caught on board the 'Lincoln,' lat. 58 deg. 30 min. N., lon. 164 deg. 30 min. W.—cod eighteen inches girth, thirty and one-half inches length, fourteen and one-half pounds; twenty and one-fourth girth and thirty-four inches long, weight twenty to twenty-two pounds; three feet long and twenty-three inches girth, twenty-seven pounds.

We were in the harbor of Iliulink, Unalashka, from the 27th of July to August 3, and from October 6 to 18, 1880. Between the first two dates we saw native fishermen daily bringing in cod for winter use. The fish were caught near the village, and were uniformly good-sized, many of them of fifteen to twenty pounds in weight at least. Men were sent out from the vessel also to supply us with fresh fish. They generally fished on the ridge at the entrance to Port Levasheff, and never failed to secure a good supply of cod averaging fully twelve pounds each. There was no falling off in the supply, and the size was about the same. In deeper water further from the village we took larger cod.

I find in the notes of Prof. D. S. Jordan the following comparison between the Okhostk cod and that of the Shumagin Islands: "Okhotsk cod are larger and more numerous than Shumagin cod, but they are thinner, less fat and more pot-bellied, and weigh rather less when dressed—80,000 Shumagin fish, dressed, weigh 260,000 pounds; 80,000 Okhotsk fish, dressed, weigh 220,000 pounds. The latter are poorer perhaps because they are taken so early in spring. They are fatter in July; fishing, however, begins in June." For the dressed Shumagin fish this gives an average of three and one-quarter pounds each, and for the Okhostk two and three-quarter pounds. The average for the Shumagin fish agrees substantially with that given by most persons who have furnished information about the Alaska cod. Prof. Jordan's information was obtained from the foremost fish merchants in San Francisco, and mine from captains of fishing vessels.

SHAPE AND COLOR.

With reference to the Shumagin cod Capt. J. C. Caton informed me that most of them are black napes, but there are some white napes. Some of the fish we caught on Portlock Bank, July 8, 1880, had black napes and others white napes. Thomas Devine, who has charge of McCollum & Co.'s fishing-station at Pirate Cove, Shumagins, reports mostly black napes, some white or gray. Capt. H. R. Bowen, of St Paul, Kodiak, Id., says they "very seldom find fish with white napes—generally black." Capt. D. C. Bowen, of the same place, told me that white nape and black nape fish both are caught, black napes being most plenty. He says that white napes are generally young fish; the big ones are almost always black napes. Capt. J. Haley informed me that the Hoo-che-noo cod have black napes. These statements coincide with my own observations at various points along the coast of Alaska, and it seems to be true that black napes predominate among the Alaskan cod. Two large ones, measuring 722 and 750 millimetres, caught in Port Chatham, Cook's Inlet, July 5, 1880, had black napes. The same variations in the external colors of the fish exist as are known in the Atlantic; the shore fish are generally darker than the bank fish, and a reddish tinge is very common. Rock cod are as well known as with us. Mr. Devine states that very pretty yellow cod are sometimes taken. Capt. H. R. Bowen says that the deep water fish are generally light in color. Mr. Devine informed me that the winter fish are whiter than those of any other season. The same gentleman mentions peculiarities of shape among the cod, as, for example, "bull-eyed" fish with prominent eyes and "seal-head" fish with short snout and wide forehead. The shore fish which were brought to us by Indians from Old Sitka were always dark colored, with long heads and eyes far apart and with conspicuous blotches, in general appearance and resembling the small cod taken in shallow water off South Greenland—the *ogac* form of the common cod. There are no differences so far as general appearances go between Alaskan and New England cod; it would be impossible to tell one from the other if they were mixed in a tank without tags or some other means of identification.

DISTRIBUTION.

In general terms we may say that cod are found around the whole southern shore of Alaska and westward along the Aleutian chain as far as Atka, extending on the western shore not much beyond British Bay, though they have been observed as far north as St. Lawrence Island. They are said to penetrate far into Cook's Inlet. We caught several large ones in Chugachik Bay, but they were sick In Port Chatham, which is near the entrance to the inlet, we found them common and good. Mr. Cohen told me that cod are present all the year near Fort Alexander. In Refuge Cove, a small arm of Port Chatham, we took many young cod in brackish water. At Chernoffsky, also, on the island of Unalashka, we again found them abundant in brackish water associated with young *Oncorhynchus*, *Salvelinus malma*, *Ammodytes*, *Lumpenus* and *Pœtus*. Several small streams flow into Chernoffsky Bay at this point, and the young fish were taken in water varying from three feet to one fathom in depth close to the shore. Fish of considerable size (weighing several pounds) were taken from the wharves at Iliuluk during our stay. Cod are quite abundant close to the shores of the Kodiak group, the Shumagins and Unalashka Island. I have seen them taken in about nine feet of water at Iliuliuk, and at a depth of at least fifty fathoms off Cape Cheerful. Mr. Devine, of Pirate Cove, says they are caught as far as thirty miles off Seminoffsky Island as deep as forty-five fathoms, and that on the middle ridge, in sixty to seventy fathoms, the best fish are taken with hand-lines.

Captain H. R. Bowen states that they are caught in three feet of water sometimes at the village of St. Paul, but these are always sick fish. Wherever there are soundings good fish may be caught. The cod of the Shumagins are generally taken at such short distances from the shores as can be readily reached in dories. The fishermen go out in dories from their vessels, or from the fishing-station, in the morning, and return in time to dress the fish aboard or on shore in the evening.

MOVEMENTS, ETC.

MIGRATIONS.

Mr. J. B. McIntyre, Mr. D. C. Bowen and Captain H. R. Bowen all agree in stating that cod remain throughout the year around the island of Kodiak. They were scarce last winter on account of the extreme cold, and up to the time of our arrival at St. Paul (July 9, 1880) the customary summer run had not yet begun. Between that date and July 14, however, we saw schools of them around the vessel where she lay at anchor. According to Mr. Bowen they made their first appearance at St. Paul May 7, 1880. Captain Bowen states that they are always found in the same places. Mr. McIntyre said that they were so scarce about St. Paul last winter that the natives could not catch enough of them for their own use.

According to Capt. J. C. Caton, cod are present around the Shumagin Islands all the time, but at some seasons they are very scarce. The best fishing is in February, commencing about the 10th and lasting to March 10. Most of the vessels coming up get their best fish and best fare in July. Sometimes they do well in May. The fleet come up late in April or early in May and stay until the 15th or 25th of August.

Mr. Thomas Devine, who manages the permanent fishing station on Popoff Island, Shumagins, also informed me that cod are to be found all the year, but that they go into deep water in cold snaps and toward evening. He stated that the schoolfish leave in August or September and return in January and February. They seem to move off to the southward and to return from the southward and westward.

With reference to the bank, twenty miles east northeast of Seminoffsky, Capt. Andrew Anderson told me that the fishing is best in August and September. The "yellow fish," *Pleurogrammus monopterygius*, school there abundantly about the middle of August, and will follow the bait up to the top of the water. Cod will bite at this yellow fish in preference to anything else.

Mr. Marcus Baker has translated for me a note by Ivan Veniaminoff, on the marine fishes of the Unalashka region, in which occurs the following sentence: "Some of these, and especially the cod, in the winter go off shore into deep water, but in summer time they are found along the shores of certain bays and in shoal water."

SCHOOLING.

Mr. D. C. Bowen, of St. Paul, distinguishes various schools of cod about the Island of Kodiak, which vary in size and other particulars, and take their names from their favorite food during the time of their stay. He gives them in the following order: First, the "herring school," consisting of medium size fish, which come about May 1 and stay until June or July; next, the "lant school," feeding on sand-launce (species of *Ammodytes*), made up of short, thick, well-meated fish, not so large as those of the herring school, which are present in June and July. Then follows the "capelin school (the capelin is our *Mallotus villosus*), July to September; these are good-sized fish, about the same as Newfoundland cod. The "squid school" comes in August or September, and remains until October. The fish of this school average twelve pounds in weight. The schools so far enumerated are all shore fish, and they are always smaller than bank fish. From October there are winter schools in some places; these are generally short, thick fish.

Capt. J. C. Caton says that they catch males and females together in the spawning season, and that they do not school when spawning.

Mr. Wm. J. Fisher has furnished the following information concerning the schooling of cod around Kodiak which he obtained from Captain H. R. Bowen: Cod associate in schools generally from May to the middle of September, and they live independently the rest of the year, the severity of the winter having much influence. At different seasons and in different places there are different schools. Males, females and young are found in the same schools. The movements of the schools are affected by the presence of sharks, by the state of the tide, the fish taking the hook more readily at slack water.

Mr. Devine speaking about the Shumagin cod told me on the 19th of July, 1880, that they found the fish both in schools and independent. There were "picking fish" at the time, and there had been "no great flush" of school fish this year. Different schools are found at different seasons and in different places. Mr. Devine says that males, females and young are not found associated. The males go together at certain times and the females. At the spawning season there are more females than males. The movements of the schools are very much affected by sharks especially, and dogfish to some extent. Dogfish are not abundant, sharks are quite so. The dogfish is identical with our Atlantic spined dogfish. We did not get a specimen of the shark, but the National Museum has a couple of small ones from Sitka, which are very close if not identical with *Galeorhinus galeus*. As for the influence of the tides Mr. Devine says that fishing is best during the spring tides, and poorest in slack tides.

Sometimes the cod have such a superabundance of food that they refuse to take the hook.

My own observations at various points along the Alaskan coast seemed to indicate that young cod from two to four inches in length prefer to school near the shores in sheltered coves where the water is shallow, and often where it receives a large admixture of fresh water. At Iliuliuk I found myriads of such young fish playing about the wharves eagerly seizing the hooks baited for larger prey. Occasionally a larger cod of say sixteen or eighteen inches in length would be caught in the same vicinity, but almost invariably we found the small fry unmixed with older fish. The supply of food forms a very important motive for the presence of cod in particular places at certain times. When we were in Port Chatham, for example, capelin were schooling there abundantly, and we caught fine cod freely. On Portlock Bank again capelin were plentiful, and nearly every cod examined had its stomach filled with them.

At the Shumagins "England hake" or more properlypollock (*Pollachius chalcogrammus*) were abundant in July, and the cod were feasting on them. The "yellow fish" (*Pleurogrammus monopterygius*) is one of the finest of all baits for cod, and will play an important part in the future of the fishery. This "yellow fish" is said by Capt. Andrew Anderson to be very abundant about the middle of August on the off-shore bank, twenty miles east northeast of Seminoffsky, where they are found schooling, and will follow the bait up to the surface of the water. It is to be noted that August and September are the best months for cod on the bank.

The herring (*Clupea mirabilis*) also has a great deal to do with a prosperous cod fishery. Capt. J. Haley told me that herring are wonderfully plenty on the Hoochenoo bank at the fishing season, and that there are enormous quantities of fine herring in Prince Frederick's Sound where also small cod are abundant.

ABUNDANCE.

Before entering into an examination of the influence of modes of fishing and practices of the fishermen upon the abundance of fish it will be well to review the actual numbers taken at different times and places. Captain Haley secured 10,000 fish in two weeks from Indians on the Hoochenoo bank, and could have got many more. The Indians caught these cod with bark lines on barbless, bent iron hooks, two of them going off in a canoe and bringing in from twenty-five to fifty fish, which were quite enough to satisfy their laziness.

Mr. D. C. Bowen states that as many as five hundred have been taken in a day by one hand-liner on Portlock bank, and that the average catch of the whole season per man is seventy-five a day.

Here may be repeated the statement of Captain White, of the U. S. Revenue Marine Service, who reported the capture, south of Kodiak, of 250 fish weighing thirty to forty pounds each with twenty lines having four or five hooks each. This number was taken in two hours.

From the New York *Times* of July 15, 1879, I extract a sentence by William S. Dodge, formerly Mayor of Sitka, to the effect that: "At Kodiak Henry Richard and Thomas Bache, fishermen, caught alone, with hook and line, within the last six months, 22,000 cod."

Captain Andrew Anderson told me at St. Paul that with a crew of ten men, on Seminofsky bank, he has caught as many as 4,000 in a day, and that his average catch there was from 1,600 to 1,800 daily.

Mr. D. C. Bowen stated that John McCathrine and a man named Smith caught 1,700 cod in a day on one trawl (a 12-line trawl of 600 or 700 hooks) in Unga straits. Their average catch was 1,200 fish.

A correspondent of the San Francisco *Post*, writing of the season of 1876, says: "One man on board the schooner Selma, which arrived the other day, had 13,000 fish to his credit," etc. These were caught during a season of four months.

Captain J. C. Caton, who has been familiar with the Shumagin fishery ever since the second year of its existence, affirms that fish are plenty enough to supply a large market when that is found. The evidence of all the fishermen goes to prove that the great want is not fish, but demand for fish. One such customer as Gloucester would whiten the Gulf of Alaska with hundreds of sails where now there are less than a dozen, and there is every indication that full fares will repay the venture.

As to the influence of fishing and its accompanying practices, we have information from only two points—St. Paul, Kodiak and Pirate Cove, Shumagin. Capt. H. R. Bowen, of the former place, says that cod are as abundant there now as they were when white man began fishing; that their haunts and habits have not been changed by the influence of man, and their numbers have not been diminished by over-fishing. Trawls have never been used in that vicinity. He regards the practice of throwing gurry overboard as injurious to the fishery; the cod, he says, will leave and their place be taken by sculpins.

Mr. Thomas Devine, of Pirate Cove, said that cod are scarcer there now than they were five years ago. He accounts for their decrease by the increased fishing, the injurious effects of trawling and of throwing overboard gurry from the vessels, and to some extent by the capture of the mother fish, which will sometimes take the hook freely. The lost gear attendant upon trawling has a bad effect upon the fishery.

FOOD.

The food of the cod in the Pacific is as plentiful and as varied as in the Atlantic. Most other fishes of suitable size are liable to suffer from its voracity, while certain species for which it has an especial liking are slaughtered in great numbers. There is a wonderful abundance of invertebrated animals, such as squid, shrimp, holothurians, crabs, marine worms, sea-bass, and, in short, just such forms as are well known to every fisherman on the eastern grounds. The waters of the Alaskan fishing grounds fairly swarm with this kind of life suitable to the wants of the cod. The fish which constitute in large measure the food of the cod are herring (*Clupea mirabilis*), capelin (*Mallotus villosus*), lant (*Ammodytes*), halibut (*Hippoglossus vulgaris*), whiting or England hake (*Pollachius chalcogrammus*), sculpins (*Hemilepidotus Jordani* and *trachurus*, also *Cottus polyacanthocephalus*), and yellow fish or striped fish (*Pleurogrammus monopterygius*). Sometimes young cod are swallowed by older ones. I have seen a species of *Liparis* from a cod stomach on Portlock bank. The yellow fish is the best bait for cod, according to Capt. Anderson and Capt. Caton. Another food fish of the cod is worthy of mention here, because of the interest which attaches to it's common name of "Cusk" (*Bathymaster signatus*)—a species very different indeed from the cusk which is so much eaten for cod in the eastern States.

Mr. Devine says that sick cod are sometimes seen feeding at the surface, and sometimes healthy fish will chase bait up. In this way yellow fish will attract cod to the surface and capelin will also. I have counted forty capelin in one cod taken on Portlock bank July 8, 1880.

REPRODUCTION.

According to Mr. D. C. Bowen, cod about Kodiak come on the rocks in twenty-five to thirty fathoms, spawning in November and December. Capt. H. R. Bowen, of the same island, states that cod, full of eggs, are caught in February; the eggs are very light straw color and about as large as number 12 shot. He says that eggs and milt sometimes run from the fish after they are caught.

Capt. J. C. Caton informed me that cod spawn around the Shumagins in February on sandy bottom in shore, and that they will bite freely when spawning. Mr. D. C. Bowen says that at certain times spawning cod will lie perfectly still on the bottom and not take the hook.

Mr. Thomas Devine tells me that the Shumagin cod spawn in from ten to fifteen fathoms of water in January and February; the size and color of the eggs are the same as in the Eastern cod. The wharf at the Pirate Cove fishing-station is sometimes covered with spawn which has run from the fish after they were landed. He says that during the breeding season the males are long and slim and the females are short and deep. The smallest codfish he has recognized as such were six inches long, and they appeared in May or June. The smallest ones seen by Capt. Bowen were, also, six inches long; they made their appearance about July, and were in company with the old fish.

On the 6th of July, 1880, we seined many young cod in Refuge Cove, Port Chatham, Cook's Inlet, where the water was less than a fathom in depth and was largely diluted by fresh streams.

At Belkofsky, on the Peninsula of Aliaska, young cod about one and one-half inches long were dredged on the 23d of July. On the following day, while lying on the west side of Deer Island, a cod one and one-half inches long was found in the stomach of a large one.

On the 1st and 2d of October we seined many young cod at the head of Chernofsky Bay, Unalashka; from the 6th to the 18th of the same month we saw them in great numbers swimming around the wharves at Iliuliuk, Unalashka, very active and wonderfully greedy. We may, therefore, say that from May to October at least young cod are found in shallow water near the shore, and that about the middle of the latter month they have reached an average length of four or five inches. At Iliuliuk, when a jig or a baited hook was let down into the water it would be at once surrounded by a throng of nibbling fry, not at all frightened by the presence and antics of numerous small boys. These small fish frequently succeeded in fastening themselves on the hooks, and were pulled out on the wharf, either to be eaten or used as bait or thrown away.

ENEMIES, FATALITIES, ETC.

DISEASES.

As a rule all large cod caught in harbors in shoal water are sick. On the 24th of June, 1880, one was taken in Port Mulgrave, Yakutat Bay, that measured 31½ inches in length, and was stout and heavy but sick and unfit for food. The gills were not bright red as in a healthy fish, but dull and faded; the colors of the body were also dull. Numerous parasites were present externally, and the abdominal viscera were infested with worms. A very unpleasant odor came from the belly when it was opened.

On the 2d of July, in Chugachik Bay, Cook's Inlet, three large cod were caught from the vessel, all of which were sick, their abdominal viscera being lined with worms and giving off a bad odor, yet the fish were quite heavy.

On the 5th of July a healthy cod 28 2-5 inches long and blind in both eyes was caught on a hook in Port Chatham near the entrance to Cook's Inlet. The fish was entirely free from parasites. Its stomach contained only the herring with which the hook was baited. Instead of the transparent aqueous humor in the anterior chamber of the eye there was an opaque white substance, the result, doubtless, of an old injury. A second fish taken here (about an inch longer than the blind one) seemed to be perfectly healthy, but there were numerous small worms on the intestines. In its stomach were an *Ammodytes*, a little wad of kelp and a pebble.

In examining a fresh fish caught near Sitka I found the inside of its mouth containing many lernean parasites.

Captain H. R. Bowen has never seen deformed cod in the vicinity of Kodiak, but diseased ones are common. He has frequently noticed ulcerated sores along the body, and especially on the head. Dead cod have never been seen to his knowledge.

Mr. Devine, of the Shumagins, has seen cod sometimes with their backbone broken, causing a deformity known as "rose bones;" but he has never seen dead fish in any quantity at or near Pirate Cove. In earlier years, he says, you could heave up hundreds of sick cod at the wharf; sometimes you would take cod long, thin and gaunt, and after taking out the bone you might "read the Bulletin through them."

PARASITES.

Mr. Devine mentions, as external parasites found on Shumagin cod, "cuttle-fish, whelks, worms and fish-lice." The commonest external parasites observed by me were small lernæans.

ENEMIES.

Around Kodiak seals and sea-lions prey upon cod, frequently taking them from the line, according to Captain Bowen.

Mr. Devine tells me that sharks are very abundant about the Shumagins and very destructive to cod; dogfish (*Squalus acanthias*) also prey upon cod, but they are not abundant. We caught comparatively few dogfish during the summer—one at Port Althorp, one on Portlock bank and many at Sitka.

THE DETROIT HATCHERY.

DETROIT, MICH., April 18.

OFFICIAL information has been given out that the building occupied by the State Fish Hatchery in Detroit is ill-arranged and so rotten that the Commissioners have determined to seek another habitat. The city Water Works demand pay for every pint of water used at the hatchery, and with that Shylockian fact to confront them they do not think it expedient to rebuild the present concern. It is said that Detroit is the only city in the United States which makes a charge for water used in fish hatcheries, and there are mutterings which seem to indicate the possibility of a removal of our hatchery to Port Huron, at the foot of Lake Huron, where water, ground and railroad transportation will be free. Detroit has obviously the best advantages for this kind of business, the one thing wanting being free water. The Fish Commissioners will soon hold a meeting here to settle the matter, and I suppose friend Kellogg will keep the readers of FOREST AND STREAM advised as to any important action which the Board may take. The present water tax is $200 a year, and a pretty liberal rental for the ground on which the shanty stands. In order to make the water go as far as possible for economy's sake, the Commissioners have been obliged to use it four times. Inasmuch as the hatchery is a public good I do not see why the city of Detroit should exact its pound of flesh for the water used *pro bono publico*.

FISHCULTURE IN NEW HAMPSHIRE.—At the recent meeting of the New Hampshire Fish and Game League, Mr. A. H. Powers, superintendent of the hatching-house at Plymouth, was called upon and gave a detailed report of the operations of the commission for the past year. He said that 138,475 salmon fry had been placed in the Pemigewasset River above Livermore Falls, and that 70,000 fry of the brook trout had been planted in various waters; 67,000 land-locked salmon, 2,000 California trout and some black bass have also been distributed. He further says: "I have in the hatchery at this time 3,000 California trout eggs; 124,000 Schoodic salmon eggs; 30,000 shad-waiter or Lake Winnipesaukee white-fish eggs now hatching. January 24 I received from Germany some 50,000 saibling eggs, a present from Prof. Baird, which have hatched, and I have some 35,000 or more young saibling to plant.

There were some 220,000 brook-trout eggs taken last fall, one-half of which were sent to Massachusetts, but it is safe to say I have 100,000 young trout. Sixty thousand salmon eggs were taken last fall, and I received from Maine 419,500 salmon eggs. It will be safe to say that I shall have 450,000 young salmon for the Merrimack River."

Mr Luther Hayes, of Milton, also one of the commissioners, was called upon. He reported that wherever he had been, the people were well pleased with what had been accomplished, and had spared no pains to further the plans of the commissioners and entertain them.

Fish Commissioner Webber spoke of the German fish, and furnished undoubted reports of the success which had been met with in introducing this fish into American waters. He stated that the greatest obstacle to fish propagation was the use of the spear and net on the spawning beds. If this can be stopped there can be no doubt but that we shall have plenty of fish. He believed that low water in the Merrimack last summer was the only reason why salmon were not seen in abundance, and with a fair quantity of water the coming season expected to see many of them. He suggested that the establishment of a branch fish and game league in every county would greatly assist the commissioners in their work. In closing, Col. Webber stated that the commissioners proposed to stop the catching of smelt, with which ponds had been stocked, and also to restore the lobster clause of the law which was quietly dropped out in the last session of the Legislature.

Dr. Fletcher suggested that the stocking of the waters of the State with whitefish should be mentioned in connection with the work accomplished by the commission.

FRANK BUCKLAND MEMORIAL FUND—34 Portland Place, London, W.—A proposal has been made by some of the friends of the late Mr. Frank Buckland to perpetuate by a substantial testimonial the recollection of his services in natural history and thereby and generally afford to the public an opportunity of paying a tribute of respect to his memory and appreciation of his life-long work. For this purpose a subscription list has been opened. It is intended to expend a portion of the sum subscribed upon a bust of Mr. Buckland, to be placed in the museum at South Kensington with the collection which he so generously bequeathed to the nation. It is further hoped that the amount collected may be sufficient to supplement the income of Mr. Buckland's widow by an annuity of £100. Should there be any surplus after the purchase of the bust and annuity, the committee propose that it should be applied to promoting the welfare of the fishermen of this country—an object which Mr. Frank Buckland had so much at heart. Subscriptions will be received by Messrs. Cox & Co., Bankers, Craig's Court, Charing Cross, and at the above address by T. Douglas Murray, E. S. Bridges (Lieut.-Col. Grenadier Guards), Honorary Secretaries.

HYBRID TROUT.—Worthville, Mich., April 13.—On the 25th ult., Mr. F. N. Clark took 524 eggs from two California trout, and fertilized them with milt from a brook trout.

He was unable to decide positively that impregnation had been accomplished when he was called away on the 11th inst., and requested me to drop you a line as soon as the result was definitely known. To-day the embryo, although very faintly outlined, is nevertheless plainly discernible. Mr. Clark said that crossing these two *Salmos* had not been done in more than one or two instances, and that an item in FOREST AND STREAM noting the success of this attempt would probably interest pisciculturists generally as giving additional evidence that hybridizing these fishes was possible.

Although ripe males of the *fontinalis* are rarely found as late as this, the one used in the present instance was by no means "stingy"—quite the reverse—the milt being somewhat thicker, however, than in the regular spawning season. Up to the present date (April 13) forty eggs have died leaving 484, of which undoubtedly ninety-five per cent. will hatch. SEYMOUR POWERS.

HATCHING THE SAIBLING—Plymouth, N. H.—The Saibling eggs have hatched. The first egg hatched Feb. 23, the last March 24. The loss has been quite large, but no more than I looked for. No doubt some of the eggs were chilled when they arrived here, still I have a good lot of healthy fish. Number of dead eggs when arrived, 5,000; died since, 6,515. Total, 11,515. I shall have 35,000 or more to plant in Newfound Lake, as that is the place they are to be planted as I understand it.—A. H. POWERS.

THE CULTURE OF CARP AND CONSTRUCTION OF PONDS.*

1.—ITS ADAPTABILITY TO ARTIFICIAL CULTURE.

THE conclusion from what has been said will be, that the carp is excellently qualified for culture in inclosed waters, as artificial ponds, and also for the stocking of open waters, such as rivers and lakes, for what is called "free fishing."

It is in the power of the culturists to produce, by means of artificial impregnations and hatching, as also by the natural increase of this fish, with its abundance of eggs, any amount of fry, as well for fresh water as most probably also for salt water, as the fact of its occuring in the salt water of the Black, and very frequently in that of the Adriatic Sea, will demonstrate.

There is no other fish which will, with proper management, be as advantageous as the carp. Its frugality in regard to its food, its easy adaptability to all waters, in rivers, in lakes and ponds, and even salt water estuaries, its regular, rapid growth, and its value as a food fish, are its best recommendations.

2.—THE LOCALITIES BEST ADAPTED TO A CARP POND.

I will try to describe, in the first place, the manner in which carp culture in ponds is conducted in Central Europe, and subsequently explain more fully its introduction in open waters.

If intending to establish carp ponds, it will be necessary to ascertain the following points before the execution of the plan:

1. Is there a sufficient quantity of water at hand for all purposes, for the summer as well as winter?

2 Is the ground, soil and water favorable for culture?

3. It is important to examine the land minutely, in order to find what are the components of the soil, for not every kind of soil is suitable for carp culture.

4. It ought to be decided from the commencement how large the establishment is intended to be, whether only for private use and pleasure, or whether wholesale production of the fish as an article of trade is contemplated.

If points 1 and 2 have been satisfactorily settled, then the ground must be examined, particularly whether it is so constituted as not to allow the collected water to penetrate, and whether the ground is sandy or loamy. Above all, it must not be neglected to measure the depth of the stratum which holds the water, and to be fully assured that it is sufficiently impermeable to withstand the pressure of the water and to hinder its oozing through, so as to prevent the consequent drying up of the pond.

A rocky, gravelly ground is not appropriate for carp culture. Sandy ground, without a considerable mixture of loam, clay and humus, is of small use. I speak here of large ponds of considerable extent. Small ponds with a sandy bottom may be improved by supplying them with loam, as it is frequently done in agriculture.

Loam is a mixture of a small per centum, of sand and a larger quantity of clay, and is suitable for ponds. If such ground contains some marl, or, better, some little elements of humus, it is of the greatest advantage for fishculture. These constituents of humus, if dissolved, give the water a yellow, muddy color; and this water supports by its ingredients a profuse number of microscopic beings, which again form the support of a larger class of creatures, and represent therefore the productiveness of food of the pond, on which, in its turn, the carp depends for its sustenance. Too much humus or dissolved peat is injurious. Water which runs through bog meadows or oak woods is not of much use, because it contains too much humic acid and tannin; these impart a moldy taste to the fish. A too considerable amount of gypsiferous earth, carbonate of lime, or sulphate of lime is injurious also. Should any mineral springs fall into a pond they must be turned off. The most favorable water will always be that which comes from rivers and brooks. Ponds might be constructed which would fill themselves with rain-water during the winter or at any other time, but such water takes a moldy taste easily, which it will communicate to the fishes, as does the water from bogs also.

In Europe, experience has shown that water coming from fertile fields and meadows, carrying with it particles of offal from villages, is best adapted for carp culture.

Spring water direct from the ground is not favorable, and ought to be conducted for at least a few hundred yards through wide, shallow ditches, in order to receive more nourishing components from the air as well as the earth, and above all to be warmed to some extent by the sun and warm air.

A tract of land, such as above described merits the preference as a site for a pond, if in other particulars the ground is favorable and has not too great a fall. If this were the case, very high and strong dams would be required for the collection of water. Such dams cost large sums if constructed of good waterproof material.

A low undulating country, with only slight elevations or hills, where the small valleys are easily closed up by dams for the purpose of forming reservoirs, is favorable, the construction of these dams involving comparatively trifling expense.

3.—THE CONSTRUCTION OF THE PONDS.

Ponds must not be too deep, as the water will be colder and will harbor fewer insects, larvæ and worms, which form part of the carp's food; besides, this fish does not grow quickly in cold water. A depth of three feet in the center of the pond is sufficient; toward the outlet-sluice it may be from six to eight feet deep, but only for an area of from 200—1,600 square feet. In the depths of this "collector" the fishes seek their resting-place for the winter, and also in summer, when the water is too warm near the edge. The outer part of the pond should not be deeper than one foot for the distance of about 50 or 100 feet, so that the water there may be warmed more thoroughly by the sun.

Toward the center of the pond, and in accordance with its size, a cavity of from twenty to fifty feet in length and two feet deeper than the rest of the ground should be dug. This will serve the fishes for a resting-place in summer and winter. This cavity is sometimes called a "kettle," though the appellation varies in different localities.

From the entrance of the pond to the other end, where the "collector" and the outlet-sluice are situated, two or three ditches of two feet in depth and four feet in length must be made, which cut the deeper "kettles" transversely as far as the collector. These ditches are intended to carry all the fishes into the collector when the pond is being drained. The collector is nothing but a place of from twenty to forty feet in length and breadth near the outlet-sluice, one foot deeper than the remaining bottom of the pond. In ponds of superior construction it has generally a wood flooring, and must be cleaned of the mud every year, so that the fishes may not become too much soiled by the mud.

In speaking of the erection of a breeding-establishment for carp† I have in view a water-course of at least thirty-five to seventy acres area, which in Central Europe would be considered an establishment of about one-third magnitude.

The inflow of water into the pond should never be allowed to be direct; as, for instance, a brook falling into it. This often causes the water to rise at an inopportune time, carrying into the pond other fishes, especially the rapacious pike. The carp also has the disposition to swim toward the inflowing water, by which means it is drawn away from its proper feeding-places. The water should be conducted into the pond sideways from the stream; and if it should be a small brook only, it may be turned off entirely and carried alongside the pond, from which point the latter can be easily supplied with water.

The inlet-sluices from the stream must of course be of a strong and practical construction, so that an overflow is impossible, and they ought to be provided with gratings to prevent other fishes from intruding.

It is an indispensable condition for the culture in ponds, according to established rules, that they be so constructed as to allow of being thoroughly drained, so that the fishes may be taken out without any difficulty. The bottom of ponds should be of such a description as to permit their being dried up for agricultural purposes if necessary.

* To the Carp and its Culture in Rivers and Lakes, and its Introduction in America," being Part IV. of the Report of the U. S. Fish Commission, 1875-76.

In Europe ponds of from 10 to 2,000 acres extent are frequently to be found, which, after having been used for fisheulture for a time, are dried up, and sometimes grass, oats, wheat, etc., are planted on the ground. This improves the soil exceedingly for fisheulture. I mention this simply in order to show that the soil gains by this manipulation not only for fisheulture but also for agriculture. If the soil at the bottom of ponds has been freed from the humic acid by vegetation, after being plowed and exposed to the air thoroughly, fishes will thrive incredibly well in them. This I intend as a suggestion particularly for farmers, who would wish to establish a small pond of perhaps five or six acres size, to show that the soil of their land would not lose, but rather gain by doing so. Agriculture and carp-culture go hand in hand in some Central European countries and form a kind of complement to one another. To-day a piece of ground may be a field or fertile meadow; next year it will be found to be a productive pond, to serve again one or two years later its first purpose.

If the size of the principal and supplementary ponds has been decided on, the height, depth and width must be measured, and the levels of the ground and dams, if such are needed, should be carefully taken. The leveling of the bottom is required to assist in the determination of the depth of the ditches, "kettles," collector, and outlet to be dug in it.

In the erection of the required dam it is most important that it be constructed of the very best material, so as to make it secure against the destructive influence of the water. It ought to be three times as wide at its base as it is high, and at the top the width should be the same as the height. The interior or water side should be less inclined than the exterior one.

Before the foundation of the dam is laid, the ground where it is to stand must be dug out to a depth of two and a width of from four to five feet throughout the whole length of it. If the ground does not consist of loam it must be filled up with it about one foot deep, and this must be tamped down hard. A second layer follows and is disposed of in the same manner. This is repeated, the clay being moistened every time if required, and then beaten down solidly. This lower stratum is but the foundation of the dam, which is formed from the earth dug out of the pond or its vicinity. This is continued until the dam is completed. Care must be taken, however, that the construction and tamping down of this lower stratum be done in layers and that nothing but good clay be used. In this manner the material of the foundation will become a very tenacious mass, which will not allow any water to penetrate. The completion of this laborious task will be a source of ultimate satisfaction, as many disadvantages, which might arise after the filling of the pond, will be done away with through its agency. The dam should not be made entirely of clay, for in midsummer, during the great heat, it would dry out too much on that side most exposed to the sun, and consequently it would become full of fissures, through which the water would escape, and this might become disastrous for the establishment.

On account of the required outlet-sluices, etc., the fact must be kept in view, that such newly constructed dams will sink 10 per cent. after a lapse of time of little more than a year, with the exception of that portion which has been solidly made. The dam should be sodded. For the draining of the pond, at the "fishing cut" season, it should have an outlet at the lower end, if no other advantageous arrangements can be made for the purpose. The use of wood-work for the channel should be avoided, its durability not being sufficient. The most desirable construction would be that the outlet channel consist either of masonry-work or water-pipes, which may be made either of clay or iron. This channel or pipe must be so made that it can be closed tightly or opened again readily if needed, and must be provided with two or three-fold gratings to prevent the escape of the fishes upon the opening of the sluice. At the same time there should be an outlet-channel, several feet in breadth, at the side of the pond, to allow the water to run off. This must also be secured by grating, but should be kept open always, so that in case of continued rainy weather or sudden and violent showers of thunder-storms no overflowing of the banks or dams may be possible through the unexpected rising of the water in the pond. Large fish ponds of several hundreds extent (some have a surface of 1,200, 1,500 or 2,000 acres) have generally and according to their size two or three outlets I have described, and which pass underneath the dam. The outflow from these is usually regulated by adjustment of the floodgates from the top of the dam.

The so-called "Monche" (monks) are wooden boxes, which stand in the pond at a distance of a few feet from the dam. They are perforated like a sieve, or are provided with small adjustable boards, and wooden pipes run from them through the dam. In Bohemia they are called "carp houses." They are, however, rarely used in large establishments at present, only such culturists making use of them who have but small breeding-ponds at their command and carry on culture on a small scale. These locks suffer too much from the water, air and sun, as also from the pressure of the ice in winter, so that they require considerable repairs at an early date after their first construction; but they serve their purpose fully in small ponds, especially in smaller ponds, which are intended for pleasure or experiment.

There are so many different ways of constructing these subterranean sewers, that I may as well pass them over; they belong more particularly to the departments of hydraulics. It is the province of the culturist to find for himself that which will be the best and most practical method in the construction of outlets.

If it be desired to make use of natural ponds, of which there are numbers in every State of the Union, it is necessary to ascertain whether they can be put into the proper condition for regular culture. This can only be done if the influx of water can be regulated and the entire drainage of the pond made possible. An intrenchment will be required with such ponds in order to make them dry. Trunks of trees should be taken out of them; and where they are too deep they should be filled up, or, if this cannot be done, they should be brought into connection with the above-described sewers on the bottom of the pond. If this is not done too many fishes will remain embedded in the mud when the pond is being drained, and this lessens the profits to a great extent.

Should any brooks fall into such ponds, as is often the case with large ones, they must be kept under strict observation on account of possible overflows which might occur. If it be practicable the brook had best be turned off and conducted alongside the pond, when the latter can be supplied with water if required.

Such brooks, coming from a neighboring hilly territory or from mountains, will frequently occasion an overflow if either a thunder-shower or sudden thawing of snow and ice should set in; in the latter case the ground might be too hard with the frost to allow the water to run off readily.

If the overflow should even be inconsiderable it would still exercise an injurious influence upon the fishes, as the influx of so much water, which in all probability would contain unfavorable substances, would be apt to drive them from their winter retreat.

In summer, sudden, violent rain-showers may cause an overflow within a few minutes, which will carry off the fishes, and eventually may destroy all the ponds. To secure against this, the construction of reserve-sluices, such as are contrived in artificial ponds, and a wide reserve-ditch alongside the pond, which is destined to carry off the threatening high water, are recommended. A small dam between the pond and brook, instead of the reserve-ditch, will sometimes answer.

Great caution is necessary in the selection of the site for a pond or the natural pond, which is to be converted into a carp pond.

Overflows not only injure the ponds and fishes, but may result in a still worse disaster, that of carrying away the fishes into strange waters and destroying the ponds.

The fundamental rule in carp culture is that the water be of the same depth in summer and winter. If the supply of water is too plentiful, great quantities of mud are carried into the pond, embedding the grass which grows in it and on its banks; this, in consequence, will rot and poison the water. The carp immediately desert such water on account of its offensive odor and retire from their proper feeding-places to depths deficient in the production of food.

The mud, which is being consequently reproduced, consists of the remainders of plants. From these different gaseous compounds develop themselves in midsummer, and the fishes become sickly in consequence. In this case, especially if they rise to the surface seeking for air, more water must be supplied through the inlet sluice, when they will recover by degrees. A casualty of this description may occur in very large ponds, though no overflow may take place.

Pernicious gases develop themselves from the mud even in winter, but they rarely have any bad effects, being injurious only if the water is covered by ice, when the fishes die from suffocation. For this reason large apertures are cut into the ice for the supply of fresh air.

NOTES AND QUERIES.

ALEXANDER'S GAME BIRDS.—I see in your last "Answers to Correspondents" that one has asked about "Game Birds," by Thos. Alexander, formerly published in the "Lakeside Library," which is now out of print. Thos. Alexander's books on "Game Birds" and "Fish and Fishing" are published in "Seaside Library." "Game Birds," No. 571, 20 cents; "Fish and Fishing," No. 567, 10 cents.—G. H. S.

MAJOR HENRY VAN WART.—Iam very desirous to learn the address of Major Henry Van Wart, who came to the United States from Birmingham, England, many years ago, resided awhile in Poughkeepsie, N. Y., and afterward returned to England. Any one who can give any information of him will confer a great favor by addressing EVERETT SMITH, Port land, Me., U. S. A.

Will the owner of Highland Lass, a red Irish setter bitch, once owned by Col. Wright Reeves, of Washington, D. C., please send pedigree to this office?

AN OLD MASSACHUSETTS LAW.—In the early records of Plymouth, Mass., is found the following resolution, adopted at a town meeting "held att the meeting house att Plymouth the 22 cond of Aprill 1673": "Att this meeting the Towne ordered that euery man in this Towne shall procure Twelue blackbirds heads six of them by the first of June next and six of them by the first of October next on paine of paying a fine of two Shillings for euery defect to the use of the Towne or 2 pence apiece for see many as shallbe wanting of the Dozen and if any kills more than a Dozen then to haue pence apecee for them out of the Townes stock and that the said heads be brought in by the time prefered unto Will am Crow Jabez howland Will am barlow and Will am Clarke."

DUDLEY'S POCKET LOADER, in its newly improved shape, is a most complete and satisfactory tool. We have tested its working and have been much pleased with it. It extracts the cartridges, removes the cap, recaps, rams the wad home and crimps the shell. It is a great improvement on the same manufacturer's old style of reloader, and now fills the bill.

BERNHARDT and her party have been traveling about the country in the famous hunting car "City of Worcester." She chartered the car last December.

THE OLD CONTROVERSY about the manner in which a trout strikes a fly is still unabated. One man has the courage to stick to his opinion, and he illustrates his belief by keeping a woodcut in our advertising columns. His name is C. F. Orvis, he makes tackle, and his motto when fishing is, "Heads, I win; tails, you lose."

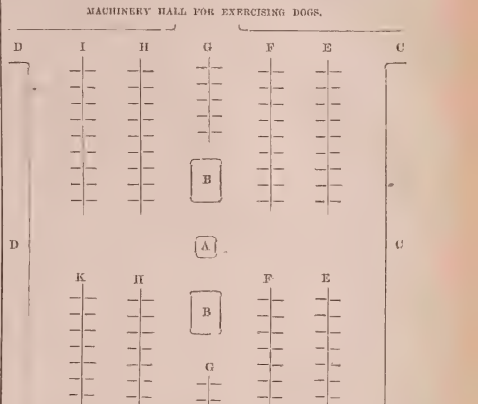
FIXTURES.

April 26, 27, 28 and 29, at New York City.—Westminster Kennel Club Fifth Annual Bench Show, American Institute Building, Third avenue and Sixty-third street. Entries close April 11. Charles Lincoln, Superintendent, No. 128 Fulton street, or P. O. Box 1,700, New York City.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. I. R. Stayton, Secretary, Pittsburgh, Pa.



October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

THE NEW YORK DOG SHOW.

FOR the first time since the Westminster Kennel Club instituted its annual bench shows the place of exhibition has been changed, and the fifth of the annual series has found a habitation and resting-place at the American Institute building on Third Avenue, between Sixty-third and Sixty-fourth streets. The up-town march of residents does not make the Institute so much out of the way as many imagine who a year or two ago looked upon the "Rink" as being quite out of the city. Now the elevated railroad makes it as convenient a place to reach if not more so than the Madison Garden, and it is not at all likely that the latter building will be your selection. During the first day the attendance was good, and in every way as fashionable as anything seen at Madison Garden, so that all fears on that account proved groundless, and even if it had not come up to the mark another year of uptown drifting and the Institute would be closer to the best parts of the city than the old place. The building itself is vastly also superior for the purposes of a dog show, the hard asphalt floor being an improvement on wood, and there being no amphitheatre of seats to prevent a free circulation of air about the building, the ventilation is of the best, and the air devoid of any taint or smell from the dogs.

For over a month the members of the committee, and the Superintendent, Mr. Chas. Lincoln, have been kept close at work perfecting all arrangements, and the result, as witnessed by the smoothness with which everything ran on the first day must have been gratifying to them. The business of receiving and benching the dogs proceeded without a hitch, and by the time the judging hour arrived on Tuesday morning a commencement could have been made if necessary. The benching was well done—we mean the laying of the plan of the benching—and a good idea can be obtained from the following sketch:

MACHINERY HALL FOR EXERCISING DOGS.

THIRD AVENUE ENTRANCE.

A—Superintendent's office.
BB—Judges' rings, each 45 feet by 34 feet.
CCC—Large dogs, from No. 1 to No. 50—mastiffs and St. Bernards; no partitions between.
DDD—Large dogs, No. 51 to No. 100—Newfoundlands, Siberians or Ulms, greyhounds and deerhounds.
EE—Dogs from No. 101 to 300—pointers, champion and imported English setters.
FF—Dogs from No. 301 to No. 500—native English setters, black and tan setters and champion Irish setters.
GG—Dogs from No. 501 to No. 600—Irish setters, Irish water spaniels and field spaniels.
HH—Dogs from No. 601 to No. 800—Cocker spaniels, field spaniels, foxhounds, beagles, dachshunds, fox terriers and collies.
I—Dogs from No. 801 to No. 900—bulldogs, bull terriers, Skye terriers, pugs, rough-haired terriers and black and tan terriers.
K—Toy and small dogs and miscellaneous classes.

At the northwest corner of the building the club dogs were benched with old Sensation at the head of the group. He was not looking up to bench condition, and a hump on his side, caused by a bite, did not improve his appearance. Next to the W. K. C. dogs came the mastiffs, and all along the northern and southern walls of the building the large dogs were placed. Pointers began again at the northwest corner of the parallel rows of double benches on the centre floor, and the numbers ran in regular rotation up one side and down the other, winding up at the southeast corner with toy and little fancy pets. This year there was little display of fancy decorations in the stalls, and we think it would be well to have all shows alike in plain stalls for straw beds, and let the dog speak for its quality without the help of outside attractions.

From what we have seen in the ring and also by walking around the benches we are thoroughly of the opinion that this is the best collection of dogs ever seen here. Numbers are fewer than last year, but that is more than compensated for by the absence of three or four hundred dogs with no possible chance of success, and now we have classes made up of dogs of quality instead of mixed and ragged looking groups. The judges selected had to do their duty single-handed, and the classes were divided as follows: Mastiffs, St. Bernards, Newfoundlands, Siberian or Ulm dogs and deerhounds, Mr. Paul Dana, of New York City; greyhounds, black and tan setters, foxhounds and miscellaneous class, Hon. John S. Wise, Richmond, Va.; pointers, Mr. S. T. Hammond, Springfield, Mass.; champion, imported and native English setters, Irish setters and beagles, Major J. M. Taylor, of Lexington, Ky.; spaniels (all classes), dachshunds, fox terriers, collies, bulldogs, bull terriers, Skye terriers, pugs, rough-haired terriers, black and tan terriers, Dandie Dinmont terriers, Irish terriers, Yorkshire toys, King Charles or Blenheim spaniels, Japanese spaniels and Italian greyhounds, Dr. J. S. Niven, London, Ontario.

Mr. Dana and Major Taylor began their duties about half-past eleven o'clock, and the former was through early, having fortunately very light classes to adjudicate upon. We say fortunately, because his work was done in such a manner as to leave but one opinion as to his capacity for the office and knowledge of dogs. We shall speak our mind very freely on his awards. Major Taylor is a gentleman who is in every way qualified for the duties he undertook and gave the greatest satisfaction, and Dr. Niven is another gentleman who knew what he was about. The classes judged by Mr. Dana were finished first, and will be first noticed.

MASTIFFS.—The best were in the open classes, Turk and Leat being the only entries in the champion classes. Salisbury is the best dog of the breed we have ever seen, a typical head, legs of the best and a good tail, but a poor, thin-muzzled dog called Grim was given first prize. Gruth, the second, was better than first, and Salisbury—well, it was like comparing a thoroughbred and a Canadian pony—a shocking decision. Creole was the only good bitch, and she also was given the special offered by Mr. Moore for the best mastiff. Salisbury, of course, should have been first in dogs, and got the special.

ST. BERNARDS.—Very ordinary classes of this grand dog. Don is smooth-coated and Turk (second) rough-coated, being in the best in their subdivisions. Barry, the winning dog, does not look like a pure St. Bernard.

NEWFOUNDLANDS.—Mayor of Bingley, the best dog seen in America, won from three poor specimens; and only one bitch, Flora, being entered, and she very moderate, first prize was withheld.

SIBERIAN OR ULM DOGS.—Caro is a fine, large dog; Lyon is not a good one, but Rex is, and Mr. Dana must have overlooked him entirely.

DEERHOUNDS.—Haco, a very good dog of seventeen months, won easily from Sir Walter.

Major Taylor finished all the English setter classes, except the bitch puppies, and, as already stated, his duties were admirably performed.

ENGLISH SETTERS.—Leicester never looked better, and as Mr. Moore states this is his last exhibition, we were glad to see the old dog retire a champion. St. Elmo was not looking as he usually does, and Coin showed the effect of his washing in the morning. Thunder was Leicester's most formidable rival. The struggle in the bitch class was between Lizzie Lee and Spark, decidedly the best two shown, and Spark won—a close thing between them.

The imported dog class was a very difficult one, a dozen dogs, being magnificent dogs. Finally Major Taylor got Duke of Beaufort and Emperor Fred together, and muscle carried the dog over beauty of conformation. We do not doubt Emperor Fred's claim, but he is not a dog of quality, compared with the second or third. Pontiac was in splendid trim, and also Dashing Monarch, the latter's coarseness keeping him back. Temple Bar looked as handsome as anything in the ring, but a description of all the good ones is out of the question. Mr. J. C. Higgins won in the bi ch class with Petrel II, a sweet bitch. But we sadly missed Mr. Moore's pair—Luna May and Lass o' Gowrie, who had not come on from the South. Daisy Laverack is slightly undersized or she would have taken a little higher than third. Blue Bell is a well-shaped bitch and was shown in excellent trim.

Native dogs were a hard class to judge, but the best were finally selected. Count Zos, a good one for his age, was, we thought, a little better than the winner, who was not looking well. Racket, at third, was a good choice, and Mr. Goodsell's Royal Carle is a handsome blue Belton. Blue Dan, a taking dog of the same color, was equally well taken care of.

Taking the class of the noticed dogs it was as good as anything seen before, and Afton, second last year, was this time only highly commended. The native bitch class was not a large, but it was a good one. Donna, the winner, is a bitch of great merit, but if she had only been second it would have been no hardship, as Flirt is a genuine good one, beautifully proportioned. Maida, we regret to say, was an absentee. Lady Laverack, like her sister Daisy, is small, but a good one. The dog puppies were not so good as we should have expected, and beyond Royal Dale and Doc there was nothing to call for any mention. The former was decidedly the best, and does credit to his dam, Daisy Dale.

Dr. Niven began his work in the afternoon with spaniels, and got through them and fox terriers before six o'clock.

IRISH WATER SPANIELS.—Mike, a fine dog, won and deserved his blue. Judy, the next best, taking second, and Limerick, a credit to Barney, was given a very highly commended mention.

FIELD SPANIELS.—A large class of various kinds. The question was at last reduced to Dash and Benedict, both of the Jacob's strain. Dash was beaten by his younger relative. Jenny, more of a cocker stamp, was placed third, and a daughter of hers, Jessie, secured v. h. c.

COCKER SPANIELS.—The dogs were pretty fair; Brag, decidedly the best, being first, with the liver and white Teddy second, and the well-known Music third. Music is hardly a working cocker. The bitches were not so good as dogs, and there was nothing in the class as good as Queen Vic. Busy was in bad condition or she would have won. Beatrice was the only good puppy.

FOX TERRIERS.—Dr. Nivens began by selecting the chunky-built Bowstring as the champion dog—a sound and justifiable decision. Tipsey was not of the same stamp, however, and Mr. Rutherford should have been first here also. The open dog class was an extra good one, and Moslem II. had all he could do to come in ahead of Royal. Notts is a hardy dog with not overmuch quality, and we do not think Tartar should have been where he was. Mr. Mason was again in front in the bitch class, and the decision was sound, Mr. Rutherford again hunting him home with the smart Salley and Tricksey. Joker made up somewhat for disappointments by easily winning in the dog puppy class. He should make a good one. The bitch puppies were very poor, winner the best.

The remainder of our comments will be concluded next week.

FULL LIST OF AWARDS.

[V. H. C., very highly commended; H. C., highly commended; C., commended.]

Class 1. Champion Mastiffs: Dogs, silver medal, C C Bulls' Turk, New York.

Class 2. Champion Mastiffs: Bitches, silver medal, M. Rathbun's Leah, New York

Class 3. Mastiffs: Dogs, first prize, $15, C P Fraleigh's Grim, Brooklyn; second, $10, C C Goodward's Gruth, Zanesville, O; third, silver medal, J H Mason's Quarry, England.

Class 4. Mastiffs: Bitches, first prize $15, C H Mason's Creole, England; second prize $10, Miss S C Hewitt's Brenda, New York; third prize, silver medal, R. Lehmann's Juno, Brooklyn.

Class 5. Mastiff Puppies: First prize, $10, Miss S C Hewitt's The Amel; second prize; silver medal, Miss S C Hewitt's Frou Frou; v h c, W R Hobart's puppies, Newark.

Class 6. Champion Rough Coated St. Bernard Dogs: Silver medal, Mr D. P. Foster's Turco.

Class 7. No entries.

Class 8. Rough Coated St Bernard Dogs: First prize, $15, H Clawsen's Barry, New York; second prize, $10, H H Baxter's Turk, New York; third prize, silver medal, H H Hoar's Rover, New York.

Class 9. Rough Coated St Bernard Bitches: First prize, $15, A E Godefroy's Braunfels, Guymard, N Y.

Class 10. Champion Smooth Coated St Bernard Dogs: Silver medal, J P Haines' Don, Tom's River, N J

Class 11. Champion Smooth Coated St Bernard Bitches: Silver medal, J P Haines' Judy, Tom's River, N. J.

Class 12. Smooth Coated St Bernard Dogs: First prize, $15, Hon. Samuel J Tilden's Ashdin, New York.

Class 13. Smooth Coated St Bernard Bitches: First prize, $15, J P Haines' Vix, Tom's River, N. J.

Class 14. St Bernard Puppies: First Prize, $10, John P Haines' Guard, Tom's River, N J; second prize, silver medal, J P Haines' Cato, Tom's River, N J; v h c, John P Haines' Toper, Tom's River, N J; h c, J P Haines' Dirk, Tom's River, N J.

Class 15. Newfoundland Dogs: First prize, $10, C H Mason's Mayor of Bingley, England; second prize, silver medal, A U Dbberson's Bogasinus, New York; v h c, E S Wheeler's Carlo, New York.

Class 16. Newfoundland Bitches: Second prize, silver medal, E E McCormick's Flora, New York. First prize withheld

Class 17. No competition.

Class 18. Siberian or Ulm: First prize, $10, A Field's Caro, New York; second prize, silver medal, G F Keller's Lyon, New York; v h c, F C Wilson's Mous, Englewood, N J.

Class 20. Deerhounds: First prize, $10, W W Sherman's Haco, Newport, R I; second prize, silver medal, W Renkin's Sir Walter, New York.

Class 31. Champion English Setter Dogs: Prize, $30, A H Moore's Leicester, Philadelphia, Pa.

Class 32. Champion English Setter Bitches: Prize, $30, D C Sanborn's Spark, Dowling, Mich.

Class 33. Imported English Setter Dogs: First prize, $25, J R Robinson's Emperor Fred, Sunderland, England; second prize, $15, J H Goodsell's Duke of Beaufort, New York; third prize, silver medal, J C Higgins' Pontiac, Delaware City, Del; v h c, C Murray's Jenius, London, Ont; H W Gause's Warwick, Wilmington, Del; A A Moore's Temple Bar, Philadelphia, Pa; h c, Gov Moore's American Ranger, Pittsburgh, Pa; J H Higgins' Dashing Monarch, Delaware City, Del; c, J H Goodsell's Don Juan, New York; L J Gaines' Blue Blood, Meridan, Conn.

Class 34 Imported English Setter Bitches: First prize, $25, J C Higgins' Petrel II, Delaware City, Del; second prize, $15, W H Beebe's Blue Bell, New York; third prize, silver medal, J H Goodsell's Daisy Laverack, New York; v h c, J C White's Lou, Pittsburgh, Pa; h c, N Hathaway's Opal, Fall River, Mass; c, L Sauster, Jr's, Cornelia, Philadelphia, Pa.

Class 35. Native English Setter Dogs: First prize, $25, B F Wilson's Spot, Pittsburgh, Pa; second prize, $15, W Wagner's Count Zos, Baltimore, Md; third prize, silver medal, J H Goodsell's Racket, New York; v h c, J H Goodsell's Royal Carle, New York; N D Hathaway's Blue Dan, Middleboro, Mass; C H Dayton's Young Belton, Peekskill, N Y; h c, F Swarthout's Afton, Pawtucket, R I; Sportsman's Kennel's Blue Drake, Geneva, Iowa; D Plock's Satan, New York; J C Higgins' Lincoln II, Delaware City, Del; c, G R Watkins' Tom, Brooklyn; W H Beebe's Cona, New York.

Class 36. Native English setter Bitches: First prize, $25, C Moran, Jr's Donna, New York; second prize, $15, Sportsman's Kennel's Flirt, Geneva, Iowa; third prize, silver medal, A H Moore's Lady Laverack, Philadelphia, Pa; v h c, Sportsman's Kennel's Highland Lassie, Geneva, Iowa; N D Hathaway's Bow Bells, Middleboro, Mass; h c, M Bacon's Lou, Lenox, Mass; A Buckingham's Maid Marian, Norwich, Conn; G R Watkins' Crook, Brooklyn; c, J White's Daisy, Bridgeport, Conn; L Willy's Tambazine, Baltimore, Md.

Class 37. English Setter Puppies: First prize, $10, J. De T. Blackstone's Royal Dale, Newcastle, Conn; second prize, $15, Sportsman's Kennel's Betty's Dog, New York; v h c, Hon John S Wise, Ham Richmond, Va; h c, H W Livingston's Peter Schlemihl, New York; c, L Sauster, Jr's Chelten D, Philadelphia.

Class 38. English setter Puppies, Bitches: First prize, $10, N M Drake's Item, Trenton, N. J.; second prize, silver medal, Theo. Moyer's Rose Laverack, Jersey City, N J; v h c, Hon R Ray Hamilton's Diana, New York; h c, H W Livingston's August Flower.

Class 45. Champion Irish Setter Dogs: Prize, $30, A H Moore's Berkley Phil d'elphia, Pa.

Class 46. Champion Irish Setter Bitches: Prize, $30, A H Moore's Loo II, Philadelphia, Pa.

Class 47. Irish Setters—Dogs: First prize, $25, Max Wenzel's Chief, Hoboken, N J; second prize, $15, A H Moore's Raleigh, Philadelphia, Pa; third prize, silver medal, S D Ripley's Spy, New York; v h c, C Denison's Sain Pedro, Hartford; h c, C S Lincoln's Duncan, Warren, Mass; c, W T Cameron's Grouse, New York.

Class 48. Irish Setter Bitches: First Prize, $25, Dr W Jarvis' Noreen, Claremont, N H; second prize, $15, B F Clark's Meg, Manchester, N H; third prize, silver medal, R H Dulany's Kate, New York; v h c, Dr Wm Jarvis' Larna, Claremont, N H; c, W H Pierce's Maid Rose, Deerfield, N H; Mrs Meeta, Wilmington, Del.

Class 51. Irish Water Spaniels: First prize, $10, Excelsior Kennel's Mike, Chicago, Ill; second prize, silver medal, D D Lawlor's Judy, Mount Vernon, N Y; v h c, H D Gardner's Limerick, Milwaukee.

Class 52. Cocker or Field Spaniel Puppies: Prize, silver medal, Lachine Kennel Club's Beatrice, Whitestone, L I.

Class 53. Cocker Spaniels, Dogs: First prize, $10, Lachine Kennel Club's Benedict, Whitestone, L I; second prize, $5, A H Moore's Dash; Philadelphia, Pa; third prize, silver medal, R M Lindsay's Jenny, Scranton, Pa; v h c, D O Frank's Jessie, New York; h c, H S Jaffray's Cubbs, New York.

Class 54. Cocker Spaniels, Dogs: First prize, $10, Dr J S Cattanach's Queen Vic, New York; second prize, $5, E Tinsley's Busy, Hamilton, Ont.; third, silver medal, C V Sewell's Lou, New York; v h c, A E Godefroy's Flirt, Guymud, N Y.

Class 55. Cocker or Field Spaniel Puppies: Prize, silver medal, Lachine Kennel Club's Beatrice, Whitestone, L I.

Class 60. Dachshunde: First prize, $10, W H Goulding, Wodan, New York; second prize, silver medal, J A Stovel, Marguerite, Philadelphia, Pa; v h c, W Schaefje's Dave, New York; c, W H Stellman's Bergmann, Baltimore, Md.

Class 61. Champion Fox Terrier Dogs: Silver medal, L and W Rutherford's Bowstring, N Y.

Class 62. Champion Fox Terrier Bitches: Silver medal, R Gibson's Tipsey, Ilderton, Ont.

Class 63. Fox Terrier Dogs: First prize, $10, C H Mason's Moslem II., England; second prize, $5, L and W Rutherford's Royal, New York; third prize, silver medal, C H Morrison's Notts, New York; v h c, C H Mason's Tartar, England; h c, A Boote's Tusseli, East Orange, N J.

Class 64. Fox Terrier Bitches: First prize, $10, C H Mason's Twilight, England; second prize, $5, L and W Rutherford's Salley, New York; third prize, silver medal, J M Waterbury's Contralto, New York; v h c, L and W Rutherford's Tricksey, New York; h c, C H Mason's Moonlight, England.

Class 65. Fox Terrier Dog Puppies: First, silver medal, L and W Rutherford's Joker, New York; v h c, W R Hill's Trouble, Albany, New York.

Class 66. Fox Terrier Bitch Puppies: Silver medal, J M Waterbury's unnamed puppy, New York.

Class 67. Champion Collies—Dogs: Prize, silver medal, Scotland Kennel's Lassie, Newmarket, Md.

Class 68. Champion Collies—Bitches. Prize, silver medal, Scotland Kennel's Lass o' Gowrie.

Class 69. Collies—Dogs. First prize, $10, J Lindsay's Ayrshire Laddie, Jersey City; second prize, A S Apgar's Nelson, New York; third prize, silver medal, C Morgan's Punch, Bordentown, N J; v h c, Scotland Kennel's Prince, Newmarket, Md.

Class 70. Collies, Bitches: First prize, $10, A S Apgar's Isie, New York; second prize, $5, A S Apgar's Daisy, New York; third prize, silver medal, J L Munn's Sheila, East Orange, N J; v h c, J W Burgess' Bess, New York; h c, F C Sayles, Jr's Daisy, Pawtucket, R I.

Class 71. Collies, Puppies: Prize, silver medal, Scotland Kennel's Meg Merrilies, New Market, Md; v h c, Scotland Kennel's Bliss' Fun; h c, J W Burgess' Sport, New York.

THE SAN FRANCISCO DOG SHOW.

(FROM OUR SPECIAL CORRESPONDENT.)

SAN FRANCISCO, April 12, 1881.

THE first bench show given by the Pacific Coast Kennel Club closed here last night and was, in every respect, a highly successful exhibition. The need of such a show has long been felt here, as the amount of ignorance existing among the sportsmen of the State of California in all matters pertaining to the breed and excellence of dogs, outside of greyhounds, was simply monumental. Men who could bet on killing ten mountain quail—the hardest bird to shoot that flies—out of twelve shots would tell you with the utmost assurance that the wretchedly-bred, though well-trained, cur that accompanied him, was a thoroughbred Lavarack setter or, perhaps, would gently insinuate that a coarse, heavy, long-eared, short-legged cross between a hound and pointer was a purely-bred foxhound. Of course there are many gentlemen in this State who were born in Great Britain or the Eastern States, who are as well posted on canine matters as any gentlemen in the world, and it was by their efforts that the Pacific Coast Kennel Club was formed and the Bench Show given. The most prominent among the well-informed lovers of the dog in this State are the coursing men who have no less than twelve coursing clubs in active operation, and the majority of these gentlemen have imported from England that the breed on this Coast is equal, in general excellence and purity, to that of any part of the world and, perhaps, a trifle superior in point of wind and bottom, as the bounding expanse of prairie-land over which the coursing matches are held, and the immense speed of the hares, falsely called Jack Rabbits, require no ordinary amount of speed and game to secure a kill, and it is rare indeed to see a hare killed until it has led its pursuers a merry chase of at least a mile, a distance frequently doubled and trebled. This being the state of affairs, it required more than ordinary courage for the part of the little band of canine experts that formed the kennel club to commence the arduous work of conducting a bench show, and the success it attained on their account reflects great credit on them. The exhibition was given in the Mechanic's Pavilion—an immense building situated about half a mile from the business portion of San Francisco, and within a stone-throw of our municipal elephant known as the New City Hall which has already swallowed two million dollars and will eight millions of dollars, and is one of the most magnificent ruins in America. A good idea of the size of the Pavilion in which the show was given can be formed from the fact that at a recent walking match held in it a track was laid one-fifth of a mile in circumference. As the main floor of the building afforded much more space than was needed for the accommodation of the dogs entered, and to enable the spectators to get a good view of the entire show at one time, several raised tiers of seats were built around the floor in an amphitheatre form enclosing a space of 68x138 feet, which was devoted to the benches, which were built in parallel rows along its full length with occasional passages at right angles to them which marked the different classes of dogs. The Pavilion was tastefully and tastefully decorated with flags and streamers, hung from the arched roof which is about sixty feet from the floor. For the purpose of general arrangement, the dogs were divided into three classes, viz: Watch dogs including great Danes, St. Bernard's, New Foundlands, Mastiffs and Russian terriers; sporting dogs including all classes of dogs used as an adjunct to shooting, and toy-dogs including bull-dogs and terriers, and nondescript dogs of all kinds. The officers of the show and judges were as follows: President, Clem Dixon, of Cumberland, England; Secretary, Colonel Stuart M. Taylor, of San Francisco; Superintendent, Thomas Tunstead, of San Francisco; Vice-President, Dr. Meara, health officer of San Francisco; Business Manager, D. R. McNelle, late of Edinborough. The judges were as follows: All sporting dogs except greyhounds—J. Lenswelay, late of Lancashire, England, at present residing in Gilroy, Cal. Greyhounds—Judge Mee, of Alameda. Terriers and toy-dogs—P. Quinlan, Esq., of San Francisco. Shepherd dogs—Thomas Farley, Esq., of San Francisco. Coach-dogs—Captain B. Harris, of San Francisco. Newfoundlands, St. Bernards, mastiffs, Great Danes or Ulm dogs and Russian terriers, T. T. Williams, Esq., late of Hammersmith Gate, London. The awards made by these gentlemen gave the utmost satisfaction to all who could be considered judges of dogs, and so popularized the Pacific Coast Kennel Club that any future exhibitions they may give will be even greater successes than this one was. The prizes consisted entirely of handsome silver cups manufactured expressly for the club by the Meriden Company and ranging in value from $120 for first prize in the large classes to $25 for second prize in the small classes. The entrance fee for all dogs, including a season ticket to the show, was $3; and the general admission price fifty cents. The greyhounds were the largest and best class of dogs exhibited and included some forty entries, all of which, with one exception, were bred in California. That exception was the first prize winner, Joseph Franklin's bl. d. Speculation, imported from England in 1877; sire, Baffler; dam, Memiss; valued at $1,000. He is as nearly a perfect specimen of a greyhound as could be found in any country, and, though fully nine years of age, is still available for stud purposes. He is a large, upstanding, short-coupled dog, with a splendid chest, powerful loins and perfect limbs, and in condition would weigh about 64 pounds. His get have gained a splendid reputation in the coursing field here, no less than four of them taking prizes at the last open meeting. The second prize winner was J. F. Carroll's Paul Jones, by imported Gentleman Jones; dam, Branch; her sire imported Spot; dam, Minetta. Paul is a smaller dog than Speculation, and in the field one of the fastest dogs ever slipped, having only once been led to his hare in the fifteen courses he has run in public. Branch took the first prize for bitches, the second going to Con Mooney's black bitch Kitty Clover, by Plumville out of Belle. Kitty has twice won first prize in open meetings and, besides having the honor of winning every course she ever ran, is admitted by the best judges here to be the closest worker and best killer in California, though her short, arched back and narrow chest relegated her to a second place on the show bench. The puppy prizes were won by Dr. Meare's Monarch II. and Joseph Franklin's Lady Franklin, both year-old pups by Monarch out of Branch; Monarch by imported Speculation. The next class in number and importance was the Laverack setters, among which Charles Miller's Sam took first prize and his Joe second. Both dogs were extremely handsome—black and white dogs without any of the popular tan markings. Their pedigree goes back to Moll and Ponto. Among the Laverack bitches Tristam Rurgess' Queen Mab took first prize, as she richly deserved. Mab is a beautiful black, white and tan marked bitch by Dan, dam, Nelly, owned by R. L. P. Llewellin, of Ashby de la Zouch, England, and had previously taken the following prizes:

First, Champion, Dublin, Ireland, 1876; first and champion, and special for best brace with Druid, St. Louis, 1878; also at Detroit in 1879 and St. Louis in 1879. In addition Queen Mab took the special prize, a handsome gold vase, for the best dog of any class in this show. Mr. Leaveley, the judge, having awarded her the maximum 100 points. Dr. T. C. Jessup's Dolly Varden took second; she is by Belton, dam, Dimple II. The puppy prize went to Isaac Upham's Grouse, black and white by Dan out of Sybyl. Dan by Llewellin's Prince out of Dora.

The Irish setters were a fine class, the first prize being won by Calvert Meade's Dick by Sport out of imported Belle. Dr. C. G. Foland's Whiskey took second. The exhibit of field and water spaniels was very poor in quality with the exception of three beautiful liver and white cockers shown by Mrs. W. T. Ladd, and which carried off all the prizes in that class, being as near perfection as is possible to conceive. The Gordon setters were a very medium class. Chisholm's Dash, Sure Shot; first for dogs and bitches, and John Newell's Roy second. Charles Franz's Myrrha by imported Monarch took first prize for Gordon bitches. No prize was awarded the puppies, as they were not up to even the moderate standard laid down by the judge.

The bloodhounds were well represented, though J. A. Bauer's black and tan dog, Sultan, that was awarded first prize should have more properly been classed as a sleuth or trail hound than as a bloodhound. J. F. Carroll's Wallace, first prize bull-terrier, was a perfect specimen, and would have been favorably noticed in that topmost altitude of a bull-terrier's ambition—a Birmingham Bench Show. The bull-dogs, black and tan, Dalmatians and toy-terriers, were simply a lot of mongrels, some of the latter representing every strain of animal from a giraffe to a Norwegian rat.

The English setters, which were made a class separate from the Lavaracks, were all lemon and white, and a fair to middling lot. John De Vault's Bell and Beauty took first for dogs and bitches. The so-called English retrievers were a lot of mongrel spaniels beneath criticism. The winner being a miserable, long-eared, mixed-coated little rust, weighing less than forty pounds and looking for all the world like a cross between a black poodle and a Newfoundland. The fox-hounds were all crossed with blood-hound or Spanish pointer blood, and though doubtless possessing good noses, were very ill-formed. As they are entirely used in this country for tracking elk, deer or bear, speed is not so much an object as it is in England, where twelve miles an hour across country is not considered too fast.

The boys here did get up a fox hunt on Coyote Creek about a year ago, but the California broncbos they rode behaved so badly at the first gulch, which was only six feet wide, that they abandoned that sport for the more congenial fun of lassooing cattle. The only entry in the mastiff class had a pedigree that announced his descent from champion Turk, but if Nicholas or Miss Agliombye lived in the neighborhood of the exhibition, and saw that nondescript brute, they would have the compiler of that pedigree arrested for canine miscegenation or libel in the most intense degree.

The judges said that it was a cross between a St. Bernard and a Maltese cat with a strain of prairie dog and salad oil in its composition, while another irreverent spectator said it was a cross between Beecher's ideal of the devil and a Democratic ward politician.

The Newfoundlands were a splendid lot, and would have received first honors in any company. Flora, winner in the bitch class tallied 93 points out of the 100 laid down by Stonehenge according to the judge in that class, who was severely critical. Her only fault was a lack of length in the neck, though not to such an extent as to spoil her beautifully symmetrical shape. She was a pure glossy black, with just a few white hairs on her chest, stood 24½ inches at the shoulder, and weighed 125 pounds. Carlo, winner in the dog class, stood 26 inches at the shoulder and weighed 160 pounds, had a fine, broad, flat, intelligent head, good muscular back, clean neck and splendid limbs, but his coat was rather rusty and his tail carried a little too high.

The pointers were a poor, impurely bred class, a majority having double noses, which in this benighted region is considered the highest proof of the aristocratic breeding of pointer ancestry. A fine Wellington pug, bred by Sir William Simpson and imported by Mrs. Isabel Strong, deservedly earned off first prize.

The Russian terriers were as grand a class as was ever got together in one show. Sabbak, the winner, had a splendid silver-gray coat, stood 24 inches at the shoulder, measured 21½ inches round the head and weighed 130 pounds. He was clever and good-natured, and would do almost every trick ever taught to a dog, in addition to standing a quail like a setter and following a

cold scent like a bloodhound. Lion, the second prize taker, weighed 145 pounds, was dark gray, black and white, and stood 25 inches high, with a 22½ inch head. His fault was weak hindquarters. J. F. Carroll took a first with Spray, a fine-looking imported Scotch deerhound. The shepherd dogs and collcys were a poor, half-bred, under-sized class.

One of the finest classes in the show in point of quality were the great Danes, among which J. P. Ames' blue and Maltese dog Nero took first prize. Colonel Stewart M. Taylor's Bruce came second, owing to a slight defect in coat and legs. Bruce also took the special prize for the biggest dog in the show. He stands thirty-two and a half inches at the shoulder and measures seventy-four inches from tip to-tip. R. W. Theobald's Gelert took first among the Landseer Newfoundlands. He is a splendid specimen in every respect excepting that his ears are a little too small. There were sixteen St. Bernards entered, all dogs, and all thoroughbred ones, too. J. W. Schaffer's Major, the winner, was a huge black and tawney dog thirty inches high, seventy-two inches from tip to tip and weighing in condition 185 pounds. His head, coat and limbs showed the perfection of the breed, though his black coat was thought by some to indicate a Newfoundland cross, and a few on this side of the big river would like some English expert like the Rev. Macdona to say through the columns of the FOREST AND STREAM if it is possible for a purely bred St. Bernard to be nearly all black of a reddish tinge. A rather small specimen there received favorable mention and had the most perfect head markings that any San Francisco experts had ever seen. He was tawney and white with a perfect white line up the pole, but his head was too flat and small and his body so poorly shaped that with all his advantages of coat and color he failed to secure a prize. Upward of $6,000 was taken in at the gate during the exhibition, but that only just paid for the prizes given and other necessary expenses. Another show will be given by the club next year.

STOLEN DOGS.

NEVER before was there raging such an epidemic for stealing dogs as there is at present, in both town and country, and it is full time that there was a stop put to the nefarious practice. To advance words of caution seems to be simply useless, for our exchanges from all parts of the country continue to cite cases of the disappearance of the canines, which, as far as we know, are seldom returned to their owners. Nor does the system of offering rewards seem to produce the desired results, for, in many instances, we have seen more than twice the value of the lost animal offered by a fond master or mistress, and yet no prodigal returned. Although a great number of these dogs are lost, yet a far greater number are stolen. There are few dogs of value that do not have on a collar, bearing the name of the owner and his address, and in our cities a dog worth keeping has always a collar about his neck. The stealing of dogs is a business just as distinct from the other branches of crime as pocket-picking is from masked burglaries. There are a dozen expert judges of dogs in our metropolis who prowl about with no other object in view than to steal the best looking subjects they can find. These professionals at once "spot" a dog of quality, follow the animal and his owner to his residence and, by awaiting their chance and by frequently using a bitch in season, the dog is spirited away, and after being cooped up for a while his hair is clipped, his color changed by artificial means and the dog shipped to some confederate in a far-off city, where the dog is placed on the market, with a considerable amount of safety and a fair amount of profit. The sporting dogs are, of course, the most difficult to handle, as almost every setter and pointer has some recognizable marking; but in the non-sporting classes, where so many animals of the same breed so closely resemble each other, and their size enables the thief to secret the victim in his pocket, it is no very difficult thing to understand why so many fashionable dogs, such as pugs, Skyes, etc., are constantly disappearing. It was only a few months ago that a dog thief was pointed out to us, and upon entering into conversation with him he produced three Yorkshire terriers, *a la* Hermann, from an inside skirt pocket, where he confessed in a very unprestidigitatorial manner to have previously secreted them. Differing somewhat from a light-fingered colored brother of his, who was once discovered in a chicken house, which history tells of as follows: "After being searched and not even a nest-egg being found on the premises, a young stagg was distinctly heard to crow in the neighborhood of the gentleman's wool; on removing a high-crowned hat which decorated the darkey's pericranium, a fine rooster fluttered out much to the apparent astonishment of the owner. 'Bress de Lor', said the darkie, 'How did he get tar? Why, he muft a-flewn up my trousers' leg.'"

Punch, years ago, pictured the dog-stealing art in a rather striking way. In was in the time of the Crimean War. A dog-fancier refuses to sell to an officer going abroad a brisk-looking Skye, because the dog is worth two pun a week to the hawker if sold only in London. This trade is now being carried on on this side of the water.

It is much easier to find a complaint than it is to find a remedy; but as long as rewards are offered by those who can afford to pay them, and thefts are committed, we will continue to read notes of dogs that have been lost, when the owners know that they have been stolen, to the end of the chapter. At all times, however, our friends would do well to promptly notify us of their losses and we will aid them as far as publishing a description of the dog and the circumstances of his disappearance without charge.

Before us is a letter from a correspondent in Hartford, Conn., who recently lost a native-bred setter dog with black head and ears, white star on forehead, one large black patch on right side, back of fore-shoulders, rest of body spotted black and white. He was taken from his home on February 19, carried to this city on the fast express, N. Y. N. H. and H. R. R. The dog was taken to Trenton, N. J., and there offered for sale, but not purchased, and here the clue ends. The dog has seen his best days and was cared for more for what he had done than for what was expected of him in the future. A liberal reward was offered, but as yet no sign has been made. We purposely avoid giving the names of dogs in these cases, and would advise our friends to omit publishing them in their notices. We sincerely trust that ere long some one will detect a miscreant in the act of stealing his dog and that he will make an example of him in such a way as will have a demoralizing effect on all creatures of his kind.

FAST AND SLOW DOGS—A PORTABLE KENNEL.

I THINK your idea of presenting a cup for field trial competion among dogs handled by their owners is an excellent one, and about hits the nail on the head. It is absurd to suppose that anything but a very small percentage of the good field dogs are ever represented at the trials, and it is an undoubted fact that many men owning first-class dogs are deterred from entering them, because they are either unable or unwilling to place their dogs in the hands of professional breakers for the purpose of running them; and do not care to handle them themselves against men who make it their business, as they would be heavily handicapped by want of knowledge of just such "tricks of the trade" as were developed by the late Robins Island trials.

Besides, who would care to do their shooting or break their dogs after the manner of the ordinary "devil take the hindmost" style of field trials.

Speed and style are no doubt desirable qualities in a dog; but don't it it just strike you that in cultivating those very qualities to the pitch of the present required—or at least prevailing—field trial standard, another and very important factor—namely nose, has been sacrificed. As almost every one can testify who has shot over setters or pointers, the steadiest and most reliable dogs are generally those fellows who strike into an easy, swinging, all-day hand-gallop; just fast enough to be checked at the first whiff of scent, without imbibing head over heels into the middle of the bevy. They are the dogs he has bagged most game over in a day, with the fewest mistakes and the most pleasure; for they are always cautious, rarely pass a bird, and consequently are less speedy than their more showy companions. As a general rule high speed and caution don't go hand in hand. Let it be understood I am not advocating the cur-e of the potterer, than which nothing is more abominable. But with all the-e good qualities which go toward making up a first-class sportsman's dog, what chance, I ask you, would such a dog have when put down with an animal of the present racing type of character—broken, probably, with an eye expressly to field trial form, as we have had it. So, therefore, by all means let the experiment be tried of owners running and handling their own dogs in something like the sportsmanlike manner one would like to see his own hunted in an actual day's sport, and free from the hippodroming which has heretofore too frequently characterized field trial exhibitions. It will be refreshing.

And now let me give you a kennel note or two, to speak in an entirely literal sense. There are, no doubt, many of your readers, who, like myself, keep but one dog. At first sight it does not seem as if the kenneling of a single dog should be worth mentioning, and I suppose it isn't to those worthies who stable their dogs with their horses, or cramp them in an old sugar hogshead; but if we can provide a kennel which combines cleanliness, comfort and easy locomotive qualities at the same time and with little expense, why not adopt it? My excuse for giving you the benefit of my experience is that I have never seen anything of the kind in my own, which any one with the "taste taste" of the carpenter in his anatomy can make for himself. Mine is an ordinary single kennel 48 inches by 33 inches, with an A roof, but—and here the patent comes in—with a detached bottom of the same size as the outside ground measurement of the kennel. This bottom is hinged by two stout strap iron hinges to the side of the kennel, and is provided with two wooden axles, to which are fitted four wooden wheels, say four inches in diameter. When closed it looks like any other kennel on wheels. It can be easily moved by one person from damp spots, etc; and by turning the kennel back upon its hinges the bedding can be daily sunned and aired and the kennel washed and purified without trouble. The wheels also serve to keep the bottom clear of the ground, and allow of a free circulation of air beneath. While it may seem a laughable idea to see a kennel on wheels, yet made as above, its handiness is indisputable.

W. W. B.

DICK, THE BLIND CUR DOG.

IF I may speak from my own experience in partridge-shooting in the woods of Maine with a dog, I should give a most decided preference to the common cur over and above all others. I have owned and shot over pointers, setters and cockers; and while I would not undervalue these beautiful and high-bred dogs, I do not think them a match in the woods to the small, yellow-haired, pricked-eared cur. I must not be understood as claiming this superiority for every cur; on the contrary, he must be to the "manor born," and have a natural taste for the business. The nearer a cur dog resembles a fox in size and color the more useful he will be. I have always observed, when hunting partridges in our woods, that when they are put up by a large-sized dog or any dog that has not a foxy appearance, they are apt to fly to a great distance into some high tree, where they will sit close to the trunk, or else, alighting on the ground, will run and hide. Now this seldom or never happens when they are put up by a small yellow cur, for, taking him to be a fox, which they may have often seen, they fly to the nearest bush or tree, just high enough to get out of his reach.

In this connection I will mention an instance of intelligence and acute scent in a cur which was actually blind. I did not own him, but borrowed him from a man who said he was "good for partridges." His owner did not tell me that the dog was fourteen years old and blind, but left it for me to find out. I was looking for partridges on the Fish River road, in the woods of Northern Maine, when, leading the dog with a string, I saw in the road a small covey of partridges which were in plain sight of the dog and within shooting distance. I instantly released him and waited for his action, but to my surprise he did not appear to see them. I thought him stupid, and suspected his owner of playing a trick on me, but I soon found my mistake. The partridges had crossed the road and entered the bushes out of sight; but when the dog had come to their tracks he suddenly stopped, wagged his tail, sniffed the air, and rushed furiously into the bushes, and in less time than I can tell it had every bird in a tree. I did not at this time suspect his blindness, but as he continued to act ever after in the same manner, I saw what was the cause of his strange conduct, and that he had a film over each eye. I do not think he made a single mistake or failed to put up a bird where the track was in any fair degree fresh. With this dog I shot one hundred and one partridges in less than ten days, not losing one through any blunder or fault of his. When I returned him to his owner I remarked that he was blind. He said, "Yes, but it made no difference, he was sure pop every time;" and so I had found him. I engaged him for the next fall shooting, but when the time came poor "Dick" was dead.

J. C.

Bangor, 1881.

"WHEN THE SPRING TIME COMES."

CLINTON, CONN., April 20, 1881.

Editor Forest and Stream:

Dogs are so numerous, and, whether we like them or not, we meet them so frequently that their habits must be of interest to all. Dog-fanciers and those who like to have a "blooded" dog about them, are often distressed, I may say, mortified, in the spring of the year at seeing their aristocratic canines returning with very bad taste of eating carrion, and often rolling in it and thereby making themselves extremely offensive. The true reason why dogs show this disposition may not be generally known, and I write this to inform your readers why dogs act in this way, and how they may be prevented from doing it.

In the spring they, like all other animals, feel the need of a purgative. Decomposing animal matter serves as a cathartic. It is very easily digested, and carnivorous animals in their wild state often bury portions of their food so that it may be partially decomposed, because the process of decomposition is really a cooking process, and cooking food, as a rule, makes it tenderer, as every one knows. Again, in the process of decomposition of animal matter, sulphuretted hydrogen—the gas that makes the odor of bad eggs so offensive—is largely given off. The sulphur in this attenuated form is the active principle that makes decaying meat so powerfully cathartic. This is to a great extent what the dogs are hankering after.

Now for the remedy. Give dogs meat that has been cooked, and also give them some sulphur on it. The sulphur can be put in the meat so that they will not hesitate to eat it.

C. W. R.

CHARLES KINGSLEY'S DOGS.—The following pleasant chat about Kingsley and his animal friends is from an English exchange: The picture of Charles Kingsley at home would show a serious gap if his dogs were not in the foreground. His love for them, and for animals generally, was strengthened, it appears, by his belief in their future state—a belief he shared with John Wesley and other historical names. Kingsley had a wonderful power of attracting the affection of dumb creatures, and likewise of quelling their fury. He was known to have more than once driven large savage dogs, quite strange to him, back into their kennel by nothing beyond eye, voice and gesture, bowing them with his look as they growled and moved uneasily from side to side, and on one occasion, after having thus forced an infuriated brute to retreat into his lair, he even pulled him out again by his chain. Muzzle was his dog at Magdalen, a clever, sedate-looking gray Scotch terrier; Kingsley was devoted to him. We hear of Dandy, Sweep and Victor at the Eversley Rectory. Mr. John Martineau, who spent eighteen months at Eversley as Kingsley's pupil, thus concludes his description of the study: "On the mat, perhaps, with brown eyes set in thick yellow hair, and with gently agitated tail, asking indulgence for the intrusion, a long-bodied, short-legged Dandie Dinmont, wisest, handsomest, most faithful, most memorable of his race." How well established was the position of Dandie in the Kingsley household may be gathered from the reminiscence of an American visitor: "Still I see Dandie lying lazy, smiling and winking in the sun." He was Kingsley's companion in his parish walks, attended all the cottage lectures and school lessons, and was his and his children's friend for thirteen years. Victor, a favorite Teckel, given him by the Queen, had Kingsley for an unsleeping nurse during the last two suffering nights of the little creature's existence. Sweep, a magnificent black retriever, finds a niche instinctively in the surroundings which young Mr Kingsley recalls after his father's death: "I can see him now on one of those many summer evenings, as he strode out of the back garden-gate with a sorrowful 'No, go home, Sweep,' to the retriever that had followed us stealthily down the garden walk, and who now stood with an ear cocked and one paw up, hoping against hope that he might be allowed to come on." And there he the dogs, buried side by side under the greatest fir trees on the rectory lawn—Dandie, Sweep and Victor—with the brief but telling inscription on the head-stone, "*Fideli Fideles.*"

N. A. K. CLUB DERBY.—*Columbia, Tenn., April* 19, 1881.—The following are additional entries by the St. Louis Kennel Club to the second annual Derby. The exact date of Mitre's birth will be furnished as soon as received from England:

St. Louis Kennel Club enters Maxim, liver and white pointer dog whelped April 26, 1880, out of Jilt by Garnet.

St. Louis Kennel Club enters Meteor, liver and white pointer dog, whelped April 26, 1880, out of Jilt by Garnet.

St. Louis Kennel Club enters Mitre, pointer bitch, whelped since April 1, 1880, out of Dot by Garnet.

JOS. H. DEW,
Secretary N. A. K. C.

[The above list was received too late for publication in our issue of April 21; it is in addition to the list of forty-eight entries which appeared in the FOREST AND STREAM April 14, and increases the number of entries to fifty-one in all as against one hundred and fourteen last year.]

RORY O'MORE.—We learn from Mr. W. N. Callender, of Albany, N. Y., that his champion Rory O'More winner of first prize at the New York show in 1877, of the championship at the New York show in 1879, and of the gold necklace at the New York show in 1880, will make his appearance in the city again at the coming show.

A FORTUNATE CURE.—The celebrated Laverack setter dog Don Juan, owned by Mr. James H Goodsell, of Orange, N. J., which was taken seriously ill some few weeks ago has, as has been seen at the show, completely recovered under the skilful treatment of Dr. A. H. Dancer, of East Orange, N. J. Mr. Goodsell in writing us about the case, in which we were much interested, says: "Dr. Dancer really deserves great credit. He was very attentive, and when he took hold of the case, late at night, the dog was almost in a dying condition, so that I can truthfully say that Dr. Dancer's treatment was very successful."

LAVERACKS IN AMERICA.—We should state that the list of pure Lavcracks in America, published in our issue of April 21, was printed without the supervision of our kennel editor. Owing to his absence several errors crept into the article which should be corrected. Mr. Llewellin's initials are R. LL. P.; C. P. Parker should be C. P. Tasker. Other important errors are so obvious as to need no special mention.

The dog hanger w. and liv. by Pride of the Border out of Fairy, born in 1875, is now owned by Mr. Frederick Austin, of Ottawa, Canada.

DEAF AND DUMB.—The Sacramento *Bee* describes a deaf and dumb dog, unable to bark or bear. He has a head like a coyote, and white in color, making him easily known from the other canines. Where he came from or who he belongs to nobody knows, though he looks like an Indian dog. He seems to be a lunch fiend and lives upon what he can beg or steal. Owing to deafness he has narrowly escaped being run over on different occasions.

THE COCKER CLUB.—Philadelphia, April 22.—Please publish in your next issue that I have resigned from membership of the Cocker Club.—A. H MOORE.

COCKER CLUB.—The Westminster Kennel Club has kindly offered the use of a room at the Rink for the use of the Cocker Club Committee and Cocker Club on this Thursday afternoon and evening.

KENNEL NOTES.

**** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Prince Rake—Mr. D. C. Bergundthol, Indianapolis, Ind., claims the name of Prince Rake for dog puppy, white, black and tan, by Rake out of Phyllis, whelped Feb. 1, 1881.

Patsy—J. Marill, M. D., Poughkeepsie, N. Y., claims the name of Patsey for his Irish setter puppy, whelped March 8, 1881, out of Gussie by Chief, purchased of Mr. W. H. Pierce, Peekskill, N. Y.

Clifton—Mr. Wm. Short New Albany, Ind., claims the name of Clifton for pointer puppy out of Devonshire Lass by champion Faust, purchased of Mr. A. J. Esly, New Albany, Ind.

Royal—Mr. B. F. K. Jennings, Springfield, O., claims the name of Royal for red and white setter puppy whelped Nov. 13, 1880.

Fannie—Mr. George T. Wells, Boston, Mass., claims the name of Fannie for red Irish setter bitch out of Bridget Hunket (Plunket-Stella) by Dick Hatterack (Elcho-Nell).

Budd—Mr. Abner Fuller, Jr., Pine Bush, Orange Co., N. Y., claims the name of Budd for his liver and white ticked English setter puppy whelped July 15, 1880, out of Lady by Oakley's Frank.

Venture—Mr. James Page Stinson, Leavenworth, Kansas, claims the name of Venture for fox terrier bitch whelped August 10, 1880, by Viper out of Lily.

Phyllis—Mr. James Page Stinson, Leavenworth, Kansas, claims the name of Phyllis for fox terrier bitch whelped Sept. 17, 1880, by Buff II. out of Judy.

NAMES CHANGED.

Nelly to Thorndale Nellie—Mr J. H. Winslow, Baltimore, Md., changes the name of his cocker bitch Nellie to Thorndale Nellie, she by Bob out of Jenny, champion Brush (3371) champion Rhea (2228).

BRED.

Maude Morelle—Rake—Mr. J. H. Rhodes' lemon and white Laverack bitch Maud Morelle to Mr. D. C. Bergundthol's imported Rake.

Princess Peg Rake—Mr. O. F. Glidden's Llewellin's setter bitch Princess Peg (Druid-Peg) to Mr. D. C. Bergundthol's imported Rake.

WHELPS.

Queen—Mr. J. F. Kirk's (Toronto, Ont.) black cocker spaniel bitch Queen whelped four puppies, two dogs and two bitches, by his Baron.

Maud—G. E. Osborn's (New Haven, Conn.) English setter bitch Maud (Fancy-France) whelped eight puppies, 6 dogs and two bitches, April 25, by R. L. Coverdill's dog (Rver's Belle-Gue Eyed Sancho).

Kit—Mr. H. B. Wygant's cocker spaniel bitch Kit, Peekskill, N. Y., whelped on Wednesday, April 20, three dogs and three bitches, by Dr. J. W. S. Arnold's music.

Kit—Mr. J. P. John's (Haverhill, Mass.) Gordon setter bitch Kit whelped April 24, five puppies, four dogs and one bitch, by his Gordon dog Lock, all black and tan with white on breast, and doing finely.

SALES.

Gus—Mr. D. C. Bergundthol, Indianapolis, Ind., has sold to Mr. W. H. Durgin, Bangor, Me., his Llewellin setter dog Gus, by Gladstone out of May II.

Rake-Phyllis' Whelp—Mr. D. C. Bergundthol, Indianapolis, Ind., has sold to Mr. Jno. W. Boilday, Aberdeen, Miss., a dog puppy, white, black and tan, by Rake out of Phyllis, whelped Feb. 1, 1881.

Ricel—Mr. J. H. Winslow, Baltimore, Md., has sold to Mr. Frank H. Jermyn, Scranton, Pa., imported fox terrier Rivet (Forger-Maggie).

Luke Schoolcraft—Mr. J. H. Winslow, Baltimore, Md., has sold to Mr. E. Knell, Moline, Ill., the bull terrier Luke Schoolcraft (Bill Sykes-Gripper).

Elle Kirke—Mr. J. H. Winslow, Baltimore, Md., has sold to Mr. E. Knell, Moline, Ill., the cocker bitch Elle Kirke (Don-Gypsy).

Jim-Jack—Mr. E. N. Jester, of St. Georges, Delaware, has sold to Mr. T. D. Miles, of Ironton, Ohio, the orange and white setter puppy Jim-Jack, by Gart out of Nell.

Pedro—Mr. E. N. Jester, of St. Georges, Delaware, has sold to Mr. Jake Engle hart, of Cincinnati, the Italian greyhound dog Pedro.

Trump—Dr. H. B. Wygant, of Peekskill, N. Y., has sold to Mr. J. E. Kline, Newport, R. I., his cocker spaniel dog Trump, out of Fly by Musid.

IMPORTATIONS.

Ayrshire Laddie—Mr. I. Lindsay, of Jersey City, has added to his kennel of Scotch collies Ayrshire Laddy, which arrived on the 19th, by steamship Ethiopia, purchased from John Howill, Esq., Newton Newmills, Ayrshire, Scotland. By Lord Mar's Yarrow out of Mr. Aird's Flossy. Yarrow by Champion Mec (K. C. S. B. 957) out of Lord Mar's Tweed. Flossy by Mr. Roger's Clinker out of Fly. He is a very fine specimen of the breed, having won a large number of first and special prizes in Scotland. He is entered in the Dog Show.

DEATH.

Carlo-Hills Kirke Whelp—Mr. J. H. Winslow, Baltimore, Md., lost on April 8 cocker dog puppy by Carlo out of Elle Kirke, by distemper.

[Lack of space obliges us to leave over a number of Kennel Notes.]

Parents, do not use vile drugs or nostrums in your families, but use pure Hop Bitters.

Rifle and Trap Shooting.

RANGE AND GALLERY.

MAGNOLIA GALLERY—Boston.—Without exception the best work has been done at the Magnolia Gallery during the past week ever recorded The scores of O. C. Arthur are particularly brilliant. Five full scores at 10 feet on a bullseye measuring only one and a quarter inches has never been accomplished before in this city. Mr. Harris also calls for especial mention for having succeeded in putting in five 49s, being only five points behind the full possible 250. All this work has been done in the Forest and Stream match. The summary gives the details:

Badge Match, 5 Scores, Possible 250.

E J Cram	245	J Ames	234
M Drew	241	D P Holder	231
E Harris	240	O A Gross	230
S Fogg	234		

Forest and Stream Match.

Arthur	50 50 50 50 50—250	Williams	47 46 47 47 47—234

T Tryon			11⅝	12½	31⅛
T Brown			11⅜	10⅜	32⅝

BOSTON, Mass., April 23.—During the early part of to-day the riflemen on Walnut Hill encountered a changeable wind, which gave considerable trouble, but later on it settled down to the southeast and excellent records were had. Hubbard succeeded in making 51 on the Mass. target, the highest score made in this match. The score:

Record Match (Massachusetts Target).

L S Hubbard	12 12 11 11 12 11 12—81

Badge Match No. 3.

M E Baird	5 4 4 5 4 4 5 5 5—46	W Gleason	5 4 5 4 5 4 5 4 4—44

The following announcements or changes in rules and new matches at long range, etc., have been made at the Hill.

Shooting rules—Double shots are prohibited, n shot being allowed to count in more than one match (except in ca of team matches, where only one such double entry may be allowed).

No sighting shots shall be allowed except on targets specially designated for that purpose by the executive officer, and in no case on targets on which a match is in progress, unless in case of emergency.

Sighting shots shall not be allowed to competitors while completing a score.

Unfinished scores at short range shall be considered worthless, after having been withdrawn from the scorer, and no shots can be claimed under or by virtue of the same after having been so withdrawn.

At short range, sighting-shot tickets, good until used, shall be sold. The record matches now in progress will both be closed on Saturday, April 30.

The Canadian long-range team is to be invited to shoot a match with the long-range men of Walnut Hill some time during this summer.

A preliminary long-range match is to begin Wednesday, April 27, at 12 o'clock M., 800, 900 and 1,000 yards. Fifteen shots at each distance. Entry fee $1, unless less than seven competitors enter, in which case each man shall pay his proportionate part of $7. One prize, value $8, to be given to the person making the highest average in two competitions. For each prize won a handicap of .05 points shall be imposed on the winners per shot average, in order to make him eligible for the next match in the series, if the same shall be shot. Match to close at end of that day on which the aggregate entries equal the expenses of the match and the value of the prize.

BOWMANSVILLE, Ont., April 15.—Match for rifle presented by Scott Russell, Esq., Creedmoor target, 200 yards, any rifle, two sighting shots; 7 shots to score; Wimbledon rules:

I Evans	0 2 0 0 0 2 4 2 3—10	S Botrell	5 2 5 2 2 2 3 2—18
E Coleman	4 2 2 3 3 4 2 5 5—27	C G McLean	2 2 3 3 4 4 2 3 4—28
R Bennett	5 2 4 4 3 4 2 3 5—23	M H O'Dell	2 0 2 2 3 2 2 4 4—16

W C King	4 3 3 3 4 3 3 5 5—28	J W Dutton	2 5 5 4 5 5 3 3 3—28
J M Heard	0 2 0 0 0 3 0 0 3	J Heager	0 2 0 0 0 2 0 4—6
J Mitchell	3 4 4 3 2 4 3 2 4—25	H Gilbert	3 3 2 3 4 5 2 5 5—24
J Graham	2 3 0 0 2 2 0 0 2—6	S Nowell	2 2 4 4 3 4 2 2—21
Chamberlain	2 0 0 2 2 2 2 1—10		

Sweepstakes:

Sando	3 4 5 4—16	Mitchell	2 2 2 4—10
Russell	3 2 0 2— 7	Chamberlain	2 3 3 0— 8
Botrell	0 4 4 2—10	O'Dell	0 2 3 4— 9
Dutton	3 5 5 5—18		

Dutton won first money, Sando second, Mitchell third, Botrell fourth.

Second sweepstake:

Russell	3 3 3 4—13	Sands	4 4 4 4—16
Hearn	3 3 2 2— 9	Mitchell	2 3 2 2— 9
Botrell	3 2 2 2—11	Chamberlain	2 2 0 0— 4
Dutton	2 4 3 3—14		

Sando first money, Dutton second, Russell third, Botrell fourth. The day was bright and fine but very windy, making the shooting difficult, especially with the very small bores, thus accounting for the poor scores of some of the boys.

MAMMOTH RIFLE GALLERY.—Limited Badge Match.

C Edwards	37 37 37 38 38—187	C R Bartlett	35 35 36 36 37—179
W M Norcross	36 37 37 38 36—186		

Amateur Badge Match.

W Williams	37 37 37 38 38—187	R Burlingame	36 36 36 36 37—181
D P Holder	35 35 36 36 37—179	O Leon	35 35 35 34 34—173

Amateur Pistol Match.

W Williams	61 61 67—189	J R Scott	51 51 57—159
S Chase	54 56 59—169	C Edwards	40 47 51—138

Experts' Pistol Match.

F J Rabbeth	75 73 81—227	J Ames	60 63 70—192
J H Williams	69 69 73—210	W Gardner	52 55 60—167
E Wilder	64 66 67—197		

Forest and Stream Match.—Mr. W. H. Harrison has showed himself to be one of the finest gallery shots in the country, by having made the remarkable score of 197, thereby placing himself ahead of all previous records since the target was changed last July. The following are the leading scores:

W H Harrison ..39 39 39 40 40—197 D N Sherburne..39 38 38 38 38—191

The shooting in all of the matches has been remarkably fine during the week. F. J. Rabbeth has made the best pistol target ever made in the gallery, his target netting 81, possible 96. Rifle range, 150 ft.; pistol range, 50 ft.

BEACHMONT, Mass., April 19.—The meet of the Shutzens at Beachmont to-day was well attended by both riflemen and spectators. With the exception of a rather strong West wind, the conditions were fairly good. The score stood: Massachusetts target; possible 120. G. H. Wilfert, 101; C. Abe, 100; H. Wolfson, 98; L. Schanecki, 98; C. M. Gueth, 97; John Kalbskoff, 95; A. Carson, 91; George Smith, 77. Massachusetts target (off-hand). H. Max, 93; C. M. Gueth, 55; H. Schanecki, 66. On Tuesday next this corps hopes to shoot on its new ground on Winthrop Head.

MEDFORD, Mass., April 20.—Bellevue range was visited by a large number of sportsmen this afternoon, and the weather conditions being all that could be desired, they blazed away at the target for six hours; 10 shots. The summary is as follows: E. F. Richardson, 49; R. L. Eaton, 49; E. Folsom, 48; F. Rich, 48; W. Charles, 48; A. C. Adams, 48; F. B. Going, 48; C. H. Russell, 47; K. Elliot, 47; A. J. Green, 46; J. R. Teel, 46; F. L. Claflin, 46; A. W. Webb, 45; J. Richardson, 45; F. C. Lee, 44; C. Hartwell, 44; L. Clayton, 44; A. Whitney 44; W. A. Pollard, 43.

FARES TO CREEDMOOR.—Notwithstanding that the rates of fare over the Long Island R. R. have been increased to all points upon that line, the company recognizing the necessity of continuing rifle practice and desiring to co-operate with the National Rifle Association in maintaining the range has very generously reduced the fare between Hunter's Point, Brooklyn and Creedmoor to thirty cents excursion to members of the association, and to members of the National Guard or other military organizations in uniform Trains will run to Creedmoor on each Wednesday and Saturday commencing May 4. Leaving Hunter's Point and Brooklyn at 8:05, 10 and 1:35 P. M. Returning, leave Creedmoor at 4:25 and 5:30 P. M. The regular trains to Queens, will, of course, run daily.

STOCKTON RIFLE ASSOCIATION—April 20.—Match at 200 yards, off hand, standing, best possible 50: Joseph Howell, 45; Geo. Fox, 45; A. J. Mellette, 39.

ZETTLER RIFLE CLUB—New York, April 23.—A friendly match took place between members of this club last Tuesday, which proved to be a very closely-contested one. The following are the scores:

Capt. B. Zettler's Side.		Capt. D. Miller's Side.	
B Zettler	49	D Miller	45
M L Riggs	47	P Fenning	49
J H Brown	47	C Judson	47
Jake Lutz	47	A Sevenoaks	36
Chas. Reckle	45	T Kilsenah	46
H Hunziker	43	S O'Neil	40
Geo Connors	35	F Fabrious	42
Dan Patterson	43	G Schurman	46
Frank Patterson	39	J Duil	47
N D Ward	43	M Dorrier	47
Dan Culhane	44	J H Grohman	43
R Zimmerman	46	Wm Klein	46
C G Zettler	49	M B Engel	47
Total	576	Total	580

N. D. W.

NEW ORLEANS, La., April 17.—The second competition for the Denver trophies—the battalion match for the elk horns—was shot at the New Orleans Rifle Range this afternoon, and resulted in a victory for the Louisiana Field Artillery team by a score of 220. Though the weather was exceedingly pleasant, the contestants labored under the disadvantage of shooting in a brisk and shifting breeze. Mr. Miller, of the Washington Artillery team, was unable to be present. The following is the score:

Louisiana Field Artillery.			Washington Artillery.		
	200 yds.	500 yds.	Tl.	200 yds.	500 yds.	Tl.
Schwind	22	24	46	Arms	21	24	45

Howe	16	6	22	Team total			242

THE STATE RIFLE PRACTICE.—Gen. Townsend has replied to the letter of Gen Hancock that it is the intention of the Commander-in Chief that rifle practice shall be pursued in the National Guard along with instruction in manœuvres and the other duties of the soldier. He is not averse to the organization by the State of a limited number of medals or other mark of distinction to each regiment, battalion and company for the best shots therein respectively, nor to similiar marks of distinction for perfection in drill, etc., and until the proper system of rifle practice can be inaugurated in the National Guard he does no reason why members of the Guard may not receive medals for proficiency in shooting from the National Rifle Association or any other similar association in the State, but he respectively declines to militarily organize competitive scores made by National Guardsmen at the matches of the National Rifle Association, or of any other ride association, in the manner allowed prior to 1880," and also respectfully declines to assent to the use of the State die.

In other words, the Adjutant-General is just foolish enough to push away the last plank that was thrown out to save the rifle practice of the State. The General evidently sets great store by those encampments of his from the opportunities they will give for strutting about.

A DENVER CHALLENGE.—The Taber Sharpshooters, of Denver, Col. have challenged the New Orleans riflemen to shoot with military rifles, 20 shots each, off hand, 500 yards, Creedmoor rules to govern, on May 1, 1881. If the challenge is accepted, we will put up a first-class representative of colorado in the way of a largest size mounted elk head, valued at $125, against a hogshead of Louisiana sugar, of prime quality, largest size. Freight paid each way by the losers. If this challenge is accepted, telegraph us on or before April 30, 11:59 P. M."

THE TRAP.

RUPERT, Penn., April 23.—Glass-ball match to-day, 20 balls, Card rotating trap, 18 yards rise:

W G Letter	11000 11001 0 w — 5
Wm Eyer	10110 11111 11010 11101—16

WALLINGFORD, Conn., April 22.—There was a lively shoot here this afternoon by two of the crack shots of this place, for the championship of the town; 100 balls a side from a Card rotary trap; strictly according to Bogardus rules. Following is the score:

J B Brogden..... 11111 11111 11111 11001 01111 11111 11111 11111 11111 11111 11111 11111 11111 01111 11111 11111—95

A Hall..... 11111 11111 11101 11110 11001 11011 11011 01011 10111 11111 11111 01111 11011 11011 11111 01101 11111 11111 11011—89.

CONEY ISLAND ROD AND GUN CLUB.—Match at club grounds, Coney Island, April 23; Fountain Gun Club rules; birds; King's patent trap, with bird-starter. The first team were handicapped as follows: Ravenhall, 21 yards; Dixon, 25 yards; McLaughlin, 21 yards; Shevlin, 21 yards, George, 21 yards; Delmar, 21 yards; Williamson, 23 yards; C. L. Madison, 21 yards; Walton, 24 yards; Smith, 30 yards; Alston, 23 yards. They scored:

Ravenhall	1 1 1 1 1 1 1—7	Dixon	1 1 1 1 1 1 0—6
McLaughlin	1 1 1 1 1 1 1—7	Shevlin	1 1 1 0 0 1 1—5
George	1 1 0 1 1 1 1—6	Delmar	0 1 1 1 1 1 1—6
Williamson	1 1 0 1 1 1 1—6	Madison, Jr	1 1 1 1 1 0 1—6
Walton	1 1 1 0 1 1 1—6	Smith	1 0 1 1 1 1 1—6
Alston	1 1 1 0 1 1 1—6		

The second team were handicapped as follows: H. Brown, 21 yards; Captain Bill, 23 yards; M. Murray, 21 yards; W. Babcock, 21 yards; E. Furey, 25 yards; Harry Miller, 21 yards; Charles Clewen, 23 yards; Frank Pike, 25 yards; Defrane, 25 yards; Duke, 21 yards; Blachmacher, 21 yards; Livingston, 21 yards; Kearney, 24 yards; Howe, 21 yards; Lemington, 21 yards; Grace, 23 yards; Barnard, 21 yards; Burns, 21 yards; Beaman, 21 yards; Hunter, 23 yards; Hyde, 21 yards. They scored:

H Brown	0 1 1 0 1 0 1—4	Captain Bill	0 0 0 1 0 0 —1
M Murray	0 1 1 1 1 0 1—5	W Babcock	1 1 1 1 1 1 1—7
Furey	0 0 1 0 0 0 0—1	Miller	1 1 1 1 —4
Clewen	1 1 0 1 1 0 1—5	F Pike	1 1 1 1 1 0 0—5
Defrane	1 1 1 1 0 1 1—6	Duke	1 0 1 0 0 0 0—2
Blachmacher	0 0 0 1 1 1 1—4	Livingston	1 1 1 0 1 0 1—5
Kearney	1 0 0 0 0 1 1—3	Howe	1 1 1 1 1 1 1—7
Lemington	1 1 1 1 0 1 1—6	Grace	1 1 1 0 1 1 1—6
Barnard	1 0 1 1 0 1 1—5	Burns	1 0 1 0 1 0 1—4
Beaman	0 0 0 0 0 1 0—1	Hunter	1 0 1 0 1 1 1—4
Hyde	1 0 0 0 1 1 1—4		

Ties were shot off, miss and out. Mr. Howe, not being a member of the club, did not compete. Ravenhall, Jr., 2; McLoughlin, 3; Babcock, 3. McLoughlin won second. with 2 to Babcock's 1.

BRIDGEPORT GUN CLUB—Bridgeport, Conn., April 15.—First meeting on the new grounds, where shooting-house has been erected and fitted up for the accommodation of the members:

H Nichols	11110 01111—8	G Gaether	11111 10001—7
A Dean	01001 10111—7	C Adams	11111 10111—9
T Williams	01101 10111—7	F Lymington	11111 11010—8
D Scott	10101 01111—7	C Curtis	00011 11111—7
J Brougton	00010 11111—6	G Link	10011 11011—7
G Machlowsky	11101 10011—7	J Scott	11011 00111—7

A series of sweepstakes followed, the first being won by Langdon; second, Adams; third, Adams; fourth, Nichols; fifth, Adams; Sixth, Adams; seventh divided by Nichols and Brogdon; eighth, Adams.

DEXTER PARK, Long Island, April 20, 1881.—Shooting match at pigeons for the price of the birds and a gold badge, 25 birds each, from five traps:

W Wesley	2[6 yards..... 1101001111111111111111w—21
E M Hammond	25 ..... 1111011110101111111010w —18

Match at 25 birds each for price of birds and an *objet d'art*, 25 yards rise, five traps:

Mr Lawrence	0100111111101111000110 —15
Mr Tait	0110011001111110000100w—12

NEWTOWN, L. I., April 14.—Seventh monthly contest of the Audubon Gun Club for the club badge; 21 yards rise, 10 balls each, Card's rotary trap:

Blackwell	1 1 1 0 1 0 0 1 1 0—6	Twing	0 0 0 1 0 1 0 0 0—3
Heming	1 0 1 1 1 1 0 0 1 1—7	Andrews	0 0 1 1 0 1 1 0 1—6
C W Field	0 1 1 0 1 0 1 1 0—6	Post	1 1 1 1 0 0 1 1 1—8
L B Field	1 1 1 1 1 0 1 0 1—8	Rice	0 1 1 1 0 0 1 0 1—6

Post won the by breaking two out of three, thus entitling him to the badge until the next monthly contest. H. M.

MILLERSBURG, Pa.—March, 25 birds a side, shot April 15, at Millersburg, Pa., between Thomas Fields, of Wyoming, and James Hand, of Williamstown; Bogardus rules, ground trap, 21 yards rise, 60 yards boundary, Rice winning with ease and grace, neither man having called bird or foul. Following is the score:

Rice	1 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—15
Dando	0 1 1 1 1 0 1 0 1 1 0 0 1 0 1 0 0 1—12

PEAK'S ISLAND, April 21.—The club badge was up as usual for the best individual score, while the shoot itself was between sides chosen by Bert Jones and Ed. Trefethen (two of our youngest members) for an oyster supper. Considering the fact that the club has had no shoot since last Christmas and members consequently entirely out of practice, we think some of the scores very creditable. 20 balls from Card's rotary trap, and 5 pairs of doubles, thrown straight away, 18 yards rise:

Jones' Side.	Singles.	Double.	Totals.
H A Jones	18	9	27
W S Jones	20	10	30
W S Brackett	20	8	28
J H Jones	16	5	21
J W Sterling	10	3	13
A W Parsons	16	9	25
G L Brackett	17	4	21
A Y Ackley	4—139	4—52	18—182
TREFETHEN'S SIDE.			
Geo E Trefethen	17	7	24
A G Sterling	19	8	27
H Trefethen	13	6	19
C S Stevens	13	7	20
E G I Brackett	8	4	12
H H Trefethen	8	4	12
H E H Brackett	12	4	16
E T Holbrook, Jr	11—105	3—45	14—150

W. S. Jones takes club badge on clean score. Trefethen's side had to pay for the oysters, but when they came to the table any looker-on would have said they got their money's worth. Following the club shoot came the challenge contest for the State championship badge, held by A. G. Sterling, of Peak's Island, and challenged C. F. Nason of Auburn. The conditions were: 20 singles from a Card rotary, and 10 pairs doubles straightaway, 18 yards rise. Appended is the score:

C F Nason	11111111111111111111—20 10 11 11 11 11 11 11 11 11 11—18
A G Sterling	11111111111111111111—20 11 10 11 10 11 10 10 00 10 10—12

On the doubles Mr. Sterling complained that the smoke from his first barrel prevented his seeing the second ball. Mr. Nason may well claim the championship of the State, having shot for this badge no less than seven times and been beaten only once.

KENTON COUNTY CLUB.—There will be a glass ball shooting tournament at Covington, Ky., under the auspices of the Kenton County Gunning and Fishing Club, May 17, 18, 19 and 20. Purses, $4,000. Particulars may be obtained of E. S. Stoddard, Covington, Ky.

That furred tongue, bad tasting mouth and miserable feeling, says you need Hop Bitters.

Yachting and Canoeing.

THE AMERICA CUP.

IN certain poorly informed quarters flippant objections have been raised against meeting a challenge from a member and yacht owner of the Bay of Quinte Y. C., Belleville, Ontario. We do not believe the members of the New York Y. C. subscribe to the ideas which have been set forth as theirs, at least not that portion of the club which is acquainted with its own affairs. Esteemed contemporaries whose main understanding of an international match and of the sport of yachting in general is a "grand hurrah" and "high times of excitement" may take pleasure that the sailing public has certain rights in the matter of challenging for the America Cup, and that accepting an offer to sail is not a favor to be graciously dispensed at the supreme will and pleasure of the New York Y. C. at all, as one might infer from expressions in some quarters. Of this the members of the club are probably well aware, and our remarks are addressed to those who constitute themselves a volunteer mouthpiece without authority, and claim to echo the opinions of "prominent members," placing the New York Y. C. in a false light, and certain to be repudiated by it. When the committee having the conditions of challenge for the cup under consideration report the result of their deliberations to the club the matter will be set at rest beyond dispute for the future, and we refrain from further remarks until then, hoping that those critics will agree with us as to the necessity of an early, definite and comprehensive summary of the whole question. We quote in the mean-

time from the *Belleville Intelligencer*, a journal quite able to cope with the flippancy of metropolitan "penny-a-liners" on yachting matters without aid from us. Referring to an "interview" reported in a contemporary it says:

"This is a new and, to say the least, a curious view of a subject as to which there ought to be, and is to be hoped will be, no difficulty. However, as they contain a misrepresentation and a serious error and will be widely read, they call for a reply. First as to 'recognized' yacht clubs. A letter sent to the New York Yacht Club in 1857 by the original owners of the America contained the terms upon which those gentlemen consented that the cup which they had won at Cowes, in 1851, in the custody of the New York Yacht Club, as a perpetual challenge cup for friendly competition between foreign countries. A copy of that letter, under the terms of which the cup has been twice competed for, and three times won, is now before us, and has not been previously published. Is now before us. It may surprise the journal and the shoddy individual whom it quotes approvingly to learn that the word 'recognized' does not appear in the document. The true sportsmen who drew up these rules prescribed that 'any *organized* yacht club of any foreign country shall always be entitled, during any term or more of its members, to claim the *right* of sailing a match for this cup with any yacht *or vessel* of not less than 30 or more than 300 tons, measured by the custom house rule of the country to which the vessel belongs.' So that as the Bay of Quinte Yacht Club—small as it may appear to the eyes of metropolitans—is beyond denial an organized yacht club, and has been so for six years, and as its challenge will be issued as a matter of right under the rules laid down by the donors of the cup, on behalf of a yacht of more than thirty tons, the journal and its snobbish friend are altogether lacking in matter for their supercilious sneers. The holders of the cup are bound to meet any challenger who complies with the simple rules which govern, or in equity to return it to the party offering them whose case it puts in title to its retention, as made known in the letter above referred to as drawn up by them, are of the most sportsmanlike character. This disposes, for once and for all, of this part of the subject.

"What the social standing of the members of a challenging club would have to do with a challenge for the coveted trophy we leave it to the combined intellect of the *Spirit* and the spiritless individual who broaches the subject to explain, as the donors of the cup do not mention that which seems a great essential to them. However, the higher-toned public may satisfy itself easy on this point. Should he ever find himself in the company of the members of the Bay of Quinte Yacht Club he would not find it necessary to guard his pockets very closely for fear of their being picked, nor, should he entertain the journal's opinion that silver spoons are scarce, to secure to adorn his table. Perhaps inquiry on the point would remove his

"The other grounds of objection taken—namely that only two of the doubts.

yachts belonging to the B. Q. Y. C. are of sufficient size to be enrolled in the New York Club, and that the members of our local club are having a 'joint-stock racing machine' built by Capt. Cuthbert to compete for the cup—are equally nonsense and devoid of foundation with those already disposed of. As a matter of fact there are three—not two—of the fleet in the B. Q. Y. C. which measure over 30 tons, and are therefore large enough to be enrolled in the New York Club—namely, the Atlanta, Nora and Dauntless. The *Spirit* so mangles the tabulated list by crediting the Gracie's measurement to the Dauntless, leaving the latter 10 tons short and thereby transposing the whole list, that we give it in a correct form below. It is, in reality, nobody's business as to whether the Atlanta is a "joint-stock racing machine' or not, as the rules do not provide that the challenging vessel shall be the property of one or more individuals. In fact, they speak of 'owners,' and do not specify which their number shall be. Neither do they provide that the competing vessel shall be 'a yacht for any one gentleman's pleasure.' The language used is explicit: 'a yacht or other vessel,' so that a trader, a pilot boat or a canal boat might be sailed in a contest for the cup, so long as the challenge was issued in behalf of a member or members of any organized yacht club. It is not even provided that the vessel on whose behalf the challenge is issued shall be the property of a member or members of the club, the rule on this point having been—and evidently purposely—left so wide as to include anybody's vessel, authenticated in the proper manner. Otherwise the cup would not be what it is—namely, the championship emblem of the world for sailing yachts or other vessels within prescribed dimensions.

"Although the insinuation as to the ownership of the Atlanta is a piece of impertinence, we may state, in order to dispose of the matter, that Capt. Cuthbert is her sole owner. The Captain says that he had enough of joint-stock craft in the unfortunate Countess of Dufferin. He will race his craft as he chooses, but not to such an extent as do the owners of the Vanduara and Samoena, which were built for racing machines and nothing else, as their time is occupied during the season in going from port to port where there are races for sailing in races wherever money prizes sufficient in amount are offered. Yet these are the sort of craft which a 'prominent club member' would welcome in preference to a Canadian sloop which would sail her round the world's championship.

"We hope and believe that the great majority of the members of the New York Yacht Club utterly repudiate such nonsensical and offensive views as those above commented upon—in fact we feel assured that such must be the case, as the body of gentlemen who have animated by snobbery so thoroughly mean, contemptible and offensive to a body of gentlemen in this city who have done nothing and will do nothing to warrant such aspersions, unless it be an offence to contemplate issuing a challenge for a contest, to which the whole world is invited in a sport hitherto regarded as belonging exclusively to gentlemen, and to engage in which the representative of their organization must travel nearly or quite 1,200 miles, thus showing a determination and a reliance on his skill which certainly ought not to be met with open insult and impertinent comment and unfounded innuendo.

"The correct list of the Bay of Quinte Yacht Club's fleet is as follows:

Name.	Owner.	Sloops, Cb.	Length ft. in.	Beam ft. in.	Tons.
Atlanta (building)	A. B. Cuthbert	C. B.,	63 0	16 0	84
Nora	R. J. Bell	"	37 6	16 10	55
Dauntless	D. Piccadilly, *et al.*,	"	37 0	14 0	24

"The above list includes, it may be said, the fastest yachts on the lower lakes, and is excelled in number and tonnage by that of but one club in Ontario."

FAIRY TALES ABOUT STEAM YACHTS.

OF the entire fleet of new steam yachts added during a year or two past, not a single one excepting the Gleam and Leila, built by the Herreshoffs, of Bristol, has been put over the measured mile and undergone a severe and conscientious examination of performance, nor has any builder or owner vouchsafed us anything more than the most windy romancing concerning the speed developed. As long as building steam yachts was confined to provincial cobble shops, nothing else could have been expected. But from such establishments as that of the Herreshoffs and Cramps Philadelphia one might have looked for something honest and reliable in the way of a public test under the supervision of competent and disinterested experts. We all remember how such an experiment by government engineers put an end for all time to the long drawn out romancing about the Anthracite's economy, and we imagine that similar disinterested testimony would very materially reduce the fanciful fairy tales boasting about concerning the late additions to our steam fleet. The reputed speed of the Vesper is 18 knots. Her actual speed, so far as anything trustworthy can be obtained, is 18 knots under the most favorable circumstances. Corsair and her sister, Stranger, are reported by the romancers as 15-knot ships, but 12 will be much nearer the mark. A silly story was published in Philadelphia some days ago to the rounds of the press. Born originally in a daily, it has been appropriated and inflated by sundry irresponsible journals until the Rhada has reached the speed of 15 knots or 18 miles without even working up to her best, and her owner, so says report, considers she has got an 18-knot yacht! One would suppose that owners would not be satisfied with a wild guess as to distance between two towns, overlooking tides, winds and diagonal observations, and that they would want something more definite than a glance over the stern by the skipper, and a "Reckon she's a-goin' all of eighteen mile, sir." Knots and miles being confounded into the bargain. We have it on excellent authority that the Rhada's maximum is so far only *eleven* knots, and competent engineers have informed us that she will never be likely to reach more than twelve. Now, to any one who knows that the power required to drive a vessel increases as the cube of the speed, the difference between the truth of eleven knots and the fairy tale of eighteen will be strikingly illustrated in the proportion of 1,331 to 5,832. In other words, romance credits Rhada with *four* times the power she really employs, a sufficient departure from the truth to raise doubts as to the value of unsubstantiated reports even in the minds of "lambs" who may not be able to tell cylinder from steam chest. What we have written concerning Rhada applies with equal force to numerous yachts now building. Fairy tales concerning their speed can serve no good ends either to owners, skippers or builders. Every body can have as vivid an imagination as anybody else, and all steam yachts are good for eighteen knots if the "lambs" could only be believed. Will not some one pocket his false pride and put his steam yacht through a series of trials for speed, efficiency and economy, thereby setting an example the mediocre crowd is sure to follow? Or are we forever to live in the realms of lightness, and are steam yachts to remain nothing more than luxurious means of dawdling away superfluous time? Why should not their owners master the mechanics of the machinery they have paid for dearly, and why not compel from builders a fair trial by experts in place of a worthless "guaranteed" before the keel is laid, or a windy assurance on a letter-trip, when paper dietetic rules many good citizens see things swimming by faster than they ought?

FIXTURES.

May 14.—San Francisco Y. C. Moonlight cruise.
May 14.—Pacific Y. C. Cruise to Vallejo.
May 23.—Southwark Y. C. Annual regatta.
May 23.—Cooper's Point Y. C. Annual regatta.
May 26.—Jordan Y. C. Challenge cup.
May 27.—San Francisco Y. C. Cruise to Vallejo.
May 28.—San Francisco Y. C. Cruise to Napa.
May 30.—Knickerbocker Y. C. Opening cruise.
May 30.—South Boston Y. C. Opening cruise, City Point.
May 30.—Atlantic Y. C. Opening cruise.

June 16.—New York Y. C. Annual regatta.
June 16.—Boston Y. C. Annual regatta.
June 17.—Lynn Y. C. Spring regatta.
June 17.—Marblehead open regatta.
June 18.—Dorchester Y. C. Nahant regatta.
June 20.—East River Y. C. Annual regatta
July 1.—San Francisco Y. C. Cruise to Monterey.
July 9.—Beverly Y. C. Championship regatta, Swampscott.
July 12.—Pacific Y. C. Annual regatta.
July 16.—Dorchester Y. C. Club house regatta.
Aug. 6.—Beverly Y. C. Championship regatta, Nahant.
Aug. 6.—Pacific Y. C. Annual cruise.
Aug. 6.—San Francisco Y. C. Annual regatta.
Aug. 11 to 14.—American Canoe Association. Lake George meet.
Sept. 3.—San Francisco Y. C. Cruise to Drake's Bay.
Sept. 3.—Dorchester Y. C. Fall regatta.
Sept. 10.—Beverly Y. C. Championship regatta, Marblehead.
Sept. 17.—San Francisco Y. C. Corinthian matches.
Sept. 24.—Beverly Y. C. Special regatta, Swampscott.
Oct. 8.—San Francisco Y. C. Moonlight cruise.
Nov. 5.—San Francisco Y. C. Closing cruise.

[From the preceding list it will be seen that already several matches in neighboring waters have been set down for the same date. It would be advisable if clubs would make it part of their routine business at their annual meetings in April to select dates in such a manner as not to conflict with each other. Before long certain dates would become invested with recognized proprietary rights as belonging once for all to certain clubs, and "making the rounds" would thus become impossible. It is possible that owners should be given all the chances possible. This applies more especially to the East where yacht racing is carried on in a much more spirited and business-like manner than in any other American waters. A little give-and-take in dates would further matters much. This conflict of dates shows the necessity for some central organization and common action which must come sooner or later, and might as well be set on foot at once. The lake clubs should also take notice of the above. Reports wish to secure "foreign" representation. By forwarding fixtures promptly to this journal much annoyance may be avoided.]

CASTING A LEAD KEEL.

Editor Forest and Stream:

The lead keel has been cast for Dr. Dawson's boat, and marks an era in lead ballast as applied to keels. The lead keel measures 27 feet 6 inches long, 1½ ft. wide, 4½ in. deep; weight 6 50-100 tons (long). The wooden keel was placed upside down and a yellow pine plank was sprung around the sides of the keel to form the mould. As the keel was well rockered the top was covered to keep the molten metal in place.

The bolts were all in position, one pair between each pair of frames, one bolt on each side of keel. The lead was then run in under the supervision of Dr. Dawson. When the planks were removed the lead was in one smooth piece—not a bolt to be seen, and all that remained to be done was to plane the keel off and turn it over, and the thing was complete.

This is the first instance of a casting being made in this manner, and it solves the problem of lead keels. The great trouble has been that a casting must be made, then unsupported at great expense, delivered all out of shape, and put on at great trouble and cost. Very few yards have the appliances to handle a casting of nearly seven tons. Yachtsmen will find themselves repaid for their trouble by going down and seeing it.

The days of bale bay, cobble stones, copper dross, gravel, and other favorite compounds of the old school are evidently numbered.

YOTMAN.

NOT RESPONSIBLE.

THE unwarranted attack upon the standing of the Bay of Quinte Y. C. is justly calling forth indignation in our Canadian contemporaries. We must ask one thing of them, however, not to visit the sins of a hasty newspaper scribe upon the innocent heads of the New York Y. C., which is very far from responsible for the squib in question, much less responsible for it. They know that when the America sailed for England, in 1851, the N. Y. Y. C. cut but a beggarly figure compared to the Royal Yacht Squadron; in fact few in England knew that there was such a thing as a yacht club outside of their own country until the America made them stop and think.

YACHTING NEWS.

MEASUREMENT ABROAD.—We extract from an article by Mr. Landseer Mackenzie in Hunt's Magazine, the following very plain and indisputable logic, which tallies with our own writings upon the matter: "Yacht measurements is a 'means.' The end is to compensate a small vessel for her deficiency of bulk, as compared with some other vessel, often a considerable one, of similar lines in all the remarks, but bulk is frequently detrimental to a vessel's speed; why should she allow time to another for what she would be better without? But that obviously concerns the yacht designer, and not measurer, since bulk properly placed is as regards speed, as bulk improperly placed is detrimental when improperly placed. We should only seek to tax speed when it is due to bulk.

"If a five-tonner can 'sail round' a ten-tonner, notwithstanding that the former has the best speed, that latter should allow time for her difference in bulk, or their respective designs cannot be fairly compared. The cause of the superiority of the large vessel, compared with the small, is due to bulk increasing in a greater ratio than circumscribing dimensions, or containing surface. Thus a cubical box two feet each way four times the surface, but eight times the bulk, of a cubical box one foot high; referring them both to a standard of weight, the large box would weigh eight times the amount of the small one, and weight gives impetus. And this is equally true for points of shape, and the best relative proportions of shape.

"In this case, then, of two vessels, the density of the water will be proportionally the same for both, but the impetus of the larger vessel, will be greater in proportion to her surface frictional area, than that of the smaller, and hence the inertia once overcome, she will have superior speed. That is to say she will sail farther in a given time, or faster in a given distance. * * * *

"Making an allowance of time, to the vessel of less speed, disregarding size, in order to put her for the nonce, on a level with the vessel of greater speed, is a 'handicap,' and the result of systematically handicapping would be to put a premium on bad design. But it is, unfortunately, the case that the object of a measurement rule and that of a 'handicap' are not kept separate and distinct in the minds of most yachtsmen, there is a tendency, on the contrary, to blend them.

"Most measurement rules, through failure of their original intent, are really nothing but bad handicaps. It is manifest, then, that the only truly logical measure is bulk as bulk must be an actual measure of bulk."

YACHTING IN CALIFORNIA.—The little keel yacht Violet has received a new cabin, and comes out as a yawl this season. At Navarro River, a new keel yacht of 30 ft. is building. She will also be yawl rigged and have lead on her keel. Purvis has his schooner nearly finished at Oakland. She is 56 ft. water-line, 45 ft. over all, showing more overhang than most of the fleet. Yale has designed an able cruiser for single hand of which we will soon give plans. She is 22½ ft. on deck; 20 ft. water-line, 8 ft. beam, draft without board 2 ft., draft of cabin 4 ft., area of sails 317 sq. ft., ballast 1,600 lbs.; inside iron. Stone has finished a light draft centreboard sloop for the last season. Stockton, Campbell & Co. and the same builder has also shipped several racing boats to Western owners. Wallin has about finished a good-looking cabin sloop for Mr. Wheeler H. Peckham. She is 35 ft. 3 in. over all, 23 ft. water line, 13 ft. beam and 4 ft. 4 in. deep, with 5 ft. 8 in. height in cabin. Mast, deck to hounds, 32 ft.; boom, 34 ft.; gaff, 19 ft.; bowsprit outboard, 14 ft. 6 in.; topmast, keel to truck, 15 ft.

QUAKER CITY YACHT CLUB.—The Pauline and Gallagher open boats have been added to the fleet. Mr. A. F. Bancroft has resigned from several of the club committees, much to the regret of his many friends, very appropriated his post as captain of the club. Mr. Austin will be his successor on the committees. Vice-Commodore Robert S. Austin is an artist of no mean order, and has just finished a life-like painting of the sloop Coquette, which is much admired by visitors to the club rooms. The paintings will be offered as a prize in the June regatta.

LENGTH ON THE DELAWARE.—Here is an item from *Afield and Afloat*: "We have talked with the most visionary extremists, and men of fixed prejudices handed down from father to son for centuries, and they all have to admit that 'something should be done,' and that a fair and honest rule of measurement is required. The 'kickers' are really those owning yachts of questionable dimensions, whose breadth of canvas is protected by the old rule, who now dread the consequences of reform. The time is speedily coming, however, when the overgrown will have to pay for their bulk, and then—well, all hands will be happy."

TOO OFTEN TRUE.—The *Troy Press* gets it about right in many cases in the following: "Is that a yacht?" we inquired of a long, gaunt codder who was lounging about the wharf, and we pointed to a small steam vessel coming in. "No," was the reply. "Is that a yacht?" we inquired again, pointing to another sort of craft that we thought might be a yacht. "No; that ain't no yot, neither," was the answer. "Well, what is a yacht?" was our next inquiry. "Well's a yot?" said the fisherman. "Well, you get's any sort of a craft you d—d please, and fill her up with liquor and sees-g-vars, and get yer frens on board and have a yot of a time—and that's a yot!"

CAPE ANN YACHT CLUB.—The following officers for the year have been elected: Commodore, Bennett Griffin; Vice-Commodore, F. H. Gaffney; Treasurer, W. F. Parsons; Secretary, H. F. Sanford; Fleet Captain, J. F. Bickford; Measurer, J. M. Cook; regatta committee, Aaron Brown, William McKenzie, I. H. Higgins, George H. Baker, Frank S. Mason, Edwin Haskell and Howard Graham. The spring matches are set down for May 30. The club's fleet includes twenty-four yachts and six new boats building. Membership has increased to seventy-five.

COOPER'S POINT YACHT CLUB.—Officers for the year: Charles Cohill, Commodore; R. G. Wilkins, Vice-Commodore; Measurer, Alexander King; Secretary, Jacob Schuck; Treasurer, H. Keefer; Regatta Committee, Jacob Schuck, Clay Funk, H. Keefer. The annual regatta is set down for May 23. Course to Chester buoy and return. At the last meeting of the club the measurement question was discussed, and although nothing definite was decided it was conceded that length should be abandoned.

NEW STEAM YACHT.—We learn that Mr. S. Clair Byrne, well known as the designer of Mr. Hussey's Sachem, Mr. Thos. Hukell's Lancashire Witch, and a large number of English steam yachts, will give his attention to the new seagoing steamer building for Mr. James Gordon Bennet by Ward & Stanton. Mr. Bennet is certain to obtain a fine, complete and fashionable ship this time. She will seem as a matter of course first of her class.

SOUTHERN YACHT CLUB.—A most liberal string of prizes is offered by the Southern Y. C., of New Orleans, as will be seen by reference to our editorial columns. The hope cherished that some Northern yachts may turn up at the line is one we could wish to see gratified. The inducements offered are certainly very far ahead of those offered by any yacht club in our Bay regatta, but which were nevertheless fought for so gallantly by a ship and crew from New Orleans.

KNICKERBOCKER CANOE CLUB.—The burgee of the club is a bobtailed rag with blue diamond. The club will occupy new quarters alongside of the Columbia Boat Club, Harlem River. Boat builders on that river would keep canoes for hire if they were half awake. A canoe race-trip brigade would take more money in paddling than pulling about in the clumsy tubs kept for hire, which frighten off more money than they bring in.

PHILADELPHIA YACHT CLUB.—This organization will probably be maintained, and some limit to sail area will be set, as Delaware yachtsmen are getting well sick of the machines produced by length measurement. Officers for the year: Commodore, John Sidebotham; Secretary, Chas. Shepard, and Treasurer, Israel Jones.

A SOUND EXPONENT.—More pretentious but less meritorious journals give up valuable space to fanciful wood cuts of yachts, the sound views set forth in *Afield and Afloat*, of Philadelphia, a journal giving fair space to local yachting news, and, we are glad to say, thoroughly sound on the questions of measurement, type, rig, ballast, cruising, and Corinthian rules.

PROVIDENCE YACHT CLUB.—Officers for the year: Commodore, Benjamin Davis; Vice Commodore, Robert W. Jenckes; President, Benjamin Stallwell; Measurer, Henry E. Thompson; Secretary, Charles I. Manchester; Treasurer, Arthur M. Black; Trustees, Benj. Davis, E. J. Anderson, Simon Cameron.

DEEP SLOOP.—Phil Ellsworth was one of the first modellers in New York to recognize the value of depth. His sloops are the deepest in New York, and his latest model surpasses his former efforts. She is building for the Secretary of the Jersey City Y. C., and will be 23 ft. 3 in. over all, about 22 ft. water line, 9 ft. 9 in. beam and 3 ft. 9 in. deep.

AN ABLE CRUISER.—C. H. Thomas, of Duxbury, has launched his new keel sloop, 24 ft. on deck, 21 ft. water line, 10 ft. beam. These little Corinthian fellows are becoming as thick as flies in the East, and in New York we have not half a dozen!

NEW CUTTER.—Mr. Kirby, of Rye, is building a keel cutter for New York owners. She is to be 28 ft. over all, 24 ft. water line, 8 ft. 8 in. beam, 4 ft. 2 in. depth, 4 ft. water, and will have a ton of iron on the keel.

PROSPERO.—The Prospero is to have racing spars and a flying jibboom, new sails from a whaling loft on the Connecticut shore, and her keel tinkered with under the charge of her sailing master.

BOOM IN CANOES.—Mr. Rushton, of Canton, N. Y., has been obliged to double his working force and rent another shop, and is still barely able to keep up with orders for new canoes.

A GOOD RIGGER.—We have been informed that the rigging of the new schooner Norseman is from the loft of H. S. Williams, of Brooklyn. Williams will rig our yacht some day, we hope.

CRUISING ABROAD.—The schooner Dauntless, Vice-Commodore Walker, R. N. Y. C., is cruising in Southern waters, and may touch at the Bahamas before returning.

BIG STEAMER.—Mr. St. Clair Byrne, of England, has made propositions for a steam yacht 216 ft. on load line, 95 ft. beam and 1,000 horse power.

WANTED.—A steam launch under 30 ft. Coil boiler preferred. Owners may find a purchaser at a low figure by addressing this office.

OSWEGO YACHT CLUB.—The yacht owners of Oswego contemplate forming a club. There is enough material for a good one.

THE VALUE OF DRAFT.—Sloop Sunbeam, of Boston, winner of 40 prizes, is to have 8 in. more keel to keep up with the times.

VEDETTE.—This handsome steam yacht has become the property of Mr. E. S. Jaffray.

Hop Bitters are above and beyond all as a nutritious tonic and curative,

Answers to Correspondents.

☞ No Notice taken of Anonymous Communications.

H. T. H., Freeport, Ill.—See game laws.

W. C. B.—Mouth of drag for ten-tonner about 2 ft.

J. L. C.—Write for circulars to the postmaster at Rugby, Tenn.

R.—The American holly (*Ilex opaca*) is found as far North as Maine.

S. R. Hooley, Plainfield, N. J., wants a pair of quail to breed from.

J. H. J., Bethelem, Pa.—No more quail can be procured this season for restocking.

J. H. D., Lowell, Mass.—Write to P. T. Barnum. We do not keep a record of circus feats.

A. W. M., Farmington, Me.—We believe the practice to be as injurious as it is inhuman.

W. A. J., Philadelphia.—No, but later on some of the dogs will be represented in our paper.

C. A. J.—Possibly an advertisement in this paper may secure you the kind of yacht you want.

C. S., Bradford, Pa.—You can secure the hammock through any of the New York dealers in sportsman's goods.

J. R., Boston.—For list of secretaries of Cricket clubs apply to Mr. O. A. Kulpe, editor *American Cricketer*, Philadelphia.

I. F. S. K., Port Robinson, Ontario.—You can perhaps obtain the birds you want from Chas. Reiche & Brother, Chatham st., New York, City.

CRUISER.—You will not find so small a cabin yacht to suit you here. Better try Boston. We have heard of several smart ones 20 ft. water line for sale there recently.

BOAT.—Skiffs and small boats in issues of July 26, Aug. 9, 30, Sept. 20, 27, Nov. 1 and 8, 1877. Build with a flat bottom. Easier and serves your purpose; also stiffer boat.

J. M. B., Boston.—At Prince Edward's Island you will find curlew, plover, black ducks, wood ducks; trout fishing. A Chesaueake bay dog would answer your purpose best.

J. G. M.—Secretary National Yachting Association is John Frick, 21 Maiden Lane, N. Y. The association has fallen through from want of leaders and premature action.

WILD, Red Bank, N. J.—Address Mr. A. J. Kelly, Anderson P. O. Howard Co., he will give you the information you want. Mr. Kelly has charge of the Baltimore Kennel Club dogs.

F. B. T.—To color the canvas of your canoe a muddy green boil canvas in bath of 2 lbs. ferrocyanide of potassa, wring out half dry and then boil in solution ½ lb. sulphate of copper in 10 gallons of water.

G. C. W.—We can send you covers for filing FOREST AND STREAM. Price $1.50; will hold twenty-six numbers. We cannot supply complete set of back volumes. B. C. Kirk, No. 38 Swan st., Albany, N. Y., has a set for sale.

A. B., South Boston, Va.—Apply to your Fish Commissioner, Col. M. McDonald, Lexington, for black bass fry for stocking streams; or, as they are plenty in the James and Potomac rivers you can get them from fishermen there.

A. M. D., New Haven, Conn.—The FOREST AND STREAM discontinued its cricket column last November. We return subscription and advise you to transfer it to the *American Cricketer*, published in Philadelphia, P. O. Box 1,950.

C. F. L., Cincinnati.—We advise every one to see the dog they are buying before they pay for it. It is not so much a question of the honesty of the breeder as it is of the buyer's own personal estimate of the merits of his purchase.

CHASSEUR, Montreal.—Limit of range of the Winchester's model of 1866 is 300 yards. The choice between octagon and round barrel is not one of superiority, but simply of taste. The model of 1876, 45-60, or 45-75 would probably suit you the best.

LIVE QUAIL.—Several inquirers are informed that the demand for live quail has far exceeded the supply; and we are unable to refer them to parties now having birds for sale. Those who advertised birds in this paper could not meet all the orders which poured in upon them.

J. ZICKLER.—You neglect to give your post office and so we cannot say where you will find good fishing within forty miles of the city, not knowing what city you live in. Post marks are not to be trusted to. They are not only illegible, but are never sent to the Editorial rooms. Please write again.

L. W. F., Middletown, Conn.—Will you please inform me if there is any good trout fishing in the southern portion of Cheshire county, New Hampshire and if so what part and the name of the parties who could post us in regard to streams? Ans. Write to Mr. Samuel Webber, Commissioner of Fisheries, Manchester, N. H.

J. M., Poughkeepsie.—Your letter is not clear, but we presume you wish to enter your dog in volume II, of the N. A. K. Club Stud Book; this you can do by addressing the secretary of the organization, Mr. Jos. H. Dew, Columbia, Tenn, who will furnish you with entry blank. Cost for single dog entry twenty-five cents.

S. S., New York.—Do snipe (English) fly only on moonlight nights, or, in other words, would the flight continue (the weather being favorable) without a moon? Ans. The birds are believed to fly best on moonlight nights, but they would no doubt continue to move even if there were no moon.

SINGLE HAND.—It is not the vertical distance of centre of gravity relative to centre of buoyancy, but to meta centre which gives an estimate of stability. Boats with c. g. above c. b. are often stiffer than those with very low c. g., owing to their c. b. shifting out to leeward faster and giving higher meta centre. Our design was very stiff without being hard and uneasy in rough water.

F. W. jr., Sullivan, Me.—I inclose head, one wing and legs of a bird which I shot this morning. Can you tell me in your next issue what bird it is, as I have never seen one unless it is a pig on, but its flight and run was more like a quail, although I never saw one like this. Ans. The bird is a turtle dove, *Zenaidura carolinensis*.

CABALLERO.—The law compelling the display of lights applies to all boats, rafts, canoes or anything else. It is both impracticable and ridiculous, but as long as it is a law you should comply as well as possible. It was sprung upon a Congressional Committee by steamboat lobbyists several years ago, but has hitherto been a dead letter and is likely to remain so.

C. H., New York.—How early in the spring are striped bass taken at the Falls of the Potomac, and what kind of bait and tackle is used? Ans. Usually in April or May. Probably later this year than usual on account of the spring being so backward. A stiff twelve-foot rod with multiplying reel, with a hundred yards of good linen line. Different baits, as live minnow, pearl minnow, etc., are used.

P. C., Lynn, Mass.—Please give me the address of some person from whom I can obtain a few pure bred black ducks (*Anas obscura*), also the price per pair. I should not want to send farther than New York for them. How much would it cost to send a couple of pairs from New York to Lynn? Ans. We are not able to hear of any one now who has what you want. Possibly some of our correspondents may be able to furnish them.

W. H. J., Philadelphia. Will you be kind enough to say what sort of rod is considered best for bait fishing for black bass? What line and what reel? Can you put me on the track of a first-class rod-maker, either in Philadelphia or New York? Ans. A ten to twelve-foot rod moderately stiff, a stout trout rod will often do. Use multiplying reel with 150 feet of linen line, if you use bait or fly, and 400 yards if you troll with spoon or minnow. Yes, we put you on the track of a first-class rod. Write to each one of our advertisers and choose what pleases you best.

ANY subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Pray, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—[Ade.

BRAIN AND NERVE FOOD.

VITALIZED PHOSPHITES.

Composed of the NERVE-GIVING principles of the ox brain and wheat germ. It restores to both brain and body the elements that have been carried off by disease, worry, overwork, excesses or nervousness. It promotes digestion and strengthens a failing memory. It prevents debility and consumption. It strengthens the brain, gives good sleep, and recuperates after excesses. Physicians have prescribed 300,000 packages.

For sale by druggists or mail. F. CROSBY, 664 and 666 Sixth Avenue, N. Y.

Eastern Field Trials Club Third Annual Running Meeting

COMMENCING ON THANKSGIVING DAY, 1881.

ROBIN'S ISLAND STAKES, OR EASTERN FIELD TRIALS DERBY,

Aquetong Trout Farm,
New Hope, Bucks County, Penna.

Lake Massawicpie For Sale.

Mr. Addison Child, of Childwold (South Colton P. O.), New York, offers for sale 3,000 or more acres of choice natural forest land, flushed with deer and other game, embracing the above lake, stocked with salmon and speckled trout, and seven tributary ponds of 15 to 50 acres each, delightfully situated in the southern part of St. Lawrence County (see Colton's Atlas), and within thirty hours' travel of the cities of New York and Boston. Being the head waters of Grass River (itself a noted trout stream) they are under the absolute control of owner, and offer rare facilities for natural sport or multi-generous fish culture. Any party or club wishing to establish and preserve a park for sporting and social recreation may address as above for details.

ABINGTON.

AT PUBLIC SALE, ON THURSDAY MAY 19, 1881, THE MOST MAGNIFICENT ESTATE IN VIRGINIA, OPPOSITE WASHINGTON CITY.

This superb estate, consisting of four hundred acres, with mansion house, superb park of ten acres, terraced grounds, fine fishing shore, only one mile from the National Capital, will be sold at public auction May 19, 1881.

To market-gardeners, stockmen, livery stablemen, and especially capitalists seeking investments, as well as wealthy men desiring the grandest country seat in all this section, Abington offers a wonderful chance. It will go dirt cheap.

For particulars, terms and pamphlet, address THOS. J. FISHER, Real Estate Agent, No. 1223 F. St., Washington, D. C. Circulars can be had of FOREST AND STREAM. April4,3t

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily see trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

RALPH'S

Upper Chateaugay Lake, N.Y.

This property (formerly the Adirondack House) has been purchased by Hon. A. Williams, of Plattsburgh, N. Y., and has this season been enlarged and remodelled, broad plazas built nearly surrounding it, fire places added to several rooms, and the whole newly furnished.

The location is delightful. It commands a view of the entire lake (4½ miles long), which is surrounded by grand ramparts of mountains and forests, unscorched by fire and unbroken by the axe. A well-known writer for the Troy Whig visitor at this place says, under date of March 17, 1881: "Chateaugay Lake is one of the pleasantest resorts in the entire wilderness, and, notwithstanding the encroachments of civilization all about, it still retains its primeval grandeur and simplicity. Good hunting abounds in its vicinity, and its depths and inlets are still alive with trout, and men who have whipped its waters with rod and reel for a generation over that have had success and that of others last season was most salt factory."

SALMON FISHING IS SURPRISINGLY GOOD, AND BEGINS USUALLY BY MAY 10.

One of the best features of the location is its ease of access. Parties can leave New York at 6 P.M., breakfast at Plattsburgh, and three hours later, by railroad to Lyon Mount, be at "Ralph's," as the resort is hereafter to be known, Mr. D. Ralph, of Malone, having leased it for a term of years.

The terminus of the Plattsburgh and Dannemora Railroad is but three and a half miles from the hotel; mails regularly received and telegraph office in the house.

The altitude, dry soil and surrounding mountainous country render this locality peculiarly adapted to those suffering from pulmonary troubles, or any one in need of the bracing effects sure to follow even a brief sojourn in the Adirondack country. Already this season several of the

FIRST PHYSICIANS OF NEW YORK

have advised their patients to seek the benefits to be derived from a season at this delightful resort.

See article in May number of "Harper's Magazine," entitled "Camp Log," by one who has tried the Adirondacks. Copies mailed by the undersigned on application. Ralph's is but twenty-eight miles from Paul Smith's. I also control Indian Point, a delightful camping place, where those who prefer to camp can have comfortable cottages, with beds, cooking utensils, etc., and be within 50 rods of one of the best fishing and hunting points on the lake. The summit of Lyon Mountain (3,309 feet high) is reached from my house. The view from there is magnificent beyond description, and unequalled by that from any other peak in the range.

Good boats (Rushton's), guides and all camp supplies on application. Excellent accommodations for horses and carriages. In fact it has been our aim to omit nothing that will add to the comforts and pleasure of our guests.

Cards, with distances to points of interest and all desired information furnished on application.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE-HUNTINGTON, as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

20 Sent, Post-paid, for $1.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, Shipping and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

FOREST AND STREAM.

Thursday, May 5.

THE BENCH SHOW.

THE show held last week was certainly, from the point of view of an outsider, a decided success. At no show previously held in New York has the quality of the animals exhibited been so good, and never has there been so little trash exhibited as this year. The English setters, the pointers, both large and small, the collies and the fox terriers were exceptionally good. Among the black and tan setters and the red setters there were some poor specimens that should not have been sent to the show, but on the whole the classes were good throughout.

The very large number of entries in the beagle class show, perhaps, better than anything else could, the rapid strides which this merry little hound is making in public favor, and we have no doubt that before very long hare-hunting with beagles will in many localities take the place of bird-shooting. It is a noteworthy fact in this connection that the entries for the special prizes for the best beagles, straight and bench-legged, in the show were more in number than those for any other special prize offered.

It is not often the case that an exhibition of this kind passes off without some protests on the part of exhibitors who, while fully alive to the excellence of their own animals, are somewhat blind to that of the competing dogs. Such protests are always annoying and almost invariably useless, for the importance of supporting the decision of the judges is appreciated by the managers of all shows. The present year has been unusually free from such evidences of dissatisfaction, and we have scarcely heard of a serious complaint in relation to judging. The advantages of the single-handed system were clearly shown, and we presume that in future the Westminster Kennel Club will always adopt this method. It is said that the exhibition was pecuniarily successful, and if this be the case there is no cause for anything but congratulation in regard to the show.

ENGLISH ZOOLOGICAL NOMENCLATURE.

THE lamentable confusion which exists in different parts of the country in regard to the common names employed to designate our various wild animals is extremely perplexing to every one who is not to some extent familiar with the local names employed in different sections. The same bird, mammal or reptile, as the case may be, has a name for each section of the country where it is found. The most familiar example of this confusion is of course found in the two birds, *Bonasa umbellus* and *Ortyx virginianus*, which occur almost every where through the Eastern and Middle United States, and are variously called ruffed or ruffled grouse, partridge or pheasant for the first, and quail, partridge, Virginia partridge and colin for the second. Among mammals we have the two deer, *Cariacus macrotis* and *C. Columbianus*, each of which is called in its own range "black tail," though the name belongs properly to the latter alone. Similarly there are two distinct species of hares, *Lepus callotis* and *L. campestris*, which are called indiscriminately jackass, or jack, rabbits.

The utter and hopeless absurdity of some of the names that are applied to certain of our animals need not be dwelt on at any length. What can be more improper and out of place than to call a grouse a pheasant? One would say that in this case the extreme had been reached, and yet at some points along the Atlantic coast the pintail duck, *Dafila acuta*, is called pheasant.

It is true that in applying these local names those who acted as sponsors at the christening have in many cases seized upon the salient characteristic of the animal to be named, and that in many cases the appellation is an extremely fitting one; but this does not help us at all in attempting to straighten out the tangle which now exists in this matter. If any one, who had never before heard of the name, were asked what a "nigger goose" is, we think that he would guess a long time before hitting on the correct answer to the conundrum. Yet we have seen old sportsmen who have shot hundreds of geese, but had never seen a cormorant, take a flock of the latter for Canada geese, judging by their mode of flight, and express profound astonishment at the fact that "those geese were all black."

This confusion of names has been brought to our mind again by a series of questions addressed us by an esteemed Canadian correspondent, who says: "Is it correct to call *Tetrao umbellus*, ruffled grouse, and *Cervus virginianus*, Virgian deer?

"Is elk the correct name for what is known in this Province as moose?

"Is the hare which is common in this and other parts of the Province of Quebec the 'Arctic' hare?

"The above names are applied to the birds and animals mentioned by our local authority on natural history matters, *The Canadian Sportsman and Naturalist*."

It is almost impossible to give a categorical reply to questions like these. In such matters it is usage that governs, and what is custom in one part of the country is, or may be, not at all customary in another. The nomenclature of science is regulated by certain fixed rules with which every one must comply who wishes to have the name which he has applied to any animal adopted by naturalists. This of course is not, nor can it ever be, the case with popular names, for the masses will continue to employ those errors which they have been educated to make use of. It is, however, very important that we should all endeavor to impress upon those with whom we shoot and fish the desirability of calling things by their proper names, for it seems a pity that the sportsmen of different States should have to speak different languages. Surely there ought to be a common tongue for the craft.

The importance of the subject would certainly warrant us in preaching a very pretty little sermon on it were the space at our command. As it is, however, we must turn to our correspondent's questions and reply to them. A reference to "Webster's Dictionary" shows that ruffed grouse is the proper English name of *Bonasa umbellus*, but under the head "grouse" we see enumerated several European species, and also the ruffled grouse, *B. umbellus*. Still, ruffed grouse is no doubt the best as it is the shortest term to employ in designating this species. The common red deer of the East is spoken of by some older authors as the Virginia deer, but we do not remember to have seen the adjective Virginian applied to it.

What we call Moose is the elk of Europe, the latter being a word of Anglo-Saxon derivation, while moose is a corruption of an Indian name. In this country, however, *Alce americana* is universally known as moose, while the name elk is always applied to *Cervus canadensis*. What is an elk in Europe, therefore, is an entirely different animal from the Elk of America—just as the partridge of New England is different from the partridge of Virginia.

The hare common near Montreal and Quebec is not the Arctic hare, *Lepus timidus glacialis*, but the varying hare, *L. americanus*. The range of the Arctic hare does not extend much, if any, south of Labrador.

We are sorry that we cannot give more definite and precise replies to the inquiries of our correspondent, but hope that we have at least made clear some of the difficulties of the case. It is really important that there should be one settled and distinctive name for each bird and mammal of the country. But, unfortunately, each local name has a number of warm adherents who will not give it up, but would fight for it to the death. Still we are glad to see that some attention is now being given to this subject, and that some associations—notably that of Michigan—are striving to work a reform in the matter of local nomenclature. If any such reform is to be attempted it will require the influence of the best sportsmen of the land to be successfully carried out.

INSPECTION OF THE DELAWARE RIVER SHAD FISHERIES.

THE annual tour of inspection of the shad fisheries of the Delaware River, by the New Jersey Fish Commission, took place on Thursday, April 28. Mr. Hamilton Disston very kindly loaned his handsome steam yacht Mischief for the trip, and Commissioners Dr. B. P. Howell, E. J. Anderson and Theodore Morford, with about twenty guests, mostly newspaper men, started from Camden at 10 A. M. A stop at Gloucester was made, and they learned that fishing was good, that it had been backward, as upon all other Nothern rivers, but that the shad were now coming in good numbers, which were increasing; that their size was good and quality as fine as ever. The river was filled with drifting gill nets, and on the return at night it was a pretty sight to see it dotted with the lanterns of the fishermen, one in the boat and another on a float at the farther end of the net. These gill nets are sunk deeply, the floats being connected by lines ten to twenty feet long, experience showing that the shad swim in the channel, near the bottom. Hence it not only economizes time and labor in making the net, but is much easier to handle.

The principal places of interest were Howell's Cove, Eagle's, Thompson's, Old Man's, Finn's and Eisenborough's Points. The estimates made show that over $100,000 are invested in the shad fisheries here on the New Jersey side alone. Thirty-five hundred men are engaged in drift-net fishing, and their nets, if placed end to end, would reach three hundred miles. The shore fisheries are controlled by eleven men, who employ from twenty-five to thirty men each, as well as numbers of horses.

As point after point was passed, Dr. Howell, whose memory runs back more than half a century, gave the history of the river and pointed out the places of interest. The Doctor says that in the olden time a ten pound shad was not a rarity, and that in his youth there was believed to have been one of sixteen pounds taken. For the ten years previous to the practice of fishculture in the river the shad had been getting small, and the meshes of the nets had to be made smaller in order to take them. A shad of four to five pounds was a large one. This was no doubt caused by continually taking the larger fish and allowing only small ones to ascend to the breeding grounds—a course which would be apt to influence the size to a very great extent. Now, however, the eggs of fish which are destined for market are saved, and they are of course the best shad. For the past two or three years the fishermen claim that the size is increasing, and shad of six and seven pounds are often taken.

The trip was a very pleasant and instructive one, and from the conversations with the river men the guests were convinced that the Fish Commission of New Jersey have done

much to increase the food resources of the State as well as to educate the men of the lower counties, who were so much opposed to all restricting laws, to the knowledge that the commission was working for the interest of the fishermen, as well as for the public in general. The fishermen now very generally observe the law which compels a close time from Saturday midnight to Monday morning, which is six hours longer than the Pennsylvania law, which allows fishing at midnight of Saturday.

An ichthyological student on board interested the company in the dissection of a young sturgeon. The fish was a young "sharp nose," *Acipensir oxyrhinchus*, called "mamoose," by the fishermen who claim that they do not grow to be over a foot in length. The ichthycus said that in later life the nose lost the extreme sharpness of youth, and that it did grow large. He also dived into the secrets of its digestion, and showed how its mouth was capable of extension and of sucking up infusorial mud; how the barbels beneath the nose felt of the bottom near the mouth which the eyes could not see on account of the nasal projection; how its stomach contained straws, grasses and minute worms and snails; and how the digestible portions were used and the great intestine, filled to repletion, carried away the refuse, and then went into the vertebral structure and showed how the back bone ran into the upper lobe of the tail like the old ganoid fellows.

And the sturgeon died.

An artist of *Frank Leslie's Illustrated Newspaper* accompanied the party and sketched points of interest for publication.

THE LAST ACT IN THE AQUARIUM.

ON the 26th of April the New York Aquarium presented a sorrowful spectacle to those who had known it in its days of grandeur. The great tanks were torn down, and piles of brick and mortar only remained to mark their location. The large slabs of inch-thick plate glass were removed, and stood on edge in the hall-way. The pipes, pumps and table-tanks were set apart, and an auctioneer was just knocking down the great stuffed Anaconda as we entered. Next he offered a lot of statuary of life and heoric size, including the Venus of Milo, the Dancing Fawn and the Laocoon, which were bought by Mr George Bunnell, of museum fame. A small Octopus, which had once been in alcohol, a big pile of chairs, a stuffed Sloth and the table-tanks went to as many different bidders, the dime museums getting their share.

About one thousand square feet of plate glass one inch thick, in plates five feet high by two and one-half feet wide, were bought, after a spirited competition, by Mr. E. G. Blackford, of Fulton Market, who also bought the smaller plates, some of the table-tanks and all the wood-cuts belonging to the Aquarium, which had been used to illustrate the catalogues, etc. An acquaintance asked Mr. Blackford if he was going to build an aquarium: "No," said he, "but it is handy stuff to have in the house." The cat roamed about disconsolate. She was not sold. We would have purchased her if the crier had put her up. We have some stock in her in the shape of a valuable mocking-bird, which she ate in 1879, and would like to own her for a half minute. Half of a brick lay on the floor within convenient reach, but pussy kept in front of the glass, and thus vanished another of life's opportunities.

The giant "devil fish" goes to Europe. It is fearfully dilapidated. Two seasons on the road with a circus has demoralized it. The bumpkins believing it a fraud (which it was not) often broke the glass and cut pieces from its tentacles.

Farewell "The Great New York Aquarium." An opportunity to establish a good institution which would have paid a moderate rate upon the investment has come to grief through mismanagement. The greed of present gain permitted all kinds of shows to invade it, and the class which once supported it in good style left it. There is still a chance for a meritorious, prudently managed aquarium in New York to illustrate the wonders of the vasty deep.

THE ICHTHYOPHAGOUS WILL DINE.

THE invitations are out. The monsters are being caught, and the *bon vivants* of the famous Ichthyophagous Club, of New York, are preparing to astonish their stomachs with new problems in ichthyophagy. The committee have letters out for untried dishes, such as "hellbenders" (called "alligators" in Western Pennsylvania), beaver tails, the proteus, or lizard, of the Great Lakes, sea-robins, toad-fish, etc. We wish that our readers living where such things are plenty would communicate with us, and then send us some of these things. Soft-shelled turtles from the West would be acceptable as an unusual thing here.

The club is a social institution; and, while it enjoys itself greatly on these occasions, when wit flows at the suggestion of the strange viands, it is really a philanthropic society and has done good in teaching the people of New York to eat the d spis d skate. This fish was not eaten, simply because our grandfathers did not eat it; and this is the only reason why many other things are proscribed. Skates are eaten in Europe, but tons upon tons were daily thrown away by our coast fishermen without reason, until the Ichthyophagous Club ate them, chronicled the fact that these adventurous spirits not only declared that they were good, but that not a man was lost in the charge upon prejudice. Not even a pang under the waistcoat of the hungriest of the Ichthyophagi was felt after the insertion of skate beneath its ample folds. And the coroner was disappointed.

This year Mr. John H. Starin does the honors and offers his hotel and steamer to take these ichthyic crusaders to Glen Island. It is even whispered that the President and Vice-President of the United States will be present to see what virtues may be hidden under the forbidden exteriors of certain fishes now despised only because they are not handsome. New members are welcomed by the club and will be instructed how to take the wrinkles out of their stomachs by the elder brethren, without money and without price. No dues are claimed; the purchase of a ticket invests the new member with all the privileges and rights; and if he is a little weak on the question of tackling an alligator steak or the limb of a lizard made in a ragout with bat's wings, he can always order a fillet of sole or of beef, and trust to time and the example of the case-hardened ones about him to bring his rebellious stomach to the scratch.

At the dinner of last year the man who consumed the vast quantity of razor-clams carried off the honors gastronomic. He still lives and will feel his mouth water, even in retrospection, as he reads this.

The following is the invitation:

NEW YORK, May 1, 1881.

Dear Sir—THE ICHTHYOPHAGOUS CLUB will give its Annual Dinner at Glen Island on Friday, May 27, at 6:30 P. M.

The objects of the Club are to reveal to gourmets the unsuspected excellence of many neglected varieties of fish food, and to make manifest to the people at large the still untried capacity of sea, lake and river to yield the materials of human nourishment. There will be submitted to the Club numerous kinds of fish and mollusks, specially provided for the occasion, which are not commonly eaten, in addition to some of the usual accompaniments of such a feast. The dinner, though partially experimental, will include enough familiar components to satisfy the least adventurous taste.

Tickets Five Dollars each, to be had of the Treasurer, Mr. E. G. Blackford, Fulton Market. JOHN FOORD, President.

Eugene G. Blackford,
Barnet Phillips,
Fred Mather,
} Committee of Arrangements.

A steamer will be provided to convey the party to the island, without charge, of which due notice of the time of sailing of which will be given.

OUR PIPES.—With the opening of the present week the contests which have been going on for four months past in two of the most prominent of the Boston galleries, for the possession of the elegant pipes offered by the FOREST AND STREAM, came to a finish. The prizes were worthy of a special effort, and so keenly have the marksmen pushed each other that one of the trophies was taken with a perfect score, while the other is but a trifle short of it. The meerschaums represent the best workmanship of F. J. Kaldenberg, known throughout the country as one of the leading artificers in that material, and they are well worth the $50 valuation placed on each of them. We are eminently satisfied with the results of the competitions, and believe that the contests have been fair and open, and that the best man has won. While gallery practice is pooh-poohed in some quarters and regarded as child's play; such treatment merely displays the ignorance of the scoffer. There has been, within the past two years, a wonderful advance in the quality of our gallery arms, and many who are prevented by circumstances or who have not the inclination to visit the out-door ranges find an excellent drill in the efforts of the galleries. The eye must be as accurate and true, and the arm as steady to gain a place under cover as to win prizes over the green sward. Besides, the emulation is as keen in one place as in the other, and already the makers of the .22 calibre rifles report a larger sale to parties who find a cheap, healthful home amusement in private ranges. There need be no danger in such a sport, and a proper knowledge of firearms would be the best preventive of the many mishaps that now occur from their careless handling.

FISHING ABOUT NEW YORK.—We have made arrangements by which we hope to secure information which will be of great value and interest to our angling friends. Our plans are now so far completed that we are able to furnish the names of a number of localities within one hundred miles of New York where fair fishing can be had. This information comes from correspondents whom we believe to be reliable, though of course we do not vouch for the accuracy of all the statements made. To any one, therefore, who may desire fresh water fishing, such as trout, bass or pickerel, we shall be pleased to supply such information as we have. This will include the name of town, the kinds of fish to be had, the fare and distance from New York city, the character and price of the hotel accommodations and the distance from the station at which the fishing is to be found.

No inquiries on these points will be answered through the columns of FOREST AND STREAM, and those who desire to have their questions attended to must apply personally or accompany their written inquiries with an envelope stamped and addressed.

TROUT FISHERMEN will do well to kill all the watersnakes that they may see in the streams during their fishing. These reptiles destroy great numbers of trout, and any one may, by opening one of those killed, demonstrate that they are fond of the fish, and that at this season these form a very considerable portion of their food. Every snake killed means a number of fish saved, and hence better fishing in future.

"THE GUN AND ITS DEVELOPMENT."—Just as we go to press we are in receipt of advance sheets of this elaborate work on gunnery and shooting arms, forwarded to us from Mr. W. W. Greener, through his American agent, Mr. Henry C. Squires. A hasty inspection of the volume shows it to be a most noteworthy contribution to the literature of the subject; and at an early day we shall give an extended notice of its contents.

WE NOTICE that the *New York Clipper* has changed its form and now appears as a folio paper. This is a great improvement and the editors and readers both must be gratified at the change. Our trans-Atlantic contemporary, the *Illustrated Sporting and Dramatic News*, comes to hand with a newly adopted cover, an addition which will be appreciated by all readers of that excellent publication.

DARWIN'S NEW WORK on the "Habits of Worms" is nearly ready. We anxiously await the special chapter on angle-worms, and their habit of squirming through the hole of the small boy's pocket and wriggling down inside the leg of his pants.

The Sportsman Tourist.

SOUTHERN CALIFORNIA AND ITS FIELD SPORTS.

A WILD and tumbling sea of land—a land of rolling green plains, towering mountain peaks and tree-filled canyons—a land of hillsides blazing with all the soft colors of the rainbow on a background of soft, warm green—a land stocked with game, where one is able to travel in almost any direction with a buggy or saddle horse; where one may stroll beneath soft, clear skies over green sod and flowery hillsides, with no mud to flounder through, no briars nor saw grass, with no chilled fingers, wet feet or mosquito riddled face, and in two or three hours have all the shooting that a man should desire; where one may lie down in the cool night air with no tent but the starry blue or the glistening moonlit leaves of some royal oak—a land where the winter sun rises soft and clear—a land of bees, birds and rabbit-fed bachelors—a land where even the legend "No Shooting Here" carries no fear to the gunner's heart—a land where everything is slow, life, death, railroads, debtors and all, and the presumption is strongly in favor of the slowness of the gunpowder—a delightful indifference to the flight of time—a land where nothing is certain but death, and even that is a remote contingency;—this is Southern California as it is pictured in a charming volume now before us coming from the pen of Mr. T. S. Van Dyke.*

The vast area of this great land of America is so extended, its boundaries are so wide, that one extreme is a *terra incognita* to the people of another section. We venture to say that the average American knows more about Constantinople and the Golden Horn than he does of San Diego and its fair harbor. The trans-Atlantic steamers are just now bearing multitudes of summer tourists to the mountain lands of the Old World; but of all those excursionists how many know that in the southwestern corner of their own country rises a mountain 11,000 feet above the surrounding plains, and affording a view from its summit of two hundred miles? We fill our libraries and museums with memorials of the extinct races of foreign lands, unmindful that within the limits of the United States are moss-grown walls, crumbling colonnades, fretted arches, cactus-grown church tower, and time-rent cloisters, each in their ruins eloquent of a faith and heroism of life, about which has gathered the glamour of time, and which only awaits the touch of the master-hand to develop its romance and pathos.

Mr. Van Dyke writes of an out-of-the-way corner of the United States, which, by reason of the neglect of railroad projectors, is to nine-tenths of the readers of this paper practically as unknown as the plains of Thibet; and because these pages tell us a great deal about California we could hope that the book might have a wide reading if for no other purpose than to make Americans more familiar with one portion of their own land, its natural characteristics and advantages, its people and their ways, and the fascinating history of its past.

To the sportsman, however, the attractions of California as a game country are, in a general way at least, well known, and it is to a faithful description of the game birds and animals that Mr. Van Dyke's book is chiefly devoted. "Flirtation Camp," we take it, is the title given to the book by the publishers. The romance which runs through the pages is happily conceived and is sufficient, perhaps, to justify this title; but, as the author explains, "it occupies far less space than in many sporting works is devoted to getting the hunters waked, dressed, fed, armed, 'liquored up' and into the field."

California is famed as a game country. A book, written by a competent hand, descriptive of its game and fish and the various methods of pursuing them has long been awaited. Such a book is now given us in "The Rifle, Rod and Gun in California." Its author is a practical sportsman of long and varied experience in hunting the game of different localities in America; and he is as good a master of the pen as of the rifle. Mr. Van Dyke has long been known to the readers of the FOREST AND STREAM as a man to whom they might look for plain statements of facts determined by himself rather than for the parrot-role repetition of theoretical speculations advanced by others. A careful reading of his book shows us that the characteristic adherence to the facts in the case has been the rule in his preparation of the volume. Lower California and its varied charms are here pictured in a most enticing manner; a volume prepared with the sole purpose of

*Flirtation Camp; or, Rifle, Rod and Gun in California. A Sporting Romance. By Theodore S. Van Dyke. New York: Fords, Howard & Hulbert, 1881. Price, $1.50.

attracting the pleasure tourist could not have set forth the natural advantages of the country more strongly; and yet there are passages here and there throughout the book which inspire confidence in the author as one not given to violet ink and rose-colored spectacles.

Black brant, Belleville—who, we take it, expresses throughout the opinions of the author—thinks the finest of American water fowl; and "although quicker far than any other kind of goose, they are still slower than a duck. But they shed shot as subscribers do editorial appeals to pay up," and can bear off a good load of lead without succumbing. The brant shooting as it is described in the first chapter of the book is such shooting as it would repay a man to go far to enjoy. Following chapters are devoted to Inland Shooting and to Coursing Hares, a most exciting sport, when the hare skims over the ground like a low flying grouse and dogs and riders follow in hot pursuit. The valley quail, we are told, here runs so fast that they will spoil a dog unless he is kept back until they are thoroughly scattered and scared, so as to make them hide and lie closely; and one can get all the shooting he wants without any dog at all; and when a dog is employed the birds are so plenty and so strong of scent that it does not require such careful working of the dog as on the Eastern quail. To successfully bag the birds in the shooting here described calls for the highest skill with the gun; they are gamy and die hard; unless fairly struck with the centre of the charge they are apt to get away. The proper shot for them is No. 10, with heavy charges of powder. Even after bringing the birds to the ground the sportsman is not sure of them. It requires a well developed bump of locality, a keen eye and a quick judgment, or the shooter will never pick up two-thirds of the birds he kills. In the autumn the valley quail pack, sometimes all the birds bred during the season in two or three thousand acres being found in a single band in the little valleys.

Among the various devices described for circumventing the wild goose is this: A looking-glass is fastened to the front of a small skiff, the glass hanging down to the water and concealing the boat behind it. A bit of looking-glass is then fastened to a split stick and lashed to the boat so as to project sidewise from the bow, and just beyond the line of the edge of the glass in front, giving to the occupants of the boat a view of everything ahead, and the skiff is paddled noiselessly down upon the unsuspecting birds, who are not so silly as to fear their own shadows in the mirror.

Deer shooting in Southern California, our author thinks, is one of the severest tests of a man's skill with the rifle. This deer, the "black tail," or, according to Judge Caton, a variety of the mule deer, is smaller than the Virginia or common deer, but superior in activity. "There was no gentle canter, no rapid run, no hugging the earth like a greyhound, nor anything indicative of effort to absorb space. Nevertheless the noble fellow bounded, not ran, as though the ground were India rubber and his legs steel springs, his four feet grouped close together, all striking the hard ground at one blow, and glancing from the touch like the *ricochet* of a cannon ball." And this bounding the sportsman finds something altogether novel, bewildering and baffling; the height of the rise from the ground is not appreciated even by those most familiar with it, and it keeps up this style of traveling "up hill and down hill, through brush, over brush, among huge boulders, rocks and shingle, with such astonishing speed and endurance that it is always worth half a day's work just to see one run." San Diego, though not a deer country, still affords abundant sport to the man who knows how and where to hunt this game; and in the autumn Mr. Van Dyke thinks it doubtful if any country in the world can give easier and more pleasant still-hunting than this. But we must not encroach too much upon our author's patience by transferring his entertaining and instructive chapters to our columns, nor would we mar the reader's pleasure by anticipating. Five chapters of the book treat of the various modes of hunting deer, and are well worth a careful perusal. The novice will find them instructive and helpful, and the veteran deer hunter will find equal satisfaction in the realistic pictures of the unequal fortunes of his days on the trail.

Mr. Van Dyke can tell a story concisely and pithily. Here is one of the "Goose Cavalry:"

"Pretty liberally sprinkled with mud-hens," said Belville; "still there are some ducks there. And, as sure as I live, there is a flock of geese on that flat!" he added, pointing to a distant line of dark-gray birds standing on the green sod across the pond. "If I can borrow that horse of that fellow I'll try a charge on them. It's the only way to get a shot."

So saying, he hailed a young Mexican who was coming behind them on horseback, and, pointing to the geese, asked him in villainous Spanish to lend him the horse.

The Mexican dismounted with a smile, perhaps at the Spanish, perhaps at the geese, possibly at neither. We shall see. Belville mounted and nubled down to within two hundred yards of the geese, on the windward side. Then, on a gentle canter, he rode on a slanting course toward one side of the flock. He did not look at them at all until he got within about one hundred yards, when he suddenly wheeled the horse and charged directly at them on a full run. They waddled and looked and looked and waddled, until the "cavalry" got within sixty yards, when they concluded it was about time to clear the track. Being compelled, however, to rise against the wind—geese *can* rise down wind, but *prefer* up wind—the cavalry, in its rapid career, was within thirty-five yards before the heavy birds got fairly started from the ground. The confused bustling huddle of black necks, white collars, dark-gray backs, together with the sound of heavily-beating wings and the rapidly-recurring "onk-k-wonk—onk-wonk—honk—k-wonk-onk," caused the horse, a mere colt, to sheer a little. But the target was so large that a snap-shot, the only kind possible from a running horse, could hardly miss it, and, with the report of the first barrel, two geese sunk heavily to the soil.

So did Belville at about the same instant. As though a keg of powder had exploded beneath him he left the saddle, as the horse, springing high in air, struck ground stiff-legged and with arching back. Belville sat for a moment, half dazed by the jar, but finding no bones broken, picked himself up, took an affectionate gaze at his swiftly retiring charger and indulged in some highly philosophical observations upon mustangs and their skill in the art of "bucking."

He did not smile very much as he approached the wagon and thanked the owner of the horse. But the owner did—a smile fully as deep as politeness demanded. Then he borrowed a bunch of matches and some tobacco of Belville and bade him good-bye in a tone and with a smile that said, as plainly as words, "If my horse can be of any service to you next time, he is entirely yours."

We have not attempted to outline the wide field of California sports depicted in the book before us. All the game of California is in turn discussed, its habits set forth, and the methods of its capture explained. This volume is full of hints which are drawn from the author's own practically acquired knowledge. It is at once a powerful plea for the climate and scenery of Southern California, a book of instruction about game, and enough of a romance to justify its leading title, had that title been made subordinate. We predict for Mr. Van Dyke's volume a most pleasant reception among sportsmen, and heartily indorse it as more deserving in merit than the ordinary contributions to American sporting literature. It will justly enhance the author's reputation as a writer thoroughly versed in the subjects of which he treats. The tone of the book is high, its sentiments are healthful and elevating. The book is dedicated "To those kindred spirits to whom the count of game and the sizzle of the frying-pan are the last and lowest of the pleasures of the field and stream;" and this same feeling finds frequent repetition throughout the book. We quote, as one of the many good things, this racy sketch of "The Great American Trout Swine:"

The Indian, the Mexican and the Spaniard long held this land of which we write, yet the game increased in their time rather than diminished. The antelope slept within sound of the fandango, the elk flourished among the rancheró's cattle, the trout flashed in the brook by the Indian's *rancheria* and the deer drank by his *temescal*. Say not that these men knew nothing of the chase or were too lazy to follow it for pleasure or for food. This can hardly be said of men who could outride the elk or the antelope on the plain and lasso and bind the grizzly in his rugged hills. They were ardent enough hunters in their way. They lacked only the spirit of the Anglo-Saxon, who go to work at the game of the country like a drove of swine at a pile of grain, beginning at the top and trampling and destroying ten times what would suffice for their real wants.

Why is it that even here, in this far corner of our country, amid these beautiful and abundant streams, it is necessary to toil for miles over great boulder-washes and penetrate the very heart of the mountain to find plenty of trout? And why, even here, are they fast fading from the places that knew them? Let the great American trout-hog answer, for here he comes.

We see a rabbit-like complacency of countenance, corn-silk locks, caterpillar mustache, butterfly necktie, *functus officio* paper collar and lark-heeled boots. He has a small champagne basket strapped on his back, a quart oyster-can of grasshoppers and worms, a line with two or three hooks on a pole and half a dozen extra ones in his pocket, a soul that would rattle in a dried hoa-skin and an abysmal stomach that yearneth forever for trout.

He has already over fifty trout in his basket—twice as many as any *man* should catch in one day; more than would satisfy the most exacting of his four-footed brethren. Yet he skips along from pool to pool and from riffle to riffle under the elastic impulse of the only love he ever felt, the love of a poor little trout, debased to the worst and last use to which game can be put—*cooking*. He tosses in his line with countenance eager as a cat's at a mouse's hole, and his face is radiant as a newly-made bridegroom's when a little fish, a finger long, comes shimmering out of the water with feeble struggles.

But, surely, he will put that back?

Of course—back into the hole in the basket! Doth it not *count one?*

Soon another comes out only a trifle larger. Too small yet even for him who was made only a little higher than the brutes, instead of (as has long been erroneously supposed) "a little lower than the angels." But not too small for the *porcus*. Joy elevates his snout as he slides the fish through the hole in his basket.

But what good is such a fingerling?

Go to! thou ignoramus! Doth it not *count?* Are not its feeble bones tender? Will it not, in the frying-pan, sing celestial music to his soul? And so, the live-long day, he skips from pool to pool with tireless sole, as if the great problem of life were to see how many of these beautiful creatures could possibly be destroyed in one day. What to him is the *allegro* of the swift-rushing stream, the *maestoso* of the boiling pool, the *andante* of the wind in the pines above! He is deaf to all music but the spluttering expostulation of a poor little trout in the frying-pan.

What cares he for the ice-cold stream of crystal, dashing itself into sparkling spray as it leaps down that cliff from its high mountain home, then foaming away through long ranks of stately alders, whirling around white boulders, boiling in deep pools of green and white, glancing through narrows, shimmering over shadows, plunging down steep rocks! Excuse me; he does appreciate it, too. It's quite convenient to wash his fish, to water his horse, to make his coffee!

What to him are the stupendous slopes above, the turreted battlements and granite castles, floating like silver islands in the translucent, dissolving clouds or burning with purple fire in the evening sun! Or the grand old forests so refreshing to the denizen of the sun-baked plains; the pure, cool morning air or the view down the great falling valley as the sun floods it with his last beams! His eyes are blind to all but a "nicely-browned" trout.

The morning passes and he has *ninety* in his basket. He meets his fellow, who has about eighty. And now, surely, they are done, for the prince of swine could ask no more than this. And see, too, they are taking off their baskets and winding up their lines.

Yes, they are done. *Done with such slow work as this!* Not thus can proper homage be paid to the idols of the great American *porcus*—the palate and the store! The stream shall be turned, for trout must be had quicker and with less work.

And now, mark how they dam up the stream and turn its current aside; and see the halo of delight that enwreathes each snout when the old channel is nearly dry and the sordid fingers grab up the poor little flopping silver-sides! And see how they gloat over the struggling opalescence and writhing green in the basket, while their palates throb with joy as happy fancy hovers over the sizzling frying-pan! O Nature! why dost thou not whip such wretches around to thy kitchen door, instead of allowing them to root in thy drawing-rooms!

We publish the following communication from Mr. Van Dyke, as it entirely relieves him from a criticism which we have heard several persons advance upon his references to that villainous compound, the Dittmar sporting powder:

MR. FAIRVIEW, San Diego Co., Cal., March 10, 1881.

Editor Forest and Stream:

The first criticism that comes to hand on my book on California field sports is from a valued friend, valued all the more for his frankness, and is that the first chapter looks "too much like an advertisement of Dittmar's powder."

Had he said an advertisement to Eastern honey dealers of Reche's apiary, I could not have been more surprised. But, as others may think the same thing, I hope you will pardon a few words.

That book was written only to entertain—not to instruct—except as to habit of birds and animals, and modes of hunting and the character of the background for our field sports. To enlighten the sportsman on a subject which, so far as books are concerned, is entirely new, and do so without wearying that fastidious chap known as "the general reader" has been my aim. I have tried also to show that "a sportsman" is not necessarily an insatiable pig let loose in nature's flower garden. And this is all, and I do not anywhere intend to indorse or recommend any persons, places or things.

In doing this I have spoken of things as they were considered generally, and not by myself, taking care not to obtrude, except upon waste of game, etc., my peculiar views. In so doing I have sometimes even run against my own views. My views on the subject of small bored rifles for hunting deer are well known to your readers, yet I put one in the hands of the main character. I think the use of the shot gun for deer, unless accompanied by good dogs to catch cripples should be punished by at least ninety days' hard labor on a diet of cucumbers and water, yet I put one in the hands of another character. This is because the general opinion is against mine, which I admit to be extreme on all points relating to the waste or heedless torture of game. In like manner I call on page ten, what I think a variety of flamingo, a curlew, because they are called here "the black curlew."

Now, when Belville is trying to persuade Norton to try the medicine of the field he does it, among other ways, by telling him of the modern improvements in sporting implements and the greater ease and comfort of shooting than was known when Norton hunted as a boy.

At the time this book was written I had never seen a grain of Dittmar powder, a hammerless breech-loader or a gram of chilled shot, and the only choke-bore I ever saw I with my own hands cut the choke out of on account of the fouling in our dry air. Yet all these things were supposed at that time to be improvements, Dittmar powder standing high in the estimation of prominent sportsmen and in the advertising columns of this paper. I knew, of course, that it had been questioned, and so had the safety and utility of hammerless guns, but the better opinion seemed in their favor. And I there speak of Dittmar just as of the other three—as they appeared to be, and not as they are. I no more intend to convey scientific information than the Bible does when it speaks of the "rising and setting of the sun," or "the four corners of the earth." When I intend to convey any information as to hunting implements I will do so by a didactic work for sportsmen alone, and not in one intended both for sportsmen and the general reader. And I want it distinctly understood that I do not in that book recommend anything except hunting as the best and purest means of restoring shattered health. And in Chapter VI I have taken special pains to guard against Nordhoffism.

In conclusion I would say that the book contains some trifling errors, owing to the impossibility of my seeing the type proofs, the failure of a large number of the plate proofs to reach me, and the expense of alterations in those that did reach me. The MSS. has been in New York since last May, and the plate proof of first chapter was corrected and returned before your exposure of Dittmar.

T. S. VAN DYKE.

P. S.—It is plain enough from the frequent use of "cloud of smoke," "rolling report, etc.," throughout the book and also from page 111, that they are all shooting black powder.

DUCK HUNTING IN A STEAM LAUNCH.

MY brother and I concluded to make a run up into Old River, above Vicksburg to interview the ducks we heard were abundant in a small lake lying back of a tow-head some five or six miles above the junction of Old River with the Mississippi, and about twelve or fourteen miles, all told, from the city. As the current was rather stiff, and the distance too great for a pull in our skiff, we made up our minds to perform the journey in a small steam launch, a screw propeller, about thirty feet in length and seven in breadth, drawing three feet nine inches when coaled and laden with our traps. Neither of us had had any experience in navigating a steam vessel, but my brother being a kind of genius touching machinery thought he could do the firing and manage the engine, while, with some hesitation, I agreed to steer the craft. So one dark, damp, chilly morning in November, at about 11 o'clock, we steamed out the harbor at Vicksburg, and soon began in a small way plowing up the Father of Waters.

For a reason we did not know at the time, we were unable to get up a high pressure of steam, and at no time did the indicator go above 60. For this reason it stood us in hand to avoid the current and hug the bars as much as possible, and the pilot did this so thoroughly that every five minutes the fireman and engineer would sing out, "If you don't stand further out you'll ground her; the bar is flat here! Keep an eye ahead! Don't you see that low point running out there!" And over would go the lead. "Scant four feet! Turn her out!" And out she would go till the current was encountered, and our speed reduced to that of a pair of lovers on a limited stroll, then back again till the warning cry of "Keep her out!" was repeated. And in this way we wriggled about like a serpent until we had passed the bar and struck the stiff current along the bluff shore. Here the fireman stirred up the fire, stuffed in more coal, and then run back and threw the throttle wide open, and stood sighting at some object on the shore to see if the Gentle Savage—for that was her name—was making any progress. She was not "flying," nor was she "skimming the foaming billows" to any alarming extent, but still she moved up stream slowly, and the reaching our destination was only a question of time and whether our coal pile would last that long.

After a while we came in sight of the mouth of Old River, and soon thereafter dropped into the shoal water lying outside the current. We had scraped one or two points in hugging the shore, and got a jolting and came near sticking on a sunken log thus far. We had both gathered up some confidence and had begun to feel that running a steamboat was no big thing after all. As we neared the mouth of Old River a cast of the lead—the combined engineer and fireman was great on the lead—showed eight feet, and we thought everything lovely, when in two minutes thereafter the craft gently glided upon a bump and quietly settled there. Getting into our skiff and taking a few soundings to find the deep water, we worked her forward and backward alternately, stirring up a sight of mud with the screw, but still sticking to the bump like a leach. A negro who kept the Government light on the point, passing in his skiff at the time, was hailed and came to our assistance. We didn't know just what good he could do, but felt that he would be company anyway and report us to our friends as stranded in case of failing to get off. But while waiting for him to pull up, enough steam had accumulated for us to syphon out. The vessel leaked badly and the syphon had to be employed often. This could only be done with steam at forty and above. As soon as we got her up to that point we put the water in her hold outside and at once floated off the bump. Thenceforward we carried a goodly supply of water for this very purpose.

The Mississippi River was quite low, while the Yazoo, which flows into it through Old River, was swollen from rains at its headwaters. This gave us a current almost to rapids for a mile or more from the mouth up, but by keeping close to the shallow shore and behind the points we managed, after a long pull and sticking on two more bumps, to get into the broad waters of Old River in comparatively dead water. But for the life of the fireman, with all the advice he got from the pilot, he could not get up steam enough to talk about. I think about this time the maximum was twenty-seven. Now, I would like to know if one going a-ducking in a steam vessel, with big expectations, would not feel discouraged at twenty-seven pounds of steam? A cold north wind began blowing, bringing with it a nasty rain, and the crew began to get wet. We could not run with the curtains down, as the wind being dead ahead and our motive power light, we would have been blown down the back track and into the Mississippi. So, running up to a big snag, we tied up, put on our rubbers, accumulated some steam and plowed away again. In an hour or so we sighted the tow-head, through the rain and mist, about three miles away, but after fuming and fretting for an hour or more, and the steam dropping down to 15, we concluded to cast anchor for the night two miles below the tow-head and hold a council of war. Here we had been out from home nearly six hours and made only twelve miles.

It was very discouraging. Duck hunting by steam seemed at first glance to be a fraud. With our magnificent skiff and two pair of oars which had been dragged after this creeping steamer, we could have made the trip in half the time. It was too late to row up to the tow-head in time to get any shooting before dark, so we made ourselves wet going across the narrow strip of land separating us from a chute of the main river, around Paw Paw Island, and there saw no ducks. Rain set in hard about dark and the wind blew a gale. The leaks in the roof increased and the side curtains flapped and blew in and conducted their water upon the seat running around the sides of the hull. Water fell upon us or spattered upon us in any place we took. After sitting up and dodging about as long as we could endure it we made down our bed. We hung up buckets under the main leaks over the bed, put our oilcloth and rubber coats over the bedding, and turned in. For a long time sleep was out of the question—spatter here, drop there, while we lay there waiting for it to come through, and in mortal fear the buckets would get full, break the nails they were swung upon, and, falling, break our heads. One stream came down directly upon the pilot's head. He put a large comforter, in the shape of a ball, under the drop. It acted like a sponge for a while, and held the water, and the pilot dropped into an uneasy slumber. Directly he awoke with his uppermost ear full of water and his head soaking wet. The engineer fared no better. He was treated to several leaks, the chief one also in his face, but he slept through most of it. His double duty that day had about worn him out, and I think he would have slept some out in a hail storm.

But it can't rain always. This time it ceased some hour during the night—we never knew—and in the morning when we awoke at six it was only cold, damp and foggy. We were on a royal disgust, and at first dec ded to raise steam and go home, but after eating a hearty breakfast we changed our minds and pulled up to the tow-head, carrying with us a dozen and a half of our decoys. Reaching there, and walking across the tow-head, we found a shallow lake about half a mile long and three hundred yards wide, surrounded by quite a stretch of marshy, boggy lands, with grass, but not a tree or shrub for cover within range of our guns in any direction. The lake was not "literally black" with ducks, but there were a great many flocks of teal and mallard upon it, and these were not wild. After making many wild shots out upon the open ground, and driving most of the ducks away, we carried our decoys across the tow-head to the lower end of the lake, from which a narrow stream of water flowed through the flat into the river, and cut and dragged down willows upon which the leaves were still green, and made a rude blind. From this we got some shots, and killed some ducks, being able to retrieve nineteen and losing others that fell where we could not wade to them on account of bogging, or that were only wounded and swam out of reach. In addition to this we bagged about twenty snipe and plover, making what we considered a good job for the work of an hour and a half. We were due at home that afternoon, and remembering the speed of our vessel the day before, thought best to start in time.

We reached the launch at 1 o'clock, and after eating a big lunch started a fire under the boiler. From the start the thing wouldn't draw. We nursed the fire, we coaxed it, may be swore at it once in a while, but all to no purpose. The best we could do was to get up a terrific smoke, the smallest part of which came out the chimney. We took the powder from a few cartridges and tried to blow her out, but it wouldn't blow worth a cent. At last we concluded to clean out the flues. How was it to be done? They were inaccessible from the top, but in the end we fell upon the idea to clean them from the fire-box. Going ashore we got a lot of long, green twigs, which enabled us to do the work. We had to haul out the fire, but couldn't spare the time to wait till it cooled off, so the fireman took a pair of wet socks for gloves and began the work. The engine was an upright one, and the job of crooking the stick in the fire-box and inserting it into the flues was tedious and, oh! so dirty. But the first twist inside of the first flue told the tale of low steam. It was literally choked up with soot. When he had cleaned about forty flues it was late and he quit and fired up. She drew as if she knew how to do it, and we soon had her under way, homeward bound. Night came on before we got into the Mississippi, and the raw pilot could barely distinguish the outline of the trees on shore. Just before reaching the mouth of Old River we met a Yazoo packet coming up in the narrow and swift part of the river. A heavy fog had come on and the boat looked as big as a mountain. In trying to give her a wide berth the pilot of the Gentle Savage ran his vessel upon a bump near shore, while under full headway, and stuck fast. The skiff broke her chain, but swung around against the side of the launch, and the engineer caught her. The steamboat passed so close to us that her waves came near rolling the little launch over. When she gave her biggest lurch the engineer cried, "By George, she is gone!" and sprang like a leapfrog into the skiff. The pilot stood upon the edge of the launch, hold of a stanchion, also ready to leap. But the little fellow stood the tossing and soon righted herself. Our lantern, however—the only light we had—had gone overboard and left us in utter darkness. This we remedied, in a measure, by using some pine sticks we had for small torches, and splitting up our broom handle when these were gone. It was essential that we watch the water in the gauge and keep an eye on the state of the steam. It kept the combined fireman and engineer busy poking his stick in the fire and then running backward and forward to look at these. Syphoning out once more the steam and the current together carried us off the bump into deep water, but just as this was done we heard the chain with which our skiff was fastened to the launch dragging over the side of the vessel, and we knew the skiff had broken loose. The engineer sprang back there, but barely in time to see the dim outline of the skiff before it disappeared in the darkness, hurrying with the current down stream, with all our game, the decoys, the engineer's auxiliary rifle, the ammunition and sundry other valuable articles. There was no use hunting for the skiff. It could not have been seen ten feet away, so we put the government light on the point behind us and struck out for what the pilot thought was Vicksburg. Getting down there after a while and vainly trying to find our landing, we at last discovered we were only down to the Town of Delta, in Louisiana, and still three miles from home. We got at home at last, but in trying to run up to the fish dock, where the Gentle Savage rested when not in use, we grounded, tight and fast, on a miserable bar, and had to yell to the fisherman to bring his skiff and take us off. The next morning a tug pulled our launch off the bar. And we found that during the night our skiff had drifted down the river and blown into the harbor alongside a steamboat, whose watchman had taken care of everything, and such good care of the game we never saw anything of it. But, as he claimed no salvage, we were glad to call it even. Since then we have never failed to securely fasten our skiff and to see that the flues of the launch were clean. On a subsequent trip we made the run from the tow head to Vicksburg in an hour and a quarter. BUBE H. POLK.

Vicksburg, Miss.

Natural History

DOMESTICATED QUAIL.

RARITAN, N. J., April 20, 1881.

Editor Forest and Stream:

I believe that I am the only person in the United States that has succeeded in domesticating the quail; the only one who has raised these birds in close confinement. There is a wide difference between a wild bird finding its own food, and its being fed in close confinement by a person who is caring for it. My quail get nothing but what I give them. When the birds began to nest, last spring, I went into their cage and made their nest. The birds were about as tame as chickens would be. The four females laid a little over two hundred eggs.

The attempts to domesticate quail remind me somewhat of the efforts of a person to invent a piece of machinery; after the first machine is made it is easy to make another. But it has been hard work to domesticate quail.

In the month of December, 1876, I shot a female quail, breaking its wing; and capturing it, brought it home. In the spring of 1879 I procured a male bird from Morris County and mated the two. After the female had laid twelve eggs she commenced to sit, and ten days later died on the nest. The male bird had sat with her on the nest for a part of the time, and after her death he remained on the nest, and August 19 brought off six young. These birds he cared for from that time until they were fully grown, as carefully and attentively and with as much affection as the female could have done had she lived. Of the six quails hatched at this time two were males and four females

I have raised quail as far as the third generation, and believe that if I resided in the country I could breed them as easily as turkeys, but as I live in town, I have but little room for them, only about twenty-four feet square, and consequently labor under great disadvantages.

Any one who attempts to domesticate quail will find it uphill work, for a while at least, but with patience and perseverance I believe that it can be done. A number of my friends have tried their hands at this, but their birds have all died. I think that in time the domesticated quail would change their color as some of mine have commenced to show white feathers in their wings.

I have had bad luck with my quail this winter, all but two having been frozen to death during the extreme cold weather. The two that I now have I saved by keeping them in the house.

I think the importance of domesticating quail is not sufficiently appreciated, but if the game continues to grow scarce, every one must recognize the necessity of some such step. I should be glad to show my birds to any one who cares to see them. HENRY BENBROOK.

Accompanying the above letter was a photograph of four of the quail raised by Mr. Benbrook in confinement.

A NEW HORSE.—A pamphlet recently published by the St. Petersburg Geographical Society contains an account of a new species of *Equus* described by M. Poliakoff. The specimen from which the description was taken, was killed by hunters near the post of Zaisan in Central Asia, and its skull and skin sent to the St. Petersburg Academy of Sciences. The describer of *Equus Prjevalski* compares it with the modern horse, and illustrates his memoir with drawings of the new species, and of its anatomy.

AN ASTROPHYTON FROM THE NORTHWEST COAST.—New Westminster, British Columbia, March 4, 1881.—*Editor Forest and Stream:* A fisherman of my acquaintance, by name Thomas Kinkade, while fishing for dogfish in Howe Sound, caught two strange marine animals, which, so far as I can ascertain, are new, at least in this part of the world; and I am unable to find any mention or description of them in any work to which I have access here; and, therefore, send on to you by to-day's mail for the purpose of having them identified. If they should be known to scientists please let me know their name and give a short description of them, or mention where a description of them may be obtained; if unknown species, I will then take pleasure in furnishing all information possible to be obtained concerning them, which, of course, would only be of any value in the latter case. Howe Sound, I may state, is an arm or outlet of the Straits of Georgia, which said straits are the waters lying between Vancouver Island and the mainland of British Columbia.—MOWICH.

Your specimen is an *Astrophyton*, a marine animal belonging to the *Radiata*, the group which contains the Echinodermata, the Jelly fishes and the Polyps. *Astrophyton* belongs in the class *Echinodermata*, with the Holothurians, or Sea Cucumbers, the Echinoids, or Sea Urchins, the Asteroids, or Star fishes, and the Crinoids, or Sea Lilies. Although regarded as belonging to the order *Ophiuridæ*, the *Astrophyton* bears considerable superficial resemblance to some of the free crinoids.

THE BEGINNINGS OF A FISH.—Flowing down from the southwest slope of Mount Rainier is a cold, clear river, fed by the melting snows of the mountain. Madly it hastens down over white cascades and beds of shining sands, through birch-woods and belts of dark firs to mingle its waters at last with those of the great Columbia

This river is the Cowlitz, and on its bottom, not many years ago, there lay half-buried in the sand a number of little orange-colored globules, each about as large as a pea. These were not much in themselves, but, like the philosopher's nomads, each one had in it the promise and potency of an active life In the water above them little suckers and chubs and prickly sculpins were straining their mouths to draw these globules from the sand, and vicious-looking crawfishes picked them up with their blundering hands and examined them with their telescopic eyes. But one, at least, of the globules escaped their scientific curiosity, else this story would not be worth telling.

The sun shone down on it through the clear water, and the ripples of the Cowlits said over it their incantations, and in it at last awoke a living being. It was a fish, a curious little fellow, only half an inch long, with great, staring eyes which made almost half his length, and a body so transparent that he could not cast a shallow. He was a little salmon, a very little salmon, but the water was good, and there were flies and worms and little living creatures in abundance for him to eat, and he soon became a larger salmon. And there were many more little salmon with him, some larger and some smaller, and they all had a merry time. Those who had been born soonest and had grown largest used to chase the others around and bite off their tails, or, still better, take them by the heads and swallow them whole, for, said they, "Even young salmon are good eating." "Heads I win, tails you lose" was their motto. Thus, what was once two small salmon became united into one larger one, and the process of "addition, division and silence" still went on.

By and by, when all the salmon were too small to swallow the others, and too large to be swallowed, they began to grow restless and to sigh for a change. They saw that the water rushing by seemed to be in a great hurry to get somewhere, and one of them suggested that its hurry was caused by something good to eat at the other end of its course—PROF. DAVID S. JORDAN *in Popular Science Monthly.*

PROCEEDINGS OF THE PHILADELPHIA ACADEMY OF SCIENCES. Part III. of the proceeding for 1880 (October to December), contains a number of very interesting biological papers. Among these are two papers by Dr. Harrison Allen, one on The Phalanges of Bats, the other On the Temporal and Masseter Muscles; botanical notes by Mr. Thomas Meehan on Sexual Variation in Plants, on Rain Trees and on Dicecism in *Andromeda Catesbæi*. Mr. Edward Potts contributes a note On Fresh-water Sponges. Rev. H. C. McCook has two very interesting notes on Ants, and Mr. Angelo Heilprin describes some New Lower Eocene Mollusca from Clark County, Alabama, and gives some information as to the stratigraphical position of the beds containing them. Mr. I. C. Martindale's paper on Sexual Variations in *Castanea Americana* is concluded from Part II. of the Proceedings.

The reports of the officers of the academy for the year ending November 30, 1880, indicate that this, one of the foremost our American scientific associations, is in a flourishing condition.

Copies of the proceedings of the academy can be furnished to those desiring to obtain them at $6.25 per volume.

TAME SQUIRRELS.—Cartland, N. Y.—As many articles have been written of late for the FOREST AND STREAM as to the mode of hunting, habits, the variety of color, etc., of squirrels, I would like to bring to notice two white squirrels, albinoes of the black or gray, that I have owned at different times.

It would seem they were both of one litter, as also were two others that were shot, taken to a taxidermist, preserved and mounted. The four were all caught or shot in the same vicinity. The first one taken alive was caught in a box trap, the second one by being run down in the snow, and I could not ascertain that any others had ever been sighted before or since that time, so I infer they all came from the same nest. Dick, the first one I owned, was perfectly tame when he came into my possession. I had, at that time, a black and tan puppy that became so friendly with Dick that I would at any time allow them to play a spell together, without fear of harm to the squirrel. He would come at my bidding from the trees, where I often permitted him to go, of course keeping watch that he did not get out of hearing of my voice. After losing Dick I heard of the second one being caught, which I soon bargained for. When I brought him home he had only been caged a few days and was very wild. I had great difficulty in making friends with him, but finally had the satisfaction of seeing him so he would leave his cage, run up my arm, and sit upon my shoulder. But he would always, if I went too far with his squirrelship, give that warning chipper that I knew meant mischief. Fred was finally sold to Mr. Geo. Chidsey, of Elmira, to mate one that he had. They were bargained for, and were to be sent to a gentleman in England, for quite a sum of money. Unluckily, Fred was found dead in his cage a few days before the date for shipping. MIC.

YOUNG BUBO VIRGINIANUS.—Elmira, N. Y., April 29.—While trout fishing two weeks ago I came across a young owl on the ground directly under a tree in which was the nest. The young bird is covered with down, and is about the size of a common foot-ball. That is, the feathers and down make it look nearly round. I am feeding it on raw meat. Can you inform me if that is a suitable food for so young a bird, and also how often to feed; am pretty sure this is a horned owl as the feathers commence to grow out on the side of the head and look like horns.—A. H. W.

Feed meat three times a day, but do not give it too much.

INTESTINAL PARASITES IN A WOODPECKER.—Boston, April 29.—A day or two since when stuffing a woodpecker (yellow hammer or flicker) while examining the inside of the body I came upon two worms—one about four and one-fourth inches and the other a trifle over two inches. The larger of the two was entirely white with the exception of a dark streak through part of the body which I took to be the food of its intestines (?), the other white and apparently mottled by grayish black spots or rings. Never have seen anything of the kind before. Do you think they might be tape worms, or do birds have that sort of parasite? The bird had been shot about twenty-four hours, but could not see any trace of life in either of the worms. They were found in the belly of the bird and close to the back—not in the intestines. Would you kindly answer what you think, if not too much trouble?—H. J. T.

The intestinal parasites which you found were not tape worms if they were not in the intestines. If you still have the specimens better send them to Dr. A. S. Packard, of Brown University, Providence, R. I., the authority on such matters in this country.

CAT NURSING SQUIRRELS—Oskaloosa, Iowa, April 18.—At Auburn Post Office in this, Mahaska, County Mr. Stephen Foster has a common house cat of the female persuasion, that has a litter of kittens. There is nothing remarkable about that, of course, but there has been an addition to this family that is rather strange to me. Mr. Foster's boys recently caught some young squirrels, and took them to the house and placed them on the floor near where the old cat kept her family. No sooner was this done than old tabby claimed them as her own. She carried each one into her

box where they have been for over ten days, receiving a great deal more attention than the balance of the family. The old cat will allow her kittens to crawl out of the nest, but she will not allow the squirrels outside at all. A good many of our citizens have visited Mr. Forster on purpose to see this, to us, new and strange family.—W. L.

A TREE CLIMBING SNAKE.—Twin Lakes, Fla., April 20. I saw, while hunting, not long since, a water moccasin lying on the body of a six-inch pecan tree which might have leaned a trifle from perpendicular, only a trifle, though. His head was down, and body laid straight as an arrow up the tree, which was smooth and straight. His neck (if snakes have necks) was bent to one side two or three inches back of his head, rest of body perfectly straight. Did he crawl down the tree in this position, or how did he take it? It was certainly very odd and new to me.—S.

ARRIVAL OF BIRDS AT LOCKPORT, N. Y.—Song sparrows, arrived March 7; meadow larks, 13; robins, 15; cow blackbirds, 15; bluebirds, 16; cherry birds, 23; crow blackbird, April 6; redwing blackbirds and mourning doves, 7. Snipe have not made their appearance yet.—W. P. D.

DEATH OF AN ARCTIC EXPLORER.—Lieut. Karl Weyprecht died March 29 of consumption at the age of forty-three. He was, with Lieut. Payr, the discoverer of Franz Josef and in the Austrian Arctic expedition in 1872-4.

RECENT ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN.—One white-haired porcupine, *Erethizon dorsatus*; one red-shouldered buzzard, *Buteo lineatus*, and one rough-legged buzzard, *Archibuteo lagopus*—were purchased. one white weasel, *Putorius ermineæ*; two opo-sums, *Didelphys virginiana*; one virginia deer, *Cervus virginianus*; two rabbits; two raccoons, *Procyon lotor*; one skunk, *Mephitis mephitica*; three screech owls, *Scops asio*; three red-tailed buzzards, *Buteo borealis*; one Carolina wren, *Thryothorus ludovicianus*; one sulphur-crested cockatoo, *Cacatua galeritis*; one red-shouldered hawk, *Buteo lineatus*; one turkey vulture, *Catharies aura*; one canvas-back duck, *Fuligula vallisneria*, and one duck hawk, *Falco communis anatum*—were presented. One rat kangaroo, *Hypsiprymnus rufescens*; one great kangaroo, *Macropus giganteus*; one dingo, *Canis dingo*; one zebu, *Bos indicus*; one Bactrian camel, *Camelus bactrianus*, and one raccoon, *Procyon lotor*—were born in the Garden.

Game Bag and Gun.

HOUNDING VS. STILL HUNTING.

WE begin the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:

1st. What is the character of the country referred to?

2d. What is the prevailing method of hunting deer?

3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?

4th. Describe in like manner still hunting and its effects.

5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?

6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?

7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?

8th. What is the open season for deer?

9th. What are the winter habits of deer, so far as you have personally observed them.

In addition to the following communications, we have on hand, and will publish from week to week, letters from J. P. F., Hunter, Still Hunter, Edw. Norton, Rifle, S., J. W. S., C. Fenton, G. F. W., H. B. Roney, D. F. McD., G. R. B., Adrian Ondack, A. C. C., The Whooper, and H. G. These writers are scattered over the country, and the mass of testimony thus furnished is of corresponding value.

MAINE.

Having visited and thoroughly explored a tract of country lying between the headwaters of the Passadumkeag, Narraguagus and Union rivers, this fall, during the hounding season, I will endeavor to give your readers the benefit of my observations.

The tract alluded to is bounded on the west by Brandy Pond, north by Nicketonas Lake, east and southeast by Eagle and Alligator Lakes, and south by William's or Great Pond. It comprises a tract of land which may be roughly computed as six by twelve miles square. Nine-tenths of this tract is "old burnt land," part of it densely and part sparsely covered with a second growth of poplar, birch and maple; and scattered throughout the territory are small unburnt swamps, so thick as to be all but impassable, into which the does and fawns retire at the approach of the rutting season. On the east side of the tract there is an extensive ridge of old-growth, hardwood timbers. No better cover or feeding ground for deer exists in this State. It is safe to say that no season has passed, for twenty years, that has not witnessed hounding in some, and frequently all, of the lakes above mentioned, and my surprise was boundless when I found twenty deer to every one which was to be found there when I visited the place ten years ago. It is needless to state that this was not *because* of the hounding, but *in spite of it*, and wholly owing to the splendid facilities for cover made by the growth of the timber during the ten years of my absence, it being too small to afford the necessary protection at that time.

There were gangs of men and hounds at every one of those lakes this fall. Twenty-four deer were killed in Eagle Lake, presumably twice that number at Nicketonas, and very few at the others. The fact that deer abounded throughout the entire length and breadth of that tract furnishes an unanswerable argument in favor of those who hold that hounding deer does not drive them out of the country, and, I must confess, completely revolutionized my ideas on the subject. The music of the hounds could be heard in almost every direction, and yet the deer appeared totally unconcerned, and we obtained two nice bucks which jumped up ahead of a small Irish setter which accompanied us.

Hounding in this section is practiced as follows. From one to four canoes are placed in the lake (according to its size) with usually two men in a canoe. They lie concealed near the runways, where experience has taught them the deer usually take water. Perfect silence and quiet is necessary when the deer approaches the beach. If he strikes boldly in and swims away from the shore, his return is cut off and his capture certain, but if he courses along the shore, in shallow water, in a direction opposite to that from which the hunters are concealed, he escapes for the time being, and has to be given another run; and some of them are so wary in this respect that their capture is a matter of no little difficulty. Perhaps I ought to state that there always has to be a spare man to put out the hounds, and when all are canoeists they usually take turns. Some hounds can be turned loose and will scour the forests till they start a deer, paying no attention to any but the freshest track, others will potter for half a day on an old one, and have to be led till a fresh track is found. Formerly ten deer were killed in this State by still hunting to one by hounds, but as the deer grew scarcer the proportion killed by hounding increased, until these figures have become nearly reversed. More are killed in this manner by nonresidents than by residents, but the numbers killed by visiting sportsmen (properly so called) are comparatively few.

There is, as is well known, a law prohibiting hounding at any and all seasons in this State, but it is not enforced, and I doubt the propriety of attempting to do so, as the great majority of our business men stand about the same chance to kill a deer by still hunting that a camel does to go through the eye of a needle, or a rich man to enter the kingdom of heaven. It would be better to repeal it, as the way it stands at present any gentleman who has got a deer during the season, with hounds, feels a moral restraint which prevents him from complaining of the man who butchers them when they are floundering helplessly in the crusty snow. But there is a strong feeling against the use of hounds in Washington county and the eastern part of Hancock county, which is fully shared by their senators and representatives, and a repeal is not practicable.

As for still hunting, there are two ways of following up a deer on light snow. Both have strenuous advocates, and both are equally successful when practiced by a master of the art. The most common mode is to creep on the track with all the silence and softness of a cat, to avoid the breaking of a twig or the crushing of a stick under the feet, and to act at all times as though the deer was within half a gun shot, watching for the hunter, with every sense alert. The other, and more rarely adopted method is to travel at the highest rate of speed which the hunter is capable of sustaining through the day, trusting to his quickness of hand and eyesight to beat the deer at his own game. I have seen this method followed, with great success, by a few who were peculiarly adapted for it; and it has this great advantage, that in noisy, crusty hunting, one will have decent success under this mode, when it is impossible to get a deer by creeping. A law permitting hounding, but prohibiting shooting in the water, would not be practicable here, as shooting deer on their runways is almost unknown, right royal sport though it be.

About the middle of December, at the close of the rutting season, the older bucks retire to the most impenetrable swamps, there to remain till their antlers drop off, no matter how shallow the snow may be, while the does and fawns herd together, usually selecting their feeding grounds on the heads and along the banks of small brooks, the extent of their travels being wholly regulated by the depth of snow.

In conclusion, I would state that it is my unalterable conviction that deer will increase and multiply no matter if they are hunted in all and every manner known to man, provided that none are killed in any manner between Jan. 1 and Aug. 1. Jack and crust hunting should be relegated to savages, or the still meaner white man who has none of the instincts of the hunter except the desire to eat when he is hungry.

PENOBSCOT.

ONTARIO.

The very able defence of "hounding deer," by "J. C. H.," in the FOREST AND STREAM of the 24th February, hits the nail squarely on the head, and I am sure will be read with pleasure by the hundreds of gentlemen sportsmen who take an annual "outing" in the backwoods of Ontario, seeking health and recreation and very necessary rest from the excessive brain work of the other forty-eight or fifty weeks.

My experience extends only to the Muskoka and Nipissing districts, the counties of Haliburton, Victoria and Peterborough, but I have, in company with a few friends, paid that section a visit every fall for the last sixteen or eighteen years, doing a little hunting and fishing, having a good deal of canoeing and camping out, and returning home in better health and spirits, and in better humor with ourselves and all mankind. We go ostensibly to hunt deer, which being something to look forward to, carries us over many trials and hardships. Some of our trips extend seventy-five or one hundred miles into the wilderness, in canoes, with fifteen or twenty "portages" or "carries" of from one hundred yards to three miles in length, and varying from a good Indian trail through a clean, dry and comparatively level hardwood forest, to a climb over a rocky ridge four or five hundred feet high, and any amount of fallen timber, or through an almost impassable cedar swamp, full of roots to trip one at every step, and sink holes which have even a greater tendency to send one headlong, especially if he has a fifteen foot canoe on his shoulders, and his hands occupied with rifle, etc. These inconveniences are passed over lightly, and are forgotten in anticipation of soon hearing the exhilarating music of the hounds.

On returning to camp in the evening, the following and similar remarks are frequently heard: "I never heard a sound of deer or dogs all day. *If I could have only heard the dogs giving tongue for awhile*, I should have been quite satisfied!" The country is principally composed of granite ridges, cedar swamps and small lakes, with an occasional stretch of hardwood. The lakes are so numerous that there are said to be no less than fifty-two in one particular township, therefore the only possible method of hunting deer in the fall is by hounding them, and they can hardly run a mile in any direction without coming to a lake or river. Some few are shot in the woods, but rearly all after they have taken to the water.

My experience goes to show that shooting on runways is pleasant sport for the hunter, if he be a good and quick shot, but it is rather the reverse for the poor deer. It is no exaggeration to say that not one in twenty are "killed in their tracks," that we so often read about, perhaps 60 or 75 per cent are wounded; a few may not go more than two hundred or three hundred yards, and can generally be found, the greater number can travel for miles before being overtaken by the dogs, and worried to death, or being left to die by inches, in either case the hunter never hearing any more of them.

The other method, shooting them in the lakes here, calls for no little skill and judgment. The lakes are mostly small, the larger ones being long and narrow. A deer can swim them almost before the hunter dare show himself, and when pushed they swim almost as fast as a man can paddle a canoe. In proof of this I know it to be a rare thing in our country for a party of five or six gentlemen, with as many guides, to kill more than eight or nine deer in a two weeks' trip. It being a common occurrence for one or two members of a party to never see a deer on the whole trip, except those brought to camp by their more fortunate companions. Your correspondent, "Adrion Ondack," is about right when he says "Deer have many ways of fooling both dogs and men." If some of those gentlemen who talk of "being paddled up to a deer to slaughter it in the water," would learn to "paddle their own canoe," and rely on their own resources to get the deer, and leave their guide at the camp to have dinner ready on their return, or make himself otherwise useful, I rather think there would be less of this kind of talk, unless it came from some of the disappointed ones! When a man does get within easy shooting distance of a deer in the water, the deer is almost always killed, preventing future suffering to the animal, and making it of service as food.

Still hunting is practiced here after the first snow fall, which usually occurs about the end of October, away into the close of the season, by both settlers and pot hunters, the latter killing them by wholesale, and selling the meat to the lumber shanties at four cents per pound. When it becomes a drug there they ship it to a market, or as much of it as does not spoil! I have known two men to kill more deer than a lumber gang of fifty men could be induced to eat. It is considered poor work indeed if each hunter cannot average one deer a day, Sundays included. In one case, in the back part of the county of Peterborough, one still hunter killed nine deer in one day.

It is a very rare thing indeed to hear of sportsmen still hunting in this section of the country. The weather is so very changeable, the country so very difficult of access when the lakes are partly frozen up, and life in a tent not very pleasant just then.

Deer have a worse enemy than the pot hunter in our country. Wolves probably destroy more than all other agencies combined. With a crust on the deep snow, the poor deer are completely at their mercy. We have a Government bounty of four dollars, which is sometimes supplemented by a township or county bounty of two dollars, for the scalps of wolves.

In reply to your fifth question, I can safely say ten deer are killed by settlers and pot hunters to one killed by sportsmen.

Sixth.—The game law of Ontario has been amended so that it is now lawful to hound deer only between the 1st of October and the 15th of November.

Seventh.—A law permitting hounding, but prohibiting killing deer in the water, would be useless and impracticable.

Eighth.—The open season for deer in Ontario is from the 15th of September to the 15th of December, with two weeks to market venison in.

Ninth.—Deer congregate or herd in "yards" during the continuance of deep snow, in the winter, in the lumber woods, where there is plenty of fallen timber to browse on, or until dispersed by two-footed or four-footed wolves.

They seem only to diminish on the approach of the settler, there being as many to-day as there were twelve or fourteen years ago on some of our old hunting grounds not as yet invaded by the advancing footsteps of civilization. It is a noteworthy fact, in this connection, that after the lumbermen have culled the best timber off from a section, and have moved farther on, deer have again become plentiful.

In conclusion, if it were made unlawful to hound deer in the section I am writing of, it would put a stop to deer hunting, as far as sportsmen are concerned, and would be a benefit only to the pot hunter, the settlers being quite willing to see a party of gentlemen hunters come among them and engage them at two or three dollars a day, each canoe and dog fifty cents per day extra. I could name a party, partly New Yorkers and partly Canadians, whose expenses on a two weeks' trip to Muskoka, last October, exceeded one thousand dollars, after leaving Toronto. Settlers get all the venison they want, and do not begrudge the few deer killed by the sportsmen, for which they are so well repaid by having these little extras thrown in their way. G.

WEST VIRGINIA.

In calling for information upon this subject, the FOREST AND STREAM has taken a wise step toward the solution of a much vexed question. To the minds of many sportsmen, however, it is already solved. With a bigotry and unfairness which, happily, is not characteristic of them, they see but one side. Having made up their minds that hounding is reprehensible, they would stop it by any means, even shooting down the poor dogs whenever a safe chance presents itself. But the man who undertakes, in this manner, to redress what he conceives to be a wrong, can hardly be classed among sportsmen.

If our legislators would recollect what an important part game laws played in the early history of England, perhaps some of their now latent wisdom might be aroused. The abrogation of the Forest Laws was an important step toward that freedom of which we are the heirs. In those early days, to hunt with hounds was a courtly pastime, while still-hunting was followed by poachers and pot hunters. Time seems to have reversed matters, and we now find the still-hunter seeking to put himself in the position of the ancient nobles—no one must hunt except as he dictates.

As yet we can have no national game law, and it will be well if centralization never reaches so far. Our game laws can be adapted to the necessities of localities, and we think that some localities may properly admit of hounding. In West Virginia, where I have hunted for a number of years, the death of a valued hound is often followed by an unpleasant occurrence—a cracked head, for instance. Let us look for a moment at the results of hounding in that country. One bright morning, several years ago, I went out with an old darkey guide to start the hounds. Our ground had been run over all the season, and when we reached it several packs of dogs were making the woods ring with their harmony. A still-hunter would have sworn that not a deer was left in the woods. I thought differently, however, and climbing slowly up the mountain, I uncoupled five hounds, one at a time. In less than ten minutes I had four bucks running, and might have as easily started a dozen. In conversing with an old resident that day, I inquired how long hounds had been run upon this particular mountain. "You must ask some one older than I am," said he, "they were run there before I was born." Here, then, is a piece of deer forest in which the deer have been hounded for at least a hundred years. Of course the deer have become scarcer, but they seem to be in goodly numbers yet. After the ground had been hounded over all last season, a party went out still hunting in the snow, and reported tracks so thick that they could not follow the deer.

Does any one suppose that all the deer within the sound of a hound's voice get up and flee? Not a bit of it. Indeed, even after they discover they are pursued, they will dodge around for some time before leaving their native woods. The popular belief is that deer are always sure to be killed when once started. I have hunted with hounds for twelve years, and during that time have seen many escape. I feel perfectly sure that out of every three deer started two escape, and once free they are as sure to return to their old haunts as the bee to his hive. It would be well to pass a law prohibiting the killing of deer in water, for here they have less chance of escape.

The deer's feet are its best protection, and in the economy of nature they were surely meant to be hounded. My observation has led me to believe that ten times more deer are killed by still hunting than by hounding. Many things besides bad shooting aid the deer in escaping when run by hounds.

Hounding is condemned on the ground that it is "unsportsmanlike." If we could get some one to define "sport," we might get at this charge. If the example of past ages were followed, hounding would rank as the highest sport. But, after all, the amount of skill required is the best test of the sport in shooting. Frank Forester tells us that he would as soon stand on Broadway and shoot omnibus horses as to shoot deer on a runway. This was doubtless very gratifying to that class who condemn everything they don't indulge in, and also to the class who affect sporting ideas. At best this assertion is but a piece of nonsense.

The skill required on the runway, to hit a deer, is equal to that of the still hunter; the excitement is greater. But let us not waste words in fruitless argument. Every one to his taste. We prefer the joyous music that makes the welkin ring, and the noble greyhound that springs from the leash with eager bounds. If the still hunter prefers to crawl upon his victim and shoot it down, perhaps in its very bed, we do not object. We insist, though, upon being let alone.

Not long since these columns informed us that Canada had passed a law permitting any one to kill a hound found running deer. This is the noblest manifesto we have yet had from the advocates of still hunting. Is it not barbarious? Killing an innocent brute, set on by its master, and following its best instincts. Suppose we wished to protect quail, and a law was passed licensing any one to kill a pointer found standing a bird. The cases are similar—who will justify either of them? SYCAMORE.

GAME IN WESTERN FLORIDA.

MONTICELLO, FLA., April 16.

THIS is an excellent point for visiting sportsmen to adopt as their headquarters. The western coast affords splendid fishing—sheepshead, weakfish, channel bass and all fine salt water fish. Excellent duck shooting can be had at the same time.

In the lakes plenty of black bass, perch, pike, etc., can be found in any number, some of the bass weigh fourteen pounds. Those desiring to try their hand at larger game can, in this vicinity, hunt bears, wildcats, possums, raccoons, deer, turkeys, etc. The country here is high, slightly rolling and very healthy. The scenery is beautiful. Most of the sportsmen seeking good sport miss it by going to Jacksonville. The fare here from New York by steamer is $30. I left New York on January 15 and arrived here, in Monticello, Fla., on the morning of the 19th. I had six dogs, and it cost me $3 per dog by steamer to Savannah, Ga. The dogs were in a comfortable place in the lower deck. I took the precaution to provide them with a bundle of straw each. I had them chained in a space about forty feet square; this made an excellent place to exercise them in, and instead of being tagged out when they reached Savannah they were as fresh as when they started. I then bought a through ticket to Monticello, *via* the Atlantic & Gulf Railroad, which cost me $2 per dog. The dogs thus cost me $30 for fare and about $5 more bonus to baggage master. I left New York on Saturday 15, on Wednesday 19 killed forty quail, and for two months I have had just such kind of shooting. Board here, at first-class hotels—can be had for $20 per month. The town of Monticello, or rather city, for it is incoporated—is a beautiful place; the roads are well kept, and there is a first-class livery stable. Here, instead of high prices, as at Jacksonville, the visitor will find reasonable rates for everything. Tallahassee is thirty-two miles from here; Jacksonville one hundred and ninety miles. The people are polite and hospitable to visitors. W. W. T.

THE EVOLUTION OF A WING-SHOT.

NORTH ANDOVER, Dec. 16.

THE first fifteen years of my life were spent in Maine, where game was quite plenty, and my love for field sports began, if not with my existence, very soon after, and now, as I write, my mind goes back to those happy days of youth, and in imagination I climb the beautiful old hills as of yore. At first my arms were a wooden gun with a cross bow, and the trusty dog was brown and white, with a curly tail; his pedigree was—well, for short, let it be called a cross between a hunter and a findit, and his training was carefully done by nature, and does so well that the dog never failed to find game. Besides the bow-gun and dog, I used a steel trap and box trap, the former's spring, being too much for my weight and strength, had to be set at home by placing the spring under a heavy wagon wheel, then, by swinging the pole to one side, the wheel would roll on and press down the spring, when I would set the trap, and swing the carriage pole back until the wheel would roll off the spring, leaving the trap ready to be carried perhaps miles away, and concealed in some place which experience had taught me was frequented by game. As I grew older, a shot gun took the place of the bow, and my field of operation increased, and I became quite an expert pot hunter and snarer.

Although skilled enough to behead a stationary barn swallow with a little muzzle-loading pistol, and to seldom miss a sitting shot with the shot-gun, wing shooting never occurred to me as among the possibilities. No one then did it in that vicinity, and I had never seen it done. But one day I was fortunate enough to fall in with some sportsmen from Connecticut, who took an interest in me, because I was thoroughly acquainted with all of the best game districts in that section, and they presented me with a copy of the *American Sportsman*, which was the first I had ever seen. It was read and re-read, for although it did not contain so much valued information as grace the columns of the FOREST AND STREAM, yet it was valuable indeed to me. It contained a few hints on wing shooting, and well do I remember my first attempt. I went alone, with my gun and an old tin coffee pot, to a back lot, where my practice would not be broken by spectators. Holding the cocked gun in the left hand, the coffee pot was thrown into the air, with all my strength, with the other, and bang went the gun before it touched my shoulder. A race to the tin pot told me it was a failure, ditto the next, and so on until my supply of shot failed. But I was not discouraged. I knew what experience it cost to learn what little I knew of pistol shooting, and I looked upon wing-shooting as far beyond anything I had ever seen, and I expected to be obliged to practice long and patiently, and so was quite astonished when, at my next practice, the old coffee pot was knocked quite out of shape at nearly the first shot. I had got over the first excitement, and not knowing how much allowance to make for the motion of my target, was determined to find out for myself; so I commenced by shooting several feet ahead, lessening the distance each time until no allowance at all was made, when, as they were straight away shots, the result was a success. After a little more practice I could hit with a degree of certainty. My next step was for a public exhibition, and finding a playmate I proposed to throw up my hat for him to shoot at, if he would do the same thing with his for me. He agreed, and the result was that my hat was untouched while his was riddled, and my reputation for shooting on the wing was made without my ever having shot a single bird on the wing. Yet the key had been touched, and soon I could do tolerably good work. I could not shoot "five or six ruffed grouse in succession," and I am not ashamed to say, without an apology, that I cannot do it now, and I do not know of any one who can do it without picking the shots.

The writer thinks that our whole sporting community is covered with an illusion caused by the unscrupulous exaggeration and bragging of many would-be sportsmen, who, wishing to make themselves appear very expert, not only tell all they can of their own success, but can collect of those they meet on their trip. We are extremely fortunate in having so reliable a medium as the FOREST AND STREAM in which to record our experience for the benefit of others, and I say let us not be trying to drag to the front rowdyish bragging or attempts to cap off every difficult shot or feat with a pull at the flask. And just here I come to what I most particularly wish to say. To protect our game we must stop this tinkering on our game laws, for we already have more law than sentiment, and the word sportsman is so mixed up with drinking, gambling and so many other evils that our honest farmers can see nothing else; nor will any undertaking succeed as long as we allow so many gambling rowdies to break in and corrupt and dispel our rifle matches, our field trials and every other laudable undertaking. My idea is that to protect our game we must make sportsmen of those snarers and pot hunters, instead of hurling all sorts of damaging missiles in their direction. Instead of condemning them for setting a snare and catching a bird, because they have sportsman's blood in their veins but have not sufficient skill and knowledge to bring the bird to bag after it has sprung from its hiding place and is speeding away with that ever-to-be-remembered whirr. Perhaps a few instructions and a little encouragement would fan that spark, which lies nearly buried in that young snarer, to a perpetual blaze, and warm his ambition to make a skilful, expert sportsman. There is much good nature throbbing in the great rural heart, and much enjoyment for those who know how to draw it out. Let those who are gentlemen conduct themselves as such. Let us remember that the farmer on whose land we shoot will judge us by what he sees of us. Let us remember that a gentlemanly deportment is necessary to command respect, and if we receive much enjoyment and good treatment, let us return something for it. Appreciation will be much better than nothing, and is all that will be received in many cases. G. W. E.

OUR DETROIT LETTER.

AT last the uncommonly stiff back-bone of our worst Michigan winter since 1841 is broken, and the heart and stomach of the sportsman is proportionately gladdened. I can give readers of FOREST AND STREAM certain facts concerning recent operations hereabout which will open their eyes, but I beg them not to suspect me of romancing. The sober truth is remarkable enough to make it worth while to put it on record. Thus, a few days ago, R. S. Fay, of Boston; H. H. Brown, of Cleveland, and Hon. Andrew Jackson, of Sault Ste Marie, went down to Point Mouille to shoot ducks. Inside of two weeks they killed upward of a thousand canvas backs, red heads and blue bills, but (and now look out for the big figures) seven hundred of the thousand and more were dropped by these bold warriors from Saturday to Thursday. Think of that destructiveness, ye mewed up men of business to whom fare and tret is the *bete noir* that stands ever in your path with fierce and wide open jaws, waiting to devour you! Can you imagine a five days' gunpowder revel like that on "grounds that may show even a greater record before the Spring packs up its carpet sack?"

Congressman Lord took a guest's run down to the same marsh the other day, where the boys gave him some of the finest shooting he ever had. He is an enthusiastic sportsman, a member of the North Channel Club, and an unerring shot with rifle or shot gun, equally at home with big and little game. Mr. Fay, the Boston enthusiast, of whom I spoke in the opening, says he belongs to many clubs, and has shot over most of the crack places on two continents, but his recent experience at Point Mouille discounts anything in his previous achievements of that kind. He assured me this morning that it was the best shooting he ever knew. Friend Banks can indorse his estimate, I do not doubt, for did not he pilot one of the famous Irish rifle team to that identical spot once upon a time within the memory of the present historian? That same Mr. Fay, in partnership with H. H. Brown of Cleveland; L. B. Jewell, of Hartford and Ed. Nichols, of Battle Creek, in this State, is building a private cabin at the Point (they are all members of the club, you must know). The new ranch is to be 20x40 feet on the ground, containing four bed-rooms, and a large sitting, reading or reception-room running the whole length of the structure through the middle of it.

I have information that the Indians are spearing immense numbers of black bass at the St. Clair Flats and selling them for the Detroit market, where they command on sight ten cents to a shilling a pound.

Migratory ducks have practically left us for a more northerly latitude, though mallard, teal and wood are still with us, of course. Still they have not shown up in anything like their numbers last year, a fact which is attributable to their feeding places being so long frozen up. Snipe are extremely scarce for the same borealic reason. You could not get one for your supper though you should offer a kingdom for it. I have not heard of any around here though I have made repeated and searching inquiry.

Geese are on the wing in millions, to speak within bounds. Old observers say no such spectacle has been seen here before within the period covered by the utmost stretch of their recollection. To me it is certainly a wonderful sight. Down at the mouth of the river and far out in Lake Erie wild swan are also gathered in surprisingly large numbers. I do not quite know what this argues, but I dare say most persons who read this letter can tell me all about it.

SPRING-TIDE.

TWO RATS—ONE TRAP—Ways Station, Bryan Co., Ga., April 24.—The following extraordinary thing happened here a few days since, viz., two full-grown rats were caught at a time here the other day in a small steel trap, one by the hind leg and the other by a front leg. Now, as the trap was set by a hole, said rats must have been in a great hurry to say the least. I never heard of a similar case. There are also very few rats on my place, which makes the affair all the more strange.—GEO. L. APPLETON.

SPRING GAME NOTES.

Coon Rapids, Iowa, April 18.—The geese and ducks have come in thousands. I was out three days ago, and in two hours had four mallards and two geese. I have just had an invitation from a farmer (he has about fifty acres of corn out yet) to go to his place and shoot the geese, ducks and cranes out of his field. He says he will build me a blind and board me until they are gone if I will keep them out. I will do it or burst the gun. We have had prairie chickens in thousands around all winter. I can't find any quail; think they are all dead.—W.

Bedford County, Va.—Snipe have been fairly numerous in their usual haunts this month, and several duck have been shot. I hear it reported from the mountains that there is a very large stock of trout in the streams this year, as was anticipated there would be. Before two weeks are out I hope to have tested that fact in person. In a letter of mine some weeks ago in which I mentioned that "old bar's" were in their usual abundance and that schoolboys had had big times with them in the snow, a typical error made me write "old bars," which, with the context, must have appeared a somewhat startling statement to those of your readers who are credulous as to Southern matters.—RINGWOOD.

Haverhill, Mass., April 22.—Woodcock have returned in fair numbers, and if they are not molested we shall have something to shoot at next fall. I have heard very good accounts of quail and think there will be more in this section next fall than for years, as there are more to start with. A few snipe have been seen, but not enough to waste time on. In reading G. W. Edwards' article I was glad there was one sportsman in this section willing to help protect our game birds. There are enough sportsmen in this place to get up a good club for the protection of fish and game, and keep the pot hunters out of the woods at this time of the year.—SACHEM.

Oskaloosa, Iowa, April 18.—In regard to our quail I think the greater portion perished during the past terrible winter. I can hear of scarcely any birds being seen since the snow has gone, save those found in fence corners and along hedges, frozen or smothered to death, and, I think, it will take three years at least, provided that none were shot during that time, for them to recover what has been lost in the winter. We are having very high water here this spring, and more ducks than ever known before. Our sportsmen are having a glorious time and are making some splendid bags.—W. L.

Wellsville, N. Y.—Woodcock are with us again. I have seen quite a number of partridge (ruffed grouse) this spring, and I do not think our severe winter thinned them out more than usual.—F.

Rochester, April 28.—I have heard of no extensive bags of English snipe being made as yet. It has been exceedingly dry since the snow left, as there has been no rain until to-day. A warm rain would probably bring birds. Twelve birds to two guns is the best day's work I have heard of.—B.

DISHONEST EMPLOYES—New York, April 26.—On the 22d inst. I sent by Dodd's Express, eleven head of game, including four brant from Jersey City, to my residence in this city. They were firmly tied together and fastened securely to the handle of my satchel; they were checked as baggage from Mannahaukin to Jersey City. As the train approached Jersey City I gave the check to Dodd's Express Agent, and received from him the usual receipt. Late in the afternoon my satchel and game arrived, but two of the best brant were missing. As this was the second time I had game stolen by employes of the same express company I thought it time to inquire into the matter, but on making complaint at the office I was told that my claim would not be allowed, and that I was to blame myself for not getting a receipt for the number of game I had. This is probably true, but when one intrusts his goods to a first-class express company he should feel that they are safe. But experience teaches. In the meantime I would warn sportsmen against sending their game home by Dodd's Express unless they can keep it under their eyes the entire time it is in their charge.—I. E. M.

It does not appear that the birds may not have been taken by the railroad employes. Our correspondent's experience should teach others to be particular to obtain a receipt particularizing the heads of game intrusted to the express agents.

THE SINK BOAT AGAIN.—Cheers for "Sink Boat." I am heartily glad to see some one come forward in defense of this most abused method of ducking. In your issue of April 21, "Sink Boat" uses the same argument that has often occurred to me. It is not worth while to repeat it, but I cannot understand the perversity of some of the sporting fraternity who will hide in a deer lick or shoot from the most deceiving blind they can construct, and always with the desire to kill as many birds as possible, and yet denounce their friends who are enjoying themselves in sink boats. You may say what you please about slaughter, but I have yet to know the man who takes his gun to the bays with the intention of killing so many birds and no more. On the contrary, he hopes for a big bag; and if his expectations are fulfilled, he comes home highly elated with his success. But if his neighbor sees fit to use a box, and is equally successful, the former calls it butchery. We, who find exciting sport in the sink boats, propose to follow our inclinations just the same in the future, for no lover of real sport, having once used one would ever return to a dull old blind where shooting, or rather waiting for a shot, grows monotonous on your first day. Let sportsmen who want to have genuine fun next season hunt up a sink boat.—CUTTER.

AN IMPORTANT MEETING of the Long Island Sportsmen's Association will be held at the Royal Arcanum Room, Music Hall, Brooklyn, Friday evening, May 6. All are invited to be present.

SPORT IN TENNESSEE—Dyersburg, Tenn., April 20.—The winter here has not damaged the quail crop. Wild turkeys are abundant; one man killed six in less than one minute near here a few days ago, and another one killed five. They are brought to town nearly every day. The boys all have

rifles, and are thinning out the game rapidly. We are about twenty miles from Reelfoot Lake, the great breeding and fishing grounds for our black bass, striped bass, white perch and other fish. Reelfoot was formed by the great earthquake in 1812, is thirty miles long, by five to seven wide, and is teeming with fish, duck and geese, and a few swan. Squirrels are "thick as leaves in Vallambrosa." They are gentle, and and are very fat and juicy The young ones are now half-grown, and will be mature very soon. It is not an unusual thing for a good hunter to bag fifty in a day. One word about guns. Why does not some one manufacture a .32 cal. magazine gun? We have lots of the .38 cal., but it is too large for small game. Who will be the first to make such a gun?—T. L. W.

MIGRATORY QUAIL.—We see it reported in a Boston paper that "the Messina quails which Messrs. Peter Jerris and J. P. Longley, of Lewiston, set free on the farm of Mr. Longley's brother in Greene last fall have returned to the farm in large numbers. They are the first returned quail heard from of the hundreds imported by our Maine sportsmen last year."

THE NEW JERSEY GAME LAW.

THE game law passed by the late Legislature of New Jersey is one of the worst pieces of legislation of this character ever put into a statute book. The Legislature of 1880 closed the woodcock season until September 1. The Legislature of this year, without waiting to allow that law to produce good results, has opened the season from July 1 to August 1; closed it during August, and opened it again from September 1 to December 16.

The second section of the new law is as follows:

"2. And be it enacted, That no person shall kill, take, expose for sale, or have unlawfully in his or her possession, after the same has been killed, any ruffed grouse (commonly called pheasant), or quail (sometimes called Virginia partridge), except only between the last day of October and the last day of December, in any year, or any rabbit between the last day of October and the first day of December in any year, under a penalty of fifteen dollars for each rabbit, grouse or quail killed, taken, exposed for sale, or had in possession contrary to the provisions of this section."

The intention of this law was to make the open season for rabbits from October 31 to December 1, but, as a careful reading of the above section will show, the law really makes from October 31 to December 1 the only closed season for rabbits, so that they can be shot at any other time in the year. Even without this error the new law would be supremely ridiculous, for what sportman can remember so complicated an arrangement as makes rabbit shooting end on December 1, woodcock shooting on December 16 and quail shooting on December 31? Every one who knows anything about practical game protection knows that quail hunters will, as a rule, kill all the rabbits and woodcock that they can during the whole of December.

It is surprising that practical sportsmen, like Senators Lawrence and Vail, did not defeat this law in the Senate or show the Governor why he should veto it.

L.

[Another correspondent, "J. R. B.," is informed that we printed the law from a printed copy furnished to us by a member of the Senate. That copy does not contain the blunder pointed out in the above communication respecting the rabbit season.—ED.]

Notes and Incidents.

GATHERED FROM EXCHANGES.

—The Spanish bark Odulia, from Liverpool, now lying at Welch, Rithet & Co.'s wharf, has on board a tame walrus or sea-lion. This animal was captured by Captain DeAbortiz thirteen years ago, while cruising in Behring Straits. It was then a "pup," was trained by him, and has been his constant companion on all his voyages ever since. He is called "Senor," and answers to his name or to a blast from a silver whistle blown by his master; but if blown by any one else he pays not the slightest attention to the call. He eats bread and meat, enjoys tea and tobacco. He is as passionately fond of beer as an old toper, and on many occasions has become gently "tight" from imbibing too heavily. When caught he weighed 19 pounds, but he now turns the scale at 411½ pounds, has two enormous tusks, measures 6 feet 3 inches at the girth and is 8 feet 4 inches long. As the Captain good-naturedly remarked, as he showed the brute to a few visitors, he is becoming "one big noosance." In bright weather he sleeps in the sun on deck. During heavy blows he resorts to a kennel, but when the weather is calm he leaps overboard and sports about the ship for hours, catching and eating fish. When tired of swimming he is hauled on board in a great iron basket. On one occasion, off the Cape of Good Hope, a great shark tackled Senor, laying hold of one of his paws and biting off one of his toes; but Senor dove, and, coming up under his enemy's belly, ripped him up with one thrust of his great tusks, and devoured him with savage cries of delight and satisfaction. He is very fond of the Captain, and when the latter is absent from the ship for a day or two he manifests his uneasiness by a thundering noise not unlike the sounds that might be emitted by two or three scores of dogs barking in chorus. Senor is perfectly docile, allows himself to be patted on the head, and is very susceptible to kindness.—*Victoria, B. C. Colonist.*

—A few years ago some kindly enthusiasts, among whom the late John Keast Lord and Frank Buckland were leading spirits, made strenuous efforts to stock our woods, moors and rivers with strange flesh, fowl and fish. We were to eat eland steaks, and luxuriate on sterlet and corregonus, which alone of all the finny race has the property of never satisfying. We were to have prairie fowl, blue grouse, and pintails from the Western woods and prairies, while salmon was to be sold on costermongers' barrows as sprats and bloaters are at present. But, somehow, nothing came of their projects. There was a good deal of experimental eating and drinking; several hopeful reports, and some indigestion. And then the the Acclimatisation Society faded from public recollection. Tinned meats, cold-air storage, and Anti-Game Law Associations seem to have been too much for it. Nevertheless, in the freer atmosphere of the newer worlds, its scientific progeny flourish apace, and are busy bringing to our remotest dependencies the salmon, trout and birds of the Old World. If, as some ethnologists assert, the European is not yet naturalized in America, the horse, the ox, and the sheep which he introduced three centuries ago certainly are.

It is not yet a hundred years since John Hookham Frere and a number of other ingenious young gentlemen of the University of Cambridge were speculating as to whether the Antipodes could ever be a self-feeding settlement. Already the land is covered with millions of kine and sheep, and in some of the Australian colonies the wild horses are becoming a public nuisance. As for the rabbit and the thistle, which the patriotic Scot imported, they have long demanded the attention of the Legislature. They have cost the squatters and the Government thousands of pounds, and even yet it is questionable whether they or these prolific immigrants will conquer in the struggle for existence.—*London Standard.*

Sea and River Fishing.

FISH IN SEASON IN MAY.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*

Sea Bass, *Centropristis atrarius.*
Striped Bass, *Roccus lineatus.*
White Perch, *Morone americana.*
Scup or Porgie *Stenotomus argyrops.*
Pollock, *Polachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*

The Pretentious Angler, to use a favorite expression of the lamented Dickey Riker, once Recorder of the city of New York, is one "that prevails to a great extent in this community." This gentleman has many of the qualities attributed by Fisher, of the "Angler's Souvenir," to Sir Humphrey Davy. If he has attained the higher branches of the art, he affects to despise all sport which he considers less scientific; if a salmon fisher, he calls trout "vermin;" if he is a trout fly-fisher, he professes contempt for bait-fishing. We have talked with true anglers who were even disposed to censure the eminent Divine, who has so ably and with such labor of love edited our American edition of Walton, for affectation in saying of the red worm, "Our hands have long since been washed of the dirty things." The servant should not be above his master, and certainly "Iz. Wa.," whose disciple the Doctor professed to be, considered it no indignity to use them, nor was he disgusted with his "horn of gentles." But the Doctor was certainly right in deprecating the use of ground bait in reference to trout, when the angler can, with a little faith and less greed, soon learn the use of the fly.—THAD. NORRIS.

AN ANGLER'S LIFE.

I've thrawn the lee thae sixty year,
Ay, sixty year an' muir,
An' mouie a speckled troutie kill'd
Wi' heckle, heuk an' hair;
An' now I'm auld an' feeble grown,
My locks are like the snaw;
But I'll gang again to coquet-side
An' take a farewell thraw.

A CHARMING book* is given to his brothers of the rod by Mr. Henderson, who tells us that he is now 61 years of age, and as ardently attached to the noble sport of angling for salmon and trout as ever. For the pleasure he has given us in this handsome volume we hope that he may continue to enjoy his angling for many years more, for his portrait looks like a hearty man, and one who would be a good companion on the stream, or in the bivouac.

How the above verse touches the heart of every one who was ever truly a boy, for "all are not men who wear the human form," and many men were never boys, as some of us were. He says: "The acquisition of his first fishing rod is always an era in an angler's life, and well do I remember the circumstances which led to my possessing one. Prowling along the river bank in search of minnows I came upon two boys apparently possessing a joint interest in a fishing-rod which projected over a willow bush. Youth is a period of freemasonry, and I was soon on good terms with the strangers, who proudly exhibited the results of their sport—three small eels strung on a willow twig. How often did we take them down and carefully measure and re-measure, wash and re-wash them, flap their tails when they showed signs of returning life, and discuss the important question as to whether they were members of the silver or golden eel families! It was not in human nature to witness such joys unmoved, and soon I was bold enough to request from my mother the sum of eighteen-pence, for which I proposed to pawn my weekly stipend of three-pence. Behold me now the proud possessor of a 'two-piece rod,' glowing with bright vermilion and rich in a brass ferrule!"

From this time our author was an angler. At eighteen he fished with a young friend who aspired to fly-fishing. He tells it: "A gravel bed was selected as the spot most appropriate for donning our tackle; my friend took the lead and was ready first; the 'feed' had just come on. A score of blue-duns were floating in the water, while round his head went my friend's line, and a sharp sting within my nostril made me scream aloud. Not seeing his cast fall, as intended, the rod made another circle, but the instinct of self-preservation enabled me to grasp the line and save myself the dreadful wrench that would have followed. What was to be done? On examination the hook was found deeply imbedded in my unfortunate nostril. I was on the point of running off to Rothbury in search of help, when my friend, with a gravity more becoming his profession (for he was an embryo surgeon) than his years, undertook the case himself. 'Lie down upon the ground,' he said, with a tone of authority. 'Shut your eyes.' I obeyed. Another sharp sting and the offending hook was extracted and lying in my hand. Many were my thanks, and warm my admiration of the operator's skill. 'Don't mention it,' said he, 'I never had a lancet in my hand before; but as I got my first case of instruments last week it seemed a good opportunity for trying them.'"

We cannot quote the whole book; and find that we must leave the angler at eighteen, while he writes at sixty. But we so admired the man who forgot that he had been injured by the man who hooked him in the nose, at a time when he was not taking flies any way, and thanked his awkward companion, instead of ducking him, that we had to quote it, to show the stuff our author was made of. We are all loveable men if the world knew us!

*"My Life as an Angler." By William Henderson, author of "The Folk Lore of the Northern Counties of England and the Borders." With Woodbury portrait and twelve woodcuts, engraved by Edmund Evans. A new edition. London: William Satchell & Co., 12 Taylstock street, Covent Garden, W. C., 1880.

FISHING ON THE CARP RIVER.

NORTHERN MICHIGAN.

HERE we are, H. C. Lonnis, my chum from Columbus, O., and our old friend, Capt. David Smith (whom we dub "Old Reliable"), of Cheboygan, Northern Michigan, leaving on the steamer Mary bound for the Carp River on the North Peninsula, with traps and provisions for a ten days' trip in the wilderness where we are to fight mosquitoes and catch trout.

Leaving Cheboygan about 5 o'clock in the evening we have a pleasant run of eighteen miles to Mackinaw Island, where a stop of about an hour gives us ample time to get supper at our choice of the miserable hotels, and then a run of five miles to Point St. Ignace, our intended course from there being northwest along the extreme northern shore of Lake Michigan, twenty-two miles past St. Helena Island, which we expected to row or sail unless lucky enough to strike one of the very few steam-tugs which ply around the shore gathering fish from the ponds. The captain of the Mary said this was the evening for the fish-tug Martel, but unless she had been detained up the shore we would miss her. By this time it was half past eight o'clock, raining, and not a very agreeable outlook. The captain of the Mary said he thought the lights of the craft off to starboard were those of the Martel. The little fish-tug running in at this moment, all our traps were duly stowed on board, and the little craft was off without ceremony. Fish? Well, I should think so. The smell was so strong I was afraid I should trip on it. The bow of the boat is filled with boxes, with covers—I guess more properly called cases—in which fish are carried from point to point, and on each side of the wheel-house and engine-room are boxes about eight feet long, two feet wide and two and a half feet high, used for scooping the fish into the boat from the pound nets, and for assorting them.

The boat was filled with the worst lot of drunken fishermen I ever saw—French-Canadians—and they made a wild night of it until 1 o'clock, when we were landed at our destination. All were good-natured—lucky for us—but full of "Injin whisky." One of them, a big six footer, weighing not less than 200 pounds, sat down on our big two-handled basket filled with provisions, and the top course being five dozen ginger cakes. "Here, stranger, get up if you please, you have sat down on our basket of provision" Up he rose, turned right around and sat down on it again, harder than ever.

As we ran into the dock at St. Helena Island, the moon was shining brightly, bringing out the residents and the shipping lying in this, the handsomest little bay I ever saw. I only wished I could have an opportunity of visiting this place in daylight. The approach is far prettier than that of Mackinaw. We follow up the shore about ten miles further, when we launch our boat, and, getting all our goods aboard, a good long whistle or two from the tug brought some one with a light on the dock, which the captain said was about a quarter of a mile off, and for which we pulled, the tug steaming off and we not regretting to part company. On the dock we found two men, who helped us safely stow our traps in the warehouse; after which we take possession of a couple of rude bunks kindly tendered us, and we are soon dreaming.

We were up in the morning and on our way by 7 o'clock for a twelve mile trip on wagon to the Carp River, over a Michigan pike, *i. e.*, a lot of trees cut down in order to drive over the stumps. We landed safely at the upper logging dam about noon Saturday. Here we dump everything, and the wagon leaves to call again Monday and take us by road five miles down the river, from which point we expect to run to its mouth in our boat, which we had rented at Indian River. In the afternoon we fished for trout and with moderate success, catching a string of fair size and excellent quality. Sunday a little incident occurred which I will always recollect with the greatest of pleasure, illustrating what many others have noticed—that wild game not being familiar to the sight of man have nothing to fear. A short distance above us a corduroy bridge spans the stream; several times when we had been on this bridge a red squirrel would come down from his tree, jump on the bridge and chatter away at a great rate, running quite close to us. This afternoon he came down again, and running around me and under my foot, which I had raised on the rider log. Thinking to try the little fellow I reached down my rod toward him and he jumped on to it, within three feet of my hand. The team came by 10 o'clock Monday morning, and at a little after 12 we were again on the banks of the Carp. The team again left, and we had before us a trip by this stream never before undertaken by a fishing party, and variously estimated at from forty to sixty miles by people who knew all about it, but had never been on the river.

We start off and float a hundred feet, when we have to climb out; and then the boat goes along all right—with one man pulling and another pushing. Here is a bend in the river, water deeper, all aboard, around the curve, and all out again. We kept this up for about an hour, but found no improvement in the river. We pulled our boat over bars, roots, trees, stones, briars, etc., and floated it over pools and worked our best to make the railroad cut, five miles below, until 6 o'clock, when we camped for the night, my chum celebrating the event by catching a trout weighing just one and a half pounds.

Tuesday morning it rained until about noon, when it cleared, and we were on our way again. The water was deeper after a couple of hours' run; we could ride with ease, and take in all the fine looking pools with satisfaction. About six o'clock we pitched tent at an old deserted logging camp. Thus far we have pushed ahead too hard, have, in fact, been in too great a hurry, and we resolve to take matters more easily and to go slow.

Wednesday morning we were out bright and early, taking advantage of the beautiful morning and the cool, fresh, bracing air, and after a turn at a couple of trout pools in our vicinity, we are off again. But a short distance is traveled before we sight a long, deep, black looking pool on the outer curve, about fifty feet long and about fifteen to twenty feet wide, while on the inner curve the water was quite shallow. "Stub er up; run 'er over there, Cap.; up to the bank in the shallow water; no noise!" Out goes my chum's line, and in less than two moments a half pound trout is in the bottom of the boat. Out goes my line, zip! and I have in

the bottom of the boat a beauty, 16½ inches long, and weighing one pound and ten ounces. We each of us catch one or two more at this pool, when they slack up and we are off again. If the fish don't bite we do not wait for them, but float along and try another place.

This river is so crooked that it would put to shame the river—so called—connecting Crooked and Mullet Lakes, on the lower peninsula. Here we are on the point of a V, very narrow and a quarter of a mile long. Could we have crossed overland twenty-five feet would have saved half a mile. These sharp turns have no good fishing places; it is in the long, round swing where we find them. We keep up this stopping at all the best looking pools until about 5 o'clock, when we again pitch tent, and, as is our custom, make a bed that is hard to excel. Layers of balsam boughs, lapped from the front to the back of the tent, like a shingle roof, with a number of extra layers at the head, a rubber blanket immediately over, with three thicknesses of blankets following, with covering, make a bed that my experience teaches me is better than any other contrivance I have ever tried. None but good-sized trout were saved during the day, and we have twenty-four and a half pounds of dressed trout—not very bad for a legitimate day's sport, besides all the small ones returned to the stream, and three hearty meals for three hungry men. This day will always remain as a bright and shining spot in my memory.

Thursday morning we are off again. It is a beautiful morning. We floated along, fishing and enjoying the grand air until about 1 o'clock, when we ran afoul of a logging-dam, and a couple of lumbermen here, from whom we learn the river is full of logs from about a mile below the dam to its mouth, a distance of a number of miles, that it would be impossible for us to go down any further. We send to the mouth of the river for the only team within a radius of twenty-five miles. A drizzling rain sets in about 3 o'clock, and about 4 o'clock the team comes—mules—and John Donnell, the teamster. I wish I were an artist, I would like to have sketched this specimen. Height, six feet on the stoop—don't know how high he would be if straightened up; big brimmed, greasy old slouch hat; pants and coat of many colors; both hands in breeches pockets, and a "gad," about ten to twelve feet long, stuck under hisarm; whiskers all over his face, very unevenly clipped close with shears; front teeth out, the balance black, and an old stub pipe with some terribly smelling tobacco sizzling away in it. "That's a nice team of mules," we ventured to remark.

"Yes; purty fair, but yer better not go too clos' to 'em as that 'er off mule's a leetle light behind"—a demonstration which we were witnessing.

Our boats and traps safely on the wagon-bed, and tied down both fore and aft, our "Old Reliable" takes the trail, while my chum and myself climb on the boat to ride. We stood it I guess 200 yards, and walked the rest of the seven miles, and right glad of a chance. We arrived safely at the mouth of the Carp, and took a tug Friday morning to Point St. Ignace, a little town stretched along the beach for more than a mile. From here we went on to Mackinaw and to Cheboygan, from which place we started a week before.

I wish to take this opportunity of personally and publicly thanking Dr. J. A. Henshall for his very able, interesting and valuable letters on fly-fishing for black bass, which have appeared in your columns. The same I have duly transferred to my "FOREST AND STREAM scrap book," and prize highly.

Columbus, O. FRANK N. BEEBE.

THE VICISSITUDES OF ANGLING.

ON Tuesday afternoon, July 20, while driving from Compton to Sawyersville, in the Eastern Township, P. Q., I went several miles out of my way, over a bad road that led through an almost unbroken forest, to visit a mill dam, where trout were reported to be both numerous and large. I fished that small body of water faithfully for at least a couple of hours and killed but half a dozen small trout, mere fingerlings, which satisfied me that information obtained from countrymen on sporting matters is not to be relied on. As I was slowly driving back over the grass-covered path, my horse, a valuable young Plough Boy mare that I had recently purchased, tempted by the green grass at her feet, suddenly threw down her head to catch a hasty mouthful, when she stepped on the long martingale that was dangling between her bit and girth. A moment later her head was free of both bit and headstall; then, with one wild look backward, she was away at full speed. Before she had run a dozen yards the high wheels of my buggy struck a log, which sent the writer out against a stump, whack! Though the stump uttered not a word of complaint against that violent embrace, every bone and muscle in my whole body found expression in the loud "Oh!" that followed. I slowly unwound myself from that stump, and with much pain regained the perpendicular position, head up and limped out to the road, where I found my fishing rods, carriage-rug, etc., and a little further on one wheel, minus the hub. I left these things as I found them and hurried on to learn the fate of my horse. A mile distant, at the edge of the clearing, I saw a man and a couple of towheaded boys standing beside a heap that lay in the ditch. As I approached nearer I was accosted with, "Weel, mon, I hev her head oop so sheil na' smuther." There in the ditch lay the mare quietly, with the wreck of my new Dexter buggy piled atop of her. An hour later a farmer's haycart might have been seen leaving that spot loaded with my traps and the smashed up buggy. Seated on top of this pile was a soiled, disconsolated-looking fisherman leading a lame horse, which was so covered with mud that its natural color was indiscernible. After a weary ride of six miles we arrived at Eaton Corners, where my team was laid up for repairs. The next day I drove out to Lennoxville and took the cars for a distant station, so as to get away as far as possible from the scene of my mishap.

Yesterday I had occasion to go to Kinnear's Mills and Leeds. My fishing tackle was left at Eaton, excepting a couple of flies and casting line on my hat. I obtained a slow and reliable "Kanuck" for my trip, and borrowed the only fishing-rod in the place—a cheap affair. Thus rigged, I determined on my way back from Leeds to try the Osgoode and Thames rivers for trout. I reached the Osgoode late in the afternoon, and after tying "Kanuck" fast to the fence, I got my rod together and made my way through the raspberry bushes up above the old mill, which stands within fifty yards of the roadside. Where I approached the stream a large pile of driftwood lay along the bank in the water. At my first attempt to make a cast with that rickety rod my flies caught in the outer edge of the floodwood. A "swirl" proclaimed a rise, and I saw the back fins and broad, square tail of a large trout as he returned back under cover, after his unsuccessful attempt to take one of the flies. With a long stick I carefully loosened and secured the flies, and passed on up the stream to the next pool, where I practiced casting until I got the hang of my rod. Here I caught a pre ty one-quarter pound trout; and after ten minues I returned to my first position and carefully made a cast near the edge of that pile of rubbish. There was a rush, and *spiz-z-z-z* the line goes singing through the water. I sprang out on the pile of floodwood, so as to keep the fish away from it, and away he sped out into the centre of the pool. How he tugs and pulls! A three-pounder if he's an ounce! After a severe fight in and out of the water he shows himself motionless on top. What a beauty! He'll weigh nearer four pounds than three. Suddenly, with a big splash, he's off again, with more fight than ever. Yes, he will go over four pounds. I know that by the way he pulls. No lighter trout could pull so heavy and strong. Skip he goes out of the water, a full foot or more, and churns the water to a foam by an angry slap with his tail as he falls back. Won't he make their eyes stick out when I show him at the hotel? Ha! ha! he's getting well tuckered out. A little more play and then to land him is the question. My landing net is with my rods, but I don't think that I'll need it, for he now leads well and I will bring him alongside of this log, then slip my hand down the line and catch him behind the gills.

"And out he comes from his accustomed haunts
Mourned by his sisters and his cousins and his aunts"

Hush! I have him almost in my grasp. I give him the butt a little harder to bring him nearer, when—flop, he is off the hook! With a languid roll and a lazy wag of his tail, head downward, he disappears from view under the driftwood. Bah! I don't believe he would weigh two pounds, even if one and a half. It's all moonshine to imagine or think that so small a river contains anything but brook trout. They may occasionally grow to the size of one or one and a quarter pounds, but never larger.

I silently reel up my line, unhitch Kanuck and proceed on my way, fully determined not to fish any more that afternoon; for, without a lauding-net to land your trout, half of the sport is spoiled. But when I arrived at the Thames, where the bridge crosses the river at the head of the big rapids, the sight of the foaming water and deep, dark pools down between those wild, overhanging cliffs, which are verily abodes of large trout, overcame my recently formed resolution, and I again tied up Kanuck to the fence and prepared for work. A large mill formerly stood near the bridge, but had been burned down. The rubbish had been cleared away, leaving the foundation walls bare, and workmen were preparing to erect another mill there. I walked out on the outer foundation wall where I could cast into the pool below the dam. A single workman was at work on the flume inside the walls. The rest of the men were engaged framing the timber some dis ance away. Drawing off a long line I made a cast, then more line, and raised my rod to make another cast, when the wind suddenly whiffed around and carried the flies far down behind me. I bring the point of the rod forward and feel a tug. Then I am greeted with a howl from that lone workman. "Och! Ough! ye murd'rin' divil! yees hev yer pizen hook in me ar-r-m. Oh! oh! oh! murdther! murdther!" I instantly approached the edge of the flume and tried to quiet him with the assurance that I had a fleam in my jack-of-all-trades knife with which I could easily cut out the hook. "Coot it out!" he yelled. "Bad luck to ye and the man that sired ye. Come near me and I'll cut yer blundering head off, that I will. Bad luck, bad luck to ye, ye long-legged spalpeen!" I had no particular wish to give him an opportunity to put his threat into execution, and as the wide and deep flume was between us I told him that I presumed that he was fond of fishing and I would make him a present of those flies, and that he could rely on my word that one was a genuine Montrealer and the other a gray palmer—just the cast for large trout. I cut the line and advised him to go home and let his wife take them out at her leisure. As I was driving away the other men, attracted by the noise, approached. I explained to them that I was leaving a couple of my best flies with their companion at the flume, and that he was so overjoyed with my present that his joy seemed to know no bounds. After the first mile, I drove that calm and quiet evening slowly back to the hotel, silently commenting on the little incidents and uncertainties connected with trout fishing, and firmly resolved, first, never again to drive a horse with a long martingale unless with a check rein; also, second, to see that the coast is clear behind when I attempt to make a cast against the wind with a weak-jointed rod.—STANSTEAD.

LAWS FOR BLACK BASS.—There is need for an inter-State legislation on the subject of many fresh water fishes, and especially for the black bass in waters which lie between States. New Jersey has just forbidden black bass fishing before July 1, while both New York and Pennsylvania permit it one month earlier. This affects waters which lie between the States, and causes the Newark, N. J., *Sunday Call* to say: "Anglers are somewhat 'in a mix' over the recent act prohibiting catching bass in New Jersey until July 1. The Pennsylvania law allows them to be caught on and after June 1. These conflicting laws, when applied to the river Delaware, which we all know forms a dividing line between these States, puts the bass fisherman in a quandary as to his rights in the matter. The same difficulty exists in regard to Greenwood Lake, the waters of which are in both this State and New York. We would suggest that when he catches a bass before July 1 he should be careful to land him on the Pennsylvania or New York bank." New York allows the black bass to be caught on June 1 in all waters except Lake Mahopac or Dutchess County and in Lake George. In the two former the date for catching is July 1, and in the latter July 20. In all waters which lie between States, as Greenwood Lake and the Delaware River, there should be concurrent legislation."

BUFFALO IN THE FORKED DEER—Dyersburg, Tenn., April 18.—All day yesterday the long bridge over the Forked Deer, at this place, was crowded with people, watching the thousands and tens of thousands of buffalo fish, rolling, splashing, slashing and cutting up generally. This is their season, lasting two or three days, and as this river is out of bank, they have taken the overflow and are out in shallow water, from one to three feet deep, and can be seen in multitudes that no one can number, whirling along in pairs and dozens, their tails and fins sometimes six inches out of water. They weigh from ten to thirty-five pounds, and are a good table fish, though inferior to our black bass. For miles and miles they are to be seen, and the moment the river begins to fall, they go back to the bed, leaving millions of eggs clinging to limbs, driftwood, brush and anything they will adhere to. It is almost impossible to go in the back water and find a limb or drift without eggs clinging to them, and as this is the case for miles, some idea may be formed of the immensity of their numbers.—T. L. W.

VIOLATION OF LAW.—Onondaga Valley, N. Y., April 15, 1881.—I met a party resident of Upper South Bay, Oneida Lake, yesterday, who, to show his regard for the game law, exhibited cord for two pound nets, claiming that, law or no law, he was going to net the lake as he had done for the past twenty years. While ducking last fall I think there were at least sixty pound-nets between Bridgeport and Upper South Bay. To-day, in a peddler's wagon, I saw suckers, bullheads and pike from Oneida Lake. Who believes they were caught with hook and line? Yet none of the local game constables interfere. On Otisco Lake there has for the past week been a great deal of kerosene burnt and big hauls of pickerel made by spearing—of course they are an inferior fish, but at the same time the law protects them (in name). You can see from ten to forty lights any night, and they will average thirty fish to the boat. The lake was stocked with trout five or six years ago, and should the spearers see one, of course he would pass it by. On Skaneateles Lake they spear trout, openly defying any one to prevent them. Up to this date there has been no trouting. The wind has held in the northwest since the 21st of March, and until we get a change of wind and rain the trout will not take bait.—DOO.

TROUT IN NEW BRUNSWICK—Sugar Brook Camp, York Co., N. B.—The trout fishing is earlier than usual. John Stewart, Supt. N. B. & C. R., caught a few very fine ones on the 23d, the first of the season. Water very low; no rains yet. Soon as rain has fallen rip fishing will be at the best. Ice is fast melting in the eastern lakes of the St. Croix. The first open water will yield the best land-locked salmon fishing. Salmon are fast leaving these lakes, owing, I believe, to a lack of small fish, their principal food. Last spring, at the proper time, I went to Fifth Lake, where, five years ago, they were in great abundance, and found not one, nor even small fry. Formerly the shallow basin below the upper dam would be alive with them. The bears are trying their legs a little, but have not reached the camp. I am placing out traps in readiness.—WARFIELD.

THE TROUT HOG IN RHODE ISLAND.—Newport, April 18.—In Lawton's Valley, some four miles from here, is the only trout stream that we can boast of, and that is quite small. There are ten fishermen to one fish—viz, men who call themselves disciples of Izaak Walton. I should call them pot hunters. One of the "disciples" while fishing there this spring made an embankment of earth and stones across the narrow part of the stream, and walking up a short distance cut a willow rod, and with it splashed the water as he returned to his embankment, then using his creel as a scoop net, captured thirteen trout, and the entire weight was one and one-half pounds—then brought them to the city for sale. Was this "disciple" a true sportsman?—TROUT.

SEINING IN THE NIAGARA RIVER.—The Niagara Falls *Gazette* says: For some years past annual complaints have been made about the employment of seines in the Niagara River. The complaints this year are not only as numerous as heretofore, but are specific, naming the location and the parties using the seines. All our sportsmen are interested in having this suppressed. It is not only a violation of the law, but it is leading to the destruction of some of the best fishing grounds in the State. Not only are the nets drawn, but others are anchored so as to prevent the fish from going in directions where the seines cannot be easily used. We call the attention of the Game Constable to the matter, and trust he will investigate the river bank from here up as far as his jurisdiction extends, and also have authorized deputies to see that this business is stopped. We also recommend that our sportsmen take steps to aid in this matter.

TROUTING IN THE SNOW—Oswego, N. Y., April 19.—I desire to record the opening of the trout season in this country by the magnificent creel of two handsome trout, captured by N. Wright and brother, of the "Leather Stockings" of this city, upon April 15. The season is very backward, snow water flooding all the streams, and the gentlemen who made the effort referred to were forced to fish from advantageous perches upon snowbanks, which were from two to six feet in depth at many points along the course of the brooks. The weather is cold and backward, but a strong wind and sun must soon diminish old winter's bonds, and within a month I hope to have a worthy basket to report.—LOUIS H.

PRESERVING FISH FRESH.—An Austrian scientist claims to have discovered that fish can be kept perfectly fresh for many days. He impregnates them with a weak solution of salicylic acid, by means of hydraulic pressure, and then packs them in casks and pours gelatine over them, which prevents their becoming stiff and dry, as well as keeping the air from them. He says it does not affect their flavor. They should be soaked in water, which restores their freshness.

STRIPED BASS—Red Bank, N. J.—A few striped bass are being taken at Port Monmouth, N. J. The largest thus far, fifty inches in length, weighing 62½ pounds, trying to escape the meshes of the law, got insane (in seine).—WILD.

ANGLERS who may wish to learn of fishing resorts about New York may do so by applying at this office, as per notice in another column.

AN EIGHT-POUND SHAD.—A shad weighing eight pounds was recently caught in one of the pound nets at Saybrook, Conn. It was exhibited at Bronson & Fitzgerald's, Hartford, on April 19.

Read of, procure and use Hop Bitters, and you will be strong, healthy and happy.

PUBLISHERS' DEPARTMENT.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Oh, why will you let that fatal friend suffer that Hop Bitter will so certainly cure.

A chance to secure good shooting at Barnegat Bay is offered to our advertisements this week.

WE HAVE RECEIVED from Messrs. J. C. Grubb & Co., of Philadelphia, Pa., their catalogue of guns in stock. It includes many of the best makes.

REPEATING MAGAZINE RIFLES are rapidly supplanting the single barrel guns for shooting large game. The manufacturers of the Ballard rifle have added to their stock a new arm of this description—the Martin repeating rifle—which has every appearance of being a durable and effective weapon.

Fish Culture.

THE NEW YORK FISH COMMISSION.

ON the subject of the necessity for continuing the appropriations yearly, the Brooklyn *Eagle* recently said: "The importance and necessity of cultivating fish for food long since passed beyond the range of controversy. In every State in the Union the subject is receiving the careful attention of the authorities. This is especially true of the commonwealths bordering on the seacoast, where the fisheries furnish occupation for many citizens and food for many more. In the Empire State the culture and protection of fishes enlisted the active and intelligent efforts of a considerable body of public spirited citizens, whose labors have been unquestionably productive of great good. The gentlemen engaged in the work have given their time to it without compensation, and their endeavors have been crowned with practical and beneficial results.

"In the culture and care of fish one of the most important agencies at work during the past ten years has been that of the New York State Commissioners of Fisheries. The commission at present consists of the Honorable Robert B. Roosevelt, the distinguished president of the American Fisheultural Association; Mr. Eugene G. Blackford, of this city, one of the largest dealers and experienced fishermen in the country; Mr. Richard N. Sherman, of New Hartford, N. Y., and Mr. E. M. Smith, of Rochester, N. Y. The expenses of the commission in the pursuit of its labors have been paid for during the past decade by an appropriation from the State, the amount being $15,000 per annum. Considerable excitement and some disappointment was occasioned last year when Governor Cornell vetoed the appropriation which had been put in the Supply Bill. The veto was based on the Governor's belief that enough had been done in the line of fisheulture by the State for the present. The Commissioners of Fisheries and those who take an interest in their work, hope that they will this year receive better treament from the authorities. The sum of $15,000 has been provided for in a bill now before the Legislature, its passage is regarded as a foregone conclusion, and the commissioners hope to convince the Governor of the advisability and importance of approving the appropriation. A strong effort will be made in this direction for the benefit of Long Island where so great a proportion of the fisheries' interest is situated.

Mr. Blackford, of the commission, was questioned, and said:

"The Commission has done a great work in the past, and we hope to be able to continue it in the future. Much will depend, however, upon whether we get the required appropriation from the State. All we ask is $15,000, and this amount is urgently needed. At least one-third of the sum should be expended on Long Island. In no portion of the State is there to be found such a large fishing interest as on the shores and in the streams of Long Island. It is of the first importance that this great interest should be watched over and preserved. Already some marked changes are noticeable. Not more than five years ago the catch of Spanish mackerel in Gravesend Bay was from 3,000 to 4,000 pounds a day. During the past two years no Spanish mackerel whatever has been found in that vicinity. On the south side of Long Island, the tract including the Benson property at Montauk Point, the waters used to yield from 300,000 to 500,000 pounds of this delicious and game fish each season, while last year the catch was not more than 2,500. Spanish mackerel were formerly very plentiful all along the Long Island coast. They were caught in great quantities all along the south side of the island and at various points in the Great South Bay. They are now extinct in all the waters throughout that region. We know of no reason for this unless that it be they were taken in greater quantities each year than they were naturally produced. The decrease became noticeable some time ago, but it was only within a very few years that the fish entirely disappeared. The departure of this delicious fish from these waters is greatly to be regretted, and if their absence can be remedied it should, in the opinion of the Commission, be done at once. It is proposed, if we can get the desired appropriation, to restock the waters at those points with young Spanish mackerel from the Chesapeake Bay.

"It is proposed and intended to establish at some convenient spot on the south side of the island a hatching house for the artificial propagation of sea bass, striped bass, porgies and sheepshead. Such an institution is greatly needed and would be of inestimable value. It is the sincere desire of every member of the Commission that we should have it. I have made visits of inspection to several points in the vicinity of Babylon and on the east end of Long Island, at the Montauk Point or Benson property. Should it be decided to have the hatching house at the east end, I am sure that Mr. Benson will afford every facility. I have obtained a lease of the entire fishing privilege of Montauk for years. It embraces twenty-two miles of the best fishing ground in the United States, and if it is thought desirable to have the hatching depot there I shall give the project all the assistance at my command. Mr. Benson is greatly interested in the subject of fisheulture. When Governor Cornell vetoed the appropriation last year, Mr. Benson called upon me and said that if anything in the fish-hatching interest suffered and we needed any funds we could call upon him for $5,000. He has extensive fish preserves on the island, and has stocked many of his ponds with carp.

"The people of Long Island have been practically deprived of the benefits of the Caledonia hatching house. Any one desiring to stock any of the Long Island streams was compelled to pay the expenses of transportation and $3 a day to a man to come with the fish in order to secure their safe delivery. In fact, the conditions under which it had to be done were almost prohibitory, the amount required to stock a single stream being from $50 to $100. A certain amount of our waters, especially ponds, will be devoted to trout culture on Long Island. The island possesses advantages for trout culture which we can find in no other part of the State. The fish seem to find their natural food and grow with extraordinary rapidity in its streams. An illustration of the adaptability of the island to trout culture is found in the fact that there are more private trout-culture establishments upon it than in any part of the State. It is fairly dotted with trout preserves from Maspeth to Sag Harbor. If the authorities take the matter in hand the production of trout will be vastly increased."

AN ICELAND EVIL.—A serious fact with a serious moral is recorded by Mr. St. George Mivart in a late number of the *Contemporary Review*: "The egg of a certain tape-worm may be voided by some dog into a stream or rivulet, and if such egg be accidently drank in by a human being it grows into a kind of bladder-worm, the ravages caused by the growth of which are so serious that in Iceland (where the social conditions lead to the maintenance of many dogs) it is estimated to be the cause of one death out of every seven. So great is the evil that the Iceland Legislature, some years ago, ordered that all the dogs of the island should be simultaneously purged and their excreta burned. These facts with regard to the dog, show that the filthy, unclean habit in which so many ladies indulge, of allowing their lap dogs to lick their hands and faces, is a practice not unattended with danger."

THE MINNESOTA COMMISSION.

THE sixth and seventh annual reports of the Minnesota Fish Commission for the years 1879 and 1880 are contained in one. There were great numbers of "California fry," by which term, we suppose, the quinnat salmon is meant, on hand at the close of 1878. They were placed in a pond near the hatchery and flourished until Jan. 1, 1879, when a change of temperature to 20 deg. below zero came, followed by 35 deg. below. This chilled them so that they refused food and great numbers perished. A favorable change in the weather seemed to revive the living until another cold snap in February thinned them out again. Still 41,000, by actual count, were distributed. The brook trout at both Red Wing and Willow Brook have been healthy and prolific, and from them 261,000 fry have been distributed.

At the beginning of 1880 another great swarm of life occupied the hatchery, filling every available inch of room, and, remembering the previous experience, the fry were kept in the troughs, where many were lost from overcrowding, but not so great a mortality as in the previous year. A singular fact was the appearance of whitefish in Lake Elmo where none had been planted. It is thought that they came by the underground passage from White Bear Lake, five miles away.

Mr. Geo. W. Seymour, of Taylor's Falls, writes that several schools of salmon have been seen by Mr. Tripp, of Chisago Lake, the schools numbering fifteen to twenty in each one and the fish from ten to twenty inches long. Two quinnat salmon were caught in the Mississippi River, near Bahnholtzer's brewery, May 22, 1879, with a trolling-spoon. They weighed over four pounds each. Mr. John J. Rhodes, of Red Wing, caught a small one on a minnow while bass fishing, and a dozen or more were caught at different places.

As was hoped for and suggested last year at the meeting of the Central Fisheultural Society, U. S. Commissioner Baird has directed attention to a systematic plan of stocking the Mississippi River with salmon. The details are in the hands of his assistant, Mr. T. B. Ferguson, who sent two experts—Messrs. Ellis and Saurhoff—to examine streams and locate a hatchery, which they finally erected at Willow Brook. It is expected that this will be a grand work. Ponds have also been built for the German carp.

THE CARP AND ITS CULTURE.*

BY RUDOLPH HESSEL, SUPT. U. S. CARP PONDS, WASHINGTON, D. C.

4.—STOCKING THE PONDS AND CARE OF THE FISHES.

To carry on carp culture in a regular and judicious manner, several ponds are required, according to the various purposes they are destined for.

1. The hatching pond.
2. The breeding pond.
3. The culture or regular carp pond.

The hatching pond serves more particularly for natural impregnation and hatching, or rather for natural propagation generally, by placing a number of male and female fishes into the pond. Here the females drop the eggs, during the spawning season, upon aquatic plants, where they are impregnated by the male.

In stocking ponds, three females are calculated to two males, sometimes twice that number, per acre. The females bear a great number of eggs, as has been remarked before, but the smaller number only are impregnated; neither do all these come to life.

The most liberal estimate will not exceed the number of from 800 to 1,000 young fishes to one spawner, the aggregate per acre amounting to from 4,000 to 5,000.

It is scarcely possible to say what is the most desirable number of milters and spawners for stocking ponds, as the views on this subject differ widely in Europe. I believe, however, the above to be correct, and it is accepted as such by all extensive establishments.

The above mentioned result will be much more favorable if the old rule, now unfortunately almost forgotten, is observed, to feed the carp which are in the spawning pond shortly before and during the season of spawning, so as to prevent their searching for food, which generally leads them to eat their own eggs. After the fish have laid their eggs they must simply be removed from the ponds, which prevents their eating the eggs. This useful rule, formerly much practiced in Europe, has unfortunately fallen into disuse; in fact it has almost been forgotten, probably because carp naturally increase very fast.† By removing the spawners,

† In Germany this rule is only observed by some small pisciculturists; in Hungary, one of the former lordly manners in the department of the "Seine inférieure" and in the department of the "Rhone"—where they likewise had the custom to plant aquatic plants (*Utricularia Vheilandrium*, &c.) in loosely-plaited baskets, which, when covered with the impregnated eggs, were transferred to other ponds. Duhamel also practiced this in his time. This practice has doubtless led Dr. Lamy, of Rouen, to his artificial spawning places made of reeds. By an order of the abbot of the Benedictine Convent of Kremsmunster, in Upper Austria (founded in 777), of the year 1629, the bakers of the convent domain were reminded that spawning-carps must be of a certain age and size, and must consequently be weighed. After spawning they had to be removed from the pond. This convent is still in existence, and is the wealthiest convent of the German monarchy, owning upward of 150 living villages, and possessing a large and valuable library and observatory and scientific collections. But the order of the good old abbot is no longer observed. Similar orders were, in former centuries, also given by other convents in Austria, as Lambach, in Upper Austria, Weichsrad, in Moravia, and others. The fishermen's guilds of Nuremberg and Bamberg had, about the year 1600, similar rules, which were placarded in their guildhalls, and which were strictly observed. At present such rules are not known in either place.

three times as many young fish are kept alive than by leaving them in the spawning ponds. On no account should too great a quantity of young fish be placed in a pond. The above-mentioned number of 4,000 to 5,000 young fish to the acre requires water which is very rich in natural food. If there are too many young fish in the spawning-pond they grow very slowly, as the pond cannot produce the necessary quantity of food. Such fish are scarcely one to two inches long when they are one to two years old; only the head grows a little, while the rest of the body remains small. As soon as young fish feel the want of food for any length of time, the gristle of the jaws is often eaten away, thus bringing its development to a close, not allowing nature fair play, and the fish remains a cripple for the rest of its life, even if it is placed in ponds affording unlimited supply of food. It is, therefore, better either to place fewer young fish in the ponds or to make the ponds larger; it will be found to pay. The young fish will grow rapidly; their development will be healthy, and even during the first year they will reach the length of five to six inches. Strong and healthy fish can thus be placed in the growing-ponds, and these, too, they will grow rapidly. If there are too many young fish for the water-area, it is better to place them in some lake, brook or river. On no account should they be kept in the pond. Beginners in carp-culture usually consider it quite a sacrifice to let so many young fish loose in the open river or lake; they keep them, and later they will bitterly regret their parsimony, or rather their imprudence, by having weak or not fully developed fish.

The hatching-pond should not be as large as the breeding-pond; its depth need to exceed 1 or 1½ feet. The outer portion, or, as it is termed, the low-water margin, should generally be from 2 to 5 inches in depth, and from 30 to 40 feet in width. Provision should be made that *Festuca fluitans* grows there plentifully; for the fishes give the preference to this plant for the disposition of eggs, as I before observed. But the bottom of these hatching-ponds must be of similar construction to that of the larger ones; that is, they must be provided with the above described cavities, or ketties, collectors and collector ditches. The "collectors" must be cleared from the mud annually, during; they need not be as deep in these ponds as they are in such as are intended for the reception of larger fishes; a depth of from 4 to 5 inches only being required for fishes of minor size. The hatching-ponds have outlets and reserve-sluices in the dam, at the lower end or on the sides to guard against overflows. These ponds must be secured against the intrusion of pike, eels, bass, catfish, tritons, water-snakes, turtles and water-lizards, rats and water-fowls, or any voracious animals, and in the South the alligator. A fine grating will prevent the entrance of the former, but most the latter various traps are in use, and other means might be devised. It is of the highest importance that new ponds be assiduously kept clear of the animals mentioned, and of many others not named here.

In small establishments, embracing only a few acres, it will be found advantageous, in spite of the somewhat greater expense, if the ponds (both natural and artificial), either all or singly, are surrounded by a very close-board fence 3 to 4 feet high and going 4 to six inches into the ground. Such a fence will afford as protection against aquatic birds, water-snakes and musk-rats, but it will exclude the snapping-turtle, the most dangerous and voracious enemy of fish, which is more to be feared than either cranes or otters. This detestable animal has been known to clean a pond of fish, and then, led by its sense of smell, to follow the fish, going even up hill and against the stream. At night it seizes the fish, which, not suspecting any danger, rest at the bottom, with its sharp fangs, resembling shears, and kills them. It is a peculiarity of carp to keep at the bottom during the night, and likewise during cold and gloomy weather, and the snapping-turtle would therefore have many an opportunity of destroying them. Large iron fish-hooks, with a piece of meat fastened to them as bait, will do good service, if distributed in suitable places on the banks. This should be done from spring to October. The pieces of meat should be of such a size that even large carps cannot bite them; they will then form a most attractive bait for the ugly monsters. These hooks should be fastened with a strong brass wire, as the snapping-turtle could easily bite through twine, and should be inspected every day.

In placing spawners in ponds, great caution must be practiced in their selection, so that only really healthy fishes may be introduced, and not such as are affected by fungous growths, the gelatinous polyp or other disease. In Europe the polyp, in particular, has frequently destroyed the productiveness of ponds for many years.

The newly-obtained young fry are left in the hatching-ponds during the winter, after which they are to be transferred to the larger ponds.

The catching of the young fishes must be done with great care, and the water must be drained off through the grated outlets very slowly, so that no fishes may remain in the mud, for, if a new hatching operation is contemplated in the pond, the never-catched fishes will be retarded in their growth on account of the scarcity of food, this being consumed by any remaining larger ones. The young fishes must be handled carefully, for the slightest injury of the scales may cause disease and death.

The breeding-ponds have the same construction as the hatching-ponds; they have dams, reserve-sluices, outlet-channels, collectors and ditches in the bottom. The only difference is in being deeper and larger than hatching-ponds. They have an average depth of 1 foot 9 inches, and the width of their shallow borders is from 70 to 80 feet. The "ketties" have a depth of 4½ feet from the surface; their borders are from 7 to 8 inches deep. The growth of grass should also be advanced in these ponds. In small ones of about 4 or 6 acres the "ketties" may have a length and width of 60 or 70 feet.

The stocking of the breeding ponds takes place in spring, immediately after the emptying out of the hatching-ponds; it lasts from the latter part of March until April.

From 600 to 1,000 breeding fishes may be calculated to an American acre, 800 being the average. To cover possible risks 100 more may be added, as in the most successful pond slight losses are to be expected.

In favorable ponds, where the carp is left to seek its food, it will have gained a weight of about 1¼ pounds in the ensuing autumn. In small ponds, about one acre in size, where feeding is practiced, they will weigh more.

In the southern countries of Europe, in favorably situated ponds, they will sometimes reach a weight of 2 pounds in the same space of time. This I found to be the case in southern France; however, these favorable results are only attributable to the mildness of the climate, and I doubt not that proportionably better results may be arrived at in the south of this country.

In ponds of small capacity, in which nourishing food is produced in small quantities, the results of breeding are not very encouraging.

An advantage will be gained in northern, colder countries, by leaving the young fishes two summers in the breeding-ponds; that is, they are transferred to a second, larger one, and only from this they pass into the culture or real carp-ponds. This will answer especially well if the bottom of the pond is poor, or if feeding has not the desired effect.

This method is followed by many competent culturists in Germany and Austria, who, in the possession of extensive lands and excellent, numerous ponds, find it to their advantage, as it enables them to place larger breeding fishes in the carp-ponds; and though there is a loss of one year later, the loss of time is compensated for by the large size of the fishes produced in the carp-ponds.

In the spring of the third year those fishes which having been one year in the breeding-pond are transferred to the carp-pond, the construction of which I have described before. Fishes have been kept in the breeding-pond for one summer only, without being fed, will be found to weigh at the expiration of that time from 1 to 1½ pound, while those which remained there two summers will show a proportionally greater increase of weight. In southern Hungary and Croatia the fishes kept in the breeding-pond but one summer occasionally thrive more favorably. Differences in the ratio of weight are commonly owing, as I observed before, to climatic influence, and the greatest and most rapid increase will be found in localities where there is an early spring and where the months of September and October are warm, but particularly where the nights are still and mild during spring and autumn.

Breeding-ponds should have a certain number of fishes only placed in them when they are stocked, and that number should never be exceeded. For the culturist it is important to bear in mind that the younger the transferable breeding-fishes are the less expense they will have caused and the sooner their money value may be realized, all carps weighing 2½ pounds and more being for the market.

To stock a culture-pond of one acre 400 to 500 carp of one pound in weight will be required, and in the following year, or rather in the autumn of the same year, when the fishes are taken out for the market, they will weigh in a good pond 2½ to 3 pounds each, or about 1,200 to 2,000 pounds in the aggregate. In some localities only 200 carp are taken to one acre of American square measure, in other places more.

Pike* are frequently put into carp-ponds in Europe without reducing the number of the carp one pike being added to 25 or 30 of the former. This is an old practice, which has been proved of great use by experience, assisting through the effects exercised in the improvement of culture—that is, the favorable progress of the fishes. The carp is a very indolent fish, which frequently remains for many hours in the same place at the most favorable period for feeding, namely in summer. It is aware of the pike's voracity and remains always cautiously at a distance from it. The introduction of the pike is practiced for two reasons: (1.) That the carp may not constantly remain in the same feeding-place, but, frightened away by the pike, may visit others also; (2) it is done, and principally so, to prevent the more mature carp from spawning; should the spawning occur, as is the case occasionally, the young fry will be devoured by the pikes, which otherwise would have deprived the large carps of their food. The pike will also destroy those fishes and their spawn which had succeeded in getting into the ponds without the knowledge or through the inability of the culturist to prevent it. Great care is required in the introduction of the pike; specimens of minor sizes than that of the carp must be selected. The growth of the pike being much more rapid than that of the carp (500 per cent. per annum), the former should be put in for one year at least than the latter, so that it may not prove dangerous to the carp. If this precaution is taken in the introduction of the pike, it will be an actual boon to the carp-colonies, for it will not only exterminate by degrees all those parasitical fishes which intrude themselves into the ponds, but it will devour frogs or the smaller kinds of its own species as well as water-snakes and tritons.

Should the pike suffer from want of food after having cleared the pond of all these animals it must be supplied with it; small specied fishes, or such as have been stunted in their growth, will answer the purpose. If this is neglected the hungry pike will attack its companions, the carp, and though it may not devour them, it will mortally wound them with its teeth.

I have so far given the principal traits of natural carp-culture, and will speak more explicitly of the artificial impregnation and hatching of the carp's eggs in my next report. So far as I know, this latter method has been little, if at all, employed in Europe, although it offers much greater advantages for the production of vast quantities of spawn. My own experiments were rewarded by by the best results. I intend continuing them this summer in Baltimore, and hope to communicate the results hereafter.

* From "The Carp and its Culture in Rivers and Lakes, and its Introduction in America," being Part IV. of the Report of the U. S. Fish Commission, 1875-76.

*Males are selected for this purpose.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. J. R. Stayton, Secretary, Pittsburgh, Pa.

September 1 at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 774, New York City.

THE NEW YORK DOG SHOW.

"DOG Show Week" has so thoroughly become an established fixture in the annual sporting events of the metropolis, that for weeks previous to the opening day all dog lovers are on the tip-toe of expectation. This year there was no cause for disappointment, for the fifth annual bench show of dogs, given under the auspices of the Westminster Kennel Club, held on April 26, 27, 28 and 29, completely outshown in every particular all exhibitions of the kind ever held in America.

The change of location, from the dusty and crumbling Madison Square Garden to the American Institute building, was a most commendable departure. In the face of removing from the centre of the city to rather a remote section it was expected that the attendance would not be adequate to cover the very large outlay which is necessary to provide for the comfort of exhibitors, public and dogs, but although Mr. Vennor had arranged for two sprinkling days, we are glad to state that there was a goodly balance on the right side at the close of the show on Friday evening. Here, in in this connection, we would say, that ever since the Westminster Kennel Club, which is an organization composed of gentlemen, inaugurated these shows, which have done so much to improve our dogs and bring the best breeders in the land face to face, there has been a disposition on the part of some to give a wrong complexion as to the motive, and they have more than hinted that the shows were run in the interest of those who had filthy lucre more in mind than the improvement of the breeds of dogs at heart. Even for argument's sake, admitting the truth of this assertion, can any one doubt that the bench shows here and elsewhere have done anything but assist a system which cannot but do good? But we do not agree that money-making has been the object, for there has always been too much uncertainty in such an experiment, which would have caused too great a loss to those interested, to suppose that dollars and not dogs was the hobby to be ridden. At all times it requires pluck to back the pocket, and even the modest vender of pop-corn at the street corners takes his chances in this world—and does good.

As already stated in our last issue, the "Rink" was the best place we have ever seen for holding the show. In fact, we do not hesitate to advise those of our friends who were opposed to entering their dogs at the Garden to send their stock next year to the Rink, and we look to see many old faces back again. The ventilation was perfect, and although the weather was warm, the air was at no time tainted with a doggy smell. The pens were an improvement on those previously used, and the cemented floor was clean and free from dust. Under the excellent management, and with Mr. Lincoln as superintendent, the experience of the past was utilized, and from the opening hour to the wind-up the show ran its course like an oiled machine. This was the first time we have ever seen the veterinary arrangements up to the mark, and Dr. John W. Dancer, the Inspector, was prompt in having the few dogs withdrawn that from time to time showed signs of sickness.

The attendance was a far more fashionable one than is usually seen at a dog show. There were many ladies present in elegant toilets, which reminded one more of a London flower show in the season than anything else. About the rings, when the judging was being carried on, there were the well-known faces of dog lovers from all parts of the country—there being few States that were not largely represented. The judging is always one of the attractions of the show, as the animals are seen to much better advantage when grouped together in the ring than when tired and curled up in their stalls. Dogs always show better when led by their owners; and although we believe that only employes of the show should enter the ring, yet the judges this year seemed throughout to keep their eyes on the right end of the chain. About the pens where the pugs were boxed, bevies of ladies were seen to collect throughout the day, reminding one of the old story of "Beauty and the Beast;" and the ovations that some of the "pets" received, no doubt were extremely aggravating to those who do not see the merits of the "little brutes."

From what we saw in walking around the stalls, there seemed to be more absentees than usual; conspicuously the kennel of the St. Louis Club, which is undoubtedly the best collection of large pointers in the country. The goodly lot of dogs that were present, however, were the grandest as to quality that have ever been exhibited, and many were the typical dogs of their breed. They were universally shown in first-class condition.

Referring to the files of the FOREST AND STREAM, we extract a comparative table of entries, and the classes under which they appeared in each of the five shows that have been held in New York, which we summarize below:—

	Entries.	*Classes.*	*Specials.*
First Show—1877	864	70	26
Second Show—1878	824	80	26
Third Show—1879	948	80	—
Fourth Show—1880	1,108	75	9
Fifth Show—1881	1,014	95	32

Exclusive of the specials, the club paid out $2,000 as awards in the regular classes, besides donating 86 silver medals.

A glance also at the official catalogues places us in possession of the following table of entries in the pointer and setter classes in this and previous shows:—

	1877.	1878.	1879.	1880.	1881.
Pointers	120	83	128	135	125
Setters—					
English	150	122	157	234	158
Irish	147	108	159	135	98
Black and Tan	83-380	64-294	73-389	74-443	92
Total	500	377	517	578	474

Dog showing has now become a science in this country, and but few owners send in dogs without merit of some sort. The ragged, weedy lot that yelped and caught the tyro's eye in the pioneer days, sandwiched between the best specimens of their class, are now left at home to guard the latch-string, and we look forward to the day when wire-netting will divide the pens, and the dogs be exhibited to still better advantage.

It was a remarkably peaceful show, with an absence of "solid protests" that would have warmed the cockles of Dr. Watts' heart. We heard the integrity of no one questioned for a moment, and it is our pleasure to compliment the judges in trying to do their level best, although we differ with them in several of their decisions.

Summarizing the show briefly here, the sporting classes were truly a fine lot, noticeably the English Setter Imported dog and bitch classes, while the native dog open class was the best we have ever seen. The Irish setter classes contained many fine specimens; but as a whole the lot was not up to what we expected, and the same may be said of the black and tans. The open class for large pointers was very much better than usual, as was also the small pointer classes. The non-sporting exhibit was a great improvement on previous years; noticeably the Fox Terriers, which have so rapidly gained favor in America. The Beagles turned out in grand numbers, as will be seen by a reference to the classified comparative table of entries annexed below. Had the club opened a special class for the "bench-legged beagles" or Basset, there is no doubt that a very much larger entry would have been secured. As it was, the special class, opened for the FOREST AND STREAM prize for the Straight Beagles, contained more entries than any other special, except in Class B. We have already spoken of the large dogs, and refer our readers to our comments in another column.

COMPARATIVE TABLE OF ENTRIES AT THE FIVE SHOWS.

CLASSES.	1877	1878	1879	1880	1881
Mastiffs	26	18	20	27	24
St. Bernards	37	16	24	32	21
Newfoundlands	12	23	20	26	7
Siberian or Ulm	8	11	11	21	6
Pointers	120	83	128	135	126
English setters	150	122	157	234	158
Black and tan setters	83	64	73	74	92
Irish setters	147	108	98	135	98
Red and white setters	—	—	61	—	—
Chesapeake Bay dogs	2	4	—	—	—
Irish water spaniels	4	4	8	7	10
Retrieving spaniels	5	9	—	—	—
Clumber spaniels	—	2	5	2	—
Cocker spaniels	19	15	26	39	24
Field spaniels	13	1	—	—	19
Greyhounds	16	23	15	15	28
Deerhounds	4	4	6	7	4

King Charles and Blenheim Spaniels	4	6	8	—	11
Japanese spaniels	4	7	5	9	3
Italian greyhounds	6	14	9	10	12
Poodles	2	—	—	—	—
Trick dogs	1	—	—	—	—
Miscellaneous	7	2	26	40	23

The judges selected had to do their duty single-handed, and the classes were divided as follows:—Mastiffs, St. Bernards, Newfoundlands, Siberian or Ulm dogs and deerhounds, Mr. Paul Dana, of New York City; greyhounds, black and tan setters, foxhounds and miscellaneous class, Hon. John S. Wise, Richmond, Va.; pointers, Mr. S. T. Hammond, Springfield, Mass.; champion, imported and native English setters, Irish setters and beagles, Major J. M. Taylor, of Lexington, Ky.; spaniels (all classes), dachshunds, fox-terriers, collies, bulldogs, bull terriers, Skye terriers, pugs, rough-haired terriers, black and tan terriers, Dandie Dinmont terriers, Irish terriers, Yorkshire toys, King Charles or Blenheim spaniels, Japanese spaniels and Italian greyhounds, Dr. J. S. Niven, London, Ontario.

The club management was in the hands of the following members who acted as stewards: Messrs. Elliot Smith, J. Coleman Drayton, George DeForest Grant and Louis B. Wright.

On both sides of the building there were long lines of booths, which offered the visitor everything from a cake of dog soap to a stuffed rhinoceros.

As we made our remarks in last issue concerning the classes of mastiffs, St. Bernards, Newfoundlands, Siberian, Deerhounds, Irish water spaniels, field spaniels, cocker spaniels and fox terriers, there is no necessity of again referring to these classes. We failed to mention in our notes regarding cockers that Mr. Chas. F. Kent's Wildair arrived too late at the show and, therefore, was not judged in his class.

In addition to regular entries, Mr. Henry Lacy, Manchester, England, entered eight dogs for exhibition—namely, Shot, a liver and white cocker spaniel, bred by Mr. Parkinson; Bock, a blue and fawn Airedale terrier; Carlos, a black and white pointer; Duke, a lemon and white Blenheim spaniel; Jack, a rough-haired Airedale terrier; Judge, a liver and white pointer bitch; Shep, a Scotch collie, and Vic, a brown and white pointer bitch. As we have already, in a late issue, given in detail the entries of the only other English exhibitor, Mr. C. H. Mason, and referred to each in the proper place, it is unnecessary to say that the lot from across the water are good ones.

During Friday afternoon the prizes were distributed, and at 3 P. M. and 8 in the evening the prize winners were paraded in one of the rings.

On Friday evening, after the doors of the show were closed, the Westminster Kennel Club held its annual dinner at the Hotel Brunswick. About fifty members and their guests sat down to table, over which Mr. H. Walter Webb presided. Toasts were offered and responded to by the judges present—Messrs. Wise, Nivens and Hammond—Major Taylor and Mr. Dana being absent. The superintendent, Mr. Lincoln, also came in for his share of the ovation, as did the representatives of the sporting and daily press. Mr. John H. Raymond proposed the toast "Laverack setters of America," and Mr. John C. Higgins to "Breeders of America." The toast to the "Eastern Field Trials Club" was replied to by Mr. J. O. Donner. The sitting was a long one, and the party did not leave the good cheer until the "early *cock* had twice done salutation to the morn."

WESTMINSTER KENNEL CLUB'S POINTERS.—The club itself entered eight of their cracks, and, as usual, they were not for competition. The list of seven was as follows: Sensation (Jingo-Nina), so well known as a winner on the bench and of third at Eastern Field Trials, 1880; Polly, the recently imported lemon and white bitch out of Summerson's Nance by champion Shot; Whiskey (Flash-Juno), black and white, in whelp to Sensation; Daisy, the charming lemon and white bitch by Flake out of Lilly, in whelp to Sensation—this bitch has a model head of her kind, denoting power, but entirely free from coarseness, with a grand muzzle; Gertie, black and white bitch by Cal out of Munn's Psyche; May, liver and white, by Satan's Tramp out of Taft's Bess, and Queen May (Native-Fan), black and white ticked.

On Wednesday morning Mr. S. T. Hammond, commenced on his class in the east ring, and he found no easy task out out for him.

CHAMPION POINTERS, LARGE SIZE.—In the dog class, which contained five entries, the absence of the St. Louis Kennel Club's Faust, Bow and York, brought together Mr. Wilks' lemon and white Tramp (Sensation-Psyche) and Mr. Moore's liver and white Banjo (Garth's Old Drake-Grouse's Bess). The former was conjured into the champion ranks at last year's show, and Banjo joined the band at Pittsburgh in January. Tramp secured the money, although he carries an exaggerated head, and is too long and weak in the loins. We preferred Banjo, a better dog, with a fine eye and intelligent face, but throaty; still neither are up to the standard of champions, and there were several dogs in the open lot more worthy of the class. Five entries also marked the bitch class in which Mr. Barker's superb black Princess (Dilly's Ranger-Fan) had no easy walk over. She is truly a magnificent animal, with a typical head, beautiful soft eyes, splendid coat, a well-shaped body supported by grand legs, and one of the finest tails we ever saw wag on any dog. Mr. White's Grace, the dam of Mr. Gregory's Belle, was among the lot.

POINTERS, LARGE SIZE.—Six and twenty pointers, all in a row, comprised this unusually fine class. Indeed, we have never seen a better lot in the ring together. Mr. Hammond was all but five minutes of two hours in making up his mind, and then he gave first to Mr. Hobert's Rapp (Don-Blossom) a remarkable fine liver and white ticked dog, winner of 3d, 1878, under Mr. Lort; 2d, 1879, under Messrs. Davidson, Colburn and Wise, and not exhibited in 1880. His return to the magic circle, and to come out on top in such a class must be a matter of congratulation to his owner. Mr. Moore's dark liver and white Guess (Start-Maud) secured second, and Mr. Godeffroy's Croxteth, liver and white (Bang-Jane), third. It was a close thing between the trio, but we fancied Croxteth, although he was shown too fine. He has a very much better head and ears, is a stronger dog all over, and has a well-developed chest of great depth. Guess we thought was rightly placed. He was the youngest of the lucky ones, and being his first appearance we handed the powerful fellow for this many good qualities. This order would place Rapp third. Lord Dufferin, Bay, Snipe and Rocket, justly deserved the three letters, but we did not like as well as either Don or Smuggler II. Chelmsford is a rare good one, but Dan, who has a disproportionately small head was well taken care of. In the bitch class there was eight entries, of which only five competitors turned up, the St. Louis Kennel Club's Lassie, Jessamine and Trinket being absent. Mr. Mason's lemon and white Water Lily (Don-Dolly) received first, Mr. Hamar's Zoe second and Mr. Meyer's lemon and white Snowflake (Gretmark-Girl) third. Zoe, a very fine black bitch, we much preferred for first choice, she has a really magnificent head, even superior to that of Princess, an intelligent eye, grand coat, but poor feet, and is said to be a good field dog. Snowflake, a nice bitch, we would have placed second, and Water Lily, who has a badly proportioned head, but otherwise a good one, third. Gypsey deservedly got very high mention.

CHAMPION POINTERS, SMALL SIZE.—This was a capital class of five entries. Mr. Orgill's old standby Rush (Flake-Lilly), added another blue ribbon to his large collection. Mr. Moore's Donald was shown in magnificent form, and undoubtedly is the best liver and white dog of his size in America. Mr. Wright's liver and white Dick (Colonel-Fly), was also benched in fine condition; he is a rattling good dog, with grand head and body, and is a superior animal. In the bitches eleven entries were made, but only four of them were presented. Mr. Orgill again won with his lemon and white Rue (Snapshot-Ruby), who was shown, as all her owner's dogs always are, in fit condition. She is a most deserving little bitch. The St. Louis Kennel Club's entry, Clytie, was absent, and five of Mr. Orgill's entries—Rill, Riot, Rowett, Random and Royster—were on exhibition only. Mr. Moore's Lady Romp II. was justly admired, as she is a remarkably handsome bitch.

POINTERS, SMALL SIZE, were a very fine lot, and twenty-one entries made up the dog class. Gay, liver and white (Champion Bang-Juno), the property of Mr. Moore, took first. Blanchcellor (Duke Duchess), a liver and white English winner, belonging to Mr. Mason, came in for second, which, we think, belonged to Mr. Orgill's lemon and white Rowell (Snapshot-Ruby), who took third, and we would have transposed these two. Rowell is excellently put together, a youngster of fine form, powerful body, being well muscled, has a good head, an intelligent eye and shows his breeding to a nicety. He was a hot class, and Parquet, Rob White and Match crowded the winners. Tom deserved more than a h. c.; he was shown in fine condition, and we liked him better the more we saw of him. Flash is a nice dog, with a head like his sire; deserved all he got. The improvement in the class, as a whole, cannot be too highly spoken of. Twenty-eight entries were in the bitch class, and they, too, were a rare lot. Mr. Orgill's kennel again won, with Rhona, lemon and white (Snapshot-Rose). Lady Dufferin, lemon and white (Golden's Dash-Hewson's Fan), secured second, and Mr. Heckshar has a fine bitch in her. Mr. Lamb's lemon and white Flirt (Grapeshot-Elf), third. Mr. Drayton's Bonnie Kate, unnoticed on account of being over size, we liked immensely, considering her one of the best bitches in the show. Lill, well worthy of her v. h. c., as was Gregory's Bell, the winner of first in Nursery Stakes last year at Robin's Island. Mr. Roach's Queen II. received no mark, although she deserved to be highly commended; she has a good head, grand body, but is deficient in stern.

POINTER PUPPIES.—The dog class had nine entries, and the youngsters were only a fair lot. The redoubtable Mr. Orgill again took first, with a seven months' old lemon and white Rocket-Clyment whelp, called Rap. Paul, a large lemon and white ticked (Prince-Waddie) puppy second, and Tim, a very promising youngster, a very high mention. Eight bitches were entered in their class, but only five were brought to the ring. Lilly, lemon and white (Fawcett's Duke-owner's Nell) came first, but we preferred Rival, a nice little lemon and white bitch. This closed the pointer classes, and, as far as color went, it will be seen honors were divided.

On Tuesday morning Major J. M. Taylor, Lexington, Ky., commenced judging the English setter classes in the west ring, and throughout showed great care and trouble in making his decisions. Every one came under his notice, as indeed did all the dogs, throughout before the other judges. The first lot was the best half-dozen dogs we ever saw represent the—

CHAMPION ENGLISH SETTERS.—They were St. Elmo, Coin, Frank II., Ray, Thunder and Mr. Moore's Leicester (Dan-Lill II.), the latter won after being hurried by Thunder. The old hero of so many battles was shown in perfect condition. The seven champion bitches were not near as good a class as the dogs. First was awarded to Mr. Sanborn's white Spark (Carlowitz-Magnet), and Lizzie Lee, of field trial fame, was the only bitch that crowded her.

IMPORTED ENGLISH SETTERS.—This class was a poser for any judge, but the typical Kentuckian was equal to the occasion, and judged it without fear or favor. Seldom have a finer lot of dogs been brought together, and from the large number of ribbons dealt out (for Major Taylor has established a reputation for being sparing in his favors), the class must have won his good graces. Mr. John R. Robinson's white and orange pure Laverack, Emperor Fred (Tory or Blue Prince-Daisy) was granted first; we were disappointed in him. He is an over-sized animal, and not our idea of a great Laverack champion winner. The black white and tan Duke of Beaufort (Pride of the Border-Fairy II.), the property of Mr. Goodsell, came in for second, and Mr. Higgin's well-known blue ticked Pontiac (Pride of the Border-Petrel) took third. It will thus be seen that the pure Lavaracks collared all the glory. We, however, preferred Darling Mourard, highly mentioned, to the third winner. Warwick, Jamie and Temple Bar, the v. h. c.'s, were shown in fit condition, and richly deserved all they got. Don Juan should have had something more than a simple commendation, and the rest of the class was rightly placed, with the exception of Mr. Sanborn's Count Noble, black, white and tan (Count Windsor, Nora), winner of the N. A. K. C.'s Derby last autumn. He certainly should have been placed along with those of very high notice. He has a superior head, many points of which are unusually well defined; deep chest, grand loins, powerful and well-proportioned body, covered with a handsome coat well marked. The bitches formed a very strong combination, and the class was exceedingly well placed. There were four absentees, all good ones, namely, Mr. Moore's charming brace of Paris-Pearl bitches, Lass o' Gowrie and Luna May; Mr. Goodsell's Norna, and Dr. Speirs' Wanda. Eleven were sent to the ring. Mr. Higgins won with blue-ticked Petrel (Pride of the Border-Petrel), Mr. Beebe second, with Blue Bell (Roderick Dhu-Mina), shown in fine condition, and Mr. Goodsell, with the pocket edition Daisy Laverack, lemon Belton (Thunder-Peiress), secured third.

NATIVE ENGLISH SETTERS.—Half a hundred and one dogs marked the dog class, it being the largest in the show. It was a wonderfully fine collection. We differed with the placing of the winners somewhat. Spot, white, with chestnut spots (Carlowitz-Lucy), owned by Mr. Wilson, a dog of the old type of American setter, received first. There was a lack of character in his face, and he seemed out of sorts. Count Zo, orange Belton (Pontiac-Queen Anne), a recent purchase of Mr. Goodsell's, was justly awarded second. He is of the new type of English setter. We, however, preferred Mr. Goodsell's Racket, black, white and tan (Rattler-Leda), who got third, to the first winner. He is a very superior dog, of high type to breed to, and has a stronger and more powerful head and body than the first. Blue Dan, a handsome blue Belton, was deservedly well cared for, as was Young Belton, a remarkably good dog, but somewhat leggy; we liked him, however, better than first. Boyle Carle came in justly for the three letters, as did Clexton, litter brother of Lizzie Lee. He is, we are told, an extra field dog. To sum up, therefore, we would have placed Racket first, Count Zo second and Bine Dan third. Afton, our choice last year for first, was shown too fleshy, but still showed his grand breeding in his wonderfully strong and typical head. McAlpine's Ranger (unnoticed) deserved mention; he is a handsomely-formed dog. Blue Drake, a pure Laverack, was justly highly commended, and Mr. Rogers' Polo should have had a c. The remainder of the class noticed were entitled to their ribbons. In the bitch class

there were thirty entries, with several good ones absent, noticeably Mr. Donner's Bessie and Dr. Speir's Maida. The class was inferior to the dogs, although there were some grand specimens. Mr. Moran's orange and white Donna (Charm–Fanny) was awarded the blue ribbon. The Sportsman's Kennel,s white and lemon Flirt (Druid–Miley), litter sister to Dr. Speir's Lizzie Lee, a bitch of extra quality, received second—we would have had her exchange places with Donna. Mr. Moore's lemon Belton, Lady Laverack (Thunder-Dereese), got third place—she is a big little one. The only v. h. c. in the class was Highland Lassie (well deserved). She is a litter sister to Lizzie Lee, Clexton and Flirt. The other ribbons were well distributed, but we think Mr. Fay's Judith (unnoticed) an animal of good substance, with good head and well-placed ears, should have had very high mention.

ENGLISH SETTER PUPPIES.—There were seventeen entries in the dog class, but they were not a strong class as things are going. A black and white ticked, eleven months old youngster, Royal Dale (Dash III–Daisy Dale), got first, and Mr. Betty's Doc, liver and white spots (Spot-Topsy) second. We fancied, however, Peter Schlemihl (Ray–Delta) in preference to both first and second. Chelten D., the property of Mr. Shuster, was a very promising young dog and should have had something more than a mere mention. The bitch class was an improvement on the dogs. It contained thirteen entries. Mr. Drake's blue Belton Rem (Trump–Belle) took first, and Mr. Meyer's lemon Belton Rose Laverack (Young Laverack–Petrel II), a bitch resembling her dam, of good quality but shown in poor condition, came in for second place. August Flower well deserved a v.h.c., and the sweet bitch Tambazine (Pontiac–Queen Anne), now owned by Mr. Whitehouse, St. Paul, Minn., should have had more than a commendation. She has a face of great intelligence, good head, but a faulty body, lacking muscle probably from want of proper exercise.

The Hon. John S. Wise on Wednesday commenced to judge the Black and Tan Setters in the ring vacated by Major Taylor. The class was, in our opinion, below the average, and as it seems in the see-saw of bench showing the pointers and English setters have gone up on one side, and the Irish and black and tans have gone down on the other. Mr. Wise distributed his favors with a lavish hand.

CHAMPION BLACK AND TAN SETTERS.—The dog class contained four entries, but Mr. T. F. Taylor's Turk, and Mr. Sedgwick's Jock, Jr., failed to appear. Toledo Kennel Club's Grouse and Mr. A. H. Moore's Bob fell in together. The latter dog by Lang out of Rose was properly awarded the prize. Six bitches had a battle royal in their class, and although there was much difference of opinion in the selection of Lady Gordon (Grouse–Belle) yet we indorse the decision.

BLACK AND TAN SETTERS.—There were some excellent entries in the large class of thirty-eight dogs, but the class as a whole was not what it should be. Mr. Brownell won first with Dash by Doane's Tom out of Chloe; Mr. Alden came in for second with Bailey's Tom (Stockton's imported Dash–Fly), and third went to Sam (Pouto–Witch II.) belonging to Dr. Gardner. The four recipients of v. h. c. were deserving, and the rest of the class was rendered on the same principle. Champ and Lang were taken from the ring by mistake, although the judge wished to highly commend each. Mr. Taft's Don deserved mention. Later on during the closing hours of the show this wonderfully well-trained dog went through a series of tricks, which were much applauded by those who saw them. The bitch class was not up to the mark; there were but two absentees checked off on the list of twenty-one entries, that had not agree with the judging, and would have transposed the three winners in the class, made the third first; second, third; and first, second. Toledo Kennel Club came to the front with Venus (Grouse–Mona) a very good one; Topsy (Bergen's Dash–Nell) took second, and the best of the three, to our idea, Mr. Moore's Lady Rapid (Old Renben-Rosa) the silver medal. Both January v. h. c. and Young Flora were deserving. In the puppy class for dogs the catalogue showed twelve entries. The class was a fair one. Grouse (Brownell's Dash-Maud) and Sam (Young–Venus) first and second are promising young dogs, the others were rightly placed with Lang's Queen of Grouse, a nice puppy, who we thought deserved higher mention. Of the eleven bitches we saw nothing outside of Daisy (Glen–Fannie).

The judging of the Irish setter classes was begun on Wednesday in the west ring, Major Taylor exercising his usual care.

CHAMPION IRISH SETTERS.—There were seven entries in the dog class, Mr. McIntosh's Biz being conspicuous by his absence. Champion Elcho was present, but not for competition. Mr. Goodsell's Rake, Mr. Nolan's Elcho III., Mr. Crawford's Arlington, Miss May Callender's Rory and Mr. Moore's Shelby (Elcho–Loo II.). The latter was shown in fine condition, and received the high honor. The class was a good one, and is so well known that comment is unnecessary. Elcho III. has always been a warm favorite of ours, whom we consider an Irish setter in every respect, and a typical dog of his class. Six entries marked the bitch class, and the money went to Loo II. (Grouse–Maybe), a choice, we must confess, we did not agree with, preferring both Dr. Jarvis' Rose and Mr. Gause's Fire-Fly.

IRISH SETTERS.—The open dog class contained thirty-four entries. It was not a deserving class, and the judge thought so by only ribboning six of the lot. Mr. Wenzel's Chief (Berkly–Duck) had an easy win; he is a good dog with a future before him. Raleigh (Elcho–Rose) secured second. Sam Pedro was the only v. h. c., and Duncan, an h. c., was one of the best in the class. It will thus be seen that the field trial winners came to the fore. The bitch class of a score of entries was of much better quality. Dr. Jarvis carried off the first prize with his newly imported Noreen (Garryowen–Cora), a promising youngster of the right, good all over, of grand color. She took first at the Irish Kennel Club Show, Dublin, last year. Mr. Clark's Meg (Elcho–Rose) landed second, also a fine animal of her type. Third went to Mr. Dulany's Kate (Imported Pat–Imported Norah). Dr. Jarvis' Lana made her first appearance, and was awarded the only v. h. c. Our list of awards will show the others that received recognition. The class throughout was remarkably well judged.

IRISH SETTER PUPPIES.—In the dog class there were twenty-one entries. Grafton, owned by Mr. Sage, seventeen months' Elcho–Rose puppy, deservedly received first. Rapid Star (George–Nora), a trifle leggy, took second, and the rest were well placed, although it would not have been straining a point to have given Marquis of Bute very high mention, as he was a youngster of good color, and well worthy of coming nearer the winners. The ten bitches, or rather nine, for one was absent, were a better lot than the dogs. Reddie (Elcho–Rose), a promising nine months' puppy, came in for first, and Lucille (Rory O'More–Norah O'More) was selected for second; we, however, preferred Red Lon, a remarkably handsome bitch, as was also Queen Elizabeth a good one, and Fashion deserved more than simple mention.

GREYHOUNDS.—We have never seen a finer specimen of this breed than Mr. Mason's Dropping Well, whose entire conformation bespoke speed to the greatest extent. Head long and clean, nicely placed ears, a graceful, well-balanced neck, with nicely-sloped and muscular shoulders, with legs as straight as darts. In her back, loins and quarters, however, her strongest points lay, the muscle being as hard as iron and bunching out in great bosses on the quarters. She stood alone as a model of perfection, and if it had not been for Slingsby, Mr. Mason's other entry, showing the effects of his recent voyage so much in coat and skin, he would have been second prize winner. Mr. Wise decided to send him out of the ring, so Don got second prize, but his straight shoulders and stifles will never permit of great speed. Juliet, owned by Major Kobbe, and Mr. Lee's Fan were much the same as Don.

FOXHOUNDS.—In this class there was every variety of hound, from half-bred harriers up to some with bloodhound looks. The true foxhounds were not very plentiful. Those of the Queen's County Hunt, with their ears rounded after the English style, were much better than any of their competitors, Comer and Coast Guard being strong, well-made hounds.

BEAGLES.—Very few bench-legged beagles were shown in the two classes, and as the Club had made no class for Bassetts or bench-legged dogs they had to be entered in the beagle class, and so had no chance for anything but the FOREST AND STREAM special prize. The prize dog Rattler is well named and is one of the best of this handsome class of dogs we have ever seen. Flute is another good one, the catalogue says by Rattler, but we did not notice this in time to inquire whether the sire was the first prize winner. Mr. T. Orgill's Melody he thought capable of doing as well in the open bitch class as in that for puppies, and his judgment was well sustained, for she won very easily. Lucy II., the second prize winner, is very light in the barrel, but has a most perfect hound head. The Montclair Hunt showed a very small one, which the handler said was excellent in the field. Owing to having slipped her puppies only a few days ago, she was looking quite out of trim. The class was very uneven with respect to size, and Major Taylor took some time to get them sorted out. The only beagle puppy shown was a small one, from the Montclair Hunt Kennel, named Bluebell, all of Mr. Sherman's and Mr. Davison's being absent.

DACHSHUNDE.—The winners were of the medium size, strong workmanlike dogs, with good heads, legs and backs. Wodan is a dark chestnut and tan, and Marguerite, by Dr. Leadell's Unser-Fritz, a black and tan, is the same style of dog, an excellent bitch. Freya, a sister to the first prize winner, was a handsome little dog, but she was passed over, preference for the commendation being given to Mr. Scheelje's Dave, in color resembling Wodan, and Mr. Stellman's Bergmann.

COLLIES.—Ray, Rex and Tweed II. were in the champion dog class; and as the Scotland Kennel dog was not looking his best, the general opinion was that Rex should have won; and it is one shared by us. As Lassie was the only one present of the two entered in the bitch class, she was made a champion. The dogs in the regular class were much better than we have ever seen; and Mr. Lindsay's success with Ayrshire Laddie acted as soothing syrup for the defeat of Rex. Nelson, recently imported by Mr. Apgar, is a beautiful dog, with a dense and long coat; quite a bench collie, and he has won a number of prizes in England. There was quite a difference between him and Punch, who took third prize, the latter being a very plain-looking dog, and so is the puppy Prince. Mr. Apgar came in for his share of the prizes, and was given first and second for his bitches Isle and Daisy. His Lassie, the winner in the puppy class last year, was entirely passed over, much to Mr. Apgar's surprise. A Rex puppy was third, and another very highly commended, both being out of Flora, a first prize winner last year. This litter was a wonderful one, for of the five chosen (three being in the puppy class) there was not a bad one; and two of the puppies were better than those out of Lassie, also by Rex, awarded the prize and a v.b.c. Sport, one referred to, was highly commended.

BULLDOGS.—Noble was the best of Mr. Mason's two, Alexander being poor in flesh and showing age. Ben would be a very fine dog if his face was shorter, as he looks a perfect bulldog from neck to tail. Mr. Barnard exhibited quite a number, of which Bonnie Boy was the best, an excellent dog of his breed.

BULL TERRIERS.—There was no doubt as to the winner in this class. Young Bill being much the best, and Silk II. the winner at Pittsburgh came second. Butcher, the third prize dog, was all over scars, and displayed rather too much of his pluck while being paraded on Friday. The small bull terriers were also judged satisfactorily. Tessa, a small little dog, being placed first, and his companion, Pass, third. The second was Mr. Watt's Grab, from Boston. Young Victor won the puppy medal.

SKYE TERRIERS.—Tom beat Mack, both good specimens, the champion being in better trim. In the open class Tatters won without any trouble, and is a very nice Skye. Mr. Moore was second with Tuck, and his Scottish Queen was commended. The latter was entitled to more than that, and was every way as good as Topsey, who got third and is not a pleasing dog.

TOY SPANIELS.—Nugget did not appear, and his entries so Mr. Moore had nothing to beat with Young Sootey in the champion dog class, and there was no competition in the corresponding bitch class. The open dog class brought out seevarl good specimens. Roderick, shewn by Dr. Cryer, of Philadelphia, but really the property of Miss ——, is a choice pug, almost perfect in all the fancy markings. George, another Philadelphia dog, was second, and is of larger build than the winner, with a finely developed head. Piccino and Prince were made commended, the latter being very little apart in size. Nay, the prize bitch, deserved her place, but Nina, though defective in several ways, is just about perfect in markings. The puppies were easily judged the medal being won by Smut.

ROUGH-HAIRED TERRIERS.—Difference of opinion existed as to what kind should be shown in this class, as some were rough and others silky. Dr. Nivens would not recognize the latter as eligible for notice, and gave first to a large Airedale terrier, weighing, we should fancy, about forty-five pounds. Paddy, the second prize winner, is a black-backed, wire-haired black and tan terrier.

BLACK AND TAN TERRIERS.—Some toy terriers were shown here in error, and only one prize was given. First to Mr. Martin's Nettle who took second prize last year in the same class.

DANDIE DINMONT TERRIERS.—Mr. Haine's recent importations are both good ones, and were so much alike that if one was good enough to win the other should have been second, and Badger II. was good enough to win. Meg was not the equal of either of them. Piper is well-shaped, but was not shown well.

IRISH TERRIERS.—This is the first time a class has been given for this breed, and it was unfortunate. Dr. Niven could not help to swell the numbers, for he has several good ones. The Lachine Kennel Club was first with Home Ruler, a son of the second prize winner, Kathleen, who was shown last year with her puppies in the miscellaneous class. They are both good specimens, Home Ruler bearing a great resemblance to her sire, Champion Sporter, illustrated in Mr. Vero Shaw's Book of the Dog.

YORKSHIRE TERRIERS.—These were much improved classes and the winners were beautiful in their silky coats. Willie won the champion prize over five pounds. The dogs of Mr. Kallaher were very good, and Young Bright was a darker blue than Mr. Mason's Sandy, who was finer in coat, and received first prize. Another even class was that under five pounds weight, and Jessie and Tatters were about equal in point of merit. Young Mozart is a good, dark-coated dog, and better in that respect than Bennie.

TOY TERRIERS.—The first prize was easily secured by a most perfect little beauty—Mrs. Nelson's Regina Victoria. It was the admiration of every one, and the judge seemed averse to giving his decision and so to lose sight of the wonder.

KING CHARLES AND BLENHEIM SPANIELS.—No Blenheims were exhibited, all being black and tans, except one black, white and tan, which was not noticed on account of color. The class was above the average, numerically, and in merit also, and it was consistently judged. Mr. Watts, of Boston, had two choice dogs, Daisy being first and Rolla very highly commended.

JAPANESE SPANIELS.—Olivette and Pipe Taylor, if they had been entered separately, would have been first and second, but being one entry Olivette was picked out and placed first, the rival opera being "left." The dam of the pair then received second prize and Tappi was very highly commended.

ITALIAN GREYHOUNDS.—The winner is a nicely shaped dog, and so is the second, who excels Pearl in being so much smaller. Cream, in the opinion of many, was the best in the class.

MISCELLANEOUS.—First was given to a Maltese dog, second and third to Newfoundlands, and fourth and fifth to Canicbe poodles. This is always a difficult class to judge, but the dogs selected were the best shown

FULL LIST OF AWARDS.

[V. H. C., very highly commended; H. C., highly commended; C., commended.]

Class 1. Champion Mastiffs: Dogs, silver medal, Chas C Bulls' Turk, New York.

Class 2. Champion Mastiffs: Bitches, silver medal, M. Rathbun's Leah, New York.

Class 3. Mastiffs: Dogs, first prize, $15, C P Fralcigh's Grim, Brooklyn; second, $10, Chas. G Goddard's Grath, Zanesville, O; third, silver medal, C H Mason's Mastiffs, England; v h c Oliver K Hand's Harold, Sing Sing, N Y; h c Mr A Hitchcock's Monarch, New York.

Class 4. Mastiffs: Bitches, first prize $15, C H Mason's Creole, England; second prize $10, Miss Sarah C Hewitt's Freuda, New York; third prize, silver medal, R Lehman's Selma, Brooklyn.

Class 5. Mastiff Puppies: Dogs and Bitches, first prize, $10, Miss Sarah C Hewitt's The Amal, New York; second prize, silver medal, Miss Sarah C Hewitt's Frou Frou; v h c W H Hobart's puppies, Newark, NJ.

Class 6. Champion Rough Coated St. Bernard Dogs: Silver medal, Mrs D. P. Foster's Turco, New York.

Class 7. Champion Rough Coated St. Bernard Bitches: Silver medal, no entries.

Class 8. Rough Coated St Bernard Dogs: First prize, $15, Herman Clawsen's Barry, New York; second prize, $10, H H Baxter's Turk, New York; third prize, silver medal, H M Hoar's Rover, New York.

Class 9. Rough Coated St Bernard Bitches: First prize, $10, A E Godeffroy's Maguerite, Guymard, N Y (only entry).

Class 10. Champion Smooth Coated St Bernard Dogs: Silver medal, John P Haines' Don, Tom's River, N J; v h c John P Haines' Harold, Tom's River, N J.

Class 11. Champion Smooth Coated St Bernard Bitches: Silver medal, John P Haines' Judy, Tom's River, N. J.

Class 12. Smooth Coated St Bernard Dogs: First prize, $15, Herman Samuel J Tilden's Asbhin, New York (only entry).

Class 13. Smooth Coated St Bernard Bitches: First prize, $15, John P Haines' Vic, Tom's River, N J.

Class 14. St. Bernard Puppies, dogs and bitches: First prize, $10, John P Haines' Guard, Tom's River, N J; second prize, silver medal, J P Haines' Cato, Tom's River, N J; v h c John P Haines' Toper, Tom's River, N J; h c John P Haines' Dirk, Tom's River, N J.

Class 15. Newfoundland Dogs: First prize, $10, C H Mason's Mayor of Bingley, England; second prize, silver medal, A U Ibberson's Bogasinus, New York; v h c, E S Wheeler's Carlo, New York.

Class 16. Newfoundland Bitches: First prize, $10, withheld; second prize, silver medal, E E McCormick's Flora, New York.

Class 17. Newfoundland Puppies, dogs and bitches: Silver medal, Edward J Birmingham's Rex, New York (only entry).

Class 18. Collie or Colley Dogs and Bitches: First prize, $10, Aug Field's Caro, New York; second prize, silver medal, G F Keller's Lyon, New York; v h c, F C Wilson's Mous, Englewood, N J.

Class 19. Greyhounds, dogs and bitches: First prize, $10, C H Mason's Dropping Well, England; second prize, silver medal, Patrick Nanry's Don, New York; h c, Major W A Kobbe's Juliet, Fort Hamilton, L I; Frank H Lee's Fan, New York; h c, L C F Lotz's Major, Chas L C F Lotz's Prairie Girl; H A Colt's Rosette, Mount Vernon, N Y; c, W Trenkmann's Dick, New York; Col George C Bradley's Don, Brooklyn, N Y; Thos Mason, Jr's, Nellie, Morristown, N J; James H Murphy's Lady, Worcester, Mass.

Class 20. Deerhounds, dogs and bitches: First prize, $10, W W Sherman's Hero, Newport, R I; second prize, silver medal, W Renkin's Sir Walter, New York.

Class 21. Champion Pointers, over 55 pounds, Dogs: Prize, $30, E S Wilks' Tramp, Galt, Canada.

Class 22. Champion Pointers, over 50 pounds, Bitches: Prize, $30, George G Barker's Princess, Boston, Mass.

Class 23. Pointers, over 55 pounds, Dogs: First prize, $25, W R Hobart's Rapp, Newark, N J; second prize, $15, A H Moore's Guess, Philadelphia; third prize, silver medal, A E Godeffroy's Croxteth, Guymard, N Y; v h c, C DuBois Wagstaff's Lord Dufferin, Baldwin, L I; Edward Lee Oakley, Springfield, Mass; H Clay Ives's Snipe, Tom's River, N J; Edmund Orgill's Rocket, Brooklyn, N Y; C H Mason's Don, England; John F Harrison's Smuggler II, Chicopee, Mass; h c, Elliot Smith's Don, New York; C H Mason's Chelmsford, England; N M Drake's Trenton, N J; c, George H Pierce's Glendale, Jersey City, N J; P O H McCartan's Rover, New York.

Class 24. Pointers, over 50 pounds, Bitches: First prize, $25, C H Mason's Water Lilly, England; second prize, $15, A Bamar's Zoe, Pottstown, Pa; third prize, silver medal, Theodore Whitehead's Blake, Jersey City, N J; v h c, William F Duerr's Gypsy, Orange, N J.

Class 25. Champion Pointers under 55 pounds, Dogs: Prize, $30, Edmund Orgill's Rush, Brooklyn, N. Y.

Class 26. Champion Pointers, under 50 pounds, Bitches: Prize, $30, Edmund Orgill's Rue, Brooklyn, N Y.

Class 27. Pointers, under 55 pounds, Dogs: First prize, $25, A H Moore's Le Guy, Philadelphia; second prize, $15, C H Mason's Chancellor, England; third prize, silver medal, Edmund Orgill's Rowell, Brooklyn, N Y; v h c, H W Livingston's Bang, Yonkers, N Y; William F Baxter's Bob White, Brooklyn, N Y; Robert C Cornell's Match, New York; h c, Hon John S Wise's Tom, Richmond Va.; R Lamb's Flash, New York.

Class 28. Pointers, under 50 pounds, Bitches: First prize, $25, Edmund Orgill's Rhona, Brooklyn, N Y; second prize, $15, John G Heckscher's Lady Dufferin, N Y; third prize, silver medal, R Lamb's Flirt, New York; v h c, D T Gregory, Jr's, 2d Belle, New York; Dr. T. F. Martin's Lill, Bridgeport, Conn; h c, T P Graham's Queen, Pittsburgh, Pa; Garrett Roach's Prudence, New York; Fred Smith's Rose, Jersey City.

‖ Class 29. Pointer Puppies, under 12 months old, Dogs: First prize, $10, Edmund Orgill's Rap, Brooklyn, N Y; second prize, silver medal, Theodore Whitehead's Tail, New York; v h c, John G Heckscher's Lady, New York; John G Heckscher's entry, New York; c, William F Duerr's entry, Orange, N J.

Class 30. Pointer Puppies, under 12 months old, Bitches: First prize, $10, Edmund Orgill's Apollo, Fan (second prize, silver medal), Edmund Orgill's Rival, Brooklyn, N Y; v h c, J H Shields' Belle, Brooklyn, N Y; h c, John G Heckscher's entry, N Y; c, William F Duerr's entry, Orange, N J.

Class 31. Champion English Setters, Dogs: Prize, $30, A H Moore's Leicester, Philadelphia, Pa.

Class 32. Champion English Setters, Bitches: Prize, $30, D C Sanborn's Snark, Dowling, Mich.

Class 33. Imported English Setters, Dogs: First prize, $25, J R Robinson's Sampson, Sunderland, England; second prize, $15, J H Goodsell's Duke of Beaufort, New York; third prize, silver medal, J C Higgins' Pontiac, Delaware City, Del; v h c, C Murray's Jamius, London, Ont; H W Gause's Warwick, Wilmington, Del; A H Moore's Temple, Philadelphia, Pa; h c, G W Moore's Leicester Ranger, Pittsburgh, Pa; J C Higgins' Dashing Monarch, Delaware City, Del; c, J H Goodsell's Don Juan, New York; L J Gaines' Blue Blood, Meriden, Conn.

Class 34. Imported English Setter Bitches: First prize, $25, J C Higgins' Petrel II, Delaware City, Del; second prize, $15, W H Beebe's Blue Bell, New York; third prize, silver medal, J H Goodsell's Daisy Laverack, New York; v h c, J C White's Lou, Philadelphia, Pa; h c, N Hathaway's Opal, Fall River, Mass; c, L Shuster, Jr's, Cornelia, Philadelphia.

Class 35. Native English Setter Dogs: First prize, $25, B F Wilson's Spot, Pittsburgh, Pa; second prize, $15, Jas H Goodsell's Count Zo, New York; third prize, silver medal, James H Goodsell's Racket, New York; v h c, Goodsell's Royal Cambridge, New York; Dr H Hathaway's Blue Dan, Middleboro, Mass; C H Dayton's Young Bellon, Peekskill, N Y; Sportsman's Kennel's Clexton; A C Crawford's Alton, Pawtucket, R I, Sportsman's Kennel's Blue Drake, Geneva, Iowa; Theo Meyer's Rose Laverack, Jersey City, N J; C Higgins' Lincoln II, Delaware City, Del; c, O R Watkins' Tom, Brooklyn; W H Beebe's Conn, New York; Newton Earle's Baldie, Providence, R I.

Class 36. Native English Setters Bitches: First prize, $25, C Moran, Jr.'s Donna, New York; second prize, $15, Sportsman's Kennel's Flirt, Geneva, Iowa; third prize, silver medal, J H Shields' Lady Laverack, Philadelphia, Pa; v h c, Sportsman's Kennel's Highland Lassie, Geneva, Iowa; N D Hathaway's Bow Bells, Middleboro, Mass.; h c, W H Beebe's Loul, New York; W A Buckingham's Daisy Dale, Norwich, Conn; O R Watkins' Croop, Brooklyn; C Wilde's Daisey, Bridgeport, Conn; L Willy's Tambazine, Baltimore, Md.

Class 37. English Setter Puppies under 12 months old, Dogs: First prize, $10, J. De T. Blackstone's Royal Dale, Norwich, Conn.; second prize, silver medal, R Betty's Doc, New York; A. C. Hunn, John S Wise's Hans, Richmond, Va.; h c, H W Livingston's Peter Schlemihl, New York; c, L Shuster, Jr's Chelten D, Philadelphia Pa.

Class 38. English Setter Puppies under 12 months old, Bitches: First prize, $10, N M Drake's Rem, Trenton, N. J.; second prize, silver medal, Theo. Meyer's Rose Laverack, Jersey City, N. J.; v h c, Roy R Ray Hamilton's Diana, New York; h c, H W Livingston's August,

Flower, New York; *c*, Benjamin B Newton's Bessie, Smithtown L. I.

Class 39. Champion Black and Tan Setters, Dogs: Prize, $30, A H Moore's Bob, Philadelphia, Pa.

Class 40. Champion Black and Tan Setters, Bitches: Prize, $30, Garvett Roach's Lady Gordon, New York.

Class 41. Black and Tan Setters, Dogs: First prize, $25, Charles T. Brownell's Dash, New Bedford, Mass; second prize, $15, E C Aiden's Bailey's Tom, Dedham, Mass; third prize, silver medal, Dr Henry Garis's Sam, New York; *v h c*, Leander Waterbury's Pride of the Frontier, New York; C B Davis' Duke of the East, Providence, R I; T F Taylor's King, Richmond, Va; T F Taylor's Greeley, Richmond, Va; *h c*, William Pierson Hamilton's Pompy, Rahway, N Y; F Dumont's Dash, New York; James Moore's Chang, Chicago, Ill; James Moore's Lang Tate Zeno, Chicago, Ill; Clay Maddux's M D, Dr John Kelly's Nellie, Baltimore, Md; Chas. R Maurice, Jr's, Doctor, Brooklyn, N Y; *c*, J C Monroe's, M D, Glen Ill, Brooklyn, N Y; T F Taylor's Briar Colt's Neck, N J; Dr Henry V Aten's Glen, Brooklyn, N Y.

Class 42. Black and Tan Setters, Bitches: First prize, $25, James Moore's Venus, Chicago, Ill; second prize, $15, Capt O H Day's Torsey, Trenton, N J; third prize, silver medal, A H Moore's Lady Rap'd, Philadelphia, Pa; *v h c*, Chas T Brownell's Clio, New Bedford, Mass; James Moore's Jamuary, Chicago, Ill; Clay Maddux's M D, Dr John Kelly's Nellie, Brooklyn, N Y; Robt Blackwood's Young Flora, Montreal, Canada; *c*, A H Thomas' Fannie, Warrensburgh, N Y; John P Barnard, Jr's, Ruby, Boston, Mass; George De Forest Grant's, Dina, New York.

Class 43. Black and Tan Setters, Puppies under 12 months, Dogs: First prize, $10, Charles T Brownell's Grouse, New Bedford, Mass; second prize, silver medal, James Moore's Sam, Chicago, Ill; *v h c*, F Frendenthal's Duke, Norwalk, Conn; *h c*, James a Creveling's Dr. Moore, Washington, N J; *c*, A H Godefroy's Bruce, Guymard, N Y.

Class 44. Black and Tan setter Puppies under 12 months, Bitches: First withheld; second prize, silver medal, George R Nichols' Daisy, New Haven, Conn; *h c*, F Frendenthal's Grace, Norwalk, Conn; *c*, A E Godefroy's Broon, Guymard, N Y.

Class 45. Champion Irish Setters, Dogs: Prize, $30, A H Moore's Berkley, Philadelphia, Pa.

Class 46. Champion Irish Setters, Bitches: Prize, $30, A H Moore's Loo II, Philadelphia, Pa.

Class 47. Class FF. For the best brace of Black and Tan Setter Puppies, silver medal: A K Godefroys Bruce and Bloom, Guymard, N Y.

THE N. A. K. C. ENTRIES.—With reference to certain strictures which have been made upon him by a New York paper, Mr. Jas. H. Dew, the Secretary of the National American Kennel Club, sends us this explanation with a request for its publication:

"By the kindness of a friend my attention has been called to an article in the Turf, Field and Farm, which I should not otherwise have seen reflecting unpleasantly upon my performance of the duties of the office of Secretary of the National Kennel Club.

"All the sporting papers that requested the proceedings or items of interest connected with the National Kennel Club have been promptly supplied with them. Had the Turf, Field and Farm made the same request it would have received the same courteous and prompt attention.

"It is foreign to any desire on my part to do anything that might even remotely injure the National Association or the interest in kennel matters, as I hope my connection with the field trials of the country from their inauguration will justify. As to my removal from office, as suggested by the Turf, Field and Farm I have only to say that I very reluctantly accepted the position, believing that some other person better qualified might be induced to act, but having accepted I have endeavored to do what I believed to be my duty; but if the interest of the National Kennel Club will be in the slightest degree benefited by my removal I join in the request that it might be done, and will render any assistance I can in getting a better officer.

"Personally, the reflections are as unkind as they are unwarranted and ungentlemanly, and if the Turf, Field and Farm can make it apparent that any part of the duty of the present secretary is to have any correspondence in future with that paper he will most certainly resign."

In behalf of the many gentlemen throughout the country who are in receipt of the uniform courtesy of Mr. Dew, we need not add here that no change is called for in the occupancy of the National Kennel Club Secretaryship. The present officer is giving full satisfaction, and the due acknowledgment therefor—the only reward attaching to the office, by the way—should not be withheld.

THE COCKER CLUB.—A meeting of the Cocker Club Committee was held last Thursday afternoon in a room at the American Institute Building, kindly loaned for the occasion by the Westminster Kennel Club. Present were Messrs. Macdougall, Fellows and McKoon, and the latter gentleman had instructions how to vote from Messrs. Kirk, Whitman and Cummings.

The result of their labors was presented at the first annual meeting of members of the club held at the same place. Dr. Morrill was elected to occupy the chair, and Mr. Macdougall acted as secretary. The report of the committee was read and accepted, and the club proceeded to its consideration by section. A very free interchange of views was indulged in by the members, and a standard was decided upon by the time the meeting was adjourned at a late hour until the next morning.

The adjourned meeting was called to order at noon on Friday by Dr. Morrill, Dr. Niven acting as secretary. After free discussion caused by the proper and systematic method of perfecting a permanent organization, when it was decided that the Chair should select two gentlemen to act with himself in drawing up a Constitution and By-laws, which, with the standard, should be forwarded to the press for publication, and also to all who expressed a desire to join the club.

N. A. K. CLUB MEETING.—In pursuance to the call of President Bryson, the club held its meeting in the committee-room of the Westminster Kennel Club during Wednesday of the show. The following members were present: Messrs. Chas. H. Raymond, John Higgins, Thos. Mordell, J. C. Sanborn and F. Satterthwaite. The object of the meeting was to devise a plan whereby the outstanding debts should be paid.

NEW ORLEANS.—Some weeks ago I purchased from Mr. Wm. H. Hawkins, Fall River, Mass., the lemon and white setter dog Rascal, and I must say Mr. Hawkins deserves great credit for the developing of this young dog. There is some talk of a State field trial here this fall, and Rascal will surely be entered for the "free for all." Our season closed yesterday, and large numbers of quail, turkeys and deer are left for seed, and we expect great sport this fall. Duck-shooting has been quite good during the winter. Your able journal has many supporters here.—E. Ô.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

Norah—Mr. C. M. Munhall's (Cleveland, O.) setter bitch Norah (Elcho-Rose) whelped April 22, eight puppies, four dogs and four bitches, by Mr. John S. McIntosh's (Pittsburgh, Pa.) Ellz.

Abbey—Mr. Herbert Inman's (New York city) setter bitch Abbey whelped April 7, six puppies, four dogs and two bitches (two dogs and both bitches since dead) by owner's Rolly. Puppies not for sale.

Judy—Mr. M. H. Clark's (Secretary of the P. & D. Club, Clarksville, Penn.) liver-marked Irish water spaniel bitch Judy, imported as a mate to champion Barney, whelped on April 14, ten fine healthy puppies, by Sandy.

SALES.

Count Zo—Mr. James H. Goodsell, New York city, has purchased from Dr. W. W. White, Baltimore, Md., the orange Belton setter dog Count Zo (Pontiac-Queen Anne).

Chelten D.—Mr. L. Shuster, Jr., Philadelphia, has sold to Mr. S. J. Martenet, Jr., Baltimore, Md., English setter dog puppy Chelten D. (Dash III.-Cornell).

Tambazine—Mr. Lemuel Willey, Baltimore, Md., has sold to Mr. W. T. Whitehouse, St. Paul, Minn., the blue and white English setter bitch Tambazine (Pontiac-Queen Anne).

Grouse Dale-Blanche Whelp—Mr. W. Tallman, Providence, R. I., has sold to Dr. T. P. Graham, Pittsburgh, Pa., a setter bitch puppy by Grouse Dale out of Blanche.

Grouse Dale-Blanche Whelp—Mr. David Boyd, New York city, has purchased a setter dog puppy of Mr. William Tallman, Providence, R. I., by Grouse Dale out of Blanche.

Grouse Dale-Blanche Whelps—Mr. Du Bois Wagstaff, Babylon, L. I., purchased at New York show of Mr. W. Tallman, Providence, R. I., a brace of puppies (dog and bitch) by Grouse Dale out of Blanche.

Grouse Dale-Blanche Whelps—Mr. Carroll Bryce has purchased of Mr. W. Tallman, Providence, R. I., a setter dog puppy by Grouse Dale out of Blanche.

Peter Schlemihl—Mr. H. W. Livingston, New York city, sold to Mr. Fred. P. Sands, Newport, R. I., the black and white ticked English setter dog puppy Peter Schlemihl, whelped Aug 10, 1880, by Ray out of Bella (now dead).

Reddie—Mr. James H. Goodsell, New York city, has purchased of Mr. Theo. H. Terry, New York city, the Dish setter bitch puppy Reddie (Elcho-Rose), winner of first in puppy class N. Y. Show 1881.

Alpine—Mr. Calvin C. Reiff, Lauderton, Pa., has sold his Bismarck setter Jim to Mr. J. H. Jewett, Buffalo, N. Y.

Frank—Mr. Calvin C. Reiff, Louderton, Pa., has sold his Bismarck setter Frank to Dr. James W. Harry, Conshohocken, Pa.

Yarrow—Mr. J. Lindsay, of Jersey City, has sold to Mr. F. S. Witherbee, New York, his collie dog Yarrow by imported Rex, first, New York, 1880, out of imported Queenie.

Gowan—Mr. J. Lindsay, of Jersey City, has sold to Mr. Mathews, New York, his collie dog Gowan, seven months old; by imported Rex out of Downey's Lassie.

PRESENTATIONS.

Druid-Star Whelp—Mr. W. B. Wells, Chatham, Ont., has presented Mr. J. O. Donner, of this city, with a fine setter bitch puppy by Druid out of owner's Star (Leicester-Dart).

Grouse-Daisy Dale Whelp—Mr. W. A. Buckingham, Norwich, Conn., has presented to Mr. W. Tallman, Providence, R. I., a setter bitch puppy by Water's Grouse out of owner's Daisy Dale (imported champion Rock-Maud).

Prince Laverack—Mr. Frank Merrick, New Brighton, Pa., has presented to Mr. Jos. J. Snellenburg, same place, the pure Laverack setter dog Prince Laverack (Thunder-Peeress), litter brother to Dai-y, Lady and Dick Laverack. Prince has been sent to Mr. Marsh Short for further instruction.

Sam-Smut II. Whelp—Mr. T. M. Aldrich, Providence, R. I., presented at New York Show Mr. Washington A. Coster, Flatbush, L. I., with a black setter bitch puppy out of Mr. N. Earle's smut II., by Green's Sam.

Warren-Rye Whelp—Mr. Jno. K. Renaud, New Orleans, La., has been presented with a white and liver pointer bitch puppy by Warren out of Rye.

Druid-Star Whelps—Mr. W. B. Wells, Chatham, Ont., has presented Mr. F. Satterthwaite, Newark, N. J., a setter dog puppy by Druid out of owner's Star (Leicester-Dart).

DEATH.

Donna Wheatley—Mr. W. A. Coster, Flatbush, L. I., has lost by distemper the pointer bitch puppy Donna Wheatley (Don Royal-Maid), in hands of trainer entered for the Robins Island Derby.

KENNEL MANAGEMENT.

132. S. S. V., Cleveland, O.—The following is a good remedy for fleas; a strong infusion of quassia, made by suspending a couple of ounces of quassia wood chips, tied in a piece of muslin, in a bucket of water for two or three hours, occasionally stirring it, is useful in killing fleas; it is free from danger, and being almost colorless is an advantage in washing white dogs. The infusion must be used instead of plain water with either soft soap or curd soap, a good lather being made to penetrate the dog's coat to the skin. Some plain water should be poured over the dog to finish the washing and remove the quassia from the coat.

133. T. D., Culpeper.—Please tell me what to do for a setter puppy with sore eyes. Every morning when I first see him his eyes are so closed up with matter he can hardly see. I wash them and put on some eye-wash I got at the drug-store, which does a little good. The puppy has a very fair appetite. Ans. You do not give the age of the puppy, but we would recommend that you continue the treatment you describe. If, however, the dog does not recover, write again.

134. L. R. L., So. Framingham, Mass.—My Newfoundland dog, three and a half year old, has been very sick for three days, cannot keep anything on his stomach, won't eat anything and drinks very little, breathes very hard. He vomits up a white, slimy matter. Will you tell me what to do for him? I gave him a dose of castor oil, but he did not keep it down. I feed him on Indian meal and table scraps. Ans. Probably an attack of bronchitis or inflammation of the lungs. Sustaining treatment; quinine two grains three times a day, and meat broths are indicated, to which a couple of small doses of calomel about three or four grains, twelve hours apart, will be of service.

135. G. H. T., Philadelphia.—My setter dog has been sneezing for the last few days, he also has a slight greenish discharge from the penis; he is well in other respects and in good condition. I think he has a bad cold. What shall I do for him? Ans. You fail to give age. Probably the dog has been overfed. Would advise regular diet which should consist of cooling food. Avoid giving much meat. Give two doses of oil, one each day, follow with a dose of sulphur one each day for five or six days. Keep the member clean by washing away the discharge carefully twice a day with tepid water.

136. A. P. P., Rochester, N. Y.—My pointer's hair comes out in spots. What shall I do for him? Ans. Rub the bare spots with sulphur ointment. Avoid giving meat for some time. Watch for eruption, which may indicate mange. Give teaspoonful of sulphur daily for five or six days. Kennel in a clean place, and have bedding changed daily.

137. J. H. E., Northumberland, Pa.—A friend of mine owns a very valuable and promising black Gordon setter puppy, ten months old, that for the past ten days, has been subject to fits. He is very quick and active, and takes them more readily while out exercising. His food has been altogether mush, and very seldom does he get any meat. He has been given medicine for worms, but it does him no good. Ans. The trouble you speak of is not uncommon with dogs of his age. Give open air exercise and opening medicine, say a full teaspoonful of castor oil, and the following day a dose of sulphur, small teaspoonful. Do not shut the puppy up but give him his freedom, and allow plenty of exercise.

138 M. E., Braggville, Mass.—My Irish setter dog has been suffering from the dog disease for the past few weeks, and seems to have had a relapse as he is now in bad shape. He runs profusely at the nose, has no appetite and is very weak. What will cure him? Ans. Your dog has probably had the distemper, and at the present stage of the disease, two grains of quinine three times a day and good sustaining meat broths will be the best treatment.

139. J. H. B., Phila.—I have a Gordon setter that is passing blood every time he makes a passage. I first noticed it on Sunday last, and I gave him on Monday one tablespoonful of castor oil, with five drops of laudanum in it. He was no better. I have been feeding him on cornmeal and oatmeal made into mush. He is two years old, what shall I do for him? Ans. If the dog is constipated the bleeding is due to that fact. Give doses of sulphur teaspoonful, and sulphate of magnesia same quantity on alternate days, and give the dog regular exercise where he can get grass.

140. C. H. P., Pomfret Centre, Conn.—Two eyes of my English setter dog, six and a half years old, are affected and he is now almost totally blind. I had him out on Tuesday, and he went into a fit, frothing at the mouth while laying on his side. The fit lasted ten minutes, and then he could hardly walk. Do you think worms are the trouble? What shall I do for him? Ans. If the nerves of the eyes are really diseased nothing can be done for him. If, however, it is a functional derangement see that regular exercise is given and proper food is given him. We suggest that you give alternate doses, one a day, of sulphur, one teaspoonful and same quantity of sulphate of magnesia, for one week. It is extremely doubtful that worms will affect a dog of his age in the way you describe.

141. SUBSCRIBER, Mt. Vernon, O.—A back-woods friend of mine has sent me what he claims to be the best dog for foxes. He says he caught mine with him this last winter, and says the dog can't be beat on deer. I have bred dogs for years, but never saw as mean-looking a brute as this one. My opinion is he is a cross between a Scotch greyhound and some other breed. The following is a description of him. Please answer through the FOREST AND STREAM if I am correct in my opinion: The dog stands between twenty-eight and thirty inches high at shoulders, body rather long, deep and broad; hind parts broad and well-muscled. Head long, eyes large, ears very short and pointed and carried back like a greyhound's. Tail about sixteen inches long, and of small thickness. Color of body, mottled tan, yellow legs and part of head white, feet small. The general get up of the dog resembles the greyhound. Weight, now in poor condition, eighty-two pounds. Hair moderately long, course and wirey. Looks as if he preferred human flesh and corn bread. Ans. Your suggestion is probably correct, if your description is. If you have any dog thieves in Knox County, you might feed him on them.

142. J. H. J., Bethlehem, Pa.—Your puppy, which you state is nine months old, and is very timid and nervous, should be given liberty at all times in some inclosed yard or lot. Take no notice of him whatever, feed on strengthening food, and do not attempt to train him until he has gained courage. If he continues after the trial of the course we recommend to be as shy and timid as you describe, we advise you to neither waste time or money on him.

143. F. K., Fulton, N. Y.—Your pointer puppy, eight months old, which has just recovered from the distemper, has been left with one of that disease's evil results—the chorea. It is an affliction seldom cured, and to our mind the majority of dogs are not worth the trouble and expense of a treatment which is at best long-winded and uncertain. The prescription you have tried of syrup of squills 2 drams; syrup of ipecac, 3 drachms; simple syrup, 1 ounce; tincture of iron, 2 drachms; and water to make 4 ounces, given in one teaspoonful doses three times a-day, is a fair tonic; but we greatly prefer the following, which is more likely to prove beneficial:—Quinine, 2 grains; nux vomica, one-eighth grain, given three times a-day. Feed the dog on stimulating food, and give moderate exercise.

For close confinement, for want of air, sedentary habits and brain and nerve-tire, trust in Hop Bitters.

Answers to Correspondents.

W. A. M., Doansburg, N. Y.—The grade of gun you name will do good service and you will find it in all respects a sati-factory weapon.

W. A. A., Canyon, M. T.—Will my wild geese lay this season, they being one year old this spring? Ans. Probably not. It is said that they do not lay until they are three years old and more.

WILD, Red Bank, N. J.—Address Mr. A. J. Kelly, Anderson P. O., Howard Co., Md. He will give you the information you want. Mr. Kelly has charge of the Baltimore Kennel Club dogs.

B. A. M., Austin, Minn.—Can you inform me or some dealer in raw material to make my own flies, etc, and where one can procure rod ferrules and gear? Ans. Write to our advertisers of fishing tackle

MACK.—Sail should be 14 ft. on mast, about 10 ft. on foot, triangular in shape. Step mast 1½ ft from bow. Would give a 14 ft. sharpie 2½ ft. beam on top. For sail use 8 oz. duck and waterproof as described in answers week before last.

J. E. H., Gravis Mills, Missouri.—It is impossible to identify the bird, as the description sent gives no details of size, color or markings. It is possible that they may have been herons of some species, but it would be impossible to say without something more definite than we have.

E. S. H., Grand Rapids, Mich.—Does Westwood's "Bibliotheca Piscatoria" contain notices of works on Ichthyology or the classification and scientific description of fishes? We are not certain, but will notice the book on its publication.

C. C. M.—Out block very slightly with good machine oil. A statute mile is 5,280 feet and a nautical knot or geographical mile is 6,086 ft. Therefore a knot equals 1.16 statute mile and a statute mile equals 0.868 knot. In marking a log line the knot is taken at 6,000 ft. even, for convenience of subdivision.

J. P. P., Waukesha, Wis.—If you are shooting "class shooting" the three men who tied on 9 shoot off for first prize; the two who tied on 8 shoot off for second, and those who tied on 7 shoot off for third. If not "class shooting," the three who tied on nine shoot off for first, second and third. Before the match was shot this point should have been determined upon.

R., Liberty, Va.—What are the best trout fishing grounds in Virginia within easy reach of hotels? I propose to take a fortnight's trouting and should be glad to have the latest and most reliable reports. I am familiar with the Blueridge stream, but want to try the best Alleghany ones. How are the headwaters of the Greenbrier? Ans. Try Hawley Springs, Rockingham Co.; Wilsonville, Bath Co.; or the headwaters of the Greenbrier, which have afforded good fishing.

O. T., Paris.—There is a mixture or some sort used to keep off musquitoes and black flies while fishing. Can you inform me what it is made of? What flies are the most killing in the early part of the season for trout? Ans. It is made of tar and sweet oil, the oil being used to thin the tar and to facilitate its removal from the skin. We prefer a rail. Take red hackles, red ibis, brown hackles, white hackles, black gnat, alder-fly, green and gray drakes. We like hackles in spring and summer.

Any subscriber or reader of FOREST AND STREAM in want of any kind of carpetings, oil cloths, rugs, etc., etc., can be sure of fair treatment at the hands of John H. Fay, Sons & Co., Boston. Call or correspond with them, and get their prices before buying. It will pay you to try them.—*Adv.*

For sinking spells, fits, dizziness, palpitation and low spirits, rely on Hop Bitters.

BIZ.—This is what they are doing in the East. Thirty-two new yachts have been built this winter in Boston, and about as many more purchased from New York.

KNICKERBOCKER CANOE CLUB.—*Editor Forest and Stream:* Our new club house will be located next to the Columbia Yacht Club ice, of Eighty-sixth street and North River, not on the Harlem as reported. ARTHUR BRENTANO, Vice-Com.

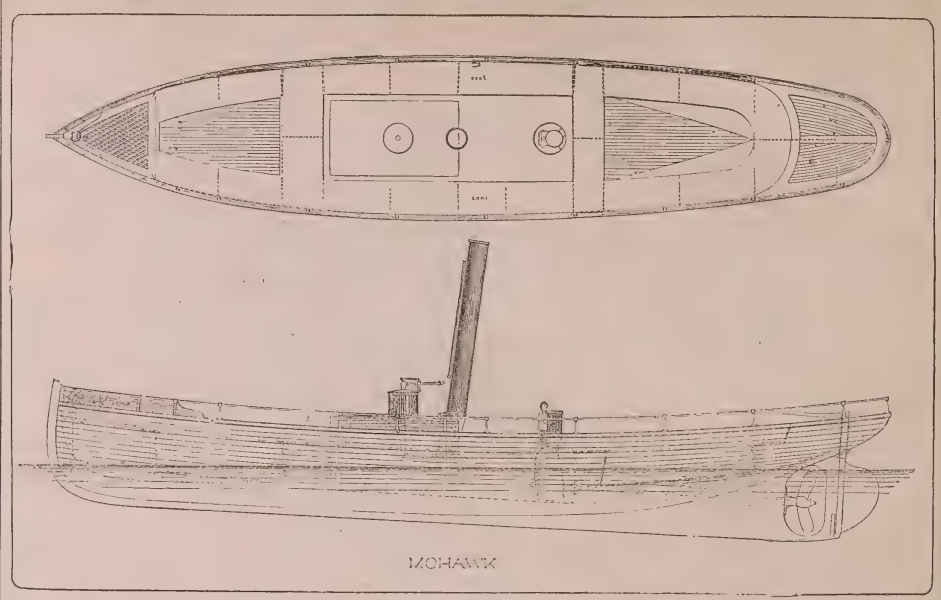
PETERBOROUGH YACHT CLUB.—Efforts are being made to organize a regular canoe club in Peterborough, Ont., the home of the Herald and Rice Lake canoes. Capt. E. B. Edwards is pushing matters, and we hope he will meet with success. Mr. N. Bishop, Com., C. B. Rose and Rev. Mr. Cressy will visit the place this season in canoes and help along the good cause.

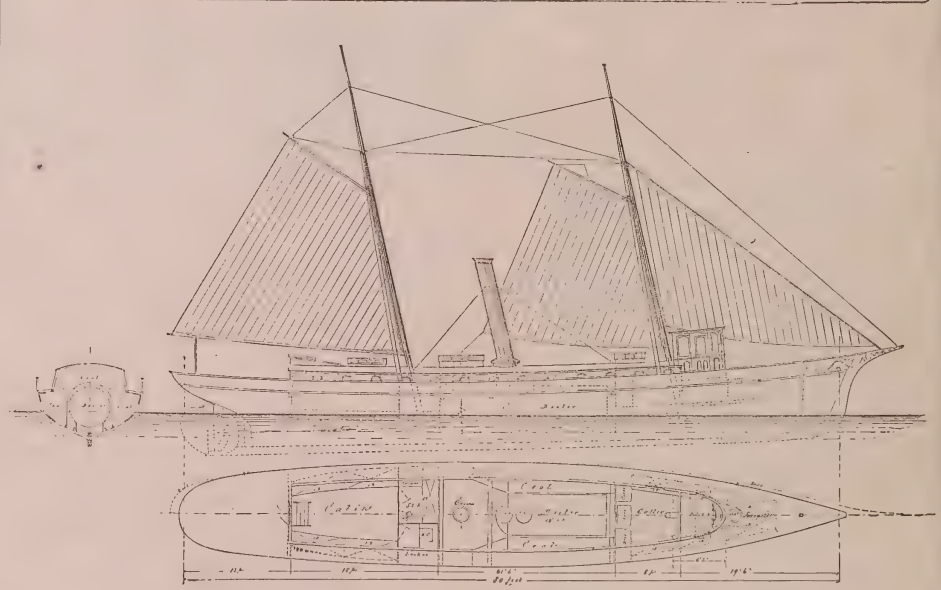
GANANOQUE YACHT CLUB.—A new club has been organized at Gananoque, Can. Officers for the year: John Ormiston, Collector of Customs, Commodore; Wm. Eyers Reeve, Vice-Commodore; Wm. Finnel, Captain; F. M. Campbell, Secretary; David Darling, Treasurer.

YACHTING TOGS.—Attention is invited to the card of Warnock & Co., who make a specialty of yachting caps of all kinds, and have a large trade in their line. The house is an old established one, and well known to the U. S. Navy. They will furnish caps made to any club pattern and of the best quality only.

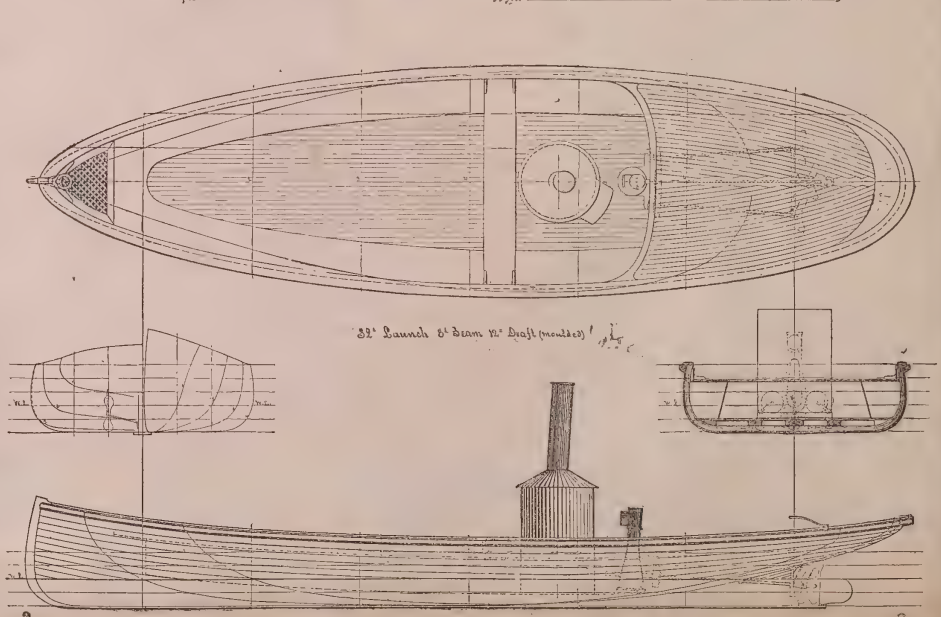
STEAM YACHTS.

ALTHOUGH the building of steam yachts in America is still in its infancy, we have attained very fair success in the all-important essential of speed, and are now beginning to give more attention to sea-going qualities and style in large yachts. There still remains a great deal to be accomplished before anything like recognized standards will furnish examples to be generally followed, but the principal builders are developing various types sure in the end to lead up to a combination of desirable features. Thus the attempt to gain great speed by overlooking everything else one might reasonably expect is being superseded by efforts to produce a serviceable sort of craft at the same time, and mere tonnage is no longer the criterion of sea-going capacity as it was a few years ago. That there is truth in the





above will be acknowledged when comparing such vessels as Ideal, Vidette, Corsair, Yosemite and Gleam, each possessed of certain qualities in a high degree, with a corresponding lack in other directions, and all taken together presenting a strange and in some respects a crude mixture and cross of "strain," due to the individualities of their modellers, who for want of precept and experience have been thrown upon their own resources. Out of all this chaos of type something giving expression to the best proportions and most suitable to the purposes of the steam yacht owner will be certain to grow. So far each builder has contributed his share of improvements, all of which combined in a single vessel, as far as compatible, would produce a very creditable specimen of the genus, and we think that by publishing the practice of the various establishments our share will be done toward bringing about the desired consummation—the union of safety, speed, accommodation, sightliness, cruising capacity, economy and popularity in a single hull propelled by steam. We may briefly classify steam yachts as "open launches," "cruising launches," "river" and "sea-going" steamers. Of the first and third classes we this week publish representations of the practice of the New York Safety Steam Power Co., whose headquarters are at 30 Cortlandt street, New York, and where engines and models of their make may be inspected. The particular characteristics of their machinery we take to be strength, compactness, simplicity, accurate workmanship and excellent finish, the company seeking a reputation founded upon the solid worth and durability of their engines and hulls, rather than upon showy flourish and superficial ornamentation. It may be remarked here that the best is the cheapest in the end, and that experience will teach that a small extra outlay, to secure accuracy of fitting and perfect finish of wearing parts, will be more than repaid by the greater life of the engine and less cost and annoyance of repairs. This applies especially to launch engines, generally run at high speed and particularly susceptible to heating of the journals and brasses. A glance at our cut, representing the company's engine suitable for boats from 30 to 60 ft. long, will show that there are two bearings for the crank shaft cast solid in the frame as well as the crosshead slides, thereby preventing the machinery from getting out of line and avoiding serious consequences. The bearings are long and the shafts of large diameter, giving ample working areas, the need of which in high-speed engines is well understood by mechanics. The crank is counterbalanced, piston rod, valve rod, crosshead pin, etc., are of steel, the connecting rod of wrought iron and the boxes of composition. The link motion is supplied with an index arc, enabling the cut-off to be set as desired. In engines over 7x9, balanced valves are introduced to overcome the friction of the valve, affording at the same time additional ports for the entry of the steam, and producing an initial pressure in the cylinder more nearly equal to that in the boiler. For reference we add a table showing proportions and weights of launch engines, and the approximate sizes of boats for which they are suitable. Engines include link motion, reversing gear, cylinder lubricatory, stop valve, drip cocks, oil cups, wrenches, pry wheel and half coupling:



Size of Cylinder. Diameter of Stroke. Inches.	Diameter of Crank Shaft. Inches.	Height from Floor to Top of Cylinder. Inches.	Weight of Engine. Pounds.	Diameter of Base. Inches.	Size of Boat for Which Suitable. (Approximate.) long by ft.	in. beam by ft.	in. draft.
2 X 5	1¼	36½	220	13	25	5	4
3½X 5	1¼	36½	270	13	28	5	4
4 X 6	2	44½	315	15½	30	6½	4
5 X 7	2½	51	395	15	35	7	4
6 X 7	2½	51	460	15	35	7	4
6 X 9	3	63½	543	18	38	7½	4
8 X 9	3	63½	575	26	40	8	4
8 X 12	4	77½	1,000	26	45	10	4
10 X 12	4	77½	2,000	26	55	11	4
12 X 12	6	90	2,500	32	70	12	4
			3,500		75	13	4

Size of Cylinder. Diameter of Stroke. Inches.	Diameter of Base. Inches.	Size of Boat for Which Suitable. (Approximate.) long by ft.	in. beam by ft.	in. draft.
2 X 5	13	25	5	4
3½X 5	13	28	5	4
4 X 6	15½	30	6½	4
5 X 7	15	35	7	4
6 X 7	15	35	7	4
6 X 9	18	38	7½	4
8 X 9	26	40	8	4
8 X 12	26	45	10	4
10 X 12	26	55	11	4
12 X 12	32	70	12	4
		75	13	4

Concerning the boilers of the same company we might say much in praise of their sectional water-tube generators for land use, their originality, economy, safety and popularity, having had charge of 1,500 H. P. in a large manufactory with gratifying results in more ways than one, but we will confine attention here only to their marine boilers. For the use of engines under 8x9 the vertical boiler is given preference; but for larger boats boilers of the horizontal, return-flue pattern take their place. Shell, furnace and tube sheets are made of the best brands of steel or flange iron, and the tubes are all tested. To produce steam rapidly the furnaces are large and the heating surface has, say, two to three times the area required for stationary work on shore. Steam gauges, safety valve, water gauges and fittings are the best in the market, and the work conforms in all respects to the United States laws. The company has had such an extensive experience in building vertical boilers that better proportions for the purposes of safety and economy are not likely to be reached. Launch boilers are tested to 200 lbs. The following data will aid builders and amateurs in selecting the right amount of power. The dimensions of boats attached are of course only approximate, and may be varied from according to purpose. The complete boiler includes ash pan, grates, smoke bonnet and stack, guy rods, safety valve gauges, feed check-valve and feed globe-valve, steam stop-valve and whistle:

Diameter of Boiler.	Height of Boiler.	Number of Tubes.	Heating surface, sq. ft.	Size of Engine to be driven.
28	48	84	60	3 x 5
30	48	150	95	3½ x 5
33	48	150	104	4 x 6
36	48	204	137	5 x 6
36	54	204	197	5½ x 7
44	66	120	205	6½ x 7
46	76	156	256	7 x 9
48	82	144	280	8 x 9
50	82	180	350	9 x 9
54	85	204	450	10 x 12

Tubes for boilers less than 36 in. diameter are 1¾ in. diameter; for boilers over 36 in. the tubes are 2 in. diameter.

Propeller wheels are two, three or four bladed, their price varying in proportion to the number of blades. For diameters ranging from 14 in. to 24 in. the "pitch" is about 150 per cent. of the diameter; from 24 in. to 60 in. about 133 per cent., though no definite proportions can be laid down, as much depends upon the number of turns and type of hull. We cannot do better than close these remarks on launches by quoting some rules for the management and care of boat boilers.

LOW WATER.

In case of low water immediately bank or cover the fire with fresh coal, or if the furnace crown appears to be red hot it is best to smother the fire with wet coal. The damper may then be closed. If the engine is running, or the feed pumps delivering into the boiler, do not stop them, but if not working do not start them, and do not attempt to blow off the steam until the fire is out and the over-heated plates have cooled.

IN CASE OF FOAMING

close the throttle and keep closed long enough to show true level of water. If that level is sufficiently high, feeding and blowing out will usually suffice to correct the evil. In cases of violent foaming, caused by dirty water, in addition to the action before stated, check draft and cover fires with fresh coal.

SAFETY VALVE.

Raise the safety valve cautiously and frequently, as it is liable to become fast in its seat and useless for the purpose intended.

SAFETY VALVE AND PRESSURE GAUGE.

Should the gauge at any time indicate the limit of pressure allowed, see that the safety valve is blowing off. In case of difference find out which is wrong and rectify it.

GAUGE COCKS. GLASS WATER GAUGE.

Keep gauge cocks clear and in constant use. Do not open them too suddenly. Glass gauge should not be relied on altogether.

CLEAN SHEETS.

Particular care should be taken to keep sheets and parts of boiler exposed to the fire perfectly clean. Keep all tubes and connections well swept, particularly where wood or soft coal is used for fuel.

BLOWING OFF.

Boilers should never be blown out while hot, as the plates and tubes retain sufficient heat to bake the deposits into a hard scale that becomes firmly attached to boiler always be allowed to cool down before the water is run out; the deposit will then be quite soft, and can be easily washed out with a hose from all accessible places. Many engineers suppose that blowing out a boiler under pressure has a tendency to remove these deposits from a boiler, but experience has shown this to be a very grave mistake.

FILLING UP THE BOILER.

Cold water pumped into hot boilers is very injurious, causing severe contraction of the seams and stays, which very often causes fracture of the stays or leakage in the seams and tubes. Many boilers, well constructed and of good material, have been ruined by being blown out under a high pressure of steam and then suddenly filled with cold water. This treatment is also highly productive of strained and leaky tubes, since being made of thinner material than the shell they cool and contract sooner.

GENERAL CARE OF BOILERS AND CONNECTIONS.

In firing with coal keep your grates well covered with a thin fire. Do not feed your fire with large lumps or throw in too much fresh coal at one time. A thin fire, lightly and frequently renewed, is the most economical.

If your boiler steams too fast close your damper and shut off the draft. Never throw open your fire door when it can be avoided, or keep it open longer than is absolutely necessary. It is injurious to the boiler and wasteful of fuel.

Keep gauges, cocks, etc., clean and in good order at all times, and gauge your pump so that the feed may be constant.

An excellent example of the open launch is shown in the handsome cut of the schooner Mohawk's tender, bought some time ago by the Grand Duke Alexis. She is 28 ft. over all, 26 ft. waterline beam, 5 ft. 7 in., with one inch less on the line; displacement, 4,500 lbs.; area midships, 4 ft. 7 in.; engine, 3½x5; boiler of the return tubular style with 85 sq. ft. heating surface to 2.36 sq. ft. of grate; wheel 36 in. diam. by 48 in. pitch; windlass, and machinery with water in the boiler, 2,050 lbs. As a novelty interesting to sportsmen we have also illustrated a new design of the N. Y. Safety Steam power Co., intended for navigating shoal waters. This launch has large beam and flat floor and can readily take the ground without damage to her wheels, they being kept above the keel. To obtain enough "area" of propeller on such light draft three wheels have been introduced, the first example of such practice we know of. The engine shaft is simply geared to work on auxiliary shaft each side as well as its own screw. The plan shows the machinery to occupy very small space. The launch is of wood strengthened by stiff keelsons and is 32 ft. long 8 ft. beam and 13 inches draft. She will recommend herself to hunters and explorers and would be serviceable on the lagoons and overflows in the South, on the Chesapeake and Delaware Bay and in such shoal stretches as Great South Bay. The third illustration is of a more pretentious yacht suitable for Long Island Sound, large harbors and arms of the sea, and on a pinch, capable of getting around the coast by picking one's weather; she is to be ranked half way between the "river" and "sea-going" steamers before mentioned, partaking a little of the nature of both. Her length on deck is 80 ft.; on load-line, 72 ft.; beam, extreme, 13 ft.; beam on load-line, 11 ft. 9 in.; depth amidships, 5 ft. 9 in. and draft aft 5 ft. 3 in.; boiler, 5 ft. diam. and 12 ft. long; engine 9x12, the machinery space being 21½ ft., the after accommodations 18 ft. and about the same forward.

WHY?

WHY should catamarans be classed by themselves? Are they not yachts in every sense as much as the open boats shifting sand bags? If they are especially fast is that any sound reason why they should be put out of the way by consigning them to catraschen? Upon the same reasoning all fast yachts should be excluded from sailing with slower boats. The Susie S., Parole, Silence, Thistle and a host of others are too fast for the common rack. Carry out the same idea and susie S. and her lot ought to be debarred from tackling slower material; but any one making such a proposition would be laughed out of countenance. Why then direct proscription against catamarans, a species of boat endowed with the qualities good yachts should possess to a far greater degree than the over-sparred, shifting-ballast caricatures some people dote upon as the fastest attainable, but which now publicly shirk a meeting with the catamaran by statute? It would be much fairer to race catamarans on equal terms, and if they are shown to be superior to the present sand-bag skiffs, like later should give the catamarans their proper place. If any one thinks there are no "vested interests," no slow-going "conservatives" in this land of progress, just let him turn this matter over in his mind. We should like to know upon what principles of equity or of common sense catamarans are relegated to a special class in the races of our open boats, thereby encouraging them to cat-ra

COLORADO HUNTERS.—Luke Wheeler, partner of Frank Ainsworth, the champion shot of Colorado, was in Fort Collins, Friday, having just come down from North Park with a load of game. Mr. Wheeler favored the *Express* with a call, and kindly gave some account of his season's hunting, which is now over. The two hunters, during the season, brought to market fourteen large loads of elk, antelope and deer. They killed 500 antelope and 250 elk. They sold all the meat readily in Denver and Boulder. Elk sold from 7c. to 10c. per pound; antelope, from 7c. to 8c., and deer, from 10c. to 12½c. The season was a very profitable one. They made two shipments of hides, the last being 3,500 pounds. Game was fat and in fine condition. There is plenty left in the mountains. There was a herd of 500 elk within 600 yards of camp when Mr. Wheeler left. The hunters, at one stand, killed eighteen elk within ten minutes. Wheeler considers Ainsworth the most experienced hunter and the best shot he ever saw. He began hunting when a boy, and hunted buffalo in Kansas.—*Fort Collins' Express.*

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Virginia Midland R. R.

The Safest, the Shortest, the Best Route to Florida and South.

Pullman Palace cars direct without change. Guns and dogs carried free. Leaves New York at 10 P. M. and 3:40 P. M.; Washington, 7:10 A. M. and 10 P. M. MERCER SLAUGHTER, General Ticket Agent, Alexandria, Va.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Paquet House, that city, ready for the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENCUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

50 All Gold, Chromo & Lilly Cards, (No 2 alike), Name on, 10c. CLINTON BROS., Clintonville, Conn.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVO, BEDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday, * Lewes, Del., Monday and Thursday at 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

For muzzle and breech-loading, cylindrical and choke-bore shot-guns. Made to open just short of 50, 70 and 90 yards, giving close pattern and great penetration. 10 and 12 gauge. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in ½ lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

The Hazard Powder Co.,

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only.*

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and ½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration.* For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in Kegs of 25, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and moist. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

88 WALL STREET, NEW YORK.

A Skin of Beauty is a Joy Forever.

DR. T. FELIX GOURAUD'S

Oriental Cream or Magical Beautifier

PURIFIES as well as Beautifies THE SKIN

Removes Tans, Pimples, Moth-Patches and Blemishes on beauty. It has stood the test of thirty years, and is so harmless we taste it to be sure the preparation is properly made. Accept no counterfeit of similar name. The distinguished Dr. L. A. Sayre said to a lady of the *haut ton* (a patient):—"*As you ladies will use them, I recommend 'Gouraud's Cream' as the least harmful of all the Skin preparations.*" Also Poudre Subtile removes superfluous hair without injury to the skin.

MME. M. B. T. GOURAUD, Sole Prop., 48 Bond St., N. Y.

For sale by all Druggists and Fancy Goods Dealers throughout the United States, Canadas and Europe. Also found in New York City at R. H. Macy & Co., Stern Bros., Ehrich & Co., I. Bloom & Bro., and other Fancy Goods Dealers. Beware of base imitations which are abroad. We offer $1,000 Reward for the arrest and proof of any one selling the same.

BRADFORD & ANTHONY,

374 Washington Street, Boston, Mass.,

Importers of English Fish Hooks, English Reels, Swivels, Silver Fishing Gimp, Artificial Baits, Spanish Silkworm Gut, Calcutta and Japan Bamboo Poles.

Sole selling agents for United States Fish Hook Works.

Sole selling agents for the Fishing Lines bearing the Trade Mark "Best Quality Hand-Laid Linen and Silk Lines," which received Centennial Medal for "strength and care taken in manufacture."

Sole selling agents for the Patent Adjustable Floats and Sinkers.

Sole selling agents for Braided Fishing Lines. Trade mark, GLOBE.

Sole selling agents for Enamelled Waterproof Braided Fishing Lines. Trade mark, a silver medal.

Selling agents for the best manufactured Jointed Fishing Rods.

Selling agents for the best Trade List, Brass, Nickel Plated and Rubber Fishing Reels.

Selling agents for Skinner's, Buel's, McHarg's and Mann's Trolling Baits.

Selling agents for Union Web Hammocks.

$5 to $20 per day at home. Samples, worth $5 free. Address, STINSON & CO., Portland, Maine.

The Baker Guns.

OUR DOUBLE GUN.

The Best Gun made for DURABILITY —AND— SHOOTING QUALITIES

PRICE, BEST ENGLISH TWIST BARRELS, - - $40
DAMASCUS STEEL, - - - - - $55 to $200

OUR NEW MODEL THREE BARREL GUN.

PRICE, - - $75 to $250

"This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate."

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 12.

SPRING DUCK SHOOTING, and its effects upon the game supply, is a subject which is attracting the attention of sportsmen at various well-known ducking-grounds.

"TO CORRESPONDENTS."—The note with this heading below the table of contents on the fourth page is published every week for the information of all concerned. Read it.

IT IS STATED that since May 1 there have been a good many snipe killed in New Jersey. The birds came on late, and lingered longer than usual. It is hardly necessary to say that the shooting of snipe at this date is scarcely less reprehensible than would be the shooting of quail or woodcock, and is something that should by no means be permitted.

THE PROSPECTUS of the Kittyhawk Bay Sportsman's Club has been received at this office, and a few copies can be had on application to us. We learn from this document that $12,000 is required to complete the purchase of the property, which is already secured, and which includes some of the finest shooting-ground on the North Carolina coast. We shall report from time to time the progress toward final organization of this club.

THE TATHAM WATCH.—We have been shown the watch given by Messrs. Tathem & Bro. as one of the prizes at the coming tournament. The watch is of gold, with engravings of hunting scenes on the front case. It is an elegant and costly piece of work, in the best style of Theodore B. Starr, the well-known jeweler of this city, and its fortunate winner at the coming contest may well be regarded with envy. The watch will be a most valuable and handsome souvenir of its possessor's skill and luck at Coney Island.

WHEN THE ICHTHYOPHAGOUS DINES.

THE article in our last issue giving the date and place of the coming dinner of the Ichthophagi has sounded the needs of the club far and wide, and friends are offering their services to procure several of the required articles of diet. The hellbenders are secured, the water snakes are promised, and the lake proteus or "lizard," *Menobranchus*, is being sought. No one has yet promised soft shelled turtles, or beaver tails, but they may come.

A caterer has been found in Mr. Murray, who enters into the spirit of the feast with his whole heart. He has longed for such a chance to display his ability, and has experimented with all sorts of strange viands. The Club welcomes him, and he hails the Club as the progressive gastronomical champions of the century.

Sitting on the editorial tripod, late the other night, the uncanny odors of the coming feast were wafted to us, and wrought up by the fumes, like the Delphic priestess of old, the spirit of prophecy came upon us, and we beheld the gathering of the Ichthyophagi. The rhyme ran thus:

When the Ichthyophagous dines
There'll be many a curious dish
Of things ne'er caught with lines,
And not at all like fish—
Steaks of porpoise and ribs of whales,
Salmi of muskrat and beaver tails,
Aspic of jellyfish, octopus stew,
Shark-fin soup and gurry-gur-roo,
When the Ichthyophagous dines.

For the Ichthyophagous eats
All things that live in the sea—
Slimy crawlers instead of meats,
Unusual to you and me.
Menobranchus from out the lakes,
Mud puppies, turtles and water snakes,
Devilled hell-bender with sauce hellgramite,
Garfish older than triboilte,
When the Ichthyophagous dines.

There will come to this ichthyic feast,
Things that crawl or swim or squirm:
The fish, the scaphiopus beast,
And the arenarious worm.
The garrulous frog and the frisky skate,
The batrachian toad-fish with flattened pate,
The flying-fish with hyaline wing,
Will come with sea nettles, which prick and sting,
When the Ichthyophagous dines.

The eel and the sturgeon will come,
And the lamprey with his nine eyes,
The swordfish and croaking drum,
And the sculpin with look of surprise.
The gurnard will walk arm-in-arm with the dab,
The horsefoot will waltz with the great spider crab,
The sullen-eyed angler will ogle the sprat,
And the devil fish twine the shrimps round his hat
When the Ichthyophagous dines.

The fiddler crabs will fiddle
To the crowd so strange and weird,
And the prawns dance down the middle
While the mussel strokes his beard.
The oysters will swim in cuttlefish ink,
The starfish will tip the soft clam a wink;
Periwinkles served in skilly-go-lee,
A sight worth footing it miles to see,
When the Ichthyophagous dines.

When the Ichthyophagous dines
There'll be queer prog to eat;
The usual thing in the way of wines
And a single course of meat.
The lobster will come in his coat of mail;
Weak stomachs will shrink from eating the snail,
But the brave ones will sample every dish,
Whether water-snake, muskrat, snail or fish,
When the Ichthyophagous dines.

THE date of the Coney Island tournament has been fixed. The convention will be called for June 20. The Long Island Association reports an ample prize list. The preliminary preparations are rapidly being disposed of, and the Island itself is assuming its festive garb. In addition to the usual attractions of the State shoot, those which are peculiar to Coney Island will this year offer special inducements for a large representation of the interior clubs. If a delegation does not even win one of the many suberb prizes, the novelty of the scene at New York's great watering-place will fully repay the visitors.

AN EXTENDED REVIEW of Mr. W. W. Greener's new book on the gun is in type, and will be published next week.

PROVISION AGAINST ACCIDENT.—Special attention is invited to the card elsewhere of the Travelers Insurance Company of Hartford, Conn. We are not disposed to rate the sportsman as subject to special risk from the use of firearms; but the frequency of accidents in every pursuit and avocation, and amid the accustomed surroundings of daily life, is so great, that it is certainly the part of wisdom to make some provision against the possible losses incurred. With the present admirable system of the company, the failure to secure a policy may present itself as a most serious neglect of duty. We have no hesitation in indorsing the Travelers and its methods, and commending it to the readers of FOREST AND STREAM. We have had personal knowledge of the New York management of the company for more than sixteen years, and believe it to be above reproach; the company is trustworthy, and has a name for prompt and fair dealing with its policy-holders. During the past year it paid out 11,774 claims, or an average per month of nearly 1,000. There was about one payment to every eight risks assumed, a strong evidence both of the frequency of accidents and of the beneficial working of the system, which is still further shown by the fact that the total number of claims paid by the Travelers is over 50,000. In conclusion, without further suggesting the worth of this system of insurance, we commend our readers to communicate with the New York agent, and having secured the information which he is ready to furnish, to judge for themselves of the merits of the Travelers Life and Accident Insurance Company.

NEBRASKA BENCH SHOW.—This show, which is to be held at Lincoln, Neb., on May 17, 18, 19 and 20, under the auspices of the Lincoln Sportsmen's Club, will take place in connection with the seventh annual Nebraska State Sportsmen's Tournament. The official catalogue announces that the exhibition will be for hunting-dogs only, and that the entries will close, May 17, at 9 o'clock A. M. Thirty classes have been opened, and the premium list gives $5 prizes to first prize winners, and $3 for seconds. There are champion classes for pointers, English setters, Irish setters, and Gordon setters, one for dogs and one for bitches; and open classes for dogs and bitches of the same breeds. The same breeds also receive recognition in dog and bitch puppy classes, and in addition, there are classes, one each for Chesapeake Bay dogs, Irish water spaniels, cocker spaniels, other spaniels, greyhounds and deerhounds. The show will be conducted under the rules of the National American Kennel Club, with slight modifications. The awarding committee will consist of Messrs. Samuel M. Chapman, J. T. McCartney and F. E. Brown, who are empowered to award a V. H. C. and a C. once in each class on merit. Isaac T. Webster, U. S. A., has been selected as superintendent. The show promises to be a success.

THE CHEAP GUN PHILANTHROPIST is out again with his glaring advertisements of $20 guns, which he is eager to furnish to bumpkins and greenies for $7 each. The President (with a capital P) of a Ducking (with a capital D) Club has bought one of these $20 guns for $7, and thinks it fully equal to a $90 arm at the most ridiculous calculation. Numerous other equally cogent proofs of the excellence of these arms are set forth for the edification of the Cheap Gun Philanthropist's pocket. We advise those in search of a gun to give the $7 arms a wide berth.

QUACKS AND ANGLERS.—This is an age of "magnetic," "galvanic" and "electric" frauds. There are suits of magnetic clothing, which ward off disease; electric hair-brushes, to cure all the ills of modern society; magnetic breast-plates, to be worn as shields against contagion; electric female garters, to develop the limbs; and now, last of all, comes the electric wristlet, to strengthen the grip of the fisherman, that he may handle his rod without fatigue. We have endured without complaint the pretentions of the clothing, shield, brush and garter quacks, but the "wristlet" wrinkle awrouses owrindignation.

WE have been shown some of the artist's proofs of the illustrations of Mr. Thos. Sedgwick Steele's forthcoming book, "Paddle and Portage," and we find them perfect gems. The book, we may safely premise, will be one of the most elaborate things of the kind ever published.

The Sportsman Tourist.

ON THE LARRIWEEP.

IN THREE PARTS—PART I.

IGNOTUS dropped into the office one morning, with the abrupt remark, "I'm tired of this; let's get out of here."

"All right, where shall we go?"

"Ever been over on the Larriweep, the other side of El Conquistador?"

"No."

"Well, let's go. I can't stand being cooped up here in Argentum much longer, and Mexican Jo says there's a cabin over there in pretty good order, and plenty of game up on the Mesa. Let's try it, anyhow, and if it doesn't pan out, we can come back. Pack up and we'll start in the morning."

The proposal chimed well with a certain restlessness that had possessed me for a few days, and when Ignotus came around next morning I was all ready. The sun had not yet appeared above Dos Hermanos, but the snow on the top of Red Peak had caught his light and glowed like a sheet of frosted silver. In the new wine of the morning air there were at least three distinct flavors: one, slightly saline, from the lixiviation works at the foot of the village; a creosotic tang from the charcoal burner's heaps on the hillside above, and the balsamic savor of the spruce buds, and of the resinous sap of the yellow pine. Intoxicated by this aerial champagne, a couple of "whisky jacks," or Canada jays, were making good their name by a Bacchanalian hilarity that was painful to witness. Tumbling over and over each other in the air, trolling profane snatches of tavern glees, shrieking with vinous merriment, they finally staggered, wing and wing, to a convenient bush, like two jolly old topers going home to sober up, after an all-night's spree. As we rode off we heard them, with much maudlin hiccupping, reading lectures to each other on the disgrace of being drunk so early in the morning.

For the first few miles our route led up the valley of the little stream which joins the Animas just below Argentum. It then turned abruptly to the left, over a rickety bridge of aspen poles, and began to climb the side of the gorge, at whose head lay the pass by which we were to cross into the valley of the Larriweep. The trail here had been "worked" at considerable expense, and was considered an excellent mountain road. Not more than three feet in its widest part, it crept along the side of the mountain, zig-zagging back and forth, twisting around this boulder, climbing up that bench, sidling around this drift of slide-rock, coquetting with that precipice, tumbling headlong down one side of a cross ravine, and staggering drunkenly up the other slope, but all the time mounting steadily toward the pass. The slant of the mountain side was such that, to gain this yard in width, the upper or right-hand side of the trail had been cut down nearly four feet, leaving a bank too steep for anything but a cat to climb, while on the left the pitch downward was so abrupt that we could almost touch the topmost boughs of spruce, with trunks as large as flour barrels and with roots a hundred feet below. I asked Ignotus what we should do if we met a pack-train coming down, and he said we would have to take the outer side and trust to luck not to get pushed over. On these narrow trails the right of way belongs to the regular freight-trains, and the transient passenger must accommodate himself to circumstances as best he may. At one place the mountain-side was cut into by a gorge, much like the gap which is left in a cheese when a half-pound slice has been taken out. Along its perpendicular sides the trail had been blasted out, scarcely wide enough for one horse to pass. Over the edge of the re-entrant angle left by the removal of the sector trickled a little stream, carrying just enough water to make the rock wet and slippery. Here Huz, whom I was riding, and who was reputed to be as fearless and sure-footed as a mountain goat, stopped short and refused to budge. I could not dismount, as there was not room to stand on either side; to turn around was fully as impossible, and, if he would not yield to coaxing, there seemed no alternative save to slide ignominiously over his tail, and, with fragments of basalt and porphyry, argue the matter from the rear. Fortunately, I was not reduced to this humiliating necessity, as he finally, with many a snort of protest, decided to attempt the passage. Once his foot slipped, and he hung for a moment poised between rock and sky; but he soon recovered, and, thenceforward, till the ticklish transfer was accomplished, hugged the rock so closely as to nearly crush my leg between the wall and his body.

As we traversed this gorge, I was struck anew with the absence of ferns and mosses in a place seemingly so well adapted for them. Anywhere in the Appalachian range such a chasm as this would have had its rugged outlines softened and its nakedness concealed by a tapestry of green, but here there was not a hint of vegetation of any kind to break the bank monotony.

Nature was in a holiday mood when she produced the Eastern mountains, and she mitigated their roughness and angularity with every possible device of fern and lichen, of trailing ground-pine and nestling moss. But she must have been in the "doleful dumps" when she hurled up these peaks, and disdained to hide their sterile slopes with any veil of greenery. No greater contrast can be found than the two mountain ranges, the Alleghany and the Rocky. The one is Nature's laugh, the other her frown. There is an air of brooding gloom over the latter that depresses and chills the observer. All the lovelier, in contrast, are the "parks" scattered here and there, relieving the dreariness of the otherwise unbearable monotony of spruce forest and naked rock. But withal, harsh and frowning as these heights are, there is a subtle charm about them that defies description. If this same charm invests the Alps I wonder no longer that the Swiss exile so often dies of home sickness.

On the opposite side of the main gorge were long lanes cut through the spruces, and extending from the top to the bottom of the mountain. But for the sharpness of descent and the great width of some they might have been taken for wood roads, but they were in reality the path of avalanches, or, as they are called here, "snow-slides." They were swept as clear of trees as though hewed out by Maine lumbermen, and at the foot the dead timber was piled up in massive log heaps. Ignotus pointed out to me the spot where, the winter before, a mail carrier, shooting down the gulch on his Norwegian snow-shoes, had been caught and buried by a slide. His body was not found till the next summer, and then the letters, for which he had given his life, were forwarded to their destinations. I was reminded of some other letters, once shown to me, which had lain at the bottom of the Atlantic for nearly a year. They were on board the Commonwealth, bound from Rio Janeiro to New York, which went down off Hatteras, in the great storm of '76. Recovered and forwarded, stained with salt water, and with the shells and sea-sand still clinging to them, they brought us the first news we had received of the death, in a Brazilian forest, of a dear young scientific friend. I could not help wondering whether, in the mail-sack of the dead snow-shoer, there were found any letters of a like melancholy character. Ignotus also told me how he had once narrowly escaped death in a snow-slide.

"A lot of us were wintering at the Highland Mary mine at the time, and the snow fell so deep that year that the mail had to be taken off, and we hadn't had any for nearly three months. So when we got too hungry to stand it any longer, I told the boys I'd snow-shoe it over the range to Carr's cabin, where the mail was lying, and get our letters. It wasn't more than twenty miles across, and I knew I could make it there and back in two days, easy, if I didn't have any back luck; so off I started. I got along all right till I came to Pole Creek, and there I didn't like the looks of things. You see it was getting along toward the time for slides, and Pole Creek Hill had a mighty bad name for 'em. That was where young Hanford and Green and those three 'tender-feet' were killed the winter before, and I could count near twenty places where slides had crossed the trail. You know the trail runs up on the bench above the creek, makes a sharp elbow and almost doubles back on itself about half a mile above, at the head of the two gulches that it crosses just after it strikes the bench. Well, I thought if I left the trail and struck straight up the hill, keeping on the hog-back between the gulches, I'd have a better show, so I turned up. It was tough work, climbing so straight up with snow-shoes, and about half way up I stopped to rest and take a smoke. I hadn't more than half finished my pipe when I heard a queer kind of a noise above me—a sort of a rasping, swishing sound—and when I looked up, by thunder! I thought the whole hill, snow, spruces and all, had broke loose and was coming down on me. I had just time to sling my arms around the tree I was leaning against when it struck me. My legs flew out from under me like lightning, but I gripped the tree like grim death, though I thought the strain would pull my arms out of joint. The loose snow flew so I couldn't see an inch before me, and I couldn't hear a thing but that swish and roar that sounded about like what a heavy freight train makes when it's running with down brakes over a long trestle, and the crack of the big spruces as they gave way before it. Then there came a smash as though the train had gone through the trestle, and I knew the slide had struck the other side of the Pole Creek gulch. After a while the snow cleared away, and I found I was safe. You see, being on the hog-back, only the edge had struck me; but if I'd been twenty yards lower down you'd never have heard this story. I was buried about up to the shoulders, and I had hard work to clear myself; but it was harder work to get my shoes, and I couldn't travel without them, for the snow was twenty feet deep in places. However, I got 'em dug out after a while, and started ahead again."

"After such an experience as that, I should think you wouldn't want to try it again."

"Well, you see, I thought lightning never struck twice in the same spot, but I hadn't gone fifty yards, before the snow broke loose in the other gulch on the right of the hogback, but I was watching for her this time and shinned out of her way pretty lively. When I came back the next day, Pole Creek gulch was full of snow where the slides had struck, and I crossed on the top of it, full sixty feet above the creek. I tell you, a slide isn't a thing to laugh at, and I never want such another close shave as that was. I was stiff and sore for nearly two weeks, as though I'd been pounded all over with clubs, and my shoulders haven't got right well yet."

While Ignotus was talking, there came into my mind some verses which the Rhymer had repeated to me, not long before, and which he said were a translation of an old Norwegian ballad, though I thought at the time they sounded like his own composition. If I remember them correctly, they were as follows:

> Down the icy slope of the mountain steep
> He flies, in the teeth of the northern wind
> The startled hare from its form doth leap,
> And the gray goss-hawk is left behind.
>
> Before each ringing, singing shoe
> The snow spins out in curving lines;
> A long thin wake of steely blue
> His arrowy trail behind him shines.
>
> "A moment more, a moment more"—
> This is the song he blithely hums—
> "My cabin door"—a muffled roar
> Smites on his ear—the snow-slide comes!
>
> There's a rasping sound from the summit above,
> And a puff of snow shoots up, like smoke;
> The side of the mountain seems to move,
> And the air is full of a sudden shock.
>
> Smit by the hammer of Thor, the hills
> Shiver and shake from buttress to crest;
> A cry from the depth of the gulch up shrills—
> And the eddying snow-cloud sinks to rest.
>
> Ah! dear hearts in the valley below,
> Long shall you wait your love's return!
> Empty and barren, the wastes of snow
> In the dying sunset flash and burn.

Just before we came to timber line we passed a pack train, preparing to break camp. In the packing between Argentum and the Conquistador country, this is the point where the first night's halt is generally made. Two or three swarthy Mexicans were catching the burros one by one, throwing on the aparejos, or pack saddles, piling up the packs on top, and accompanying all with a rolling fire of Spanish vocables, which sounded wonderfully liquid and musical, until Ignotus informed me they were "cuss words."

Profanity seems robbed of half its wickedness, and all its vulgarity, when veiled in the guise of the sonorous "*Carajos*" and "*Carambas*" of these dark-eyed muleteers. Picturesque and romantic as these rascals are in the abstract, in the concrete they are to be wisely avoided. To say nothing of the minor inconveniences attending them, such as *Cimex lectularius*, *Pesiculi*, and fleas, they will steal your shirt from your back, or cut your throat for a pint of *aguadiente*. By some wise provision of Nature, Greasers and burros seem to be complementary creations, but in point of morality, the burro is the better brute of the two. "A blanketed nation of thieves and harlots," Randolph of Roanoke called them, and sad experience leads me to give in my adhesion to his pungent characterization. Passing the camp, we emerge from the timber, and enter upon the sloping plateau which leads up to the pass. The contour of the ground is like one of the old-fashioned, double-peaked McClellan saddles, with the addition of side flaps. We are riding up one of these flaps and will soon cross the seat, between the two peaks, and begin to descend upon the other side.

Here, almost at the summit, the ground is as marshy as in the Black Swamp of Ohio, and the large white buttercup grows in profusion among the Carices on either side of the trail. Over the peak to the right, sails a turkey-buzzard, a bird I have never, save this one time, seen at so high an elevation, and I should doubt his identity now, did not my field-glass bring him so near that there is no mistaking his naked head, his rounded tail, and his general vulturine aspect.

To the left of the trail, in a cleft of the rock, lay a patch of snow not yet melted, and on its surface were several large white butterflies whose species I was unable to determine. They seemed as much at home, and as comfortable, upon the snow, as when flying around the buttercups, only a few yards distant. Perhaps they resorted to the snow to cool the nectar which they drew from the flowers. If so, iced sherbet is not entirely a human invention. At the top of the pass, the western wind blows strong in our faces, and Huz and Buz snuff it up, as though it bore to their nostrils the salt smell of the Pacific, or the balmy odors of the Golden Gate. At these high altitudes, the influence of the radiation from the earth's surface and of the density of the air, as affecting the general temperature, is very apparent. The direct rays of the sun here are scorching. Ignotus' nose flames like a light-house, and, judging by the feeling, mine is equally well baked. My pocket thermometer, exposed for a few moments in the sunlight, marks 100 deg. F., and yet within fifty yards is a bank of snow two feet deep, and ten minutes rest in the shade of that rock yonder would set us shivering with cold. Were we to camp here to-night, we would need as many blankets as at home in mid-winter. The woods below us look so cool and inviting, that we take small time for rest, but press onward. The trail pitches abruptly downward over a long tract of slide-rock, where we dismount and lead our horses. The sharp fragments cut our feet and scarify our horses' legs, so that, like the Patriot army at Valley Forge, we mark our path with our own blood. The heat and the rocks together make this part of the trip so unpleasant, that it is a relief to plunge once more into the heavy spruce woods, and work our way downward to where, a thousand feet below, brawls the Larriweep. The Indians have been setting fire to the woods hereabouts, and we presently come to a stretch of burnt forest, through which our trail leads. The spruce needles, accumulating for years, had formed a thick mat upon the ground, and in this the fire had slowly smouldered till a bed of ashes, several inches deep, was left. Through this we plow our way, the horses sinking to their fetlocks at every step. The charred trunks of the spruces, looking like gigantic black pen-holders, loom up all around. Solitary pen-holders—clumps of them—long vistas of them—enough to set up a Brobdignag stationer in business. As we thread our ghostly way through them, the ashes so deaden our footfalls that, if one had a sufficiently lively imagination, he might fancy us disembodied spirits, tracking our way through a dead and burnt-out world. Stirred by our progress, they settle down in an almost impalpable powder, till horses and riders are all the same gray tint, and Ignotus murmurs that we will soon be able to furnish lye enough to supply a campaign editor. The constant inhalation of the fine ashes soon produces a choking thirst, and man and beast alike rejoice when we emerge from this Vale of Asher, and see before us the Larriweep, and our cabin waiting hospitably for us with open doors.

Out of the side of the mountain is scooped a semi-elliptical plot some hundred yards in length, and half as many in width. Behind rises a wall of rock, the buttress of a mesa, which rolls on still further back a mile or more, till from it springs, clear and sharp, the mountain proper, the peak of El Conquistador. On this mesa are clumps of spruce, balsam fir and quaking aspen—*Populus tremuloides*—islanded in a sea of gramma and bunched grasses. It is a chosen resort for deer and elk, who find shelter in the groves and succulent food among the grasses. The peak itself is tenanted by the cimarron or mountain sheep, while the heads of the gulches which cut the mesa like earthquake clefts, tempt the bears—frost, black and cinnamon, with tidbits of wild parsnips and celery. The front edge of the half ellipse is formed by the Larriweep, clear, cold and foaming, and on its very edge stands our cabin, reached from the trail upon the other side by a huge foot-log of spruce. True, the floor is of native dirt, the only window a chink between two logs, and a pendant oilcloth must do duty for a door; but the gaping fireplace, built of flat stones from the rock-slide above, the bunks in one corner, which shall be filled with fragrant spruce boughs and piled with our fur robes and Navajo blankets, the slab-tables, benches and stools—these promise solid comfort.

With deer and bear and cinnamon meat from the mesa above, and grouse and duck and trout from the valley below, our table will be well supplied. As for the more æsthetic parts of our nature, artistic hunger shall be satisfied with the changing tints of the snow upon the opposite peaks, the grays and the browns of the rocks, the green of the cotton-woods, the blue and the olives of the sky, and the starry flowers that spring up everywhere. For music, have we not the voices of the mountain calling all the night, the whisper of the wind in hemlock boughs, and the pæan of the brook?

For literature, the pages of the "Great Stone Book" lie spread out before us, waiting for an interpreter. Ignotus and I exchange glances, and each answers the other's unspoken question by quietly dismounting and beginning to unpack. Thousands of years ago Nature foresaw this expedition, and prepared for us, on the other side of the stream, a pasture of about fifty acres, so hemmed in by mountain walls that ten minutes work with an axe barricades its only outlet, and here Huz and Buz, Rob and Rena are turned out to spend idyllic days. Pitch—pine knots from a fallen tree soon crowd the fireplace, and civilization and solitude have shaken hands. Your true nomad claims a right of homestead wherever he spreads his blankets, and when I started out with my gun, in hopes of a stray grouse, Ignotus asked me, in the most matter-of-fact way, if I would be "home" for supper. I had always looked upon the absenteeism of landlords as an evil strongly to be condemned, and was the more convinced of the justice of my views, when I found that in our absence our preserves had been so thoroughly poached that I was forced to return grouseless to camp. I was well repaid for my walk, however, by discovering in one of the *Mustelidæ* a trait I had never before suspected. On the ledge behind the cabin grew a number of "service-berry" bushes, loaded with ripe fruit.

Noticing a movement in one of them, I drew near to see what was going on, much in the spirit of a thrifty house-

holder, who observes an unwonted commotion in the branches of his favorite Pearmain, what time apples be ruddy and small boys do most abound. But when I spied the marauder, I was as much astonished, as would be the aforesaid householder should he discover his trusted Maltese cat in the act of plucking and devouring his cherished fruit. On account of the steep slant of the hill-side, the upper branches of the bush hung so low as to touch the ground, and there, perched upon a convenient stone, sat a little mountain-weasel cramming his maw with the delicious berries. The small rascal had donned his winter suit of snowy ermine, in contrast to which the black tip of his tail shone blacker than ever. In eating he held the berry upon the rock, between his fore-paws, and nibbled at it as daintily as Miss Whyte-Kyddes would taste a chocolate *bon-bon*. With him cleanliness was one of the cardinal virtues, as he sinned against etiquette by carefully making his toilette after every course, washing first his hands and, then his face, next combing his hair, and lastly brushing the crumbs off his fur suit, of which he was very proud. From the care taken to keep it from being soiled, I judge it was the first one he had ever owned, and that, being too poor to afford another one till next winter, he felt that it behooved him to keep it as immaculate as possible.

Having eaten five or six berries, he happened to turn his head, and caught me in the impoliteness of spying upon him. Paralyzed for a moment at my lack of breeding, he soon recovered, resolved himself into a flash of white light, and, in the felicitous phrase of a Western editor, "betook himself to the solitude of his own privacy." His departure was so sudden that nothing short of the Yankee comparison of "quicker 'n a streak o' greased lightning" would describe it. Telling Ignotus about it afterward, he said they had been known to run so fast, when badly scared, as to set their fur on fire: at least, so he had heard; but, as he didn't seem to more than half believe the story, I, too, felt justified in receiving it with a modicum of doubt.

After we had gone to bed, we found we were not the only inhabitants of the cabin. A large family of mountain rats had taken possession, and the blowing out of the candle was the signal for the commencement of a nocturnal "jamboree." (By the right of pre-emption that word belongs to Ignotus; but I am forced to "jump his claim," as no other expression will describe the performance.) We had put our bread in a tin pan, turned another one over that, set the heavy iron cover of the bake-oven on top of all, and fondly imagined our improvised safe was burglar proof; but the tumbling of the lid to the ground and the rattling fall of the covering tin pan soon showed us our mistake.

With a muttered anathema, Ignotus, who slept in the lower bunk, arose and replaced them. Another tumble and rattle, another skurry of the retreating enemy up the cabin walls, another midnight procession over the cold dirt floor, and Ignotus again sought his blankets. After two more repetitions his patience was exhausted, and I heard him in the darkness engaged in some mysterious performance, after which he again lay down. We had just dozed off, when there came a mighty clatter of tinware, and Ignotus, jumping up and lighting a candle, showed us his ratship caught in an ingenious trap. Tomatoes had formed part of our supper, and the can which held them had been opened by two cuts in the top in the shape of a Greek cross, leaving four projecting points of tin. These Ignotus had bent down inside the can, and at the bottom had put a little butter, of which these rats are very fond. When the thief had secured the tempting booty, and attempted to withdraw his head, the sharp points had caught him under the jaws, and he was a prisoner. Having "caught our hare," Ignotus proceeded to "cook" him with a billet of wood, and we again lay down. Whether he was chief commissary, or whether his terrible fate deterred the rest, is uncertain, but we were not annoyed any more during the night.

THE GATEWAY TO THE PLAINS.

DETROIT, Minn., Feb. 14, 1881.

ALTHOUGH the world is predicted to close its career during the year, and become, as it were, an incident of the past, we beg leave once more to call the attention of your readers to this land away to the North, where but a short time ago nobody but the red-man roamed over the vast prairies between here and the Rocky Mountains, and the antelope and elk bounded over hill and knoll as free as the wind that swept its unbroken face, while the buffalo grazed in vast herds where now their white and bleached bones checker the wheat-fields of the sturdy farmer, grim emblems of the past. To a person who has never been in the West and seen these vast stretches of land, without even a shrub or tree to mar their surface for hundreds upon hundreds of miles, the realization of their magnitude can be but feebly portrayed in the mind.

Detroit is, in one sense of the word, the gateway to these vast plains on the line of the Northern Pacific Railroad, for to the east of it extend those mighty forests which cover the northern parts of Minnesota, Michigan and Wisconsin, while to the west the prairie begins and continues in an unbroken stretch to the Rocky Mountains. The prairie is rolling with alternate highlands and marshes, in which the wild fowl congregate thickly in the spring and fall, until it reaches the Red River, a level, unbroken field with scarcely any lowlands or marshes. A faint idea of the nature of these prairies can be obtained when the method of plowing pursued on some of the great farms there is mentioned. The plowman in his day's work takes a straight course and keeps his single furrow until noon, when he turns around and occupies the remainder of the day on the return trip, thus making but two furrows in a whole day. This may sound a little "fishy" to some Eastern people, but it is a fact, nevertheless, well known out here.

Duck, goose and chicken shooting occupied the attention of our sportsmen here during the fall months, and rich harvests were reaped by them. Then came winter and with it the sport of deer shooting, and many a proud old buck stained the white mantle of mother earth the morning after the first snow with his life-blood. The deer were never known to have been as thick in this county as they were this season, and thousands of them were killed about here alone. The extreme cold soon put a stop to the exciting sport of deer shooting, and as an occasional warm day presented itself our sportsmen started out and had a rabbit hunt or tried their luck at angling through holes in the ice. Some of them have pretty good luck and obtain fine strings not uncomfortable to carry in a few hours. HIAWATHA.

THE ATTENTION of tourists is called to the advertisements of Chas. J. Greenough, Saranac Lake, New York, and of Kennedy Smith, Eustis, Maine.

Natural History.

WALLACE'S ISLAND LIFE.*

FEW works on science have attracted more general attention and admiration than those of Mr. Wallace, and few have met with more general appreciation and acceptance among naturalists. Well known in the scientific world as having independently worked out the law of Natural Selection, which he announced at the same time with Darwin, and the author of numerous works of importance, he stands in the very front ranks of England's scientific men.

His Geographical Distribution of Animals, published in 1876 by the Harpers, is justly regarded as one of his greatest works, and to that the present volume is, in some sort, a supplement and completion.

The study of the fauna and flora of islands, as distinguished from continental life, is marked by many and serious difficulties, and in many cases the knowledge that we require can never be obtained, owing to the settlement of the country and the consequent destruction of the forests and introduction of exotic species of plants and animals, which must soon cause the extinction of indigenous forms of life. A true and natural classification of plants and animals is required for the intelligent pursuit of this study, and though this is now being reached, it is too late in many instances for us to benefit by it. The doctrine of evolution, or to use a term as expressive and more generally understood, "descent with modification," is the key to the problems which we have to work out, and it is only since 1859 that this doctrine has been set before us in its full clearness, and has received general acceptance. So long as the various forms of life could be accounted for on the theory of a special creation for each one, there was manifestly no further explanation required of the phenomena of the distribution of plants and animals. If each form of life was created and placed in its special habitat, everything was said, we could not go back of that.

The conditions which serve to influence the distribution of life are many and various, and the facts requiring elucidation so intricate, that, until the present time, the problems presented to us have never been satisfactorily explained. The traveler in Northern Japan will find there birds which he has been accustomed to see in Great Britain, some species being the same, others closely similar, though he is separated from that island by the whole breadth of a great continent. But let one who is familiar with the fauna of Australia proceed to New Zealand, only thirteen hundred miles distant, and he will find almost every form of life, whether animal or vegetable, wholly unlike what he has been accustomed to in the neighboring continent. In the Malay Archipelago is a still more striking instance. The islands of Bali and Lombok, each about as large as Corsica, are separated by a strait only fifteen miles across, yet these two islands differ more widely in their birds and quadrupeds than do England and Japan. On this continent we have a similar case. The flora and fauna of the Eastern States, as one passes southward from Northern New England, changes somewhat, becoming more luxuriant as we approach the Gulf, but not altering its essential character, even at the Southern extremity of Florida. But just across the narrow strait which divides that peninsula from the Bahamas, is a vegetation truly tropical, and with it a bird and insect fauna almost identical with that of Cuba. Paleontology gives us much assistance in working out the genetic connection of the various forms of life now existing upon the earth. In some cases, the ancestors of living forms have been traced back through their various changes and modifications to the beginning of Tertiary time, while, too, many evidences of the migrations of certain groups are furnished by their fossil remains, and the proofs of such migrations shed a flood of light on the present distribution of many existing animals. The knowledge derived from stratigraphical geology is also very important, for from it we learn what portions of the earth have been long submerged beneath the surface of the ocean, and thus what portions have long been isolated and allowed the time for the development of a special flora and fauna of their own.

Other and even more important classes of evidence are the great changes of climate which have taken place both in the polar and temperate zones—which are shown by the evidences of a luxuriant vegetation in the former, and of glacial action in the latter—and the theory of the permanence of existing oceans and continents. It is now generally believed that mild climates near the poles and periods of intense cold in temperate regions have several times in the course of the world's history alternated with climatic conditions not markedly different from those now existing, and the influences of such changes upon life as regards the migration, the modification and the extinction of species can scarcely be over estimated. The theory of the substantial permanence of continental and oceanic areas is a new one, and is as yet very imperfectly understood. It is, however, thoroughly believed in by Mr. Wallace, and there seems to be good evidence in support of it.

After presenting us with a vast amount of information on the distribution of different forms of life on islands and continents, Mr. Wallace summarizes the facts which he has brought together, and in the concluding chapter of his work gives the results of his study of the most difficult subject. He says, in brief,

that the distribution of the various species and groups of living things over the earth's surface, and their aggregation in definite assemblages in certain areas are the direct result and outcome of a complex set of causes, which may be grouped as "biological" and "physical." The biological causes are mainly of two kinds—firstly, the constant tendency of all organisms to increase in numbers and to occupy a wider area, and their various powers of dispersion and migrations through which, when unchecked, they are enabled to spread widely over the globe; and, secondly, those laws of evolution and extinction which determine the manner in which groups of organisms arise and grow, reach their maximum, and then dwindle away often breaking up into separate portions which long survive in very remote regions. The physical causes are also mainly of two kinds. We have, first, the geographical changes which at one time isolate a whole fauna and flora, at another time lead to their dispersal and intermixture with other faunas and floras—and it was here important to ascertain and define the exact nature and extent of these changes, and to determine the question of the general stability or instability of continents and oceans; in the second place it was necessary to determine the exact nature, extent and frequency of the changes of of climate which have occurred in various parts of the earth, because such changes are among the most powerful agents in causing the dispersal and extinction of plants and animals. Hence the importance attached to the question of geological climates and their causes which have been here investigated at some length with the aid of the most recent researches of geologists, physicists and explorers. These various inquiries lead us on to an investigation of stratified deposits with a view to fix within some limits their probable age; and also to an estimate of the probable rate of development of the organic world; and both these processes are shown to involve, in all probability, periods of time much less vast than have generally been thought necessary.

Having done so much in the First Part of his work, Mr. Wallace then proceeds to apply the facts and theories already established to the explanation of the phenomena exhibited by the faunas and floras of the principal islands of the globe, which he classifies in three groups in accordance with their physical origin, each of which exhibits certain well-marked biological features.

Of all the conclusions which the author draws, perhaps the most important is that with regard to the age of the earth which we inhabit, or more properly, that which treats of geological time as bearing on the development of life, and with an abstract of his remarks on this subject we must close our review of this most interesting work. The periods of time usually demanded by the geologist for the development of the organic world have been very great, but we find in the earliest fossiliferous rocks evidences of the existence of many forms which require vast periods of time for their development. The physicist, however, denies that any such enormous periods of time are available. The sun is losing heat more rapidly than it could acquire it from any conceivable source, and the earth is cooling and must once have been too hot to admit of the existence of life upon its surface; the friction of the tides is constantly checking its rotation, and this cannot have gone on indefinitely without making our day much longer than it is. By means of various estimates, which need not here be gone into, it is shown that the rate of modification in the organic world, in remote geological time, was probably much greater than it now is, and that at the present epoch the earth is in a "phase of exceptional stability both physical and organic, and it is from this period of exceptional stability that our notions of the very slow rate of change have been derived."

Mr. Wallace's work is replete with new facts, and gives us the views of the most advanced thinkers of Europe. It is of the utmost value to science. Besides this it comprises a fund of interesting information on natural history that will recommend it to a very large class of readers who have no special scientific knowledge.

*"Island Life, or the Phenomena and Causes of Insular Faunas and Floras; including a Revision and attempted Solution of the Problem of Geological Climates," by Alfred Russel Wallace. New York: Harper & Brothers, 1881.

MIGRATORY BIRDS AT QUEBEC.

WHILE New York and adjacent States lay buried under a deep coating of snow, swept by Boreas in no gentle humor, we, of the province of Quebec, have stood *bouche Beant*, at the bare idea that for once the old tyrant, in a moment of hilarity, should have vaulted over us to wreak his malignity beyond the line 45 deg. We record an exceptionally mild winter, followed by a precocious spring.

Isothermal freak notwithstanding, migratory birds do not appear to have been much influenced by this abnormal state of weather. The following extracts from my note-book show no very marked deviation from their ordinary time of arrival here the last five years:—

March.

3. Pine Grosbeak, returning North. Mr. J. M. Lemoine informed me that he noticed a few up to 15th inst. Snow Bunting at Lyster.
6. Bald Eagle at Cape Sante.
8. Shore-Lark. Never abundant.
15. Crows 15 days late. Building, April 23d.
16. Canada Geese. Flying N. E.

April.

1. Wilson's snow bird, or "Nun" (*Junco hyemalis* we presume). Eight to ten days late.
11. Song-Sparrow (*Rossignol*). Five days early. Herring Gulls.
14. Robins. Five days late; very abundant 30th. Rough-Legged Buzzard on one occasion noticed February 28th. I have never seen the *Var. sancti-johannis*. Wood-cock (see *Quebec Morning Chronicle*), rather early.
22. Snow-Geese. Rare; irregular. Shrike (*C. borealis*), ordinary time.
23. Black Duck, flushed in pasture field ponds. Swallows (city) reported by H. C. A. early.
23. Free Sparrow (*S. monticola*), irregular.
24. Savannah Sparrow, not common.
25. Wilson's Snipe (*La Becassine*), ordinary time.
26. Hermit Thrush. A warbler not identified. Wood-cock—flushed Crescent Cove—late. Buffle head (*B. albeola*).
27. Purple Finch, occasionally noticed the year round. Blackbirds, ordinary time. Bluebird, first observed to breed here last season. Golden-wing Wood Pecker, ordinary time. White-throated Sparrow, ordinary time. South-southerly, of Cape Rouge. Mallard, very rare in this section.
28. Grass Finch, usual time.
29. Fish Hawk (*P. Carolinensis*) shot on day previous at Grondines by a gunner, who offered it for sale on board steamer *D'Etoile*.
30. House Wren, rare in this locality. Yellow Rump Warbler, in scattered bands. The first Butterfly of the season was observed to flutter about merrily on the 9th. Frogs held a weak rehearsal on the 23d (now *treat* us to a full choral). A Ribbon Snake was noticed quite lively on the 25th, and these busy bodies, the bumble bees, put in a first appearance on the 30th.

Gardening in sheltered localities commenced on the 13th. Potato planting (Roberts & Copeman), on a large scale, began on the 23d. Since then, farming operation progressing without interruption. J. N.

Dornald, Cap Rouge Road, St. Foye (near Quebec), April 30th, 1881.

CURIOUS HABIT OF A WOODPECKER.—The following note is taken from the New York *Sun*, and calls attention to a habit that we have never noticed in a woodpecker. It is true that one often sees the common and widely distributed red headed woodpecker rattle on the dry shingles of a barn, or against a loose board on the side of a house, where his only object, so far as could be divined, was to make a noise, but we have never known of this being done regularly as appears to have been the case in the instance noticed below.

We presume that the species referred to is the California woodpecker, *Melanerpes formicivorous*. The note is as fol-

lows: I have been noticing particularly the peculiar habits of a woodpecker. As I go to work every morning, about 8 o'clock, this bird alights from a tree on a neighboring hill, flies directly to an oil can with bottom upward, on which he pecks away with measured stroke for about half-an-hour. He then flies off about twenty feet to an old coffee pot and goes through the same performance for another half hour. He is then off, and is seen no more till the following morning. Now, this woodpecker is not "tapping at the hollow beech tree" to obtain food, by arousing the insects concealed beneath the bark, and the question arises, What is he drumming on the old tins for except to gratify his drumming propensities? Between his taps on the tin can he looks toward the sky, as if waiting the effect of his music on the feathered race around. Evidently he is in search of a mate, and his instinct (curiously enough) tells him, as instinct tells the small bad boy, that more noise is to be got out of tin than out of an old oak. This being springtime, I presume he will stop it when he procures his mate. He certainly deserves one for his ingenuity.—RAPHAEL B BRAVO.

Luther's Valley, Monterey County, Cal.

CARE OF MONKEYS IN CONFINEMENT.

THE larger anthropoid apes are especially interesting to me, and I lose no opportunity of increasing my knowledge of their habits and actions in captivity. The gorilla that was exhibited at the Westminster Aquarium some few years since, was an especial favorite of mine. He would sit on my knee and recline his head on my shoulder, appreciating me as a friend and glad of some respite from the treatment of the German keepers, more brutal than himself, who managed this gentle and confiding creature with a large cart whip. Some months since, I saw a full-grown orang-outang at Jamrack's, but the conditions under which it was then to be seen were very unfavorable to its examination, and I had to content myself with making a very brief announcement of its arrival and probable size in the *Field* of Aug. 28, 1880. This orang-outang was purchased by the manager of the Royal Aquarium, Westminster, and has passed through the late unfavorable winter in that institution. During the cold weather it had a severe attack of bronchitis, through which it passed most favorably, under the very judicious management of Mr. Carrington, and the unceasing care of its attendant. This orang-outang is the largest that I have ever seen alive. Mr. Wallace, in his "Malayan Archipelago," states the height of his finest examples to be 4 feet 2 inches when measured erect, and that the outstretched arms reached 7 feet 9 inches. These measurements, I should say, are fully equalled by those of the male at the Aquarium; but as he refuses to be handled even by his attendant, it is impossible to measure him accurately. His cage is nearly six feet high, but he has not to extend his long arms to reach the top, and as he hangs suspended from his hinder hands, he can reach over a great extent of the floor. Of the history of the specimen little or nothing is known, except that it was shipped from Malacca, and that it was very thin and savage when it arrived. Its age is surmised to be about ten years, its well-developed, discolored permanent incisors and canines giving credence to the supposition. Its treatment throughout the winter has been carefully managed. The temperature has been kept up to about 65 deg. Fahrenheit by steam pipes, and while the creature was ill a bronchitis kettle was kept steadily at work. Its medicine was cod-liver oil and milk, with a small quantity of carbonate of ammonia. The animal appears now in very good health; its nose is assuming a blue tinge; it is active in its habits, playing for two or three hours at a time with a young chimpanzee that is allowed to visit it. The actions of these two animals when seen together are most amusing. The orang pursues the chimpanzee, which is not a quarter of his size or weight, and stretching out his long arm, seizes her by the leg, and by main force pulls her across the cage, pushing her hand into his mouth, and pretending to bite her. She enjoys the rough horse-play, gives utterance to her gratification in a subdued laugh, something like the sounds of "Hah, hah, hah," done in a loud whisper. At last she tires of the sport, and then the power of mind over matter comes into play. Seating herself in one corner of the cage, she repels his antics by blows or bites, and, though strong enough to crush her in his grasp or kill her with one bite of his strong canines, he is subdued, and takes refuge under his blanket, which he wraps around and over him, so as to cover himself entirely and exclude the free access of air. Being desirous of ascertaining the exact treatment of this animal, I asked Mr. Carrington for his dietary, which he kindly gave me for one week, adding the cost. The orang-outang is supplied with a good quantity of rice milk, well sweetened, about half a pound of rice per day being employed; he has, by way of animal food, about half a dozen eggs daily in addition to the milk. He also takes weekly about one bottle of cod-liver oil, and eats about sixpenny-worth of bread per diem. But the most expensive articles or his dietary are the bananas and oranges with which he is supplied. Sixteen shillings' worth of bananas, bought at the wholesale rate, and an equal expenditure for oranges, make an orang-outang rather an expensive pet, as his board, without lodging or attendance, costs about £3 per week.—*London Field.*

SPRING NOTES.—Sing-Sing, May 3.—I send you the following notes of bird arrivals:

April 17. Found red shouldered hawks (*Buteo lineatus*) nest containing two eggs.

18. Saw first chimney swift (*Chaetura pelasgia*).

24. Saw pair of pewits (*Soyarnis fuscus*) building nest.

27. Found blue birds (*Sialia sialis*) nest containing five eggs, and robin's (*Turdus migratorius*) nest containing one egg.

28. Saw first wood thrush (*Turdus mustelinus*) and cat bird (*Mimus Carolinensis*).

29. Found song sparrow (*Melospiza melodia*).

May 1. Saw first king fisher (*Ceryle alcyon*). Pair king birds (*Tyrannus Carolinensis*), and yellow warbler (*Dendraeca aestiva*). Found robin's nest containing three eggs.

2. Saw pair house wrens (*Troglodytes aedon*) building nest.

P. D.

RARE BIRDS FOR NEW YORK.—Ocean, N. Y., April 27.—There were two very rare birds for this part of the State shot here to-day, and received by me for mounting. One is a California grebe, the other is Bonaparte's gull.—J. T. STEYNER.

CAPTIVE HERON, Allentown, Pa.—Last week Mr. Theo. Mohr shot a fine specimen of the night heron (*Nyctiardea grisea nævia*). The bird lives yet, and is very hearty. They feed him on fish and fresh meat.—C. H. B.

Game Bag and Gun.

HOW "HATCH" WON HIS RIFLE.

OUR party numbered four. We had run down from the city to spend a day or two with "Uncle Hatch," as he was familiarly known among the boys. Hatch lives in the little seacoast town of M——, about thirty miles from Boston. The old gent was delighted to see us, and readily promised to show us "how to shoot a quail" the next day, though he was a "leetle afraid we would have bad weather for our sport." Sure enough, the next morning was wet and cold, a drizzling northeaster having set in about midnight, and at daybreak it was "piping."

As we couldn't shoot, we voted to take a peep into Hatch's shop to while away the time. Hatch's shop was a famous depository for old flint locks, Queen's arms, muzzle-loaders, decoys, fishing-tackle, spears, and, in fact, everything that an old-time sportsman could gather together in his extended travels. L—— had taken down from a magnificent pair of antlers an old-fashioned octagon, iron-barreled rifle which looked as if it might have been old when Plymouth Rock was founded. We were looking and commenting upon it, when a quiet chuckle at the door startled us, and turning, we saw the genial face of the "old man," who had stepped in unawares. By the twinkle in his eyes and the comical working of his mouth we knew that he had overheard at least a part of our not very complimentary remarks about the rifle. When he had deposited his load, consisting of a dipper of cider and a bucket of "sponge russets," he quietly took up the old rifle, and, after sighting it carefully once or twice, turned to us with a contented smile upon his visage, and said:

"Well, you youngsters don't think much of the old tool, do you? She ain't very smooth, but she has been a mighty good one, and has killed more game than you boys ever saw outside of them Boston markets. I haven't shot her for fifteen years, but I'll bet I can beat the best of yer now, long or short range."

Knowing the old man to be a practiced hand at the trigger, none of us cared to accept his bet, though we asked numerous questions about the gun.

"Well, it looks as though we may have fair weather in about an hour; so, if you want me to, I'll tell you how I came to be the boss of that old blunderbuss, as you fellows call her."

We filled our pipes and seated ourselves around on boxes and stools. The old man began as follows:

"Nigh on to thirty year ago, me and my old chum, Cross (dead now, poor fellow!), went on our annual hunt down East. That was in the days of slow travel, and it took us a number of days by packet, stage and footing it to reach our old camp on the Narragaugus River, in 'township 40,' State of Maine. We had been in camp two days and hadn't seen a deer, though 'signs' were plenty enough. The third morning I cruised over a new ground, but saw nothing bigger than a hedgehog, and went back to camp tired and hungry about an hour after noon. Cross had got there before me, and, judging from the looks of his knife, which was sticking in the door post, he had not come back empty. He said he had killed a young deer about a mile or more from camp, and, after getting a bite of something to eat, we went out to bring him in. Not far from where he found his deer I noticed the stump of a big maple, about three or four feet high, that had all grown up to sprouts, making a capital stand to shoot from. I told Cross I was going to 'lay' on that stump that evening and see if I couldn't shoot a deer. It took us till late in the afternoon before we got his meat back to camp, and the sun wasn't more'n an hour high when I whistled to Rolfe, my old hound, and started. I took pard's gun, 'cause I liked her mighty well. Cross laughed when he see me going, and, says he, 'Hatch, if you'll bring in a deer to-night, the rifle's yourn,'—and, fact, I thought he were pretty safe in saying it. Well, I got to the old stump and made myself as comfortable as I could among the young shoots that grew from the top of it. The sun went down and I hadn't seen nary hoof, and I began to think I was going to be skunked that day sure, but I took a pull at my pipe and waited patiently till it got most too dark to shoot. Pretty soon I heard my dog snuffin' pretty hard, and in a minute more I heard a rustling in the young poplars and maples that grew in a little hollow in front of where I was laying. I watched close for the deer to show himself, expecting he would give me a shot every minute. I got a sight at his horns once as he poked his way through the bushes, and then I lost track of him. Well, I got pretty nervous, and 'twas getting to be tedious work setting on top of that old stump, but just as I was thinking of sliding down to stretch my legs, I saw my deer way across the holler, making for the tall timber that grew on the side of the hill beyond. It was mighty dark by that time, and I could only distinguish his form now and then as he rose above the tops of the brush. When he got to the edge of the wood he stopped right in front of a big dead poplar, and began to scratch. Now was my time. I tried to sight him, but 'twas so dark I couldn't see the length of my gun barrel. I twisted and squinted but 'twas no use; at last I found I could sight the big tree behind him, 'cause it was so much lighter colored than the deer, and so I concluded to try a chance shot and trust to good judgment, backed up by a lot of luck. I sighted for the tree about a foot above the buck's back, and swinging my rifle to the left till I thought she was p'inted about right, I let her off. I listened for his start, but didn't hear anything, so I got down to the ground and sent old Rolfe ahead to see what he would find. The dog he knew what he was after, and made a bee line for the place where I last see the deer. I tell yer, boys, I was a little astonished when I got there and found that deer dead as a nail, not a rod from where I fired. I had put my ball right into his neck bone, and he hadn't kicked more than once. I had just got my knife into him when I heard Cross' whistle and knew he was coming out to look for me. So I sat down and waited. You never saw a man more surprised than he was when I showed him my game and told him the particulars. But he was up to his word and gave me the gun, and she has brought down many a one since that time, though I never made her shoot in the dark after that. We got the deer back to camp that night, and next day I measured the distance from my stump to the old poplar, and it was a hundred and ten rods to a foot. Yes, that's the gun, and them are the horns that grew on the buck I killed."

We all agreed that it was a marvelous shot, and apologized to the old man for our premature judgment of the "old blunderbuss," which was more than ever an object of interest. The storm had broken up, and soon we were stowing away one of Aunt Roxanna's glorious lunches, preparatory to our delayed start for the fields. ISLAND CAMP.

HOUNDING VS. STILL HUNTING.

WE begin the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:

1st. What is the character of the country referred to?

2d. What is the prevailing method of hunting deer?

3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?

4th. Describe in like manner still hunting and its effects.

5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?

6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?

7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?

8th. What is the open season for deer?

9th. What are the winter habits of deer, so far as you have personally observed them.

MAINE AND NEW HAMPSHIRE.

Hounding and still hunting in Coos County, N. H., and Oxford County, Me., have led to the following observations:

1st. Character of country is mountainous, and the source of Connecticut and Magalloway rivers; includes many lakes, ponds and beaver meadows, and the occasional evidence of water where it is not now, the moss-grown cranberry bogs, the summer haunts of larger game than the subject of solicitude.

2d. The question relating to the favorite means of capture resorted to only brings out the prejudices of the writers, and results of the earliest impressions, the prevailing method as it exists in the minds, but not in the practice, of the residents. Within the last five years, owing to light snowfalls, the mode has been crust-hunting with dogs. In the summer and autumn of 1879, parties attempted their capture at Parmachenee Lake, by using hounds. They were not successful, but eight miles from them, as the crow flies, at Connecticut Lakes, deer were found seeking food in unlikely places—on rocky shores, between the marshy locations on which they always were found, the dates corresponding with the drives made on the Magalloway waters, where they could not be taken by jack-shooting—the common practice in both locations in 1880, where they were taken as late as September 9, and found on the nights of the 17th and 18th of the same month.

4th. Still hunting on snow is not and never has been practiced here.

5th. Deer are increasing rapidly. Sportsmen do not slaughter here.

6th. Residents do not favor game laws.

7th. No need of a law applying to dogs in summer and autumn. The streams are abundant, and dogs lose their game.

8th. Open season for Coos Co., N. H., Aug. 1 to Dec. 1, Oxford, Me., Oct. 1 to Jan. 1.

9th. Deer choose the sunny slopes when there is an opportunity and plenty of undergrowth, hardwood lands usually, seeking fir and spruce ridges to escape pursuit. Rivulets usually are abundant in their winter haunts. A deer yard I have never seen, as the term is generally accepted. A system of thoroughfares often extending for miles, only after heavy snow falls, where only the more recent feeding-ground appears to the casual observer, does their range appear limited. Unless very much frightened, they will always run away on the trail concealed, but which their instinct enables them to locate, to the discomfiture of the pursuer. EDW. NORTON.

ONTARIO.

1st. Hilly and rocky country, with large tracts of burned land and brule.

2d. The habitats still-hunt to a great extent, but a few use dogs, or rather curs. Sportsmen usually bring in dogs with them, and by the same token frequently have them shot.

3d. I am not very clear as to this, but really do not think that it does, as the deer appear to return to their former resorts when driven off for a time. The deer are usually driven to the lakes, and in some places are bagged on the runways, but I may say that "watering" is the rule, and the result is usually that out of four deer put in only one is killed; but every hunt has its charms, derived from using the hounds, whether the deer is killed or not.

4th. Where deer are plentiful, still-hunting, by all odds, is the most effective.

5th. Market hunters, though, thank heaven, we are troubled with few here. Very likely the non-residents kill most.

6th. There are, you may say, no resident sportsmen, in the true sense of the word, and the sportsmen in the neighborhood by all odds prefer hounding.

7th. Seems hardly practicable, as it is hardly human nature not to watch for and shoot a deer, if one knows where it is going to water. Such a law in most sections would, to a large extent, render hounding useless.

8th. Oct. 1 to Dec. 15. Hounds allowed for six weeks.

9th. Have a tendency to "yard" in green woods.

ONTARIO.

1. The country to which I would refer is the territory lying between the Madawaska and Bonnechere rivers in Ontario in the vicinity of Lake Clear, Heiland Lake and Constant Creek. This tract, containing some 300 square miles, is well wooded with pine, maple, beech and birch. Lakes of small size are met with every two or three miles in all directions. The land is mountainous and rocky. A few settlers are scattered along the intervening valleys. Ice forms on the lakes toward the middle of November.

2. The settlers and market-hunters practice still-hunting. Two or three parties of sportsmen are accustomed to visit the locality in October and November, one of which uses dogs. The others are still-hunters.

3. Deer are hounded in the usual way. One of the party takes the dogs to the foot of a hill where recent tracks are discovered and lets them slip and pick out their own quarry. The remainder of the party, two or three in number, are posted on the well-known runways, where they each take their chances of a flying shot. Sometimes one is posted on a lake in a canoe, as the deer always take to water. The hounding seems to have no effect on the deer. They are too plentiful. Crust-hunting and still-hunting are thinning them out wonderfully. Where we were camped last year we found tracks in the morning very frequently within a stone's throw of the dog-house.

4. Still-hunters generally range along the tops of the hills in the early morning, and without much trouble come upon their prey. Or else they track the deer—if a very large one—up hill and down dale. Mr. Plaunto, of Lake Clear, always hunted with dogs until last season when he lost five

hounds, which were poisoned by still-hunters with whose occupation the animals interfered. He considered a score of deer great work for a season. This year, accompanied by a German named Haskins, a resident, he has sent 160 carcasses to market.

5. Those who kill for the market, viz.: farmers and such men as Plaunto, kill the most deer. Of the sportsmen the still-hunters are most successful. The best week's work we three ever did with dogs was seven. Farmers and residents kill hundreds where non-residents do not slay dozens.

6. The farmers and still-hunters (I mean the market-hunters) would as the dogs interfere with their system. The farmers have one way of preventing hounding, viz.: poison and buckshot. I have seen them shoot the deer with one barrel and the dog with the second.

7. The territory is almost too remote to be within the vigilant eye of the law. The lakes are so numerous that unless a party consisted of a full company of sixty rifles little execution could be done on water.

8 Open season for dog hunting from 1st September to 15th October; for still-hunting, etc., without dogs, from 1st September to 1st December.

9. I have seen little of them in winter time. What I saw in that country were yarded in a dry swamp between the hills in a second growth of beeches.—F.

MICHIGAN.

1st Mostly in the old pine works where the deer get plenty of feed on browse or second growth; this bordered with thick cedar swamps and tamerack.

2d. It is pretty evenly divided.

3d. They are driven into the water, where it requires no skill at all to kill them. In other words, men kill them that would so rarely ever get one still hunting. I think it drives them away to some extent, for they leave their old feeding-grounds.

4th. Would not be so destructive if they would observe the close season. The deer are killed all through the winter to supply meat for the lumber camps. A man from one of the camps told me the other day that they killed two deer at their camp this month.

5th. Market hunters or men who kill them for profit. Residents.

6th. Do not think they would; but there might be game wardens appointed who would enforce the law.

7th. That seems to be well thought of. I think it would.

8th. Sept. 15th to Dec. 15th.

9th. They stay in the swamps after cold weather sets in, and yard when the snow gets deep, say from 30 to 48 inches.

Mr. Ralph Williams, while hunting last December, saw a deer's back over a log, and supposed it was feeding; he shot at it, and as it neither fell nor ran away, he got a little closer and shot again, killing it, when he found two deer with their horns firmly locked together. The other deer had been dead some time, as its back was broken.

The victor had drawn the other about sixty rods. Their horns are so firmly locked that they cannot be separated without breaking them. Mr. Williams says they would not weigh less than two hundred pounds each. SAW DUST.

Alpena, March 1881.

A TEXAS GAME COUNTRY.

1851—1881.

THE following extract from a business letter just received from Caleb Baker, a farmer living at Farmersville, Collin County, Texas, will doubtless be read with much interest by many of your readers. Mr. Baker, though quite advanced by years, has yet the true spirit of the hunter in his soul, and he not unfrequently hitches up his team, stows away his traps and guns, and starts off—"git-up, Sup"—on one of those Daniel Boone expeditions, when for a time, at least, he can see no signs of civilization around him to disturb his peace of mind or mar his quietude. By reference to a county map of Texas his travels may be pretty nearly traced out. I see his route lies right over my old "scouting" grounds when after the red-skins in those early days of Texas frontier life, which have long since passed away. This renders the account of his trip doubly interesting to me, for in it I can trace a faithful narrative, and so indorse the same to your readers. He says:

"I have just returned from the extreme borders of civilization on the head waters of the Colorado and San-Saba rivers, where I went trapping for beaver. I was gone all winter. I went first to McKinney, thence to Fort Worth on the Texas and Pacific Railroad. Worth is quite a city now. Thence to Granbury on the Brazos River; thence to Erath County; thence to Comanche County; thence to Brownwood in Brown County. All of these are very fine agricultural counties; they now abound in vast herds of cattle, sheep, etc. From Brownwood, which is quite a populous place, I went down Pecon Bayou seven miles, where I put out my traps and caught some beaver. It is a small, clear prairie stream. I then trapped up the Bayou seventeen miles to the mouth of Gim Ned's Creek. Thence up this creek, which is but a small, lovely, clear stream, to Camp Colorado, which is quite a large place, and has a post-office. I then drove across the high, rolling prairie country about twenty-five miles to the Colorado River, where we found plenty of beaver signs, but the weather now turned so cold that we did not do much trapping for them, but remained in camp. I went with a two-horse wagon and a span of ponies, and was well supplied with everything I needed. From the Colorado River in Coleman County I went south over the prairies about forty miles on to the San-Saba River, and thence followed it up, trapping as I went, along seventy-five miles, and away up into the unsettled and mountainous region near its headwaters. This is a very beautiful, small, clear stream, which heads among the hills and mountains of this truly picturesque and sublime region of country. I lived in camp all the time, and my team fared quite well on the rich and nutricious grasses around the camps.

"By this time I had to start back, for my time was nearly expired. Oh, how I regretted it, for I was truly happy in these wild retreats. Here I could commune with nature, and there were none to molest or make afraid. I caught of beaver alone fifty-four, and if the winter had been as mild and genial as I scommon, I could have caught as many as I could have managed. I saw a vast deal of this great and varied country lying to the west of me, and I wish I could give you some idea of its rich prairies, rocks and mountains. I can say, however, that the mountains of Western Texas are the roughest that I have ever seen. I was brought up from a child at the foot of the Cumberland Mountains, but these do not compare with the mountains of Western Texas. There were more wild fowls in these small rivers than I ever saw in any rivers before, such as geese, brant and ducks of all kinds. Antelope, deer and turkeys were plenty, with some bears, and the best fish are abundant in all the streams. I had no trouble to catch them with a hook and line. I always had plenty of game in camp, and I often thought of you and wished you were present to enjoy the scenes."

Truly, my kind friend, my heart was with you. Under your recital it now beats as freely as in 1850-1-2-3 and 4, when I roamed over these same prairies, encamped upon these same streams, and slept in these same mountains. But then all was nature primeval. Not a human footprint, except that of "poor Lo" ("yer honor" on his trail), was to be seen in all of this vast upper region of country. And then even, his wily tracks were very few and far between, for they were those generally made in hot haste, as he was fleeing to his far-off northern wigwam; while returning from his accustomed forays into the white settlements from below, and driving before him, in full tilt—bow-strung and in war-paint and feathers—a lot of stolen horses and mules, and hanging to his belt or strung to his bow the yet bleeding scalp of some helpless woman or innocent child that he had butchered. Such were the frequent scenes on these frontiers in those early days of Texas history.

Little did I then dream that I would live long enough to write the following for the benefit of your readers, viz:

The Texas and Pacific Railroad is now running as far west as Abilene, in Taylor County, and will soon be completed to El Paso, on the Rio Grande River.

This road passes through or near to all the counties mentioned by Mr. Baker. It runs through a great game region, much of it unsettled, and thus opens up another great thoroughfare to the tourist, the seeker of health and the sportsman. It may be reached from New York city via Dallas in about seventy-two hours, and at an expense of about sixty dollars. October, November and December are the prime months for sporting and enjoyment in Texas, and truly happy will they be who can enjoy them. H. W. MERRILL.

New Rochelle, N. Y.

SHORE AND INLAND NOTES.

GAME AND GAME PROSPECTS.

Philadelphia.—There were a great many ducks on the flats near Havre de Grace, and on the Gunpowder and Bush rivers, but they have evidently paired, and are, ere this, on their way to their northern breeding grounds. Captain Clay has returned from his trip down the bay, and reports immense flocks of snow geese between "Stow" and "Mad Horse," in the neighborhood of Bombay Hook. These fowl have visited the Delaware Bay every spring for the past three years, and during the day remain well out in the bay, resorting to the burned meadows to feed at night. Captain Clay, observing this, made his blind in one of the meadows or marshes used by the fowl, and cutting out a few decoys from an inch plank, and painting them white, managed to get two shots and kill a number as they came in to feed. "The trouble was," remarked Captain Clay, "the geese came to me in two great bodies, and having been shot at would not return. Had they came into the meadows in twenties, or even fifties, I would have had rare sport. There must have been twenty thousand of them, and the noise they made almost deafened me." The fact that these snow geese are visiting our bay every spring should be noted by naturalists. The natives do not know them, and call them "white geese," and say "they are not fit to eat." The meadows between Mad Horse and Stow creeks show their work in feeding, the grass, for a long distance, having been pulled up by the roots.

This spring our snipe shooting has been very unsatisfactory, the birds having been restless and frequently shifted their quarters. We have heard of few pleasurable shoots, the weather has been so variable when the birds first arrived.

Lake Megantic, Quebec, May, 1881.—A half-dozen moose have been killed by parties from this vicinity, ostensibly over the boundary, but boundaries and lines are little regarded by these gentry, so I comfort myself with the probability that they were Canadian moose after all. Migratory quail are reported to have made their reappearance on the farm of Mr. Sam. Burrell, in Lennoxville, where they were loosed last season. This is encouraging.—PENOBSCOT.

Tom's River, N. J.—Quail have wintered remarkably well in this section, considering the severity of the weather. During the heavy snowstorm the wind blew hard, causing the snow to drift, and leaving many bare spots where birds could feed. Besides they have, in some cases, been fed by the sportsmen. I know of one man who has been feeding two bevies near his house all winter, one of which contains twenty-two birds, the other eighteen. A neighbor who was out a few days since giving his dog a run, found, in walking a distance of about one mile, six bevies, numbering from six to fifteen birds in each.—H. C. G.

Wauseon, O.—I do not think the quail have been destroyed to any extent with us by the cold, as plenty of unhusked corn has remained standing, affording the birds plenty of food during the winter.—W. H. H.

Bloomsburg, N. J., April 23.—I have made inquiry during the past three weeks in the southern part of Warren County, Greenwich (including Pohatcong), Franklin and Harmony townships, and in eastern Hunterdon County, Bethlehem, Alexandria and Holland townships, which territory includes very fine hunting ground of both valley and hills, and find that where remnants of coveys were left from last fall there still exists enough for breeding purposes to insure pretty fair shooting next fall, provided the nests are not destroyed by vermin, hawks and crows. Within two miles of this place one gentleman lately saw a covey of twelve fine birds; another counted twenty-two at another place, undoubtedly two or three remnants together, as when flushed they flew in different directions to their usual haunts. As yet but two have been heard whistling—nothing strange at this season. Some of our birds must certainly have perished, but nothing like the numbers given. What percentage actually did perish can not be ascertained by any one. From what I can find out I infer that neither 50, 75 nor 90 per cent. were killed. Woodcock are reported here in fair numbers, and the boys expect to do some tall sweating in July again and call it "sport."

Moira, Franklin Co., N. Y., April 25.—The snow is still deep all over the southern part of this county. And sleighing excellent on all roads south of the centre of the county. The ice on the lakes and ponds is two feet thick, and residents living near them have during the past week been catching trout through holes cut in the ice. One was caught at Conger's Pond, three miles from Dickinson Centre, weighing four pounds; and one weighing two and a half. Friday night four bears were seen near a barn about two miles from the village. Saturday morning a party of hunters here with guns and dogs started in pursuit of them, and succeeded in killing one of the old ones and one cub, the other old one and cub escaped, but quite a number of hunters are out again today. The two killed were very thin in flesh. The old one, which had a frame that when in good condition would weigh from 350 to 400 pounds, only weighed 110. A large otter was shot near here a short time ago. In February a silver gray fox was shot about a mile south of the village, and its hide sold for $25. Martin birds have just arrived here during the past week. A large martin house is erected in the centre of the village in which hundreds nest every summer. The English sparrows take possession of it when they leave in the fall, but have to evacuate when they return in the spring. The first spring the sparrows were in it there was considerable fighting between them and the martins on their return, but the martins drove them out.—A. C.

Kent County, Delaware.—The marsh lands bordering our creeks and bays are good snipe shooting grounds. Not as many birds killed here this spring as usual.—H. R.

Tolland Co., Conn, May 1.—Our spring has commenced with a few snipe on the meadows, and the ducks, which have been quite plentiful for this section, about going north. A woodchuck was shot here on the 12th of March, when snow was on the ground, which is the earliest I ever knew of one being seen. From my own observation I should judge that about half the quail were killed last winter. Partridges all right. A friend of mine commenced to feed a flock of seven quail; before a month's time the flock had increased to forty, but crows encroached as well and got a good share of the grain. He finally succeeded in drawing the quail within fifty yards of the barn—so near the crows dare not come—where the quail came regular every morning, and some of the time to the barn yard itself. They did seem to be afraid of his dogs, which were pointing them every day, and wondering why some one did not shoot.—MARS.

Twin Lakes, Fla., April 20.—An unusually late spring has kept ducks and snipe with us for an unwonted time. Last week I killed twenty-two snipe and fourteen teal, besides bagging a very fine otter, killed with No. 6 shot in the head at twenty paces. A cotton-mouth moccasin five feet long came to grief also. The prairies bordering the St. Johns have been in the finest condition for weeks for snipe, and they have been numerous, but are getting scarce now.—S.

Charleston, Ill., April 23.—The weather has been very warm here for six days, and the brant, geese, cranes, ducks and woodcock have nearly all left us for a cooler climate. The snipe and plover are tolerably plenty yet.

OUR DETROIT LETTER.

THE 1st of May ended the duck and snipe season in Michigan, and all sportsmen shot right up to the end of the last day. William Jardine, manager of the Point Mouillie Shooting Club, arrived in town on the 5th inst. He reports a few canvas backs, red heads and blue bills hanging around Mouillie Bay. Any quantity of swans and geese yet remain, though they seem less restless than when I last wrote with reference to them. Jardine bagged a swan last week of enormous measurement. The Mouillie Club is improving its property in a way to excite the genuine sportsman's admiration, and fill him with a passion to be one of this club's well-cared-for guests. This seems by general consent to be the sportmen's paradise. Not only does it afford the best hunting at all seasons, but those who shoot there are made comfortable, and even luxurious, by Supt. Jardine and his wife, the latter being one of the most accomplished caterers to be met in a day's journey.

J. V. D. Eldredge and Messrs. Metzger and Stenton returned from St. Clair Flats last Monday with 130 ducks and 200 black bass—the finest lot of fish ever speared by mortal man within this bailiwick. The spearing season is now at its height, and the Flats fairly swarm with half-breeds and Indians, who are making big wages, as black bass sell at the drop of the hat. WAH-NE-TA.

PROHIBIT GAME EXPORTATION.

WAUSEON, O., March 21, 1881.

Editor Forest and Stream:

At last you have hit the nail on the head in the matter of game protection. In the editorial of last week, "Where Some Game Goes To," you suggest the idea which, if carried into legislation, will do more for game protection than all the game laws in force, and I am glad for one to see the leading sportsman's journal take the position there occupied. Everything else has been tried. Now try protection, with heavy penalties for shipments of game beyond the State when killed, and see how it will lessen the demand, and thus lessen the trapping and ground mashing and otherwise hogging of game. As long as there is a demand in Europe and in the larger cities of the East for our Western game, with no prohibition of exportation, so long will there be local dealers who make it an object for boys to trap and loafers to destroy whole coveys at a single shot for the money that there is in the business.

With only the local State demands to supply, the prices, with our present supply, would be low enough to take away the present incentive to slaughter.

I have long wished to see the FOREST AND STREAM take this stand, and hope that you will push the matter on sportsmen until our Legislatures are induced to pass absolute prohibitory laws of the kind suggested. W. H. H.

SPRING DUCK SHOOTING.—Just now our market is overcrowded with wild ducks of every kind and name; in fact, the massacre of ducks the present season has been more than usually large Single hunters bag 80 and 100 per day, and every choice feeding spot hides a hunter in his "blind" and reveals his "beautiful decoys." The deadly storm of lead with which these beautiful birds are met as they return to their northern homes for nesting is cruel, and should call out the protest of every true sportsman. The long fall season, during which they are legitimate game, as well as their trying and precarious winter life in Southern waters, should suffice. It is well known to every sportsman that many varieties of ducks choose their mates before their flight to the North, and this cruel slaughter breaks up the brightest anticipations that cluster around the old homes to which these birds every year return. It is small wonder that the cry comes from many of the formerly most favorite haunts of these birds that the finest varieties are very scarce. They should be protected by the law—humanity and the best sportsmanship both demand it.—*Chicago Inter-Ocean, April* 23.

Notwithstanding that this subject has been so often commented upon by the public press, and by sportsmen of the true type by the same medium, nothing was done at the last session of the Ontario Legislature to put a stop to the criminal practice of spring shooting. Year after year it has become apparent to those who observe and take an interest in game protection how fast this species of game is diminishing, and that mainly owing to the negligence or apathy of our legislators. We claim that no argument can possibly be adduced in justification of the practice at present tolerated by law in this wanton and indiscriminate slaughter in the breeding season. We are aware that individuals, some of whom are simply interested in the matter, and who still advocate spring shooting, do so for the mere sport, while others approve from pecuniary and sordid motives. But then, to view the matter from a moral and humane standpoint, there is but little or no distinction between the criminals. In this section, for a month at least, thousands upon thousands of ducks have been slaughtered, either to gratify the former's morbid taste or the latter's greed for gain. "And how many a birdling thus shot on the wing, while others are sent mateless on their journey." But it is not in this duck-shooting alone that the evil exists. Other species of game protected by law fall a prey to this class of so-called sportsmen; and so long as our law-makers aid and abet the crime, we may reflect that in a few years more our commonwealth in the matter of game will have become so depleted that an entire prohibition for a series of years must ensue.—*Windsor Correspondent Toronto Mail.*

AN ANTELOPE SHOOTING STRATAGEM.—We left Edgerton, Colorado, on the Denver and Rio Grande Railroad, with no place in view, but intending to go east or southeast until we struck game. We were pretty lucky in our quest, and on the second day found enough to satisfy the most exacting; and as it was the second day of the shooting season when we arrived at our destination, we found the antelope very tame, and in a week had shot as many as our two ponies could draw home. Encouraged by our first success, we started out again two months later, and although we located our camp in the same place, we found things very different from our first visit. Previously we had no difficulty in getting within eighty or one hundred yards of a herd; but in the meantime they had been hunted so much that it required considerable skill to get within even three or four hundred yards of them. We had lain behind soapweeds and sage bushes for two or three hours at a time, waiting for the game to feed up to us, but in every instance something either startled them before they got within range or they changed their direction On the morning of the ninth day we ate our remaining slice of bacon, and concluded that we would try once more and then "break camp." We hit upon the following plan. We put a bridle on one of the ponies, and both mounting, we hoisted a sheet of brown paper in front of us, leaving a couple of holes as points of observation, and commenced our advance on a herd quietly grazing a mile away. Although we were in plain sight, they did not seem to notice us until we were within half a mile of them; then they raised their heads and sniffed the air, and as we advanced they came forward about fifteen or twenty yards, craning their necks, trying to make out what it was coming. When we were within eighty yards we stopped, and, slipping quickly off the horse, I dropped on my knee, raised my piece, and at the word "Now" both fired, both balls taking effect. At the sound of the reports the herd started on a hard run, but instead of turning tail they described a circle round us; this enabled us to put in two more shots each, but only one took effect. We collected the spoils after some trouble. We sat down to dinner with lighter hearts than we commenced the morning with, and on no occasion has an antelope steak tasted richer to me than it did that day. We found exercise and fresh air a better accompaniment to venison than red currant jelly. We tried the same plan several times on a later trip we took and found it work well each time.—G. B H.

DOGS AS RAILROAD BAGGAGE.—Chelsea, Mass., April 6.—Why is it that the railroads advertise in the columns of your valuable paper to ship one dog for each sportsman free? In your issue of March 17 is a statement from "Kenwoc," which is an outrage seemingly. Now, if these railroads advertise to do thus and so, why would it not be a good idea to paste one of their advertisements on each dog, and if it is the baggage man, enter a complaint?

My experience is different from Kenwoc's. On Nov. 9, 1880, I left Boston, via New York and New England, for Gordonsville, Va. I inquired at the office what would be the charge on my dog, and was informed not a cent. I asked if the baggage men were allowed to charge anything, and was informed that they were not. I then asked the baggage man what he would charge to take care of my dog to Washington, D. C., and was almost paralyzed when he told me fifty cents. I gave him one dollar, and did not see him again, but my dog was O.K., and in Washington on the same train as myself, and in as good condition as myself.

Now, to Gordonsville is less than 100 miles. I asked the baggage man how much for my dog—fifty cents again. I paid it. My dog was passed to me by the baggage man at Gordonsville all right. If I had not had this experience, and at so little expense, I should doubt Kenwoc's statement. But south of Gordonsville they (baggage men) perhaps have no conscience. By answering this through your valuable paper you will confer a great favor on a constant reader.

I wish to say I found at Gordonsville abundance of quail and partridge, wild turkey and woodcock in fair numbers, and hares in abundance. Also the best accommodation at the Magnolia House, kept by Mr. Mayhew, and Capt. Harry Carter Clerk one of the best of fellows. Wishing the success to your valuable paper which it deserves,—I remain,

CHAS. H. SINCLAIR.

THE STATE TOURNAMENT.—A meeting of the Long Island Sportsmen's Association was held Friday evening, May 6, Vice-President Cook in the chair. The prize committee reported that they had received eighty prizes of the aggregate value of between $5,000 and $6,000. The bird committee reported everything favorable for a large supply of birds. The game law committee reported that the Long Island Association bill was practically killed, and that the bill known as the Armstrong bill had been reported favorably and ordered for a third reading. On a motion by Mr. Altenbrand, the secretary was instructed to write to the members representing Long Island, and have them try to insert in the Armstrong bill, as amendments, the clauses of the Long Island Association bill relating to woodcock, Coney Island creek, county game protectors and ruffed grouse, and if they could not do this to try and defeat it. The committee on finance are to provide badges for the members of the association and for all others that they may see fit, that will serve as a passport to the freedom of the grounds. It was decided to call the convention for June 20. A committee to be appointed by the chair are to arrange the order of shooting, the prizes and to consider the propriety of having a shoot open to all on the two days following the tournament, and are to report to the association.

CURRITUCK.—There have been, perhaps, more wild fowl, ducks, geese and swan, shot at Currituck during the past season than there has in any season for ten years. It is wonderful to think what a vast quantity of game has been shipped from our sound this fall and winter past. Eighteen years of experience will enable me to estimate the numbers very closely. From Oct. 11, 1880, to March 25, 1881, I have shot 1,700 ducks, 48 geese and 21 swan, making in all 1,769 birds. There are about 400 gunners in the Sound, including sportsmen from the North. Some of the gunners have shot three to four thousand each, but we will divide them equally, say two thousand to each gunner, that will be 800,000 birds that were killed in our little Sound in less than six months. Is there a sound, river or lake in the United States that can produce as many birds of the same kind and in the same length of time?—J. B. WHITE.

CONNECTICUT.—The only amendment of the Connecticut game law, passed at the session of 1881, was as follows: "Section 8. Any person found with a bird dog and gun upon lands where birds mentioned in Sec. 1 of this act are known to exist, shall be deemed *prima facie* to be there for the purpose of pursuing said birds with intent to kill, and the owner of such lands, with such others as he may command to assist him, may arrest such person while on said land, if he refuse to leave the same at once, forthwith carry him before a justice of the peace, who, upon the written complaint of such owner, shall proceed to try said person in all respects as if he had been complained against by a grand juror or other proper informing officer, and, in case of a conviction under any of the sections of this act, one-half of the fine imposed by the Court shall be paid to the informer."

MINNESOTA SEASON—Minnesota game law as amended, Feb. 26. Open season, woodcock, July (after the 3rd), August, September and October. Pinnated and sharp-tailed grouse, quail and stuffed grouse, September, October and November. Aquatic pond, September 1st to May 15th. Fine of $5 to $50, or forfeiture of guns, sporting implements, dogs and game, together with costs of prosecution, or both at discretion of court.

ENGLISH SNIPE ON TOAST.—These birds should not be drawn. Pluck them, wipe them and truss the head under the wing, which, like the neck, must be skinned. Press the feet upon the thighs and pass a skewer through them and the body. Put four on each skewer, tie them to a spit and roast them at an open fire for a quarter of an hour. Put slices of toast in the dripping pan under the birds to catch the trails, and on these toasts serve the snipe, after flouring and browning them. Add a little brown gravy. These birds must be eaten very hot.—*The Gastronomist.*

SMALL CALIBERS FOR GAME.—Philadelphia, April 24.—I have been intending buying for some time a small bore rifle for small game shooting, principally squirrels, and, while I should like for many reasons a .22 cal., have been in much doubt as to their force and accuracy up to 75 or 100 yards. I should like very much to hear the experience of others who have used these light bores on game.—T. J. S.

NEBRASKA TOURNAMENT.—The seventh annual Nebraska State Sportsmen's Tournament will be held at Lincoln, Neb., May 17 to 20 inclusive. The prize list aggregates $2,265. The Nebraska State Sportsmen's Association will convene Tuesday evening, May 17th. The secretary is Mr. E. Hallett, Lincoln, Neb.

GEORGE W. FLOWER.—George W. Flower, of Watertown, New York, died in this city last Wednesday evening. Mr. Flower was well known to the members of the New York State Association, of which, in 1874, he was the President. He was a prominent citizen of Watertown, having been its first mayor.

THE MANY FRIENDS of Mr. C. S. Shattuck, the manufacturer of single-barreled guns, will learn with pleasure that he is getting into shape again after the destruction of his factory by fire some months ago. The new factory, we are informed, will be ready for work June 1, 1881.

NEW JERSEY.—There were some snipe on the Big Piece at Pine Brook, N. J., last week—the first lot this year. Newark Meadow also had a sprinkling last week.

WE HAVE A LIMITED NUMBER of our pamphlets on "Dittmar Sporting Powder." Copies may be had on application at this office.

Camp Fire Flickerings.

By the way, that reminds me—

THAT "Uncle's" story in issue of April 28 reminds me of a deer shooting incident here in Detroit, Minn. One man last Winter killed thirty, another twenty, and so on, while one fellow had the extraordinary luck, cheek, or whatever you may wish to style it, to bring down two at one shot, and with a rifle at that. While out in the woods he came upon them standing still, unconscious of his presence, and just as he pulled the trigger they moved alongside of each other and both received the fatal bullet. I have never heard of a similar occurrence, and do not think its like was ever accomplished.—HIAWATHA.

THE fox-hunting stories in the late numbers of your paper bring to my mind an anecdote narrated to me by a friend of mine, a gentleman of unimpeachable veracity. In the latter part of March or the first part of April we often have on moonlight nights very pretty fox hunts. About four or five weeks ago my friend and two gentlemen rode with a good pack of dogs to a den where a fox had young ones. They stationed a man at the den to keep the fox out until the second or third round. The dogs soon made the woods echo, and made one round, running hard, and then all was still as death, and the dogs one after another came in. The man at the den was sure that the fox had not run in, and so there was nothing to do but to blame the dogs and to start for another den; there the performance was repeated; but, *mirabile dictu*, they heard the old fox barking in the woods not a hundred yards away. They at once harked on the dogs, but they would not run. Now, as to whether the dogs were more humane than the hunters, and would not run an animal that had young to provide for, or whether it was something supernatural, I leave for some of your fox-hunting subscribers to explain.—D.

Clergyman, lawyers, editors, bankers and ladies need Hop Bitters daily for nerve force.

Sea and River Fishing.

FISH IN SEASON IN MAY.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*	White Bass, *Roccus chrysops.*
Pickerel, *Esox reticulatus.*	Rock Bass, *Amblopiites.* (Two species).
Pike or Pickerel, *Esox lucius.*	
Pike-perch (wall-eyed pike) *Stizostethium americanum, S. griseum,* etc.	War-mouth, *Chænobryttus gulosus.*
	Crappie, *Pomoxys nigromaculatus.*
Yellow Perch, *Perca flavitilis.*	Bachelor, *Pomoxys annularis.*
Striped Bass, *Roccus lineatus.*	Chub, *Semotilis corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*	Pollock, *Polachius carbonarius.*
Striped Bass, *Roccus lineatus.*	Tautog or Blackfish, *Tautoga onitis.*
White Perch, *Morone americana.*	
Scup or Porgie *Stenotomus argyrops.*	

The "True Angler" is thoroughly imbued with the spirit of gentle old Izaak. He has no affectation, and when a flycast is not to be had, can find amusement in catching sunfish or roach, and does not despise the sport of any humble brother of the angle. With him fishing is a recreation and a "calmer of unquiet thoughts." He never quarrels with his luck, knowing that satiety dulls one's appreciation of sport as much as a want of success, but is ever content when he has done his best, and looks hopefully forward to a more propitious day. Whether from boat or rocky shore, or along the sedgy bank of the creek, he deems it an achievement to take fish when they are difficult to catch, and his satisfaction is in proportion. His enjoyment consists not only in the taking of fish; he draws much pleasure from the soothing influence and delightful accompaniments of the art. God be with you, gentle angler, if actuated with the feeling of our old master, whether your are a top fisher or a bottom fisher; whether your bait be gentles, brandling, grub, or red worm, crab, shrimp, or minnow, caddis, grasshopper, or the feathery counterfeit of the ephemera. May your thoughts be always peaceful and your heart filled with gratitude to Him who made the country and the rivers, and "may the east wind never blow when you go a-fishing."—THAD. NORRIS.

WE are glad to be able to state that we have now a large number of localities near New York where fishing can be had. We shall be glad to supply to such of our readers as may desire the information a list of such places from which they can make a selection. A stamped and addressed envelope must accompany each application.

DUCKS, BLACK BASS AND MASKINONGE.

ERIE, PA., May 2, 1881.

UNTIL within a few days Lake Erie has been covered with an unbroken sheet of ice, but now it is well broken up and has entirely disappeared from the bay. As soon as the bay opened large flocks of duck arrived, and have remained ever since, though they have had little inducement to do so, owing to the hundreds of guns that are constantly banging at them. We are endeavoring to have a law passed prohibiting spring ducking and limiting the shooting in the fall to three days a week—Tuesday, Thursday and Saturday. If they are not disturbed a great many remain here and breed. Our Game Fish Association has planted wild rice for several seasons, and the ducks are yearly becoming more numerous.

Fishing through the ice has been good all winter, the catch being perch, blue pike and herring, with occasionally a pickerel. The black bass appeared April 23, nearly a month earlier than usual. Two boys fishing for herring from a boat anchored near the ice landed eighty-four bass. Since then large numbers have been caught, the best string so far being 102 for one man. They run very large for spring fish; one that I saw weighed going 5 lbs 9 oz. The large perch are also running in, and are so numerous as to be almost a nuisance; they bite as fast as one can drop in his line. In a week or two all the different varieties will have appeared, and we will have great sport. At present, though there are plenty of fish, the wind blowing over the ice is rather uncomfortable.

Our Game Fish Association is an energetic body. We have a fish-warden or detective paid by the city, and in addition the association pays a reward of fifty dollars for information leading to the conviction of any one for violations of the fish law, by seining, etc. We have already convicted and fined one man, and several are awaiting trial.

I have noticed the articles in your late issues calling attention to different points as pleasant places for sportsmen to visit, and I will say this much for Erie, that one who enjoys first-class fishing for bass, maskinonge, pickerel, etc., without being compelled to suffer the discomforts of camp life and the sportive attentions of the black fly and mosquito, can not do better than come here at any time until the first of August, or during the fall. In my next I will give an account of some of its advantages. PRESQUE ISLE.

KINDRED SPIRITS.

THE long wharf at Mandarin, Florida, stretches some six hundred feet out into the peaceful St Johns, and hither repair the fishermen after their night's toil in their rowboats with their nets to sell the quivering fish to the inhabitants, and ship the surplus by morning steamer to Jacksonville.

I strolled down the wharf in quest of mess and met a tall, bony fisherman on whose face the habit of fishing all night had left a very plain impression. Did ever any one look so much in need of going to bed early for a few nights and sleeping uncalled in the morning? Not from any apparent fatigue, however. He had got used to fishing all night, and yet nature, true to herself, permitted no such transposition of day and night without painting red the eyelid and spread

ing over the whole face such a sort of beaten-to-death countenance as my fisherman wore.

"Haven't got a fish," said he. "No luck at all last night. I should have had some luck, too, if it weren't for a confounded alligator. Gosh, he got in my net and it took me nearly all night to get him out, and thar was two of the prettiest schools of bass flopping close by that I ever saw. Instead of getting a good lot of um as I ought ter hev done and would hev done if it wa'n't for that blarsted alligator, here I am this morning with nothing at all in the boat except the durned thing."

"Have you got him in the boat," I asked.

"Yes Don't yer want to come down and see him?"

I followed him down to the end of the wharf, and preceding us went his fisher companion, a lad of about seventeen. The boat lay moored to the bulkhead and up above on the wharf, under a shed, sat a half dozen negro women with their babies, waiting for the next steamboat.

The boy, with an animated grin, ran down the flight of steps into the boat, and as we approached pulled out an alligator, four or five feet long, by a cord that was fastened about its neck, and held it on his knees, bending its tail around from side to side.

The negro women at the first look grabbed their babies, and fled in all directions, notwithstanding the boy's good-natured, "He won't hurt you." He picked him up and put him down, coiled his tail, rubbed his sides and put his ugly head upon the boat thwart for general exhibition, and through it all the alligator was as quiet as a lamb. Indeed he seemed rather to like the process he was undergoing, if one might so interpret the dull leer and satirical wink or two he gave. Perhaps he liked the jolly disposition of the boy.

"Won't he bite him?" I asked.

"No; alligators won't generally bite" said my fisherman, "unless you tantalize um. That boy there" he continued "is jus' like a baby; jus' as quick as his head is down in the night he's asleep."

Now this seemed just unlike most babies to me, but maybe he was jammed for a comparison, so I said nothing, while he went on:

"Last night, sir, after we ketched that 'gator we put him in the bottom of the boat forward, and that boy there went and laid right down alongside of him, and I'll be danged, sir, ef he and the alligator didn't sleep together, rolled in the same blanket the rest of the night. Yes, sir; hang me of they didn't," and the fisherman squinted his red eyes until they looked redder with emphasis at what he was telling.

I looked in the boy's face for some trace of kinship to the ugly Saurian, or some sign of that which had won its mild behavior, but the kind eyes and look of jolly good nature were all I could see. I know not whether that friend of animals, the renowned Bergh, adds a jolly disposition to his humane treatment of the brutes, but here is a lesson, if it be a lesson, where it has apparently won the heart of even so uncouth a beast as an alligator, and if adopted with more favored animals, who can tell what wonders might result. Possibly if all the winter visitors to Florida were endowed with good-humored, rollicking natures, the ugly brutes might yet be tranformed into affectionate domestic pets, which we might lead about with a pink ribbon, or dandle in our arms with interested love. C. D. D.

SPEARING FISH IN MARYLAND WATERS.

MUCH has been said and written lately of the products of the gastronomic State and of the means used to entrap and secure those products. An American epicure knows just when to visit Maryland in order to obtain the one delicacy that suits his appetite. In summer he has the soft crabs of the Chesapeake and its tributaries, and certainly a more delicious morsel could never have been served to the gods. A Baltimorean will boast of this dish and glory over it to a stranger; but let that same Baltimorean go twelve or fifteen miles from the city to one of the smaller rivers, where "crabbing" is the principal means of livelihood for those of the uneducated portion of the community who do not work on farms, his hostess will do perhaps as he did and put before her guest the greatest delicacy she can offer—soft crabs. He thinks of Tantalus when he sees them, for they are covered with an abundant supply of milk-gravy, and that at once places them out of his reach; for as long as he can remember he has been taught that milk and crabs were never intended to come within sight of each other. Out of compliment to his hostess he allows one to be placed upon his plate, and when he sees those about him indulging with no apparent fears of the consequences the temptation becomes too great to be resisted, and, concluding to do while he is in Rome as the Romans do, he cautiously begins the attack. Before many moments he is willing to acknowledge to his hostess that he never before has tasted soft crabs

"Ah!" she replies, "that is because you have never visited their native shores."

"But," he continues, "do you mean to persuade me that this is the same species of crab that we consider such a luxury in the city?"

"The very same, only we, living here, can procure them, as the crabbers say, 'just as they have shed,' or, in other words, just after they have worked themselves out of their hard shells. In this condition they are too delicate to be transported. They have to be kept for a day, at least, before they are strong enough to bear even a short journey, and by that time their shells have commenced to harden once more. By the time you buy them they are very apt to have what we would call a paper shell, when to us they are no longer soft crabs. Ah! you must eat them where they are caught to eat them in perfection"

And so it is with most things of the kind—they never taste the same away from their favorite haunts. Crabs, both soft and hard, are caught from the middle of May till the middle of September and are considered a delicacy as long as they last. Catching them has not been as yet turned into a sport, for, unlike the sportsman who brings in the aid of a dog or pack to start his game, the crabber must trust to his own eyesight and skill in the use of his crab-net. From sunrise to sunset he wades in the water, dragging his boat along by one hand and using his net with the other. At times his labors are well rewarded and he finds himself at the end of the day possessed of six, eight or ten dozen crabs; but at other times he will, perhaps, for weeks catch but four or five single crabs a day.

So much for crabs—a subject we had no intention at first of touching on at such length. There are other points in regard to them that I am sure would be of interest; but the subject of this article does not allow a fuller account of them.

The sportsman of Maryland longs for the last of October and first of November. Then, with his dogs, he scours those parts of the country where he is safe from the penalty of the law, a notice that will at times make the heart of a gunner sink within him, and if he meets with success he is very apt on his return to the city to invite a few select friends to a partridge supper.

Oysters are a third luxury of which much has been said elsewhere. I have never heard them spoken of as a luxury whose capture was indulged in as sport, and yet personally I have derived much pleasure from joining parties that started out to go oystering. The sport consists in vainly endeavoring to fish up the oysters with long rakes. Woe betide the party who start out without an experienced oysterman on board, who not only fishes up the oysters, but roasts them on the shore afterward.

Spearing fish, although a means of livelihood for the fishermen and crabber through some of the colder months of the year, seems to be something of which little is known elsewhere. A stranger out on a dark evening is sometimes surprised into an exclamation of astonishment at the appearance of the landscape, which is lighted up even to the heavens, as though all the woods were in a blaze. A smile will form itself on the features of the native, who replies:

"Oh, that is only some one gigging."

"And pray what is that?"

Accompany us on an expedition of that kind and we will initiate you into one of the most picturesque sports conceivable. Let us choose a picturesque place to begin with. The "Eastern Shore," as all Marylanders call that part of their State that lies east of the Chesapeake, is too low and flat for beauty, and the western shore—well, I think we'll try the Severn up above Annapolis, near its head, where the banks are high, thickly wooded and dotted over with evergreens that give them beauty even in the cold, dreary winter months. Here in one of the little creeks that give beauty and romance to the river we find some fishermen preparing for the night's work. They are an easy-going set, who take life as it comes and find a fund of amusement when together in their own sayings and doings. Evidently they have just been laughing over one of those same jokes, for on the face of an old negro in the background there is a broad grin still visible, and his old head moves from side to side as if he were just about taking in the fun.

Old "Uncle Philip," as they call him, fishes and crabs some in summer, but the crutches at his side prevent his taking an active part in what those about him are now preparing for. And while we are speaking of Uncle Philip, perhaps you would be interested in knowing his first impresions of an earthquake. Some three years since, this region of country was visited during the winter by a succession of "shocks" quite alarming at times to the dwellers on the soil. The first one occurred on the night that the city of Richmond was roused from its peaceful slumbers and its inhabitants forced into the streets by the unusual sounds and motions accompanying a shock of earthquake. The time was twelve at night, and though Uncle Philip had retired, his worthy better half was still busying herself about household matters. As the rumbling was heard he roused himself and called:

"Lucy, who dat ar drivin' roun' de house dis time o' night? 'Tain't fur no good, sure."

Then, as the little cabin shook and swayed from side to side, he added:

"Dar, now! He drunk; done run ag'in' de house."

But our fishermen have some of them completed their work for the present, and are preparing to go home for their suppers; so we select one for our guide in the evening, and then examine more particularly their arrangements. The wood they were sorting as we came up is what is called "light-wood," and is procured from old rotten pine stumps. It is very resinous and gives a brilliant light, which the fishermen tell us is what attracts the fishes. In slavery times, when the negroes were not allowed to have lamps to carry about at night, they would use knots of light-wood for torches.

"What is this?" asks some one, picking up a long wooden handle with an iron instrument at one end that looks as though it might be an instrument of torture. It has three heavy teeth barbed at the ends, and the whole thing resembles Neptune's trident more than anything else

"That is a gig," is the reply.

"And please tell us if this is what you use to spear the fish with."

The answer only confirms our notions of its being an instrument of torture, and we turn to watch one of the men who has put across his boat from side to side a broad board on which he is now placing a goodly supply of sand.

We begin to see into things a little, and are not surprised when, after supper, we saunter down to the water to the place where our fisherman was to meet us, to see him building a fire of light-wood on the sand in his boat. How quickly it blazes and how brightly it illuminates everything around. We take our places in the boat and are rowed across to one of the smaller creeks, where everything looks wierd and unnatural. We feel almost as though we were entering on enchanted ground, and our whisperings soon cease as the fisherman, after putting aside his oars and adding fuel to the fire, noiselessly propels the boat by means of the handle of his gig. Suddenly he raises and reverses it, and even our inexperienced eyes see what has riveted his attention. A fish, attracted by the bright light, has gradually approached the surface of the water, and when nearly there has become perfectly motionless. We scarcely dare breathe as we wonder what the next move will be; but we have not long to wait, for the gig descends with fatal aim and comes up bearing on its end a bleeding fish.

But, as usual under similar circumstances, we forget the sufferings of the victim and enter into the excitement of the hour, watching for the poor, unsuspecting creatures to appear, and then anxiously noting the descent of the instrument that is to administer its death blow.

Our experienced fisherman seldom misses a "strike," but we, who flatter ourselves we know more of physics than this uneducated waterman, are soon compelled to admit that he has practically mastered the laws of refraction, as applied to his particular calling, while we, understanding it in theory, are unable to put it into practice, for our attempts to imitate him and "strike" a fish are signal failures. We only succeed in scaring the fish, which glides swiftly away, to return perhaps in a very few moments to the same spot, becoming perfectly still as before, in a most tantalizing way.

But it is of no use. We try and try again with the same result, and resignedly return the gig to the hands that have become accustomed to its use.

As we turn our faces homeward we notice that our companions have the appearance of having just emerged from a coal mine. Do we look the same? No need to ask that question, for it would be impossible to have such dense smoke so near us, blowing directly in our faces at times, without it leaving its mark.

And now as we land, and our fisherman turns to go, we prepare to enjoy the picturesqueness of "spearing." The boat glides noiselessly along, being propelled by a small boy who sits in the stern and sculls, while the fisherman stands at the bow, gig in hand ready to pounce down on his prey. The firelight plays upon their forms and renders every movement distinctly visible. It plays upon the water and surrounding trees and underbrush till the whole scene becomes alive and in motion, as if touched by the wand of a magician. In the centre of all is a column of dense smoke, brilliantly illuminated, and rising high above our heads, wandering off into space, as if a messenger sent to other scenes to tell of the one little spot of beauty it had left.

A. WESTON W.

THE BERLIN MEDALS.

THE medals from the International Fishery Exhibition at Berlin, 1880, and diplomas accompanying them have been distributed. Those belonging to New York city and vicinity came to the office of the FOREST AND STREAM for distribution. The medals are all of one size, whether of gold, silver or bronze, and are three inches in diameter, and a quarter of an inch in thickness. The gold medals are twenty carats fine, and weigh seven and a half ounces, a liberal and costly souvenir. The diplomas are elegantly lithographed in blue and gold on heavy paper, and are handsome enough to hang in any place. They contain the name of the person to whom a medal, or honorable mention, was awarded, and the object for which it was given. We have already published electrotypes of the medals, and now give the following list of American awards:

CLASS I.—PRODUCTS OF THE FISHERIES.

Silver Medal and Diploma.

Alaska Commercial Co., San Francisco. Seal skins in various stages.

N. E. Atwood, Provincetown, Mass. Oils.

J. W. Beardsley & Sons, 179 West st., New York. Salted and smoked fish.

Eugene G. Blackford, Fulton Market, New York. Fresh American fish.

A. Booth & Co, Chicago and San Francisco. Canned Salmon.

Hagedorn, Hamburg and New York. Fresh American oysters

Portland, Me., Packing Co. Canned fish.

Russia Cement Co., Rockport, Mass. Fish glue.

U. K. & F. B. Thurber, Read St. and West Broadway, New York. Collection of canned lobsters, crabs, clams, mackerel, etc.

Dr. H. Ward, Rochester, N. Y. Collection of stuffed fishes and reptiles.

Bronze Medals.

J. H. Bartlett & Son, New Bedford, Mass. Preserved fish and oils.

J. B. M. Carley, Fulton Market, New York. Pickled oysters, etc.

Caleb Cook, Princetown, Mass. Oils.

A. W. Dodd, Gloucester, Mass. Oils.

W. K. Lewis & Co., Boston. Canned salmon.

Joseph Palmer, Smithsonian Institution, Washington. Plaster casts of fishes.

Joseph Pryer, New York. Oils.

S. Schmidt, 152 W. 19th st., New York. Smoked sturgeon and other fish.

J. W. Smillie, Smithsonian Institution, Washington. Photographs of fishes.

William Underwood & Co., Boston. Preserved fish.

Honorable Mention.

Max Ams & Co., New York. Preserved fish.

H. M. Anthony, New York. Preserved salmon.

A. Booth & Co., Baltimore, Chicago and San Francisco. Canned Oregon salmon.

Kemp, Day & Co., New York. Preserved fish.

Howe & French, Boston. Prepared isinglass.

Maryland Packing Co., Baltimore. Canned hard crabs.

H. Mayo & Co., Boston. Codfish salted, and other fish.

McMenamy & Co., Hampton, Va. Canned crabs and oysters

Franklin, Snow & Co., Boston. Prepared mackerel.

S. Schmidt, New York. Eels in jelly.

CLASS II.—FISHING TACKLE AND APPARATUS.

Gold Medal.

H. L. Leonard, Bangor, Me., agent Wm. Mills & Son, 7 Warren st., New York. Split bamboo fishing rods.

Honorable Mention.

J. W. Collins, Gloucester, Mass. Marine drug for preventing vessels drifting to leeward.

CLASS III.—FISH CULTURE.

Gold Medals.

Charles G. Atkins, Bucksport, Me. Models of fishways and hatching apparatus.

C. B. Ferguson, Baltimore. Fisheulture on steamer, invention of movable hatching buckets.

Seth Green, Rochester. Collection of fishcultural apparatus.

M. McDonald, Lexington, Va. Invention of fishway.

Fred Mather, New York. Invention of conical hatching apparatus.

Livingston Stone, Charlestown, N. H. Fish breeding apparatus.

Silver Medal.

Oren M. Chase, Detroit. "Self-picking" hatching jar.

Bronze Medal.

B. F. Shaw, Anamosa, Iowa Fishway.

Honorable Mention.

James Annin, Jr., Caledonia, N. Y. Apparatus for sending fish eggs.

F. N. Clark, Northville, Mich. Hatching box for salmon and whitefish.

CLASS IV.—TRANSPORTING LIVE FISH.

Bronze Medal.

Fred Mather, New York. Tank for transporting fishes at sea.

CLASS VI.—ACCESSORIES TO THE FISHERIES.

Silver Medal.

United States Commission of Fish and Fisheries. Fishermen's clothing, collection of fishing implements.

CLASS IX.—MAPS, CHARTS AND LITERATURE.

Silver Medals.

S. Thaxter & Co., Boston. Eldridge's coast charts.

Honorable Mention.

Hydrographic Office, U. S. A., Washington. Charts of the coast survey.

BASS FISHING IN THE POTOMAC.—The Washington *Post* is responsible for saying that the fishing season has opened most auspiciously. The Potomac River swarms with bass and perch, and the gamy fish manifest a voracious appetite for the bait. A favorite resort for bass is in the Little Falls, just above the Chain bridge; but the Great Falls, some fifteen miles up the river, offers still better sport to the fisherman. A few days ago Mr. Carson, of H. D. Cooke, Jr., & Co., caught twelve large bass at the Little Falls inside of six hours, in weight from one to three and a half pounds each; and in the course of a single morning Mr. Thompson Nailor captured seventeen fine large bass in the same locality. Mr. Jack Harlan reports a catch of twenty-eight bass, weighing from one to four pounds, in a single day, at the Great Falls. Old man Dyer, the veteran fisherman, is camped for the season at the Great Falls; his catch averages from twenty-five to thirty fine bass daily, and his friends in the district are abundantly supplied with delicious brain food. All the experts pronounce bass-fishing this year better than ever before on the Potomac River. The river is well stocked with perch, and the boys have great sport with this species of the finny tribe, pronouncing the perch as gamy as the bass. The best place for perch is at Eads' mill, above the Chain Bridge. One day this week Messrs. L. R. Livingston and J. E. De Sauls, of the Treasury Department, caught 300 perch, weighing from a quarter to one and a quarter pounds each. Every day the river in the locality named is visited by scores of fishermen; each rock is pre-empted at an early hour, and a small fleet of boats are anchored off the mill. Mr. O'Meara, of the sporting bazaar, says that the demand for fishing-tackle is unprecedented. Senators Hampton and McPherson are enthusiastic fishermen, with an especial fondness for bass. They use the artificial fly, and maintain that the bass take to it sooner than they do the live bait. Senator Edmunds is another ardent lover of bass-fishing—he follows in the footsteps of Daniel Webster, who was a great fisherman, and could frequently be seen on the banks of the Potomac with rod in hand. Senator Vest, of Missouri, is as fond of the sport as is ex-Vice-President Wheeler. He has a beauty of a split bamboo that only weighs eight ounces; with it the Senator can land with perfect ease a bass weighing fully five pounds. Several members of the Cabinet are very happy when they get a "bite," and President Garfield, in his early days, was an earnest and successful fisherman. In the Government departments there are a number of very fine Nimrods who devote their Sundays and holidays to the denizens of the Potomac. The sport will increase as the season advances, and there need be no apprehension that the bass and perch will become scarce in the river in this locality.

THE "TAYLOR."—Recently we had occasion to speak of *Pomatomus saltatrix* and, to make it perfectly clear what fish we referred to, gave it its northern name of "bluefish" and its southern one of "tailor," as we and others spelled it. It has often been a matter of wonder how such a fish could have been called a "tailor," for although he has needles enough in his back he has no eyes in them. We pressed the matter home to the fishermen, but the thread of their observations were never waxed with a bit of information, and sew it would seam to be one of those things which have become clothed with authority by custom without reason. It does not suit our columns to go deeper into the subject, and we will cut the matter short by scissoring the following from a letter written by Mr. M. H. Clark, of Tennessee, to whom we and our readers are under obligations for the information: "In your last number you speak of the bluefish being called 'tailor' at the South. This is an error; they are called "Taylor," so named from their having appeared for the first time off the coasts of North Carolina and Virginia, and in immense numbers, about the time General Zachary Taylor was inaugurated President of the United States."

SHAD TAKE THE FLY.—An Augusta, Ga., correspondent writes that shad are very plenty in the Savannah River, and he asks if they will take the fly. Shad take the fly very freely at Holyoke, Mass., just below the bridge across the Connecticut River. We know of no other place where there is any certainty of so taking them, although they have been caught in other places. The shad cannot pass this point on the Connecticut, and some are cruel enough to say that they are so thick below the bridge that the fly gets in their mouths by accident. The fly is not cast, but is used on an eight-foot rod and allowed to drift down the swift current for two hundred feet or more.

THE ICHTHYOPHAGISTS.—"The Ichthyophagous Club will dine," says the FOREST AND STREAM, and the editor of that paper calls upon his subscribers in all the four quarters of the globe to send him in "hellbenders," toadfish, horshoe crabs, beaver tails, and other delicacies of the vasty deep and interior mud ponds. With the FOREST AND STREAM as purveyor extraordinary, we can conceive of no reason why the determined but misguided members of the Ichthyophagous Club should not satisfy their craving for inedible reptiles and indigestible crawlers. Besides its piscatorial matter the FOREST AND STREAM has a critical report of the late bench show, and its usual complement of sketches and communications from correspondents. The number this week is in every way an excellent one.—*New York Commercial Advertiser.*

The New York *Times* has devoted columns to the coming dinner, and a gaunt and hungry man clambered into the editorial rooms with the query, "Say, Mister, when does the Sarcophagus dine?"

LAKE MEGANTIC, Que., May 1.—"Winter still lingers in the lap of Spring" in this vicinity, and from present appearances Spring has got a permanent job on her hands (or rather in her lap). The snow is two feet deep in the woods and the ice ditto on the lake. Lunge are caught at this writing at the upper end of the lake, with live bait, through the ice, and sell for 10 cents per pound. They are a better fish than those caught in the Kennebec and Penobscot waters. When the trouting season opens I am in hopes of being able to send you something interesting, and in the meantime shall be happy to answer any inquiries from gentlemen who think of visiting this locality the coming season.—PENOBSCOT.

A LOST GRAYLING.—Bellevue, Eaton Co., Mich., May 2.—Down here in the south part of this State a man fishing for rock bass, with worms for bait, caught a grayling, probably the only one ever caught around here. This river (Battle Creek) is a much dammed stream, both for mechanical purposes and for the scarcity of fish. It empties into the Kalamazoo River, and that into Lake Michigan. How did that fish get here?—C.

AN OLD CARP.—An obituary of a fish is one of the queer items in a Paris paper. One of the fattest carps, it says, in the lake at Fontainbleau has just died. It was called Fanny, and is believed to have been born in the reign of Francis I., or nearly 400 years ago. She was accustomed every afternoon to show herself to an admiring crowd, and accept crumbs from their hands, as she had done in times past from the hands of many of the Kings of France.

BLACK BASS, SAUCE DIPLOMATE.—After thoroughly scalding, cleaning and removing the fins of the fish, put it into a fish kettle with a bunch of parsley, an onion cut into slices, salt, pepper, a bottle of white wine or cider, and half a pint of water, first wrapping the fish in a sheet of buttered paper. Put the kettle on the fire and boil very slowly. Serve with a sauce composed of cream bechamel mixed with a crayfish cullis.—*The Gastronomist.*

THE MUSKOKA DISTRICT.—We have received from the publisher, Mr. G. Mercer Adam, Toronto, Canada, a large "Map of the Muskoka and Parry Sound Districts." It shows the roads, post offices, telegraph stations, etc., and is a very great aid to sportsmen tourists visiting that famous camping country.

FLORIDA BASS FISHING—Twin Lake, Fla., April 20.—Bass fishing is fine now. I took twenty not long since in less than an hour's fishing in the St. Johns, which would have weighed not far from fifty pounds. Phantom minnow was the attraction, which is my stand-by for river fishing.—S.

COLORADO.—Price, Conejos County.—My residence is here, three-and-a-half miles from the south line of Colorado, on the Navajo River, first waters starting toward the Pacific. Eighteen miles to nearest neighbors, grandest scenery and best place for fishing and hunting in the mountains.—BARZILLAI PRICE.

LAKE MEGANTIC.—E. J. T. wishes information as to the best means at present of reaching Lake Megantic, with name of reliable guide and expenses.

CALIFORNIA TROUTING.—R. W. wishes names of public or private houses among the pine forests in the northern part of California where horses and good accommodations can be had, and where there is an abundance of trout fishing.

Fish Culture.

THE CARP AND ITS CULTURE.*

BY RUDOLPH HESSEL, SUPT. U. S. CARP PONDS, WASHINGTON, D. C.

I now proceed to give a few rules of general importance for the construction and management of carp-ponds.

The ponds should have as shallow a border as possible. Their depth should be in accordance with their size, one foot in the culture or regular carp-ponds where large fishes are kept; ½ foot in breeding and ¼ to ½ foot in hatching ponds. The borders should be of considerable width; it is desirable in any case that a great number of such shallows be contrived in ponds, as these are the principal feeding places of the carp.

Another important condition to be considered is this—that the water in ponds must be of the same depth all the year round, any variation in this having an injurious influence upon the fishes.

Ponds of smaller circumference, of from 10 to 15 acres, are, according to results obtained, better suited for carp-culture than very large ones, 100 to 1,000 acres in extent. These are frequently found in Central Europe upon tracts of land belonging to some princely domain. In the former the fish finds more security, the bottom of the pond being smoother; it also suffers less from the waves, these being high and rough in large ponds, becoming very detrimental to the spawn and breeding fishes, especially during storms, when they are cast ashore and become the prey of water-fowls or perish in some other manner.

The diminution of water by evaporation must be made up for by a fresh supply; this, however, must not exceed the quantity actually needed for maintenance of the regular height of water. Small ponds of from one to fifty acres area, which serve some commercial or industrial purpose, as mills, etc., and which are constantly varying the height of their water, cannot be considered as favorable or regular culture-ponds. Although the fishes may grow to a pretty good size in them, they must still be regarded as belonging to the category of waters for "free fishing," like lakes and rivers. In these neither the height of water, nor the hatching of the eggs, nor yet the increase of aquatic animals can be regulated at will. Still, leaving these waters to lie waste on this account would be a pity, for if stocked with carp they will, in spite of all disadvantages, remunerate the proprietor, and the care which he bestows on them will be a source of much pleasure.

I beg to make some remarks, in conclusion, relative to the introduction of the carp and its increase in open waters, in which it is solely left to the care of nature, and to which subject I alluded at the commencement.

We introduce into our waters migrating fishes, such as the salmon and shad, and find it profitable, for the reason that they consume but little food in the rivers, growing up in the sea and ascending into fresh water as large fishes. We also maintain in our lakes whitefish, bass, pike, etc. These are all fond of animal food and belong in part to the class of fishes of prey. The carp, on the contrary, lives upon vegetable food, insects, larvæ and worms, but it never attacks other fishes or their spawn. It can be produced in masses and then be transferred into the waters destined for its reception. This can be done either by artificial impregnation and hatching, or in the way of natural increase.

For each of these methods two ways of action are open: (1,) the spawn can be transferred to open water as soon as it is free from the egg, or, (2,) the young fishes may be kept in ponds for a season until they have had time to grow—that is, for one summer. In the latter case, the rule that fishes which are destined for open waters must not be artificially fed is to be strictly adhered to. Carp which have been used to feed in that manner will not be so apt to find the food for themselves which, until then, had been supplied to them. Tormented by hunger, they will lose the fear of their enemies and the consequent cautiousness, falling an easy prey to them before many weeks will have elapsed.

If artificial feeding is not intended, the ponds for the reception of the small fishes must be proportionately larger, so that they may find food in sufficient quantities in a natural way. Both methods have their advantages. If the young fry is transferred into open water five or six days after hatching there will be no necessity for the establishing of large ponds. A great number of eggs must, however, be hatched in this case, for the small fishes will be destroyed in vast numbers by their enemies.

The better method of the two is certainly this: To keep the young fishes in large ponds until the fall, when they will have reached the age of five or six months. During this time they will have had the opportunity to learn how to find their food by their own efforts, such ponds producing it profusely to satisfy all their wants, and thus they will be prepared for their stay in open waters. To carry through the latter method a larger extent of water is required, nature itself having indicated precisely the conditions under which and the limits in which the natural and unimpaired growth of the young fishes may be expected.

They do not require as extensive a pond during the first months of their development and growth as those which have reached a more advanced age. For this reason it will be more advantageous to choose the middle way by retaining the young fishes in the ponds for about one or two months and then to give them their liberty instead of transferring them immediately after the hatching or keeping them for five of six months. By acting upon this suggestion, the incalculable advantage will be gained that the fishes profit by the rich food of the open waters during the season and will have grown strong enough to fight more successfully for their existence. For this purpose establishments for artificial breeding, constructed with a regard to the demands of climate, are essentially needful in these open waters, so that the greatest possible number of eggs may be hatched.

In Europe the subject of stocking open waters with carp has been discussed, because there, in its native country, its excellent adaptation for this purpose has been recognized.

I observed above that this fish is found in great numbers in most of the European rivers, particularly in the Rhine. Although this river has a very swift current, which at times forms rapids, here neither mud nor suitable ground is to be found which would qualify these localities for feeding places for the rather indolent carp; still, there are numbers of shallows and small creeks, the borders of which are richly overgrown with grass and *Festuca fluitans*, where the fishes find food plentiful and multiply.

The river carp is not as fleshy as the pond carp; this is accounted for by the great amount of bodily exercise which it is naturally compelled to take. In many places it is more highly appreciated than the pond carp, probably because the river water does not impart to it the moldy taste which is sometimes found with the carp inhabiting ponds situated in marshy localities and morasses which have not a sufficient supply of fresh water.

The assertion in regard to the preference given to the river carp will be found to be correct, especially in regard to the rivers Rhine, Elbe, Weser, Vistula, Loire, Rhone, Garonne and the Danube. The latter is celebrated in song as the beautiful, blue Danube; in reality its water has, during the greater part of the year, a grayish-white, muddy color, and a very swift current. It has, however, particularly in Austria, Hungary and the lowlands in general, which border upon it, numerous branches which creep along sluggishly, and also many creeks with almost stagnant water.

A great number of fishes of prey inhabit this river; the pike, perch, the rapacious Hucho (*Salmo hucho*), and, above all, the never satisfied *Wels* (*Silurus glanis*), which, in the lower Danube reaches a weight of 500 pounds. Its habits being similar to those of the carp, it lies on the mud banks or feeding places of this fish and becomes its most dangerous enemy and insatiable destroyer, and still the carp increases in the Danube. From the city of Ulm, where this river begins to be navigable, after its escape from the Black Forest, a thousand miles downward to its mouth on the Black Sea, as also in this one, the carp is found. To this fact allusion has been made on a former occasion. The carp thrives best in those parts of the Danube where the water is least clear, at the influx of the muddy water of its tributaries. At one time I was present at a draught of a seine which took place close to the quay of the City of Pesth, in Hungary, and was arranged by Mr. Szihelsky Ferentz. At that point the river is constantly plowed by steamers, steam tugs, canal and ferry boats, and it would have seemed that there could be many fishes there, yet 300 fine carp, weighing from one to five pounds each, were taken in one draught of the net, within the distance of about one-quarter of an English mile. The carp is partial to this locality, because it finds abundant food there in the offal from kitchens, slaughter-houses, breweries, and the sewers of both the cities of Ofen and Pesth. In the European lakes, for instance in the lakes of Constance, Zurich and Geneva, the carp comes sometimes from these into the ports to seek for food.

Comparing the water of the Danube with that of the Mississippi, I feel convinced that I may safely assert that the carp would thrive excellently in the latter, although its water appears to be even more muddy and rapid than that of the Danube, and I believe this to be true of the Mississippi and Ohio and many others of its tributaries. The Mississippi has near its borders many spots where the current is slow and which are partially covered with vegetation; there are also numerous creeks, where the fishes would find food plentifully in the alluvial mud on the banks. What has been said of Mississippi will be found to be the case with many other, or probably nearly all, American rivers. They will be found to be adapted for the introduction of the carp, so long as they are not mountain torrents which have to break their way through rocky and pebbly ground. The increase of this fish is of great importance from an economical point of view, especially so in regard to the southwestern waters.

Under the present circumstances it is to be hoped that the endeavors which have been made for this purpose may before long be rewarded by success and become a *fait accompi* and that the difficulties which will have to be overcome may not prevent the achievement of it. The effort will and must meet with success at last.

5.—TAKING THE FISH FROM THE PONDS.

The emptying out of ponds demands the greatest caution and attention. The water must be made to flow off very gradually through the several outlets, all of which are to be kept open at the same time; it requires frequently from ten to eighteen days to draw off the water. The fishes are driven carefully and slowly with boats into the principal ditches, as they must not be chased on any account, or they will bury themselves in the mud; occasionally many thousands will do so within a few moments and will remain there, pressed together closely, and so perish through suffocation. This is recorded as having occurred from time to time, when, during the process of driving them into the ditches, the fishes were startled by some unknown cause and all sank into the mud instantaneously. Through the impossibility of extricating them speedily enough, many hundreds and even thousands perished, the owner sustaining heavy losses in consequence. To guard against such an emergency, preparations should be made for an immediate supply of water in similar cases, in order to save the fishes. If the fishing out progresses in the regular manner the fishes will by degrees draw off from the ditches into the collector. The collecting takes from five to six days in large ponds, containing frequently 100 to 400 tons of fishes. Care should be taken, that crowding them together may be avoided. On the evening before the fishing-out, when the water of the pond has been diminished to the depth of half a foot, those fishes which have been collected are shut off from the pond by a large net and in the early morning, at the dawn of day, they are caught. As so large a number of fishes cannot be disposed of at once, they are transferred to the so-called market ponds, from which they are sold by degrees to fish dealers. These market ponds are quite small, capable of holding from 2,000 to 3,000 pounds of fish only and are supplied with running water.

Those who never saw the fishing-out of a carp pond can scarcely imagine the beautiful sight of so many thousand fine fishes, fat and well fed, raising their high, broad backs and thick, puffy lips above the water, their heads side by side, all being nearly of the same size, weighing from four to five pounds, their bodies closely pressing against each other, looking like an immense herd of sheep, imprisoned in one large net upon a circumference of 3,000 to 4,000 feet. Closer and closer the circle is drawn around them, until its extent measures only about two acres, when they are caught by thousands, weighed in lots of 100 pounds, and then they are placed

* From "The Carp and its Culture in Rivers and Lakes, and its Introduction in America," being Part IV of the Report of the U. S. Fish Commission, 1875-76.

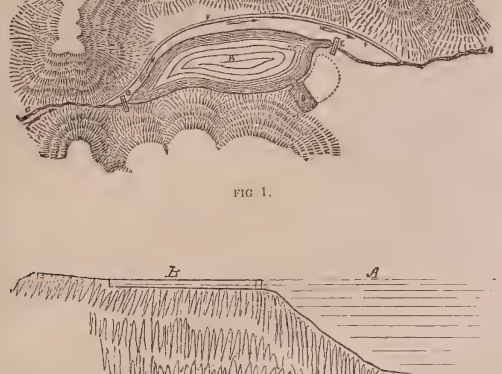

FIG 1.

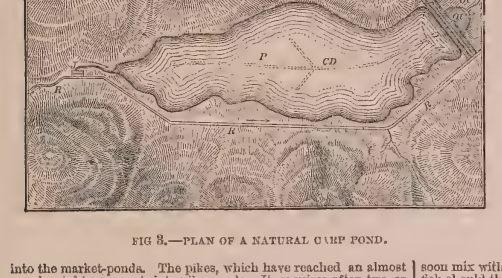

FIG. 2.—B A, CROSS-SECTION OF POND THROUGH BREEDING-PLACE.

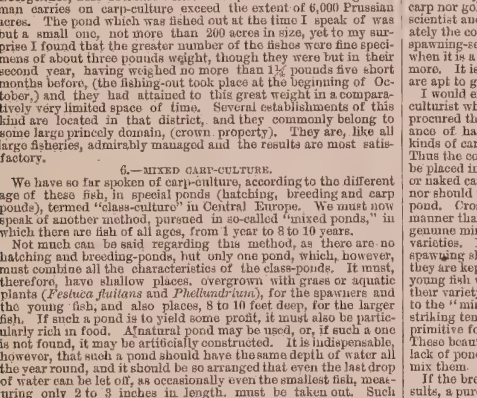

FIG 3.—PLAN OF A NATURAL CARP POND.

into the market-ponds. The pikes, which have reached an almost equal weight, are put into pike-ponds. It requires often two or three days to weigh the fishes, ponds of 1,000 or 2,000 acres area containing on an average 200 tons of carp and twenty tons of pike, tench and other fishes not included.

I assisted once at the fishing-out of one of these ponds, which took place in the neighborhood of the town of Gupen Plietz, province of Brandenburg, Germany. The pond was the property of a competent culturist and valued friend, Mr. Thomas Berger, of Georgenhof, near Cottbuss-Peitz. The ponds in which this gentleman carries on carp-culture exceed the extent of 6,000 Prussian acres. The pond which was fished out at the time I speak of was but a small one, not more than 200 acres in size, yet to my surprise I found that the greater number of the fishes were fine specimens of about three pounds weight, though they were but in their second year, having weighed no more than 1½ pounds five short months before, the fishing-out took place at the beginning of October,) and they had attained to this great weight in a comparatively very limited space of time. Several establishments of this kind are located in that district, and they commonly belong to some large princely domain, (crown property). They are, like all large fisheries, admirably managed and the results are most satisfactory.

6.—MIXED CARP-CULTURE.

We have so far spoken of carp-culture, according to the different age of these fish, in special ponds (hatching, breeding and carp ponds), termed "class-culture" in Central Europe. We must now speak of another method, pursued in so-called "mixed ponds," in which there are fish of all ages, from 1 year to 8 to 10 years.

Not much can be said regarding this method, as there are no hatching and breeding-ponds, but only one pond, which, however, must combine all the characteristics of the class-ponds. It must, therefore, have shallow places, overgrown with grass or aquatic plants (*Festuca fluitans* and *Phellandrium*), for the spawners and the young fish, and also places, 8 to 10 feet deep, for the larger fish. If such a pond is to yield some profit, it must also be particularly rich in food. A natural pond may be used, or, if such a one is not found, it may be artificially constructed. It is indispensable, however, that such a pond should have the same depth of water all the year round, and it should be so arranged that even the last drop of water can be let off, as occasionally even the smallest fish, measuring only 2 to 3 inches in length, must be taken out. Such "mixed ponds" must likewise have "collectors" and "collector-ditches." It will also be found very useful to construct a sort of hatching-place, on some flat and sunny place, near the bank; i. e., a so-called cut in the bank, measuring 40 to 100 feet in length and 30 to 50 feet in breadth, and having a depth of 6 inches to 1½ feet. This cut should be thickly planted with the above-mentioned aquatic plants, and ought, so to speak, to be the only place in the pond where carp can ascend from the depth in order to deposit their eggs conveniently and engage in the spawning process.

As soon as this has taken place, the entrance to this cut is closed with a net, so the eggs cannot be eaten by the fish. This net may be removed when the young fish have come out of the eggs, but it is preferable to leave it in its place for some days, that the young fish may be able to feed for some time undisturbedly.

Explanation of Diagram.—A is the pond, B the cut, which, though directly connected with the pond, is in reality nothing but a hatching-pond, such as has been described above. In order to have a complete system of ponds, nothing would be required but a "breeding-pond."

In Europe this method was generally adopted by beginners in carp-culture, commencing with a mixed pond, and gradually proceeding to the small "hatching-pond," and finally to the "breeding-pond, as the great advantage of separate ponds for the different ages of fish over the "mixed-pond" system soon became evident.

In such a "mixed-pond" no pike must be kept for regulating the stock, as may be done in a class-pond, for all the small fish would then soon be devoured. It must be made a strict rule that, with the exception of the tench (*Cyprinus tinca*), no other kind of fish, however harmless, is allowed in the pond. The tench is related to the carp, but it spawns 4 to 5 weeks later, so there can be no danger of cross-breeds.

Great care should be taken that no gold-fish (*Cyprinus carpio auratus*) or bream (*brama*) get in the pond, for these fish would soon mix with the carp and tend to degenerate the breed. Such fish should therefore be removed or killed at once. The gold-fish, especially the silver, swims in spawning-schools like the carp, and at the very same season. It thus spoils the egg of the carp, as all eggs which it impregnates will produce spotted fish, having at least a silvery streak ⅓ to ½ inch long and ½ inch broad between the caudal and the dorsal fin. Such bastards (the cross-breeds of gold-fish and *Carassius* also resemble them) do not grow larger than gold-fish, and have as many bones. They are unfit for table use and entirely unsuited for ornament, as they are neither genuine carp nor gold fish, and are disagreeable objects in the eyes of the scientist and connoisseur. If such fish are not removed immediately the consequence will be another cross-breed during the next spawning-season, for such a hybrid spawns, like the gold-fish, when it is a year old, and the breed of carps would degenerate still more. It is best to kill such worthless cross-breeds at once, as they are apt to give great trouble.

I would embrace this opportunity to impress upon every carp-culturist who intends to make breeding experiments with any carp procured through the United States Fish Commission, the importance of having, if possible, only one of three above-mentioned kinds of carp, unless he can have every kind in a separate pond. Thus the common carp (*Cyprinus carpio communis*) should never be placed in the same pond with the mirror carp" or the "leather or naked carp" (*Cyprinus carpio alepidotus, coriaceus vel nudus*), nor should the two last mentioned varieties ever be in the same pond. Cross-breeds would invariably be produced, and in such a manner that one would have neither genuine common carps nor genuine mirror or leather carps, but a cross-breed of all the three varieties. Not even when quite young and not yet capable of spawning should these varieties be put together, because, even if they are kept strictly separate during the spawning process, the young fish would never have the sharply marked characteristics of their variety as regards form and color, but would approach nearer to the "mirror-carp" and the "common carp." The carp has a striking tendency, when living with other varieties, to approach the primitive form of the common carp, and finally to be merged in it. These beautiful varieties should therefore be kept strictly separate: lack of ponds or any other reason should never induce people to mix them.

If the breeding experiments are to be accompanied by good results, a pure variety should be selected, and the finest and best milters and spawners, showing strongly all the characteristics of their variety should be procured, and the experiments will be crowned with success.

I must return to the so-called "mixed culture," by mentioning that it is not to be recommended. In Central Europe it is never practiced by scientific pisciculturists, but only by small operators mostly in so-called "peasants' ponds." This method does never yield a certain and truly profitable result.

EXPLANATION OF DIAGRAMS.

Fig. 3.—Pond *P* is a natural body of water. Its extent is about one hundred and fifty to two hundred acres. It is formed by a dam, *D*, about seven to eight feet high, crossing the valley and thus collecting the water of a run flowing there. Before *D* is a deepening, *C*, the collector. In the dam *D* there is an outlet leading to another deepening—the so-called outlet collector *OC*. The purpose of this collector is to keep back fishes that may have passed the outlet when opened. It is provided with a screen or netting. *CD*, upon the bottom of pond *P*, is the collector ditch, which conducts the fishes to *C* when the water is let out, and thus prevents them being caught in the mud. *R* is the run of water which, to prevent overflow, has to be conducted around the pond in a separate ditch, leaving an inlet at *I*, protected by a sluice with screens.

Fig. 4.—*F*, surface of the pond: *C*, collector; *D*, dam; *O*, outlet; *OK*, outlet collector; *J*, inlet; *R*, stream; *D*, the dam; *R*, the run or creek.

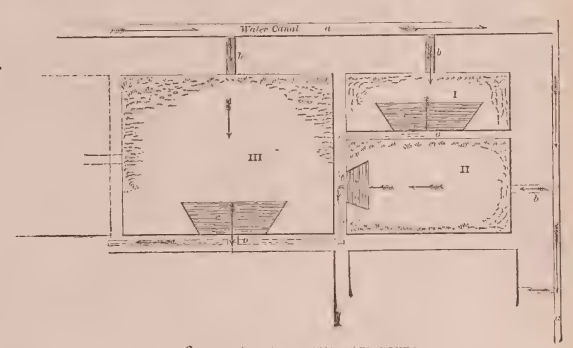

FIG 6.—PLAN OF ARTIFICIAL CARP-PONDS.

7.—FEEDING THE CARP.

In conclusion I will make some remarks on the feeding of carp in close ponds. It is not every natural pond which is a good pond, having the essentials of a good soil at the bottom and capable of producing sufficient food for the fish. If these conditions are wanting, the fish must be fed. This is, as a general rule, only necessary in ponds with sandy bottom without any clay. As I have said before, I am not in favor of feeding fish, as my standpoint is that of the rational culturist sharing the opinion with most of the prominent pisciculturists of the Old World, that carp should find its own food in the ponds.

If, however, the nature of the bottom demands artificial feeding, or if suitable food can be had at a remarkably cheap price, the feeding should be done with great caution. Never feed in one and the same place; even if the pond be very large, distribute the food in different places near the banks. If the food is always put in one place, or even if it is distributed over two places, the carp will stay in the neighborhood of these places, will become languid, and, instead of scouring the other parts of the pond in search of food, will remain at the bottom. It will, even if surrounded by the richest food, grow fat, but never have any firm flesh; nor will it ever grow much in length, as the somewhat phlegmatic fish does not get the exercise which favors its growth.

Never give them much food at one time, but by degrees in small quantities, never during the day, but either early in the morning or in the evening. During the hot season only feed them late at night, because the carp, if it has eaten sufficiently in the morning, will remain at the bottom all day, while during the higher temperature of the water it is necessary for its health that it should swim round and get a change of water. It is therefore useful to place in ponds containing large carps a limited number of pike, which, however, must be smaller than the carp. The carp fears the pike and flies from it. If there are pike in the pond the carp will get more exercise and will seek natural feeding-places, whither, on account of its innate sluggishness, it would never have gone.

Pond-carp are accustomed to other food than the river-carp. The former confine themselves to worms, larvæ and plants, while those living in streams find all sorts of animal and vegetable refuse; these latter can also stand a greater amount of food, as the current naturally makes them take more exercise, thus increasing their appetite. It is different with the pond carp; if you give it too much food, it will not take any more than is necessary to satisfy its hunger; the remnants will remain at the bottom, and if their quantity be considerable they will spoil the water. If these remnants are chiefly animal refuse, as flesh or blood, fungi will grow on them, and will then produce, as with the salmon and trout, diseases of the skin, the gills, and in the case of the carp, sometimes internal diseases.

The writer once had the following experience: During his absence a number of large carp were fed on congulated blood which had begun to putrefy; the fish devoured it eagerly, got sick, and most of them died in a few days from an inflammation of the intestines. Spoiled food should never be given to fish. If slaughter-house or kitchen refuse can be had, give these, chopped up small about the size of peas. Never give so much that remnants remain for any length of time in the water and begin to putrefy. Let no one be induced by the circumstance that the carps like to eat the dung of hogs, sheep and cows, to feed them on any putrefying matter. There are instances on record that thereby epidemics, particularly diseases of the scales, have originated.

The carp likes above everything else vegetable matter, such as cabbage, lettuce, boiled potatoes, corn, turnips, pumpkins, melons, etc. The refuse of malt from breweries and distilleries is also very good food for carp, and wherever such refuse can be had it should be given to the fish.

The small pisciculturist, having a pond of perhaps one to two acres near his house, will often be able to feed his fish on refuse, as he will always have it fresh from the kitchen and stable.

In conclusion, I earnestly recommend the culture of the carp to all pisciculturists. If the value of the carp for table use has once been recognized it will become a highly esteemed fish, especially in the neighborhood of large and populous cities, and its culture will yield a larger and more certain profit than the expensive trout.

8.—EXTENT OF CARP-CULTURE IN EUROPE.

In Europe many thousand acres of artificial waters are to be found. In these enormous quantities of carp are bred. Some of

these ponds, or rather lakes, have an extent of about 1,000 to 2,000 acres. They are provided with gigantic dams, many of them 60 feet high. By these the water is closed in into broad valleys, containing no other fishes than carps from 4 to 5 pounds in weight. If we consider the size of these lake-like ponds, surrounded by enormous dams which are overgrown with oak trees 100 to 300 years old, series of three and more of these lakes being not uncommon, then we can form some idea as to the remunerativeness of these establishments, particularly in Bohemia.

The standard establishment with regard to the most extensive business transactions is found in Austria. The Prince of Schwarzenberg, of whom I have spoken previously, possesses more than 250 ponds of large size, the smallest having about 10 acres, the largest 2,000 acres in extent.

We find many villages where ponds of 50 to 200 and more acres are maintained at the expense of the community.

9.—THE TABLE QUALITIES.

If the carp were a fish of inferior quality, like the buffalo-fish, for instance, its sale would doubtless be limited to the seaport towns of Northern Germany and the principal cities of Central Europe, as Vienna, Berlin and Paris. In the latter city, in spite of an abundant supply of salt-water and different kinds of fresh-water fish, the carp is never preferred to these, and, with the exception of trout and salmon, it frequently commands a price three times as high as that of all the rest.

I maintain my assertion that the carp, whether it be scale, mirror or leather carp, is one of the most excellent fresh-water fishes, and its introduction will be of great value in point of national economy, especially on account of the facility of its culture and the enormous extent to which this may be carried on.

The carp and its value as a fish of culture will before long be fully appreciated, so that we may be enabled favorably to compare the results of its culture in America, as also the extent attained to, with any other country, to our complete satisfaction.

PACKING EGGS FOR LONG JOURNEYS.

THE latest improvement in packing fish eggs for long sea voyages is that practiced during the last winter by Mr. Fred Mather, of the FOREST AND STREAM. The eggs were placed on trays with a bottom of canton flannel in the usual manner, and a piece of the same laid over them. The trays and the flannel were thoroughly soaked for a day previously, as no more water came near them. The frames were then held together by strips tacked across, and the lot put in a tin box with a tight cover which retained all moisture and sealed the box. The tin box was then put into a wooden one with a two-inch space all around for ice, and holes for drip in the bottom. This wooden box had strips on the inside of the bottom to allow cold air under the tin, and strips on the bottom outside to allow the water to drip without the holes becoming closed.

A lot of whitefish eggs received from Mr. Frank Clark, of Northville, Mich., which were by order of Professor Baird sent to the Deutsche Fischerei Verein, arrived in Germany in good order, after having been packed in this manner by Mr. Mather; and two lots of eggs of land-locked salmon from Mr. C. G Atkins, Grand Lake Stream, Me., one for the Societe d'Acclimatation, Paris, and the other for the Deutsche Fischerei Verein, Berlin, went, as the following letters show, in the finest condition:

Societe D'Acclimatation, Paris, April 5, 1881.

Professor Spencer F. Baird—

Dear Sir: "I have much pleasure in informing you that the shipment of eggs of land-locked salmon arrived at its destination in excellent order. The eggs were packed in perfect condition and the large supply of ice preserved them admirably. We have every reason to hope that your kind and liberal action in this matter will be the means of enabling us to establish in our waters a fish of great economic value. I am directed by the council to convey to you their very high appreciation and hearty thanks for this new and valuable present, and I pray you to accept the expression of our deep gratitude.

"I avail myself of this opportunity to inform you that our young land-locked salmon of last year are doing perfectly well, so far as is known, indeed most of them are in Chauvet Lake, where they have space, deep and cool water. A portion of them have been kept for experiment in a small pond, where the conditions are not so good, but they thrive splendidly. RAVERET WATTEL, Sec'y."

The President of the *Deutsche Fisherei Verein* writes from Berlin, April 5, 1881.

Mr Fred Mather,

Dear Sir: "Mr. Busse, of Geestemunde, writes me concerning the arrival of the eggs of the land-locked salmon repacked by you, that: "There never was seen so beautiful a sending of fish eggs. "VON BEHR."

THE ENGLISH FISHERY EXHIBITION.

NORWICH, England, April 18.

THE Exhibition was opened to-day, Monday April 18, by the Prince and Princess of Wales. This is the first national exhibition of the kind held in England. So far back as the end of last year the possibility of such an exhibition was mooted, and no sooner was the hint given than a numerous and influential list of patrons was found to support the scheme of an exhibition of fish, aquatic birds and plants, machinery and implements of every kind employed in fishing industry and for fishculture, and special prizes were offered for the best models in all things pertaining to fish and oyster culture, nets, boats, implements and all things connected with fishing.

So great was the demand for accommodation that the committee were twice compelled to alter their arrangements with respect to the distribution of exhibits in the space at their disposal, and, indeed, it was only in the course of this forenoon that matters may truly be said to have assumed a settled appearance. The result, therefore, is that the exhibition is in all respects a most interesting one, embracing as it does all branches of and appliances relating to the fishing industry. This city has been selected by the council as the place where the exhibition should be first held, and perhaps a better could not have been readily found. In close proximity to Yarmouth, and situated on a branch of the Yare which is navigable up to the town, Norwich is in the centre of a district where fishing as a vocation is pursued assiduously, and where pisciculture is ardently followed.

The Prince and Princess of Wales arrived at noon from Sandringham by special train, and were accompanied by Prince Leopold and a large party from Sandringham, including Messrs. Spencer Walpole and Prof. T. H. Huxley, Inspectors of Salmon Fisheries. Arriving at the exhibition, their Royal Highnesses were received at the entrance by the Mayor and other corporate officials of the town, wearing their robes of office. The party were then escorted to a richly decorated platform within the exhibition, the appearance of the Prince and Princess upon which was the signal for loud cheering and the waving of hats and handkerchiefs by the thousands of spectators assembled. Silence having been restored, the inaugural ceremony was begun. It consisted simply of the president of the exhibition, Mr. E. Birkbeck, M.P., reading an address of welcome to their Royal Highnesses, remarking that the exhibition was fortunate in having secured their presence that day, and referring to it as an attempt to promote still further this great industry and to provide for the social welfare of the fishermen. The Prince of Wales briefly returned his own and the Princess' thanks for the manner in which they had been received, and trusted that the exhibition would be the means of evoking more public sympathy than hitherto with the condition of the fisher folks. The exhibition was then formally declared open. Their Royal Highnesses were afterward shown round the various objects of interest, with many of which, notably the fish-hatching apparatus, they appeared to be highly interested, as well as in the marine fishery implements and models; also a fine collection of preserved fish, by Mr. Jardine, principally pike, one of which weighed 36 lbs. The aquatic fauna of Norfolk and Suffolk was well illustrated in a series of aquaria.

One of the most interesting of the general exhibits is what may justly be termed the three splendid show cases of Messrs. Samuel Alcock & Co., the well-known fishing-tackle manufacturers of Redditch, which are devoted to specialties required in the piscatorial art, and which contain indeed a complete series of angling equipment—of everything, in fact, as it has been amusingly and graphically remarked, that a fisherman, or a fish either, unless a very fastidious fish, could desire.

A splendid display of shore-haunting and fish-eating birds is made by H. Stephenson, Esq. The *Fishing Gazette* displays an angler's basket filled with implements devised by its editor, Mr. Marston, and all named "Fishing Gazette," as pliers, leads, knife, spinner, etc. A curious roll is the "thermal," of Mr. Alfred, which tells the temperature of the river when roach are off their feed. There is a fair show of models of boats used in the fisheries, some of which are propelled by steam.

In fishculture England is far behind other countries, taking rank after Holland, France, Germany and the United States. The models are of crude form and not at all compact. This has arisen from the fact that their fishculturists have been content to follow after the late Mr. Buckland, who, while an enthusiast on the subject, was not at all inclined to follow the methods of other countries, and was unwilling to acknowledge that they had anything worth investigating. With all due respect to Mr. Buckland this trait in his character, this insular pride, so to speak, has kept England far in the rear of other lands in this useful art. The Buckland Museum is well represented by plaster casts of fishes and some apparatus, fish-ladders, etc.

LARGE SHAD CATCHES.—The remarkable increase in the catch of shad in the Delaware is attracting much attention. The number taken by the fishermen of Camden county on Monday last exceeded the catch of any one day in the past twenty years. The shore fishery at Howell's Cove, Gloucester City, took 8,700 on that day, the first haul yielding 2,500; Hugg & Howell's shore fishery, at Gloucester City, took 9,000; Bennett's shore fishery, above Camden city, took 3,000, and the gill-net fishermen operating in the portion of the river opposite Camden County, took 7,500, making an aggregate of 21,200 shad taken by the fishermen of one county in a single day! The increase is no less marked in the counties lying further down the river, and many of the smaller fisheries on the river above Trenton, which for some years past have hardly paid expenses, are astonishing their owners by the number of fish they yield this year.

The great improvement in this branch of industry is attributed to the persistent efforts of the State Fish Commissioners to enforce the laws providing for a close time, and to the yearly addition to the supply of young fish made by artificial propagation. We learn from Major Anderson that the increase in the catch of shad in 1879 and 1880, was at the rate of about 200,000 fish each year (nearly a million pounds), and the indications are that this rate of increase will be equaled if not exceeded this year.—*Trenton, N. J., State Gazette.*

REPORTS OF FISH COMMISSIONERS.—Fish commissioners will please not lose patience entirely with us on account of the delay in reviewing their reports. We have had such a press of fishcultural matter in the reports of the American Fishcultural Association and the carp articles by Dr. Hessel, which we have published by the request of some twenty subscribers, that we have been obliged to defer from week to week several reports. We publish them when the order in which they are received, and have now on hand the following State reports to review—Missouri, Colorado, California and New Hampshire—which will soon appear, as well as a list of the fishes of California, by Prof. Jordan.

GREAT HAULS OF SHAD—Philadelphia, Pa.—Three of the heaviest hauls of shad ever made at that fishery were made at the Gloucester shad fishery on the Delaware River yesterday. At high water 3,000 shad were caught; at first ebb, 1,500, and at low water 1,000, in all 5,500. The high water haul is said to have been the heaviest for twenty years. These hauls were made May 2, 1881.—C. S. N.

TROUT FOR WELLSVILLE—Wellsville, N. Y., April, 1881.—About ten days ago we received from the State Hatchery twenty-five thousand speckled trout fry and distributed them in the tributaries of the Genesee River. We hope to get some of the California trout as soon as they are ready to send out. Those we put in the Genesee two years ago are doing nicely.—F.

Holabird Shooting Suits. Upthegrove & McLellan, Valparaiso, Ind.

Ladies, do you want to be strong, healthy and beautiful. Then use Hop Bitters.

Any one wishing to have a badge of medal made would do well to consult adv. of Wilkinson & Lennon, 149 Fulton st., F. Y.

We have received from Mr. W. H. Cruttenden, of Cazenovia, N Y., one of his new catalogues, which he says he should be pleased to furnish to any of our readers who will send him their address.

The Kennel.

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. J. R. Stayton, Secretary, Pittsburgh, Pa.

September at St. Louis, Mo. St. Louis Kennel Club Third Annual Beach Show. Charles Lincoln, Superintendent.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 74, New York City.

May 17, 18, 19 and 20, at Lincoln, Neb. Nebraska Dog Show. Isaac T. Webster, U. S. A., Superintendent.

EASTERN FIELD TRIALS CLUB.

THE regular monthly meeting of the club will be held to-day at 4:15 P. M., Room 18, *Tribune* Building. The following rules will come before the club and will probably be adopted as they stand. Should there be any amendments they will be published in our next issue:

RULES AND REGULATIONS.

Rule 1. The management of meetings for the annual field trials shall be entrusted to the Executive Committee of the club.

Rule 2. The judge, or judges, shall be selected by the Executive Committee, and their names shall be publicly announced as soon as possible after their selection. When a judge from ill-health or other satisfactory cause is prevented from attending a meeting or finishing it, the Executive Committee shall have the power of deciding what is to be done.

Rule 3. Every subscriber must name his dog at the time of entry, describing his color, markings and giving the names of his sire and dam.

Rule 4. For all stakes, the names, pedigrees, ages, colors and distinguishing marks of the dogs shall be detailed in writing to the secretary of the club, to be filed at the time of making entry or entries. Any dog's age, markings or pedigree which shall be proved not to correspond with the entry filed shall be disqualified, and all such dogs' stakes or winnings shall be forfeited.

Rule 5. Dogs to be eligible for the Eastern Field Trial Derby must be whelped on or after the first of April of the year preceding the trial for which the dogs are nominated.

Rule 6. The forfeit money must accompany every nomination, and the balance of entrance fee must be paid before the draw.

Rule 7. The Executive Committee may reserve to themselves the right of refusing any entry they may think proper to exclude; and no person who has been found to the satisfaction of the Executive Committee to have misconducted himself in any manner in connection with dogs, dog shows or dog trials will be allowed to compete in any trials that may be held under the auspices of the Eastern Field Trials Club.

Rule 8. Immediately before the dogs are drawn at any meeting the time and place of putting down the first brace of dogs on the following morning shall be declared and posted in a conspicuous place the evening previous.

Rule 9. All stakes shall be run in the order of the programme, unless the whole of the competitors or their representatives in the various stakes may agree otherwise, in which case the order may, with consent of the Executive Committee, be changed.

Rule 10. When two dogs owned or handled by the same person are drawn together one of the dogs names shall be returned to the undrawn numbers, which shall then be well shaken and another name drawn in its place. If at the latter end of a Trial it is found impossible to avoid running two such dogs together it then may be permitted.

Rule 11. A natural bye shall be given to the lowest available dog in each row. No dog shall run a second bye in any stake unless it is unavoidable. When a dog is entitled to a bye, either natural or accidental, his owner or nominator may run any dog he may select from his entries in his stake with him.

Rule 12. Every dog must be brought up in its proper turn without delay; if absent for more than twenty minutes its opponent shall be adjudged the winner and entitled to the heat, and shall in that case run a bye. If both dogs be absent at the expiration of twenty minutes from the time of call to run by the Judge or Judges shall have the power to disqualify both dogs or fine the owners any sum not to exceed the amount of Ten Dollars.

Rule 13. An owner, his handler or his deputy may hunt a dog, but it must be one or the other and when dogs are down an owner must not interfere with his dog if he has deputed another person to handle and hunt him.

Rule 14. The person handling and hunting a dog may speak, whistle and work him by hand as he may deem proper, but he can be called to order by the Judges for making any unnecessary noise, and if after being cautioned he persist in doing so, they can order the dog taken up and adjudged out of the stake. An opponent's dog cannot be purposely interfered with or excited, or an appeal can be made to the Judges. If an opponent's dog points game the other dog is not to be drawn across him to take the point, but if not backing of his own accord he must be brought around behind the pointing dog. Dogs must be hunted together and their handlers must walk within a reasonable distance of one another.

Rule 15. If a dog be withdrawn from a stake on the field or at any time during the holding of a Trial its owner or his deputy having authority shall notify in writing, with his named attached, the Secretary or one of the Executive Committee of the Club. If the dog belong to either or any of these officials the notice must be handed to one of the others.

Rule 16. If any subscriber openly impugns the action or decisions of the Judge or Judges, during the progress of a Trial, he shall forfeit not more than $20, or less than $5, at the discretion of the majority of the Executive Committee of the Club.

Rule 17. When two dogs, the property of the same owner, or of confederates, shall remain in for the deciding trial, the stake shall be considered divided, and also if the owner, or deputy of one of the two dogs, induce the owner or deputy of the other dog to draw him for a consideration or bribe of any nature whatsoever. If, however, either dog be drawn without consideration, from lameness, injuries, or from any cause clearly affecting his chances of winning, the other dog may be declared the winner, on the facts of the case being clearly proved to the satisfaction of the Judge or Judges. This same rule shall apply when more than two dogs remain at the end of a stake, which is not run out; and in case of a division between three or more dogs, of which two or more belong to the same owner these latter shall be held to take equal shares of the total amount named their owners. In the division, the terms of any arrangements to divide winnings, and the amount of any money given to induce the owner of a dog to draw him must be declared to the Secretary.

Rule 18. Any objections to an entry must be made in writing, addressed to the Secretary of the Club; and will be acted on by the Executive Committee, whose decision shall be final.

Rule 19. No person shall be allowed to enter or run a dog in his own or any other person's name, who is a defaulter for either stakes or forfeits in connection with Field Trials or Dog Shows, or for any money due under an arrangement for division of winnings, or for penalties regularly imposed for the infraction of rules, by the Executive Committee present at any meeting, or for any payment required by a decision of the Eastern Field Trials Club.

Rule 20. Dogs shall be drawn in braces by lot, and run in heats, either in one or two sections, as the Committee may deem most expedient, and the beaten dog to be retired (except as hereinbefore mentioned) and the winner to be run again. Should the drawing be made in two sections, the winner of the first and second section, shall be run together to decide the winner of the First Prize or place. The defeated dog to run against such dogs as the winner has directly beaten, or the best of these as may have been decided by the Judges by running, and by running them off, and the winner of this series to take second) prize or place. The Judges shall select from the best of these beaten dogs which are to compete for third place or prize, and the same method shall be adopted in drawing as for first and second place and prize, so deciding the third place or prize. The Judges are granted the discretion of declaring the best of these beaten dogs the winner, by selection or by running extra heats between them.

Rule 21. The Judges shall order up the dogs as soon as they have determined which is the best according to the scale of points in Rule 23. Unless a dog shows such lack of merit that in the opinion of the Judges he cannot be placed, all dogs shall, if time permit, have at least two chances to show their behavior on birds.

Rule 22. Pointing hares, stink birds, larks, turtles, bittern, game chickens, guinea fowl and turkey, or any bird generally considered game, shall not be considered false points. No dog making a false point shall recovering it to be such, without any encouragement from his handler, shall not be penalized.

Rule 23. Positive points of merit: Pointing, Nose and Staunchness, 40. Pace, Quartering and Style, 20. Retrieving, 10. Backing, 10. Obedience and Disposition, 10. Total 100. Negative points for demerit: False Pointing, from 1 to 5. Breaking in or breaking shot, from 1 to 10. Chasing, from 1 to 10. The second offence of a willful chase loses the heat.

Rule 24. No person, except the Judges, attendants and reporters, will be permitted to accompany the handlers of dogs. Two persons will not be permitted to work one dog. If, from any cause, the handler of a dog is disabled to such an extent that he cannot shoot, the Judges, or some person appointed by them, may shoot for him. The handlers of the two dogs shall go together, as if it were a brace of dogs, so that the dogs shall be upon an equality as to ground, opportunities for pointing, etc. No spectators will be allowed nearer to the handlers of dogs running, than seventy-five yards to the rear. No person shall make any remarks about the Judges or dogs in hearing of the Judges; such persons, so offending, shall be expelled from the grounds. Should any handler of dogs annoy the Judges, after having been ordered to desist, the Judges shall order such dogs as he is handling up and out of the stake. The privilege is granted the handlers to ask the Judges for information or explanation that has a direct bearing upon any point in issue pending such questions the dogs shall not be under judgement. Dogs afflicted with any contagious disease, or bitches in season, will not be permitted on the ground.

SAYINGS ABOUT DOGS.

A CORRESPONDENT, "Kentuckian," asks, "Can the FOREST AND STREAM or some of its readers give the origin of the addressing a man as dog for an insult? Isn't it really an insult to the dog to so call a vast majority of the human race, and rather complimentary than otherwise to the remainder of mankind?"

The expression come, along with much more of our proverbial wisdom, from the far East, where dogs were curs of low degree, as they are there to-day. The likeness could scarcely be said to be complimentary to the man.

The ways of the dog have passed into many proverbs among different nations, and the character of the animal as shown therein is not at all a discreditable one. A writer in the London *Queen* has collected some of these sayings, which we copy here:

An Englishman says, "If you cannot bite never show your teeth," or "Don't bark if you can't bite," while the Scotch say,

"Great barkers are nae bitors." We also say, "What, keep a dog and bark myself?" These need no explanation, and the same is true of others, such as "Any stick will do to beat a dog;" "Give a dog a bad name and hang him;" "It is easy to find a stick to beat a dog," and "When a dog is drowning every one offers him drink." On the same principle of giving to those who do not want, we are told that every one bastes the fat dog, while the lean one burns. Of course a hungry dog will eat dirty pudding. It is a bad dog that deserves no meat, and "It is useless to tie up a dog with a chittorling."

The French language is singularly prolific in sayings about dogs. A good dog never barks amiss, but not every dog bites that barks. The best of friends must part, as Dagobert said to his dog. This is well known, and so is this: He is like the dog of Jean de Nivelle, which runs away when it is called. A dog may look at a bishop is like our own "A cat may look at a king." To beat the dog when the lion is present may be safe, but is rather cowardly. Two dogs to one bone are bad. He who would drown his dog calls it bad. You must throw stones at the dog which bites; but flatter the dog till you get to the stone heap, and do not make fun of the dog till you are out of the village, perhaps because a dog and a cock are always brave on their own dung-hill. If he who takes a dog by the ears is bitten it is no wonder.

A young man is sometimes as foolish as a young dog. To be always under control is to be like a dog in a string. A man who is used to submit to harsh treatment is like a dog which goes on foot and with a bare head. He is treated like a dog sometimes, and especially if he comes in like a dog at nine-pins, or when he is not wanted. Love me, love my dog, is advice recognized in different countries, but it is French to call the chief man a dog with a grand collar. More curious is between dog and wolf to denote a dim dawn in which objects can scarcely be distinguished. We could add several others from French sources, but we wish to give a few examples from elsewhere, more particularly from the German.

Here we find that some people should not be squeamish; if they go over a dog they must go over the tail. This reminds us of the saying, "When you have swallowed the ox don't make a fuss about the tail." A German, like many more, may be as hungry or as weary as a dog, and, when he labors under a delusion, sees a blue dog. That the dogs bite the hindmost is as true as stronger utterance among ourselves. He is in a destitute condition who has not a dog to draw out of the oven. Do not blame the innocent. It rests not with the dogs how many horses shall die in the year. The hare may run the fastest, but many dogs are the death of the hare. Nobody cares to own a dog which is everybody's companion.

When they have nothing, the Flemish will tell you that you will find the dog in the pot. The Dutchman may be as snappish as a young dog. The Italian says, No dog is so bad as not to wag his tail; that a dog which barks never bites, which is scarcely true; and Woe to the skin of a snarling dog unless it be strong and tough. The Spaniard says, If you wish your dog to follow you give him bread; and yet he says, When your dog wags his tail it is not for you, but for the bread. He thinks, too, that a well bred dog always dreams of hunting.

The Turks have a few good sayings, one of which is, The dog barks and the caravan goes by; mere noise is nothing. Another is that, The dog which is led out to hunt against his will takes no game The Arabs have observed that every dog barks at his own gate, and that a dog which runs is better than a lion which lies down. They think it a foolish thing to draw the dog's teeth and bark yourself; but, having no great confidence in the animal, they say, Pat a dog on the jaws till you can muzzle it. From the Chinese we learn that a dog which raises its tail despises its foe; also, that he who beats a dog should think of its master. Other rough and ready sayings of theirs are, that the dog in its kennels howls at the fleas, but the dog which is hunting does not feel them; and that it is not dogs' fleas which make the cats cry out.

THE AMERICAN COCKER SPANIEL CLUB.

NEW YORK, May 7, 1881.

TO THE MEMBERS:

Gentlemen—Your committee appointed at the adjourned meeting of the club, held at the American Institute Building, New York city, on the 29th of April, beg to submit the following Constitution and By-Laws for the government of the club:

For the information of those not present at the annual meeting held on the 28th of April, your committee would state that the standard of excellence, as incorporated in the Constitution, was unanimously adopted by those attending the meeting. The committee's work consists of the Constitution and By-Laws other than the standard.

Your committee now requests all who desire to perfect their membership to forward the first year's dues of $2 to the secretary of the committee. On the 1st of June a list of members will be issued and the election take place of the first executive committee of five, to hold office until the next annual meeting. This done, the labors of your committee will cease, and it remains in your hands to assist them by your joining at once and getting as many to become associated with us as possible. Yours respectfully,

J. L. Morrill, Chairman; A. McCollom; James Watson, Secretary.

Committee of Organization of the American Cocker Spaniel Club. Secretary's address, P. O. Box 2,950, New York city.

CONSTITUTION.

ARTICLE I.
Name.

This club shall be called the American Cocker Spaniel Club.

ARTICLE II.
Object.

The object of this club shall be the encouragement of the breeding of the cocker spaniel and the offering of special prizes at bench shows where the standard of points of this club is recognized and the prizes are awarded by a judge approved of by the Executive Committee of this club.

ARTICLE III.
Membership.

This club shall consist of an unlimited number of members.

ARTICLE IV.
Application for Membership.

Any person desirous of joining this club must make application to the secretary, inclosing therewith the amount of dues for the first year, which shall be returned in the event of the non-election of the applicant.

ARTICLE V.
Election of Members.

The power of election shall rest with the Executive Committee, a four-fifth vote being requisite to elect a member.

ARTICLE VI.
Management.

The management of this club shall be intrusted to an executive committee consisting of five members, who shall be elected at the annual meeting, to hold office for one year or until their successors are appointed. Vacancies in the membership of the Executive Committee, arising from any cause whatever, shall be filled by the Executive Committee till the next annual meeting of the club. They shall from their number elect a president and secretary-treasurer, who shall perform their several duties as prescribed by the By-Laws, and generally such duties as pertain to their office.

ARTICLE VII.
Annual Meeting.

The annual meeting of this club shall be held at New York city, on a day during the week in which the Westminster Kennel Club show is held, and in the event of no show taking place, then at such time and place as may be decided upon by the Executive Committee.

ARTICLE VIII.
Special Meeting.

A special meeting of the club shall be called by the Executive Committee on the written application of one-fourth of the members in good standing.

ARTICLE IX.
Discipline.

The Executive Committee shall have power, by a four-fifths vote, to suspend any person from membership of this club until the next meeting of the club who, in the opinion of the committee, has been guilty of fraudulent or dishonorable practices in connection with bench shows or field trials.

ARTICLE X.
Standard.

The standard of points of the cocker spaniel, as defined and adopted by the club, is as follows:

A cocker spaniel must not weigh over 28 lbs. nor less than 18 lbs.

General Appearance, Symmetry, etc. (value 10).—A cocker spaniel should be eminently a well built, graceful and active dog, and should show strength without heaviness or clumsiness. Any of the spaniel colors is allowable, but beauty of color and marking must be taken into consideration.

Head (value 15) should be of fair length, muzzle cut off square, tapering gradually from the eye, but not snipy. Skull rising in a graceful curve from the stop, and with the same outline at the occiput, the curve line being flatter but still curving at the middle of the skull. The head should be narrowest at the eyes, and broadest at the set-on of ears, and viewed from the front, the outline between the ears should be a nearly perfect segment of a circle. The stop is marked and a groove runs up the skull, gradually becoming less apparent, till lost about half way to the occiput. This prevents the domed King Charles' skull, and there should not be the heaviness of the large field spaniel, but a light, graceful, well-balanced head. Jaws level, neither undershot nor pig-jawed, teeth strong, regular and free from canker.

Eyes (value 5) round and moderately full. They should correspond in color with the coat.

Ears (value 10) lobular, set on low, leather fine and not extending beyond the nose, well clothed with long, silky hair, which must be straight or wavy—no positive curls or ringlets.

Neck and Shoulders (value 10).—Neck should be sufficiently long to allow the nose to reach the ground easily; muscular and running into well-shaped, sloping shoulders.

Body (value 15).—Hips should be well sprung; chest of fair width and depth; body well ribbed back, short in the coupling, flank free from any tucked-up appearance, loin strong.

Length (value 5), from tip of nose to root of tail should be about twice the height at shoulder, rather more than less.

Legs and Feet (value 15).—The forelegs should be short, strong in bone and muscle; straight, neither bent in nor out at elbows; pasterns straight, short and strong; elbows well let down; the hind legs should be strong, with well-bent stifles; hocks straight, looked at from behind and near the ground. Feet should be of good size, round, turning neither in nor out, toes not too spreading; the soles should be furnished with hard, horny pads, and there should be plenty of hair between the toes.

Coat (value 10) should be abundant, soft and silky, straight or wavy, but without curl; chest, legs and tail well feathered. There should be no top-knot or curly hair on top of head.

Tail (value 5) usually docked, carried nearly level with the back. At work it is carried lower, with a quick, nervous action which is characteristic with the breed.

SCALE OF POINTS.

General Appearance	10	Length	5
Head	15	Legs and Feet	15
Eyes	5	Coat	10
Ears	10	Tail	5
Neck and Shoulders	10		
Body	15	Total	100

ARTICLE XI.
Amendments.

No addition, alteration, or amendment shall be made to the Constitution except by a two-thirds vote of the members present or represented by proxy at the regular annual meeting of the club. No proxy to be admitted unless it is specifically stated therein in what manner the vote shall be recorded. At least thirty days notice of any such proposed change must be given to the Executive Committee, of which due notice shall at once be sent to the club members.

BY-LAWS.

ARTICLE I.
Officers.

The officers of the Executive Committee shall be a president and secretary-treasurer, who shall be elected at the first meeting of the committee after each annual meeting of the club, to serve until the next annual meeting.

ARTICLE II.
Duties of Officers.

SECTION 1. The president shall preside at the meetings of the club and Executive Committee, appoint all sub-committees, audit and approve all bills, and order meetings of the committee whenever, in his judgment, he may deem it necessary.

SEC. II. The secretary-treasurer shall keep the minutes of each meeting of the association and of the Executive Committee; shall conduct their correspondence, and have charge of and be responsible for all books and papers. He shall also have charge of all moneys belonging to the association; shall pay all bills, when properly approved, and submit a report thereof to the committee whenever called upon by them to do so.

ARTICLE III.
Payment of Bills.

All bills shall be presented to the President, and shall be audited by him. In case of approval he shall affix his signature and date of approval. After such approval the secretary-treasurer shall be authorized to pay.

ARTICLE IV.
Prizes.

Sec. 1.—It shall be the duty of the Executive Committee to endeavor to obtain suitable classes for cocker spaniels at all bench shows, and that at such shows as agree to abide by the standard of the club, and appoint a judge approved by the committee, the committee shall have full power to offer such prizes as they may deem advisable in addition to those given by the show authorities.

Sec. 2.—That these prizes shall be known as "American Cocker Spaniel Club Special prizes."

ARTICLE V.
Judges.

Sec. 1.—A list of gentlemen competent and willing to officiate as judges of cocker spaniels shall be made up by the Executive Committee, and the secretary shall, on the application of the manager, superintendent, etc., of any dog show, transmit a copy of said list, and arrange, if desired, with the gentleman chosen therefrom to act as a judge at said show. That the expenses incurred by said judge shall be paid to him by the show committee engaging him.

Sec. 2.—The club judges shall not compete at, or be interested directly or indirectly in, the shows at which they officiate.

Sec. 3.—The judge shall award prizes to dogs impartially and according to the order to which the dogs approach perfection in the type, formation and proportions fixed by the club as the true standard of excellence. They shall not recognize any other type or standard, and shall be amenable for their decisions to the committee of the club alone. They may withhold prizes, etc., if the specimens exhibited do not, in their opinion, merit the same.

ARTICLE VI.
Dues.

Sec. 1.—The annual dues shall be $2, payable upon application for membership, and thirty days before each annual meeting thereafter. No member whose dues remain unpaid shall be entitled to vote at the annual meeting.

Sec. 2.—Any member in arrear for dues shall not enjoy any of the privileges of membership until his dues are paid.

Sec. 3.—Any member in arrears for twelve months thereby forfeits his membership.

ARTICLE VII.
Expenses.

All expenses incurred by the secretary-treasurer, or by any member of the committee, for or on behalf of this club and on the authority of the committee, shall be defrayed out of the funds of this club.

ARTICLE VIII.
Annual Report.

An annual report and abstract of accounts, duly audited by two members, together with the rules of this club, names of members, committee and officers, shall be printed and supplied to each member of this club.

ARTICLE IX.

These By-laws may be altered, amended or suspended by a majority vote of the Executive Committee, provided notice shall have been given to each member of the committee of the proposed change. That such change must be confirmed at the next annual meeting of the club.

A BULL DOG ROBINSON CRUSOE.

JUST below Suspension Bridge is a small rock and sand island, in Niagara River, which can only be reached from the high bank, two hundred feet above, or through the perilous rapids at its feet. About twenty-five years ago a man named Taylor fell into the river at the Maid of the Mist landing, and by great effort came down and landed on this island.

About seven years ago a dog got into the current at the above landing, and he, also, made his way to this island. This animal lived on the island for nearly two years, and was fed by the late Wm. Flemming, of the United States Customs. At the end of nearly two years a young man from Canada ventured over the bank on a rope ladder and landed safely on the island; but the dog was wild and unmanageable, and the man was drawn up without him. Shortly after this there came up a cold storm and the poor dog was shipwrecked and his bark lost forever.

Since that time Taylor Island has been uninhabited until Sunday, April 16. A man from Niagara Falls was seen walking out on the bridge, which is located about one hundred yards above the island. He had with him a small-sized bull dog that he had sentenced to death for the paltry crime of killing chickens.

When he had reached about the centre of the bridge he picked up his canine friend, and, after patting him for a moment, threw him from the bridge. Down, down, he went, two hundred and twenty feet into the perilous rapids below. But, instead of floating off as hundreds of other dogs have done—stone dead—he came to the surface and boldly struck out for Taylor Island, where he landed, shook himself and lay down in the sun to dry. I saw him this morning and fed him; he appeared to be as lively as ever.

His appearance there has arrested the attention of many sight seers. C. E. LEWIS.

Suspension Bridge, N. Y.

CAPTAIN McMURDO'S KENNEL.

DURING the longest "wait" for the trout season to open I have ever known, I can scarcely do better in the way of news from these parts than give a short sketch of the kennels and surroundings of Captain McMurdo, who, it will be remembered, moved his establishment this winter from Campbell County to Shadwell, Albemarle, some five miles from Charlottesville.

From the Captain's windows we look upon historic grounds. Monticello, the home of Jefferson, crowns a lofty hill right in front of us, while upon a field between where the aristocrats of the kennel stretch their legs before starting out for their daily instruction stood the house where the great statesman was born.

The kennels themselves are situated on a breezy lawn, with enough shade to keep off the hot summer sun, while the cold north winds are intercepted by a mountain that rises immediately behind the house.

A more beautiful spot it would be hard to imagine; and when the foreground is enlivened by the forms of ten or twelve of some of the best bred setters of the day, who have "dropped in their tracks" to the down charge and are watching with keen eye for the signal from their master that releases them again, the picture becomes a doubly charming one.

The healthiness, condition and high state of training of the inmates of the Captain's kennels are due to methodical and judicious feeding, to the perfect cleanliness in which they are kept, and to the untiring and constant attention given them by the Captain himself. To say that he devotes himself entirely to his pets would be a mild way of putting it. If, in short, all two-legged youngsters got such care and devotion from their pastors and masters as do these four-legged ones from theirs, parents and guardians might well sleep easy in their beds.

Particularly promising are two bitches by Gladstone out of Strather's Frost, and some pups by Dash III. Mr. Foster, of Leesburg, too, has a very handsome lemon and white setter bitch with the Captain, while a powerful black Hungarian pointer from the kennels, I believe, of Prince Esterhazy, is the one representative of his breed. RINGWOOD.

FAST AND SLOW DOGS.

AFTER reading in the valuable columns of FOREST AND STREAM a number of letters about field trials, fast and slow dogs, etc., it seems to me pretty clear that some of the field trials should be held on entirely open ground. It is very uncommon to find a really fast dog, who is perfect, or even first rate in cover. And, as in many localities, fast dogs are the most serviceable, it is desirable to encourage their breeding to a limited extent. Such dogs will always be scarce, and consequently rank first, because they must not only have extraordinary speed, but also the finest of noses, together with endurance and the other qualities that are required in good field dogs, otherwise they are valueless, as any sportsman would prefer a reliable slow dog to a blundering fast one. For mixed ground extraordinary speed is useless, and an active, busy worker, with a fine nose and all the other necessary qualities, is the best style of dog one can have.

I have always found that I had the most satisfactory partridge (quail) shooting when hunting over a brace of dogs, one very fast and wide ranging, the other slower and pretty close ranging. The former finds most of the coveys, and the latter does the best work in the woods and rough places.

What any one can want with a really slow pointer or setter I can't understand, for if their hunting grounds consist of very thick covers a brace of good spaniels will do better work than any of them.

As regards putting a stop to jockying and field trials, I believe we are entirely dependent upon the judges, who, if they are the right sort of men (thoroughly understanding the ways of birds, as well as of dogs), can easily do so by making an example of any handler who does anything unfair, either to help his own or hinder his competitor's dog. To watch some handlers one would think they were training their dogs—not showing what they had taught them—so much whistling and shouting do they make. And how this can be called hunting them "in all respects as in an ordinary day's shooting," is beyond my "ken."

The proposed trials, in which the dogs would be handled by their owners, might, I fancy, be made very popular, and as they would be an inducement to gentlemen to learn how to handle dogs better than is usually done at present it would not only be a benefit to themselves, as it would add very much to their interest in their dogs, but would also be a great boon to the dogs, by preventing the cruel treatment sometimes resorted to for want of a proper knowledge of the art of training them. IBEX.

WHOSE DOGS?—Portland, Maine, April 29.—For a long time occasional reports have come to me concerning setters falsely claimed to have been bred by myself, or from my stock, and the number of reports and inquiries have so increased that I wish to answer to all by a single reply, through FOREST AND STREAM, which I assume to be read by all sportsmen.

My setters are of two native strains—the Irish reds (Cora II, Cale, Covert, etc.) and an orange and white strain that I term the "Sargent" strain, in compliment to Gen Horace Binney Sargent, of Salem, Mass., for whom the original setter of this blood was imported, upward of thirty years ago. As much care and precau-

tion are exercised in relation to my dogs as would be for blooded horses or other thoroughbred stock; all are under constant surveillance, and a record is kept of each one of their get not retained in my possession.

I have been recently informed that a litter of puppies in Portland are represented as sired by one of my dogs, "surreptitiously obtained for the purpose."

It would be as difficult to thus obtain the services of one of my dogs as it would be of any blooded stallion. Not one of my dogs has been in Portland for many months past (excepting puppies, shipped here to be sent away), nor at any time possible to have been a sire to the litter referred to.

My residence here having been in one place for many years it is now my misfortune to receive the credit *(sic)* for all the mischief committed in this part of the city, notwithstanding the fact that it is only occasionally that I have any of my dogs here, and on such occasions keep them locked up, except when with me.

While free to admit that dogs are nuisances at times, yet I do claim to take more than ordinary precautions in regard to my own dogs, for the sake of avoiding annoyance to others; and I sincerely wish that the owners of numerous felines roaming at will and lifting their voices in the hours of the night that might be still, would take as much care of their pets, especially such persons as have made complaints of the barking of my dogs at times when every one of them was leagues away. The latest complaint against my dogs occurred this week. It is five months since any one of my dogs has been in Portland. *Sic semper*, or at least nearly always thus.

In conclusion, I would say that any one seeking to learn whether certain dogs are justly claimed to be bred from my stock need simply address me at Portland, Maine. EVERETT SMITH.

DETROIT KENNEL CLUB—Detroit, April 28.—I have just come from a most interesting visit to the Detroit Kennel Club, and although not an expert in matters thereunto pertaining, it is possible that a narrative of a layman's observations in that not particularly pleasant ordered precinct may interest readers of "The Kennel" department of FOREST AND STREAM. First, then, the Detroit Kennel Club is the direct outgrowth of *canisculture* by an enthusiastic amateur of this city, Dr. M. V. B. Saunders, whose passion for a good dog amounts to adoration. He is the *Deus ex Machina* of the club, and really the personal supervisor of it, but Mr. A. Saunders is secretary and treasurer. The kennels are situated on the Doctor's premises on Parsons street, and the dogs breed here consist chiefly of pointers and English setters. The principal stud dog is King Bow, by the St. Louis Kennel Club's champion Bow. The brood bitches are Dot, by Capt. Forbes' imported Ponto, and of Dr Saunders' old imported Nell; Grace (very handsome) out of Dot; Lurette out of Nell, and both by Dr. Saunders' Handsome Don, he by Fred Simmons' imported Frank, out of Lumsden's Rose, prize winner of the Detroit bench show of 1879; Chess (a recent purchase, and a beautiful bitch), out of Dot, by Golden's Dash. There are among the pointers 22 puppies, born in three litters on March 7, 11 and 17 respectively, all sired by King Bow out of the bitches above named. They are the liveliest lot of little rascals I ever saw. One blue-eyed beauty, white, with lemon ears, and marks about the head, quite captivated me, and altogether, they are the handsomest, healthiest and cleanest kennel of puppies imaginable. They feed with commendable impartiality on the mothers, and the latter seem to take as kindly to one litter as another. This is communism with a vengeance. Verily it is a new thing; but it struck me as a very convenient family arrangement.

Among the setters, I noticed with particular satisfaction a promising blue-black white and tan (English) bitch by John E. Long's Cain 2d, out of Long's famous old Brown Juno. Another is a three-quarter Laverack white bitch with a black ear. She had just dropped a litter of ten by Rackett, the dog sold by Mr. J. E. Long the other day to Mr. Goodsell of Ohio. *Graphite* for $500. I suppose this breed will keep on increasing until its fame shall have been spread over the land. I recommend to the men of the club that if they want to make their doings and prospects specially and widely known, they should employ the advertising columns of FOREST AND STREAM, to which sportsmen and fanciers are in the habit of looking for just such information. G. P. GOODALE,

RUBY AND HER PROGENY—Piermont-on-Hudson, N. Y., April 30, 1881.—In your issue of the 21st ult., you give me as the owner of the pure Laverack bitch Ruby. When I sent you the pedigree I forgot to say I sold her some years ago to Mr. C. H. Raymond, and that she had gone to the happy hunting grounds, for which oversight please excuse me.

As regards Ruby's breeding, Mr. Laverack said her dam Cora is own sister to Mr. Garth's Q. O. Daisy, winner two years in succession of the cup at Shrewsbury Field Trials, and bred same way as Llewellin's Countess—Cora, Daisy and Countess being out of Old Moll by Old Dash and Mystery, bred, he says, by him as pure as can be; and the same way bred as Countess.

I believe Mr. Laverack's word has never been questioned.

The quality of Ruby's puppies for field work has been of the best. Ned, out of Ruby, by Dr. Rowe's Milo, owned by Dr. H. M. Banks, of Englewood, N. J., was a splendid dog, with superior nose, high courage and great endurance. Daisy Dean, owned by A. H. Dew, Columbia, Tenn., and Diamond, owned by Mr. C. H. Whitman, Chicago, Ill., are out of Ruby by Pride of the Border.

The following gentlemen have owned Ruby's pups: Col. Wright Reeves and Col. Kinney, Washington, D. C.; Dr. Green, New York; Mr. Hasbrouk, Jersey City; Mr. Bingham, West Meriden, Conn.; Charles M. Gregory, Kent, Conn. The above are out of Ruby by Dr. Gautier's Gordon setter Dan. Dr. Strachan, N. Y., had one out of Ruby by Dr. Gautier's native setter Milo, and I believe Mr. Willis, of Rahway, N. J., has one of the same litter. Daisy Dean and Diamond are the only pure Lavaracks out of Ruby that I know of, but there may be others. W. F. STEEL.

RRUSH II. AND BLACKIE II.—*Editor Forest and Stream:* Mr. Goldsmith is slightly in error in his remarks quoted in the FOREST AND STREAM, April 21, respecting the parents of Brush II. and Blackie II. He says: "Brush and Rhea are considered to be the best brace of black spaniels in England by long odds." To begin with, Rhea has been dead nearly a year, and, good little bitch though she was, it is many a long day since she might have been considered the best bitch in England. She won a great number of prizes in her younger days, but had retired from the show arena some years ago, and, indeed, was eventually killed on account of her great age. Neither has Brush been considered the best dog in England since Kaffir and Zulu came out last June, though, at their first meeting at the Crystal Palace, Brush beat Kaffir, Zulu and Squaw (they three being only fourteen months old), Kaffir and Zulu have beaten Brush each time they have met since, and once, at least, I believe, he has been placed below all three. Mr. Easton sold Brush about that time, which was a very wise proceeding on his part, as his day was past. Brush has since passed through four or five hands

Beau and Blackie are not "champions," neither having won a champion prize. Brush and Rhea were champions, but I do not think there have been any champion classes for black spaniels lately, certainly not since Beau came out, nor at the shows he patronizes. The shows Beau goes to bear the same relation to the battle ground of Brush and Kaffir as the late Newport show, for instance, does to the W. K. C. shows. I have no desire to detract from the merits of Mr. Cummings' importations, as they are both of very choice blood, Brush II. especially; but the notice was misleading to those who do not closely watch the English prize lists and show reports. The dogs have quite enough to recommend them without claim being laid to honors for their progenitors, which are unwarranted because unearned.

Kaffir, the dog who lowered Brush's colors, his brother Zulu and his sisters in blood, Squaw and Lass o' Devon (liver and tan), are, Mr. Goldsmith might have said, closely related to him, as their dams (Smutty and Negress) are both by Rolf out of Bolte, Rolf being sire of Brush. All four were bred by Mr. T. Jacobs, Newton Abbott, and are the get of Champion Bachelor, which says a good deal for him as a sire, perhaps more than for the Rolf strain, which is present in equal proportion (*i. e.*, one-fourth) in the pedigrees of Kaffir, etc., and Brush II., because they are all of proved excellence, while Brush II. has yet to undergo the test of public competition. It should be borne in mind that all these dogs are field spaniels, not cockers. DIDO.

COLOGNE TRIALS.—The International Field Trial, open to all countries, came off at Cologne last Wednesday, and we hear by telegraph that it was won by Sir Thomas Lennard's Priam, the celebrated pointer that won the Field Trial Derby in 1878, and that the second prize, a setter belonging to Herr Max Prellberg, called Prince II., the third being Mr. P. Lowe's setter Duke of Devon. It must have been a good field, as the entries included such notable ones as Champion Ranger, who went over for it last Friday in charge of Mr. Fletcher. Priam is, however, a very difficult one to beat when he runs in his true form, and he will take a deal of beating in English field trials this spring if he has taken to run kindly, as his nose, style and pace are magnificent, and it is a treat to see him work at home, though he was just as good when on actual service on Sir Charles Mordaunt's moor last August, when he was shot over for a fortnight by Mr. S. E. Shirley. Sir Thomas Lennard has a very promising own brother to Priam, likely to run well in the coming Field Trial Derby.

A good dog show is likely to be held at Maidstone next week on Tuesday, Wednesday and Thursday. There are 450 entries.

The Crystal Palace Dog Show will be held during the first week in June.—*Bell's Life, April 16.*

AN EXPLANATION REQUIRED—Claremont, N. H., May 6.—I notice in your issue of May 5 that Mr. G. E. Osborn, of New Haven, Conn., advertises for sale a red setter dog pup, six months old, by Champion Elcho out of Highland Lass. Will Mr. Osborn kindly inform the readers of FOREST AND STREAM of the date of service of Highland Lass by Champion Elcho, and full particulars therewith, and thus oblige, possibly, some would-be purchaser; also the owner of Elcho, who, by the way, has no knowledge of such an event, as above claimed?—OWNER OF ELCHO.

COUNT ZOO AND TAMAZINE.—Dr. W. W. White, Baltimore, Md., the breeder of Count Zoo and Tamazine, calls our attention to mistakes in the official catalogue, wherein the former was called Count Zos and the latter Tambazine. The first-named error was noted in our report. Dr. White is the owner of the dam of this excellent dog and bitch, having purchased Queen Anne from Mr. Von Culin and bred her twice to Pontiac. Count Zoo was claimed at the show by Mr. James H. Goodsell at the catalogue price, which was a ridiculously low one.

ESSEX COUNTY HUNT.—The kennel of this hunt has been moved from Montclair, N. J., to a most admirable situation near Llewellin Park, on Orange Mountain, Orange, N. J. The premises consist of six acres of ground, dwelling-house, stables, kennels, etc., etc., and is just the place for the dogs and puppies. The hunt are fitting up the house as a place of *rendezvous* for the members and subscribers and intend to make a first-class club-house of it. Since taking the new place the hunt has more than doubled its membership, besides raising a large subscription. Things are "booming" with the Essex County Hunt.

ABSENTEES AT THE SHOW.—It is with pleasure that we comply with the following request, although in our report of the show mention was made of several of the absentees; "Philadelphia, May 6.—Please mention in your next issue that my bitches—Champion Mina, Champion Ruby, Countess Bang, Luna May and Loss o' Gowrie—were not at the New York Show.—A. H. MOORE.

BOW BELLS.—In our report of the New York Show we omitted, under heading of Native English Setter Bitches, to mention that Dr. Nelson D. Hathaway's Bow Bells, Middleboro, Mass., received very high commendation. This was an oversight on our part, for in reviewing the class our judge was last limited when he awarded her name, "worthy of what she got; a superior bitch." Bow Bells is by Dash III, out of Opal and litter sister to Blue Dan, who also received v.h.c. in the open Native English Setter Dog class.

BARONET.—In another column Mr. H. W. Livingston advertises in the stud his lemon and white small pointer Baronet (Orgill's Rush-Owner's Rose). The dog showed such excellent and steady work in the field at the Eastern Field Trials Club meeting last autumn that we have no hesitation in calling the attention of our friends to this promising young dog.

BALTIMORE.—I have just returned from Baltimore, Md., having mingled not a little with the representative dog men while there. One of the members of the kennel club of that city tells me that their breaker has in the past year house-trained between thirty and forty setters and pointers for parties not belonging to the association, besides field-breaking ten or twelve. "Our club is self-supporting now," remarked my friend, "and we are enabled to keep our own dogs without expense, but no more bench shows for me, thank you."—HOMO.

MR. TRACY'S PICTURES.—Mr. J. M. Tracy, of St. Louis, Mo., the well-known artist, was at the New York Dog Show, and had four of his pictures on exhibition, the subjects were: "The First Point (prairie-chicken shooting in Minnesota). A Young Family (Kaye's Nannie, with litter of puppies by Brackett). Portrait of Mr. Jos. D. Luca's Mambrino Gift, Junior. Portrait of champion Leicester. These pictures can now be seen at Schuyler & Duane's, 189 Broadway, this city.

BEAGLES AT NEW YORK SHOW.—Our remarks on the beagles, bitches, at the recent show were mutilated in the hands of the printer. They should have read, "Bess, the second prize winner, is of a stronger build than the winner, and was a good second. Lucy II is very light in the barrel, but has a most perfect bound head." In Irish terriers, also, the period inserted after unfortunate sadly interfered with our meaning. That sentence should have read: "* * * it was unfortunate Dr. Niven could not help to swell the numbers, for he has several good ones."

MR. JACOBS' SPANIELS.—The present is a favorable opportunity to call attention to the advertisement of Mr. Jacobs, of Newton Abbott, England, as two of his spaniels were on exhibition at the New York Show—Dash, entered by Mr. A. H. Moore, of Philadelphia, and Benedict by the Lachine Kennel Club, of Whitestone. Mr. Jacobs as the breeder of Kafir, Zula, Squaw and Lass o' Devon has earned a world-wide reputation.

LOST.—On the morning of April 30, a large pointer dog, four years old, light liver ears, with fine lemon ticks all over body. A liberal reward will be paid by owner for his return. Address Mr. F. P. Magoun, 10 East Thirty-seventh street, this city.

LAVERACKS IN AMERICA.—In addition to the dogs under this heading, the dog Sting, blue Belton, whelped May 1, 1880, by Carlowitz out of Princess Nellie, bred by Mr. M. Von Culin, now owned by Mr. Osler Potter, Freeport, Ill., should be added to the list.

DOG FIENDS.—Last week some miserable scoundrel at Belmont, N. Y., poisoned two valuable dogs owned there, one a setter and the other a pointer. The setter was poisoned in the yard and died on his master's doorstep.

KENNEL NOTES.

*** Breeders and owners of dogs are invited to send memoranda of names claimed, bred, whelps, sales, etc., for insertion in this column. We make no charge for the publication of such notes; but request in each case the notice be made up in accordance with our form, that the name of both owner and dog be written legibly, or printed, and that the strain to which the animal belongs be distinctly stated.*

NAMES CLAIMED.

Wim—Mr. S. Gundelfinger, Brazil, Ind., claims the name of Finn for red Irish setter dog puppy out of Nell (Plunket-Stella) by Rudge (champion Elcho-Bridget Plunket).

Klamath—Mr. R. Pitcher, Rhinebeck, N. Y., claims the name of Klamath for liver and white ticked pointer dog puppy, whelped Nov. 1880, out of Lulu by Sensation II.

Pyrle—Mr. R. Pitcher, Rhinebeck, N. Y., claims the name of Pyrle for liver and white pointer dog puppy, whelped Nov. 27, 1880, by Sensation II. out of Lulu.

Modoc—Mr. R. Pitcher, N. Y., claims the name of Modoc for liver and white ticked pointer dog puppy, whelped Nov. 27, 1880, out of Sensation II.

Chief II.—Mr. A. Blair Kelsey, of Belvidere, N J., claims the name of Chief II. for his all red Irish setter dog puppy, whelped March 6, 1881, by Mr. Max Wenzel's Chief (Mr. A. H. Moore's Berkley-Duck) out of Mr. W. H. Pierce's Gussie (Pratt's Dan-Hollon's Darts Rose).

Chester—Mr. David Boyd, New York city, claims the name of Chester for setter dog puppy by Grouse Dale out of Blanche.

Harry Jr.—Dr. J. H. Meyer, New York city, claims the name of Harry Jr. for his black, white and tan pointer puppy by Dr. Smith's Sport out of Rena II.

Maud—Mr. J. E. Kline, Newport, R. I., claims the name of Maud for liver and white cocker spaniel bitch, whelped February 29, 1880, by McKoon's Rhusier out of McKoon's Fanny.

Mac—Mr. J. E. Kline, Newport, R. I., claims the name of Mac for liver with white breast cocker spaniel dog, whelped March 8, 1881, by McKoon's Rhusier out of McKoon's Fanny.

Faust—Mr. Wm. Loeffler, St. Louis, Mo., claims the name of Faust for black and tan dachshund puppy out of his Waldine by Dr. Twaddell's Unser Fritz. Waldine, first prize St. Louis, 1880. Unser Fritz, first prize and special Philadelphia, 1876; first prize and special Baltimore, 1877; and first prize and special Philadelphia, 1878.

Grethehen—Mr. Wm. Loeffler, St. Louis, Mo., claims the name of Juliette for tan colored Dachshund puppy out of his Waldine by Dr. Twaddell's Unser Fritz.

Juliette—Mr. Wm. Loeffler, St. Louis, Mo., claims the name of Grethehen for tan colored daschund puppy out of his Waldine by Dr. Twaddell's Unser Fritz.

Calmak—Mr. C. Du Bois Wagstaff, Tahiulah Kennel, Babylon, L. I., claims the name of Calmak for setter dog puppy by Grouse Dale out of Blanche.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, May 7.—The new matches opening on the Hill to-day did not fill very well, though the day was a fine one. Those riflemen who entered, however, found about the best shooting conditions of the year, the wind coming gently from the south and east. The condition of the new matches are as follows:

Sharpshooters' match (Massachusetts target)—Open to all comers, without handicap; rounds 10; entry fee, 25 cents; prizes to be won on the aggregate of five scores, which, in case of ties, shall be considered as a continuous score; 20 prizes: total value, $137.50.

Handicap match (Creedmoor target)—Open to all comers; rounds, 10; entry fee, 25 cents; 5 scores to win; competitors divided into classes on their record; 6 points on each score from the 49 class; 5 points from the 48 class; 4 points from the 47 class; 3 points from the 46 class; 2 points from the 45 class, and one point from 44 class; ties in same class to be treated as a continuous score; ties between different classes to be decided in favor of the highest class; 20 prizes: value, $137.50.

The best scores are appended.

Sharpshooters' Match (Massachusetts Target).

BOSTON, May 4.—The opening long-range match, season of 1881, was shot at Walnut Hill to-day. At the beginning of the match the wind proved troublesome, blowing from 6 to 4 o'clock, requiring constant watching; later on it settled to 4 o'clock, although blowing strong, and excellent records were made for opening efforts. The score:

J F Brown	800 yards	5 4 4 5 4 5 5 5 4 5 5 5 5 4 5—70
	900 yards	5 5 3 4 5 4 4 5 5 5 5 5 5 5 5—68
	1000 yards	4 5 4 5 5 5 5 5 5 5 4 5 5 5 5—71—209

MEDFORD, Mass, May 4.—To-day was a fine day for the shooting fraternity at Bellevue range, a goodly number being present. The early part of the afternoon a strong wind from 2 o'clock tended to keep down the scores, but later calm prevailed, and some good scores were made, as will be seen by the annexed summary of best shots at 200 yards.

Cadlin	4 5 5 5 4 5 5 4 5—47	Whitney	4 5 5 5 5 4 3 5 4—45

L W Farrar	46	47	56—149

C Edwards 45 48 53—146

The following are the prize winners in the several rifle matches for April:

Forest and Stream Match—W. H. Harrison takes the pipe with a magnificent record.

Limited Badge Match.—F. J. Rabboth takes first prize in this match with the following: 37, 37, 38, 39, 39—190.

Amateur Badge Match—W. Williams takes first prize in this match with a remarkably fine score for an amateur—37, 37, 38, 38, 38—188.

R Burlingame 36 36 37 37 37—183 D P Holder 35 35 36 36 37—179
L M Marshall 36 36 37 37 37—183

The following are the prize winners in the pistol match for April:

Experts' Pistol Match.

F J Rabboth	73	73	81—227
J H Williams	69	72	78—219

E Wilder 70 70 75—215
J Ames 62 70 70—202

Amateur Pistol Match.

W Williams	68	68	73—209

S Chase 56 58 59—173

THE BRIDGEPORT RIFLE CLUB held their regular semi-monthly shoot at Seaside Range, April 29. The weather was unfavorable for good shooting. A squall came up about two o'clock, and the wind from that time until night blew in fitful gusts, varying from northwest to west (we shoot from north to south), making it almost impossible to do fair shooting. The scores are appended:

Sharps Rifle Match, 200 yards.

H Nichols	4454534414—40	D L Marsh	4444534414—40
A C White	4544435141—41	S V Nichols	4435534444—38
Geo Quitmeyer	4454434444—40	S C Kingman	4434445604—37

Match for $10 gold plate, 200 yards.

Geo Quitmeyer	4445554—32	P M Beers	4535454—30
A C White	5545544—32	S H Hubbard	4454443—29
D E Marsh	4454455—31	H Nichols	4544584—29

Silverware Match, 200 yards.

D E Marsh	5444555—32	A C White	5444445—30
S H Hubbard	4444445—30	Geo Quitmeyer	4445454—30
W Reynolds	5444446—30	H Nichols	3455454—30

Record Match (Marsh Badge)—This match is for a gold badge presented by D. E. Marsh, to be shot for on the following conditions at 200 yards on a special target, with a 4-in. carton, 8-in. bullseye, 14-in. center, 20-in. inner, 26-in outer:

Geo Quitmeyer	5554546—32	A Higgins	4434032—20
A C White	5446553—32	Wm Spencer	2220346—19
H Nichols	6363525—29	F W Barber	3343004—17
D E Marsh	4540456—25		

Allcomers' and Allcomers' Rifle Match, 500 yards.

S H Hubbard	4434545455—43	D N Conger	5554402545—39
S C Kingman	2345445545—41	R S Bassett	4232434344—33

Sharps Rifle atch, 500 yards (carton).

D N Conger	5554555466—36	F W Peck	4525554544—43
S H Hubbard	5454555655—40	W Reynolds	4436545235—41
S C Kingman	4544654544—45	S V Nichols	4434433353—36

Record Match, Club Badge, 500 yards.

W Reynolds	4646444—32	S C Kingman	5546534—31

Field Glass Match, 900 yards.

S H Hubbard	4355551—31	D N Conger	5454443—29

There were several more scores to be shot on the last two matches, but the afternoon proved to short.

R. S. BASSETT, Sec.

THE NEW HAVEN RIFLE ASSOCIATION met Friday, April 30, and chose the following officers for the ensuing year:—President, Major James G. Stetson; vice-president, Colonel S. J. Fox; recording secretary, Charles E. Fowler; treasurer, Captain Andrew Allen; corresponding secretary, Lieutenant-Colonel L. L. Morgan; Directors, Captain Frank W. Tiesing, Captain E. J. Morse, James Pinkey, John M. Marlin, Major W. H. Layne, T. G. Bennett, Eli Whitney, jr. The annual membership fee was reduced to $1.

ALBANY, May 5.—Yesterday the regular matches of the season were reopened. The light was not of the best description, and a strong six o'clock wind, shifting to nine and three o'clock, rendered holding extremely difficult. The competition was won by G. H. Charles with a clean score of centres. The following were the scores made:

John Hodge Match—300 yards.

G H Charles, Bal S	4 4 4 4 4 4 4 4 4 4	—40
W E Flich, Bal S	4 4 5 4 4 3 5 3 4 *1—39

Peter Smith, R C	5	4	3	5	4	3—19
Charles G Theever, R M	*2	5	5	0	4	0—16

*Allowance to military rifles.

CREEDMOOR, May 7.—The opening of the range took place today with a fair attendance of riflemen. Two matches were fought, but the Remington gold match and the Winchester running deer matches lapsed for want of entries. The first contest was the tenth competition of the "We Will" match; prize, a Remington long-range rifle, value, $125, offered by the late Major Charles A. Coffin. Open only to members of the National Guard of any State; 300 and 600 yards; position at 300 yards standing, at 600 yards any with head toward the target; seven shots at each distance; weapon, the authorized military rifle in use by the organization of which the competitor is a member. Entrance fee, fifty cents. Prize to become property of competitor winning it three times (not necessarily consecutive). The leading scores were:

J L Paulding	300 yards	3 4 4 3 4 4—27
	600 yards	3 4 2 2 0 5 4—20—47
T J Dolan	300 yards	3 3 3 2 4 3—21
	600 yards	3 0 3 4 0 5 5—22—43

The sixteenth competition of the Ballard rifle match was then held. First prize, a Ballard mid-range rifle, offered by Messrs. Schoverling, Daly & Gales, New York; value, $80; and twenty per cent. of the entrance money; second prize, fifteen per cent.; third prize, ten per cent; fourth prize, five per cent. Open to all comers; winners to be handicapped one point for each time won; distances, 100 and 200 yards; position, standing; weapon, any rifle; rounds, seven at each distance; no cleaning allowed between either shots or distances. The rifle to be won three times (not necessarily consecutive), before becoming personal property, but any competitor making a full score (35 points) at each distance at any one competition to become the final winner. Entrance fee, fifty cents.

	100 yards	200 yards.	Total.
J W Todd	33	31	64
J R Grohman	32	31	63
N Ward	33	30	63
J Wood	33	30	63
E Alden	32	30	62*
E E Lewis	32	30	62
F J Donaldson	33	29	62
J L Paulding	33	29	61*
D F David	32	26	57*
J W Wright	28	26	54

*Handicap of 1 point.

POUGHKEEPSIE, N. Y., May 7.—The Riverview Military Academy had their second weekly shoot to-day. The Springfield cadet rifles were used; distance, 100 yards; regulation target. Below are the scores:

Bisbee	4 4 2 3—13	Marten	5 4 4 4 5—22
Patten	4 4 2 4—14	Murray, Jr	4 5 4 5 3—21
Farnesworth	3 3 3 3—12	Jones	3 2 4 4 5—18
Wilcox	3 2 3 4 5—17	Hermida	3 4 3 4 4—18
Smith	4 4 4 4 5—21		

BRUNTON RANGE, ELIZABETH, N. J, May 7.—The first matches of the New Jersey State Rifle Association were shot at Brunton Range to-day. Attendance good; weather, fine strong 8 o'clock wind. The following scores were made Sharps match for military rifles, 200 yards; ten shots; any military rifle:

Sharp's Match for military rifles, 200 yards, ten shots, any military rifle.			
Darr	5 5 4 5 5 4 5 4 4—45	Townsend	4 4 4 5 5 4 5 4 3—40
Howard	4 5 4 4 4 4 5 4 5—43	Collins	5 4 4 4 4 4 3 3 4—39

*Bullseye (5) on the wrong target. †Memphis Rifle Club. ‡German Rifle Club.

NEW ORLEANS, April 24.—The individual match for the pictures of the New Orleans and Denver teams, which constitute a portion of the Denver trophies was shot at the New Orleans Rifle Club's range to-day, and resulted in a victory for Gschwind. The detailed score is as follows, at 100, 200, 500 yards, and the totals:

Gschwind	24	20	21—65	Berceegey	21	19	17—57
G W Charlton	22	20	19—61	Guerin	20	16	17—52
Sport	21	19	20—60	Hanusell	14	14	20—48
Heiss	21	21	18—60	Knight	0	20	15—35
Selph	22	21	17—60	Collins	15	12	8—35
Ames	21	20	16—60	Henry	0	19	7—26
Gerteis	23	21	15—59				

NEW ORLEANS, May 1st.—The challenge of the Denver riflemen to the New Orleans marksmen, to shoot a match for a prize of a pair of elk horns on the one side, and a hogshead of sugar on the other, has been mentioned.

The date fixed by the Denver people was May 1, and the time between the receipt of the challenge and the day named for the contest was too short to allow the formation of a team. Captain Dudley Selph has therefore telegraphed as follows to Capt. John P. Lower, of Denver:—"Challenge received too late for May 1. Particulars by mail." The Denverites who handle the rifle are organized, and can pick a team to represent their city on short notice, but in this city there is no club of riflemen, and a team to represent New Orleans can only be made up after several competitive shoots in which all the Crescent City marksmen have a right to enter. This absolutely indispensable preliminary generally consumes from six weeks to two months, and it would be well for for all teams or clubs to remember this fact when drawing up challenges in the future. The second competition for the third Denver prize, offered for individual contest, took place to-day at the New Orleans Rifle Park, with the following result:

	300 yards.	200 yards	100 yards.
W Weiss	18	21	23
W A Arms	18	21	23
E Gschwind	17	20	24
G W Charlton	16	20	24
D Selph	18	19	22
J C Sport	16	20	24
L Gertels	12	20	24
G Hanswald	14	18	22
W Wilkins	9	17	23
T C Darell	13	14	17

SPRINGFIELD, Ill., May 5.—In response to the invitation of the Springfield Rifle Club, the celebrated rifleshot, Mr. W. Milton Farrow, attended a practice shoot at our Elliott Range to-day. The weather was fine, and but from two to three points on the wind gauge was required. Distance, 1,100 yards; 15 shots. Mr. F. used his Ballard rifle, the same one used by him in the match at Dollymount, and his record is believed to be the highest on record for the distance:

W M Farrow	5 5 5 5 4 5 5 5 5 5 5 5 5 4 3—71
W L Gross	4 5 3 5 5 5 3 5 4 3 5 5 3 3 5—61

Ties on 27: A. Q. Goud, Chas. Winslow, M. C. Hall and Henry A. Stetson, shot off at 21 yards. Won by Winslow breaking 9 out 10 balls. Card rotary trap. H. A. S.

SOUTH ABINGTON, May 7.—The second regular shoot of the Sportsmen's Club took place on the Park to-day. Card trap; 18 yards rise; 20 balls each. Badge becomes the property of any member winning it three times in succession:

Samuel Norton	19	S H Norton	16
C B Smith	17	D B Rowe	18
Wm Wilder	14	M W Lincoln	16
C W Bryant	14	C F Cook	15
C H Nute	15	J E Whildren	17
Geo Harlow	16	Warren Edson	19
H Vosnus	11	Geo Edson	17
C Whildren	16	Eugene Edson	15
W Alden	16	Wm B Lincoln	16
Thos Fish	16	Elmer Bates	16
F Packard	13	P Smith	5
A T Packard	11	C Whildren	14
H Whiting	13	W H Cook	14

In shooting off ties on 19 and 21 yards, W. Edson broke 10 straight, Mr. Norton missing his seventh, thus giving the badge to Mr. Warren Edson.

WEST HAVEN, Conn., May 4.—Regular weekly match at glass balls, the score was as follows: Alfred Hill broke 20 out of 20, Edward Ross 29 out of 34, Clark R. Shelton 22 out of 28, D. B. Wheeler 26 out of 31, Morris Isbell 16 out of 20, James Peck 16 out of 22.

FOUNTAIN GUN CLUB.—The annual meeting of the Fountain Gun Club was held May 2. The reports of the Secretary and Treasurer showed that the club had 174 active members, and eighty honorary members, and that including the scrip of the Long Island Association the club had a net balance of $753.62. The handicap committee reported that they had handicapped the members in three classes, A, B and C. In the A class in which the shooters are handicapped at not less than twenty-five or more than twenty-seven yards there are forty-eight, and in the B class in which they are handicapped at not less than twenty-two nor more than twenty-five yards there are forty-eight, and in the C class where the shooters are handicapped at not less than nineteen nor more than twenty-one yards there are seventy-six. The report was accepted and approved. The prize committee reported that for this month's shoot they had provided three special prizes—a handsome opera glass, a carving set, and an order for five dollars' worth of goods on E. H. Madison's. The classes drew for the prizes, and class A received the five dollar order, class B the carving set and class C the opera glass. Messrs. Frank C. Chamberlain and J. J. Bennett were taken from the honorary roll and elected active members by acclimation. The following gentlemen were unanimously elected members: Theodore Livingston, Josiah Howe, Major A. G. Constable, W. E. Dorwin, Robert E. Dunham, George T. Gregory, John Betts, Fire Commissioner McLoughlin and Cornelius Colyer. It was decided to send a team to the cup shoot of the Long Branch Gun Club. Another team was selected to shoot at Oyster Bay. Vice-President, George A Chappell; Treasurer, Harry G. Miller; and Secretary Charles W. Wingert; Trustees, Messrs. Hugh Goodwin, Moses V. Bayliss, F. C. Chamberlain Nathaniel Beggs and Lorin C. De Traine. The club diamond badge was then presented to Mr. Wingert he having won it the most times during the year. The Secretary was instructed to write and extend the courtesy of the Fountain Gun Club during the coming tournament to the Monroe County and Audubon Clubs of Rochester, to the Point Lookout Club and to the Seneca and Phœnix clubs of Seneca Falls.

FOUNTAIN GUN CLUB.—The monthly shoot of the club, May 4, 5 traps, 7 birds, resulted in this score:

First Class.

M Baylis, 27 yds	1111111—7	J James, 25 yds	1101111—6
G W Wingate, 27 yds	1111111—7	E Eddy, 26 yds	1011011—5
Dr Talbot, 27 yds	1111111—7	J T Slane, 25 yds	0111110
E H Madison, 27 yds	1111111—7	J Bohling, 26 yds	0010011—3
H Wm Stacey, 25 yds	1111111—7	J C Defraine, 25 yds	1100
M J Kearney, 25 yds	1110111—6		

Second Class.

D A Lenkin, 23 yds	1111011—6	C F Offerman, 23 yds	1101011—5
S B Hansen, 23 yds	1111010—5	Wm Hickford, 23 yds	1001011—4
John Akhurst 23 yds	1101111—6	H Miller, 23 yds	1001100—3
Theo. Livingston, 23 yds	1101111—6	P. Ravenhall, jr, 23 yds	0100110—3
W E Hunter, 23 yds	1110101—5	C Hemming, 23 yds	1110
Jas O'Connors, 24 yds	0111102—5		

Third Class.

L J Duryea, 21 yds	1110111—6	C A Lester, 21 yds	11000w
N Cook, 21 yds	0100111—3	B Cross, 19 yds	1000000—1
M O'Donnell, 19 yds	0101101w	W H Miles, jr, 21 yds	1001011—4
C Carroll, 19 yds	1100w	Mr Talt, 21 yds	000w
E D Bushnell, 21 yds	1000001—2	C Fish, 19 yds	0w

The ties for the first prize were shot off and Mr. Baylis was the winner, but on account of the lateness of the hour the ties for the second prize were not shot off. The third prize was won by L. J. Duryea.

MINER ROD AND GUN CLUB—Regular shoot on Thursday, May 5, 1881, at Springfield, Long Island.—Before the shoot took place a regular meeting of the club was held, with Vice-President James T. Davis in the chair. Mr. Henry Wallace stated that there were many good and valuable members in the club who take great interest in its welfare and are desirous of having the club incorporated according to law, and that it was desirable that the club be given a permanent name. Mr. Wallace therefore moved that the club be called the "Springfield Gun Club," and that the club be incorporated by that name, at the same time stating that this change was not suggested out of any disrespect to Mr. Henry C. Miner, its president. This motion was seconded by Mr. John B. Voskamp and was unanimously adopted. Major George Aery thereupon announced that Mr. Michael Englert had requested him

to present to the club a handsome gold medal, known as the Englert Tropoy, which was to be shot for at three regular shoots, 10 birds each. In a neat speech the vice-president accepted the trophy and thanked Mr. Englert for the same on behalf of the club. After the meeting adjourned the first shoot for the Englert trophy took place.

The following is the score: John B, Voskamp, 5; Wm. D. Steers, 5; James T. Davis, 8; Michael Englert, 7; John Wood, 9; Henry Wallace, 9; John A. Dinkel, 9; Major George Aery, 5.

Judge Dinkel hit the tenth bird fairly; the bird was a strong twister and died out of boundary, hence it was not scored for him. Mr. Henry Wallace hit his tenth bird, but it lighted on a tree out of boundary and was not scored for him.

PORT MORRIS, May 2.- Monthly glass ball contest of the Knickerbocker Gun Club took place on their grounds, April 30. 15 balls, 25 yards rise, rotary trap.

C E Baker.....1 1 1 1 1 1 1 1 1 1 1 1 1 1 1—13	
F B Chedsey.....1 1 0 1 1 1 1 1 1 1 1 1 1 1 1—13	
A A French.....0 1 1 1 0 1 1 1 1 1 1 1 1 1 1 1—12	
A Strenke.....1 1 1 1 1 1 1 1 0 0 1 1 1 1 1 0—11	
S Chubb.....1 0 0 1 1 1 0 1 0 0 1 1 1 1 1 1—10	
E P Morton.....0 0 0 0 0 0 0 1 1 0 0 1 1 1 1 1—6	
J V Seaman.....1 0 0 1 1 1 0 1 0 0 1 1 0 0 0 0—5	

Baker, first prize; Chedsey and French tied for second. In the shoot off, at 5 balls, Chedsey broke four and French two. Steinke received third prize. This match was shot according to the class shooting rules.—K. Y. C.

UNKNOWN GUN CLUB—Brooklyn, April 30.—Monthly match for a badge. Birds, 21 yards:

J Schlieman.....1 1 1 1 0 1 1—6	H Pantson.....1 0 1 0 1 1 1—5
M Chichester.....1 1 1 1 0 0 1—5	H V Staden.....1 0 1 1 1 1 1—6
Th Medder.....1 1 0 1 1 1 1—6	C Gulick.....1 0 1 0 0 1 1—4
H Knebel.....1 1 0 0 1 1 1—5	

In the decision of the tie between Schlieman and Medder eight birds were shot at. Schlieman killed five straight, his sixth fell dead out of bounds, and he killed his seventh and eighth. Medder killed five straight, missed number six, killed number seven and missed his last.

THE Long Island Forester Club held their first monthly shoot at glass balls for a gold badge Saturday, May 7. The badge was won by Mr. R. T. Sabin. The club, though young, are enthusiastic, and every fall go to Noyac, L. I., for a two weeks' expedition after the ducks and quail. The officers for the ensuing year are: Henry Thorpe, President; Charles M. Edwards, Vice-President; Robert T. Sabin, Treasurer; and Charles W. Field, Secretary.

BUFFALO, April 29.—Match between the Bradford Gun Club, of Bradford, Pa., and the Audubons of this city. The shoot was at ten single rises each twenty-one yards rise, from ground traps:

Audubons		Bradford.	
Fisher	1 1 0 1 1 1 1 1 1 1— 9	Linnaman	1 1 1 1 1 1 0 1 0— 8
Rafferty	1 1 1 0 1 1 0 1 0— 8	Grech	1 1 1 1 1 1 1 1 1—10

W. W. E.

KENTON COUNTY GUNNING AND FISHING CLUB—Covington, Ky., April 4.—This club will give a National glass ball tournament on May 17, 18, 19 and 20. Offering prizes amounting to about $3,000. We had a practice shoot on April 2. Glass balls, 18 yards rise, Mole traps. First match; 5 balls:

McGraw	1 0 1 1—4	Remington	1 1 0 0 1—3
Gustright	1 1 1 1—5	Hume	1 1 1 0 0—3
Hudson	1 1 0 0 0—2	Josie	1 1 1 0 0—3
Second Match.			
McGraw	1 1 1 0 1—4	Hume	1 0 1 1 0—3
Gustwright	1 0 1 0 1—3	Josie	0 1 0 1 0—2
Hudson	0 1 0 1 1—3	Smith	1 0 0 1 1—3
Remington	1 1 1 0 1—4		

Ties won by McGraw and Gustright.

Third Match.			
McGraw	1 1 1 1 1—5	Smith	1 1 1 0 1—4
Gustright	1 1 1 0 1—4	Josie	0 1 1 1 0—3
Hudson	0 1 1 1 1—4	Hume	0 1 1 0 1—3
Remington	1 1 1 0 1—4		

Ties won by Smith.

LEAVENWORTH GUN CLUB.—Shoot for the club badge April 26. Twenty balls each, ten from a revolving, and ten from a rotary trap; 18 yards rise:

E D Lecompte	01011 11111 11111 11111—18
C N Whitman	11111 11110 10111 11111—18
D B Hinman	01101 11111 11111 11111—18
E Haberlein	11011 11111 11011 10111—17
A Weimber	00101 11111 01110 11111—15
Chas McGee	10110 11111 11111 00101—15
B C Hinman	10101 11111 10100 10111—14

Five others shot. Lecompte, Whitman and Hinman tied on 18 balls. On the shoot off at five balls Lecompte won, taking the badge. A. Girard won the leather medal with a score of seven.

TOPEKA, Kan., April 26.—The tournament of the Topeka Gun Club opened in good style to-day. There were present to-day between thirty and fifty sportsmen, among them Gwyn Price, of St. Louis; Fred Erb, of St. Joseph; J. M. Hershey and Sam Black, of Osage City, and W. Ellet, of Eldorado.

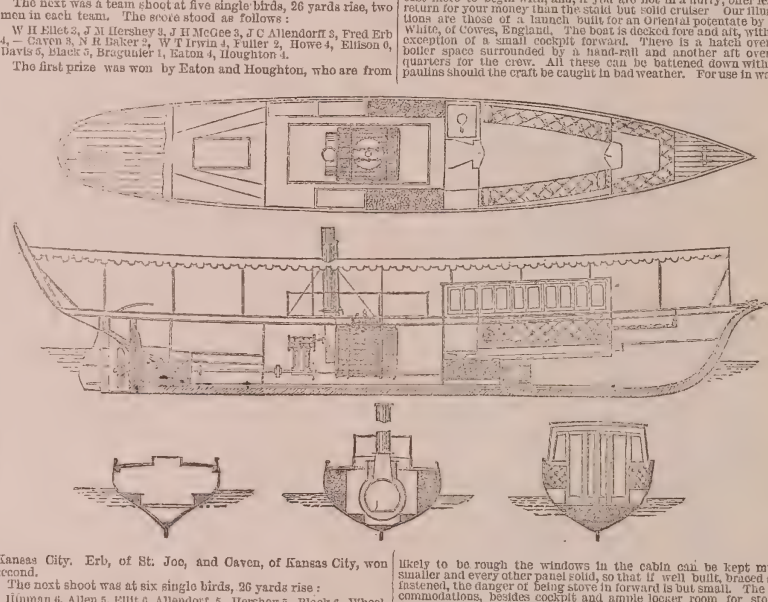
The tournament takes place on the Topeka Gun Club's excellent range in the Fair Grounds, where everything has been admirably arranged for the accommodation of those taking part.

The first shoot was at seven birds, 21 yards rise. The following shows the result:

W C Hinman 8, J U Allendorf 7, C A Wheeler 4, J H McGee 7, H W Howe 4, C McClaren 5, J M Hershey 7, W H Houghton 7, Theo Davis 6, W H Ellson 5, A G Allen 3, Amos Black 7, W H Ellet 6, D H Eaton 7, W H McCarten 5, B F Hoy 4, Geo W Bragunier 5, — Huestes 3, J H Burke 3, W T Irwin 6, N R Baker 6, — Gleason 4, D E Wellman 3.

The gentlemen who tied on seven divided first money. Those who killed six birds shot off their tie, and Irwin and Davis tied again and divided second money. Those who killed five birds shot off their tie, and Bragunier and Ellison tied again and divided third money. Fourth money was won by Howe.

The next shoot was at ten glass balls, 18 yards rise, from five Bogardus traps, placed five yards apart, for a purse of $300. The score stood as follows:



W C Hinman 7, D E Wellman 8, J V Rennick 8, W H McCarten 9, Theo Davis 6, W H Ellet 10, J H Burke 7, L S Hildebrand 6, W T Irwin 8, B F Hoy 9, Amos Black 9, J H McGee 9, J U Allendorff 7.

Ellet won first money, and Black after shooting with the others who broke 9 balls won second money. Irwin and Wellman divided third money.

The next was a team shoot at five single birds, 26 yards rise, two men in each team. The score stood as follows:

W H Ellet 3, J M Hershey 3, J H McGee 3, J C Allendorff 3, Fred Erb 4, — Caven 3, N R Baker 2, W T Irwin 4, Fuller 2, Howe 4, Ellison 0, Davis 5, Black 5, Bragunier 1, Eaton 4, Houghton 4.

The first prize was won by Eaton and Houghton, who are from

Kansas City. Erb, of St. Joe, and Caven, of Kansas City, won second.

The next shoot was at six single birds, 26 yards rise:

Hinman 6, Allen 5, Ellit 6, Allendorf, 5, Hershey 5, Black 6, Wheelock 5, Houghton 5, Fargo 6, Howe 4, McGee 4, Fuller 5, Ellison 5 Eaton 6, Erb 5, Caven 6, Davis 6, Irwin 4.

The ties being shot off, Fargo won first money, Hershey second, and Howe third.

The first match of the second day was at ten glass balls, eighteen yards distance, sprung from a rotary trap. The entries and score were as follows:

Wellman 7, Burke 9, Baker 9, Irwin 4, Hitman 6, Caven 6, Bingham 8, Reagen 6, Black 7, Fuller 8, Ellet 10, Erb 10, McGee 9, Davis 8.

Sept. 17.—San Francisco Y. C. Corinthian matches.
Sept. 24.—Beverly Y. C. Special regatta, Swampscott.
Oct. 8.—San Francisco Y. C. Moonlight cruise.
Nov. 8.—San Francisco Y. C. Closing cruise.

STEAM YACHTS.

IN our last issue we illustrated examples of open launches and cabin yachts suitable for bay and harbor work. This week we take the opportunity of presenting a type of launch very popular in England, and which will find favor with us in the future, being a cruising launch of fair speed, accommodation and ability. Such boats combine the handiness and moderate cost and draft of the ordinary launch and living accommodations of a permanent sort. Cruising launches, not being built solely for speed, are more reasonable in first cost, can be depended upon for strength and a long life, and their engines having a lower velocity of piston than those of racing craft, give much less trouble and annoyance, while their coal account is also less serious an item of expense. One or two hands compose the crew. Fuel can be carried for an extended period, as a minimum displacement is no object; and with ample draft, dead rise and an easy bilge, very fair rough water qualities may be secured, so that this type is especially adapted for family use, for sportsmen, for knocking about, and in short for steam cruising on small tonnage. To persons interested in mechanics, who like to observe the working of machinery, experiments, compare, investigate old theories and perhaps build others in their place, who like besides the romance of adventure, ever-changing scene and weather, and seek the brawny health of a life in the open air, we say invest in a cruising launch and take your time and comfort. Racing steamers are good in their way, but they cost more to begin with, and, if you are not in a hurry, offer less in return for your money than the staid but solid cruiser. Our illustrations are those of a launch built for an Oriental potentate by J. S. White, of Cowes, England. The boat is decked fore and aft, with the exception of a small cockpit forward. There is a hatch over the boiler space surrounded by a hand-rail and another aft over the quarters for the crew. All these can be battened down with tarpaulins should the craft be caught in bad weather. For use in waters

likely to be rough the windows in the cabin can be kept much smaller and every other part solid, so that if well built, braced and fastened, the danger of being stove in forward is but small. The accommodations, besides cockpit and ample locker room for stores, fishing tackle and shooting outfit, consist of a saloon 12 ft. long, w. c., pantry and galley, situated forward of the main machinery. The latter occupies 16 ft., and the remaining length abaft has two berths and storage for the crew. She may be steered by tiller on deck aft or by a wheel on the after cabin bulkhead, a position affording a good view ahead, and protecting the steersman from the weather and sea. This launch made a passage from Cowes to London in the teeth of a strong easterly gale, and any one who knows what Dungeness and the South Foreland are in such weather will appreciate her seagoing qualities. Her length is 50 ft.; beam, 10 ft.; draft forward, 2 ft. 10 in.; aft, 3 ft. 6 in.; displacement, 11 tons; screw, four blades, diameter 5 ft., 6 in.; pitch, 3 ft. 3 in. to 4 ft. 6 in.; two cylinders, diameter 7½ in.; stroke, 6 in.; grate surface, 5.5 sq. ft.; heating surface, 215 sq. ft. At the speed of 11.05 miles (9.58 knots) per hour, the number of revolutions was 268, and the gauge showed 16 lbs per sq. in. With a mean effective pressure in the cylinder equal to 75 per cent. of the boiler pressure, the power developed would be 43.4 I. H. P., which must be considered very satisfactory in so small a boat. The hull is built of teak and mahogany, laid in two layers diagonally, copper and copper fastened, and the interior fittings are of a rich character. The launch has been reported as giving great satisfaction and living up to her trial speed, a mean of 11 miles at sea.

THE INTER-STATE REGATTA.

There seems to be very little courage and enterprise of late among the owners of racing "open boats" in New York. Not only are we unable to organize a public Bay Regatta at home for a single day in the year for paltry money, but we refuse, through sheer inanition, to accept the cool challenge and tempting offers held out in other directions. As a very fair example of the state of feeling among owners of racing boats in these latitudes we publish the following correspondence between Vice-Com. Harris, of the Southern Y. C., and Capt. Ira Smith, owner of the well-known "Fleet-and-mainsail" Silence. The letter of Capt. Smith displays anything but the spirit we had expected and the double-back-acting guarantee demanded against loss is apt to be received with a smile quite as much as the anxiety displayed to do away with light sails, because forsooth our open-boat sailors conless themselves not as wide awake nor of feeling among owners of racing boats as these latitudes we publish the following correspondence between Vice-Com. Harris, of the Southern Y. C., and Capt. Ira Smith, owner of the well-known "Fleet-and-mainsail" Silence. The letter of Capt. Smith displays anything but the spirit we had expected and the double-back-acting guarantee demanded against loss is apt to be received with a smile quite as much as the anxiety displayed to do away with light sails, because forsooth our open-boat sailors conless themselves not as wide awake nor of feeling among owners of racing boats as these latitudes we publish the following correspondence between Vice-Com. Harris, of the Southern Y. C., and Capt. Ira Smith, owner of the well-known "Fleet-and-mainsail" Silence. The letter of Capt. Smith displays anything but the spirit we had expected and the double-back-acting guarantee demanded against loss is apt to be received with a smile quite as much as the anxiety displayed to do away with light sails, because forsooth our open-boat sailors confess

crew having whipped the fastest in the land! We are sorry none of our boats are likely to be seen on Lake Pontchartrain, for our yachtsmen sadly need to learn a few lessons from the South—how to rig, how to race and how to organize one great club for open boats—unlike New York, where every third clique must have its "club" and narrow localism must count its commodores by the legion, with high privates in the rear rank as scarce as white blackbirds:

NEW YORK, April 28, 1881.

TO EDWIN HARRIS, Vice-Com. S. Y. C.—

Dear Sir: Your favor of the 20th inst. to hand and to one who has not had a full experience in the costs of racing 27 ft. yachts it looks very liberal and would be if we were not in New York; but you must remember that only ourselves will come down under 30 ft. on any occasion, so that the club purse may as well be considered $1,000, two-thirds of which it will cost us to sail at New Orleans, which is an individual expense; so you must not think us exorbitant if we decline to visit your city unless we have some such understanding as the following: The club or any yacht-owner to allow the Northern yacht $500 for expenses, provided she loses the race and to guarantee to Northern yacht an outside bet of $1,000 against any Southern yacht of her class in the regatta. You may think this is complicated, but we will do the same here to any Southern yacht. Besides, we prefer by your rules that you allow all fore and aft sails, which we never use here (jib and 1 mainsail only), and that is a great advantage to you.

Hoping to get an early and satisfactory reply, as all my friends are anxious for me to give New Orleans a trial,

I am, very truly, IRA SMITH.

NEW ORLEANS, May 5.

TO Capt. IRA SMITH, New York:

Dear Sir: Your communication of 28th ult., addressed to Alex. Brewster, has been placed in my hands, and in reply thereto I will say that we would be very happy to be able to welcome you and your yacht to our proposed inter-state Regatta, but do not think we ought to be expected to appropriate the sum of $500 which you request for your boat if she fails to secure the prize of $1,000, $1,200 or $1,500, as the case may be, to defray expenses.

We will contribute $150 or $200 towards defraying your expenses (win or lose); and as for an additional wager of $1,000, the people will be open to you and you can buy yr ur own boat for as many thousands as you may see fit to put up.

I had hoped that by offering the purses we have that your yachtsmen would be eager to send one or more boats here to contest for them and that your city, so liberal in all things, would, through those devoted to yachting, make up a small purse to defray the expenses of a boat and crew to this locality for the glory of beating us in our own waters.

I do not see that we would have the slightest advantage in carrying light sails, your crews are inferior to none and it is certainly as fair for one as for the other.

It is our sincere wish that you pay us a visit. We will do everything in our power to facilitate you. We have as fair a sailing course as it is possible to have anywhere and you can be assured of a hearty welcome and our sincere congratulations should you win.

Very truly,
EDWIN HARRIS, Vice-Com. S. Y. C.

Editor Forest and Stream:

Since my last, of recent date, the S. Y. C. has determined to offer $1,500 as a prize should only *one* of your yachts honor us with a visit. Of course we should not be expected to defray any of the expenses of the outcoming yacht. When Mr. Israel went North even the entrance fee of $5 was required before his yacht could hoist sail. The expense of bringing out and taking back a yacht and sailing-master with five men would be about $60, unless some arrangement could be made at your end of the line with your steamship companies for a further reduction of rates, which I am sure could be done. PONCHARTRAIN.

YACHTING NEWS.

MYSTIC YACHT CLUB has been organized in Detroit, Mich. Officers: Sailing Master, Lon Oviott; Treasurer, Harry James. Committee, H. S. Starkey, A. Henkel, Lon Miller, W. Thayer.

CHALLENGE ACCEPTED.—The owners of the schooner Con O'Connor, Reside N. Y., have accepted the challenge of the sail Mr. Hyde Bowie's schooner Nellie for $1,000. Match to be sailed after July 4.

NEW DELAWARE YACHT.—The T. J. Pratt, the latest addition to the Quaker City Yacht Club, has been launched at Bridesburg. The dimensions are: Length on deck, 26 ft. 4 in; beam, 11 ft.; depth, 4 ft. 6 in.; mast, 40 ft.; boom, 35 ft.; gaff, 20 ft. 6 in. She will carry about 150 yards of canvas.

ALBANY YACHT CLUB.—*Editor Forest and Stream:* We have elected the following officers for an active season: Commodore William W. Grey; Vice-commodore, Daniel G. Sibley; Secretary, Albert Albers; Treasurer, H. D. Evans. Board of Stewards—R. E. Cooley, George Hawley, W. Carmen, Col. John D. Brooks, Henry Sann. We are building a new club house across the river.—W

MEASUREMENT.—"Bigness is power," says Capt. Painter, of Camden. Exactly, and not length, for length is not necessarily "bigness." Tax bigness and you tax power as you ought. Tax length and you tax shape in a special direction, for evade which the boat shrinks and spreads in another direction in the effort to obtain that "bigness" which Captain Painter justly calls "power." It is this bigness of a yacht time allowance should in logic be founded upon.

NEW YORK CANOE CLUB.—In accord with the suggestions of a correspondent in these columns, the New York C. C. has determined to organize weekly or fortnightly local cruises of short duration. These cruises will appeal to the army of a hundred thousand dyspeptic citizens with the result that they can be induced to go "sailing for a paddling in a canoe, doctors will have to take to telegraphs, on newspapers. No worry, fret, noise, struggle, but all nature, wild, broad and beautiful without, and freedom, health and accumulated vigor within.—A. H. SIEGFRIED.

CLEVELAND YACHTING ASSOCIATION.—All hands are overhauling their ships at present. The Gerlach Brothers have launched the Ida, and she is now receiving a thorough overhaul. They are also having a new sloop built, 35 ft. over all, 30 ft. on keel, 11 ft. 5 in. beam and 2½ ft. of water, with a cabin 11 ft. long and a double board, each piece being shaped like a quadrant with the vertical edge forward. Hoist of mainsail, 37 ft.; boom 36 ft., and gaff 14 ft., proportions which vary very much from coast customs. The club anchorage will likely be located inside the government breakwater, nearly completed. In the meantime a temporary boat house will be completed, and a windlass and marine railway on the beach will be used to run the fleet high and dry in case of an on-shore gale. Two new yachts are building besides one of 30 ft. by Geo. Parish, and one a schooner of 33 ft. length, 13 in. beam and 3½ ft. water. The Penny Press is to sail for Buffalo.

FUNNY LOGIC.—A highly esteemed contemporary, trying its hand at the cutter business, thinks that if Mr. Lee's new cutter had more beam she would have more room and be faster. This is worth knowing, being tantamount to saying that the largest boat is the biggest. Mr. Lee owes profound thanks for the information that a forty-tonner is larger and more powerful than a thirty. It is barely possible that Mr. Lee did not want more than a thirty-ton boat and preferred to put that size in length rather than in beam. Our contemporary ought to be above comparing yachts by their length only, or else touch very gingerly on matters it is likely to make a "mess of. The new cutter will be a grand boat, with greater accommodations than shorter, broader boats of the same size, and more powerful for all practical purposes. At sea she will sail the flat floors hull down, and we venture the opinion that she will be a tartar in light airs. In a strong lower sail breeze and smooth sea our crack sloops will probably be better to windward. The outer shows a very powerful midship section, a cross between that of the well-known Vanessa and Dr. Hatcher's old-time Muriel of forty tons. Aft the stern and fine quarters bear the Wivenhoe stamp and remind one of the schooner Sealechi. There is but one objection to the cutter, that is her excessive cost. This is not due to her proportions, however, but to a style of build which for strength, durability and finish has never been approached in our practice. There will be no yellow pine, no treenails, no iron fastenings in the new boat, but oak, rock elm, teak, mahogany and copper and yellow metal throughout. We understand buy or storms, but the opening of the cruise has been a success nevertheless His proposed route embraces the Alleghany, Ohio and Mississippi, from Cairo to Rock Island, then the Rock River and lakes to Pewaukee, Wis. From there he will cross Lake Michigan by steamer, cause across the State, taking in what sport is to be found on the trip. From Sheboygan on the straits of Mackinaw he will go down the lakes to Kingston, Canada, thence down the St. Lawrence, through the mazes of the Thousand Islands. The Richelieu will next be worked up stream into Lakes Champlain and George, the Hudson River and home to New York, a total run of 3,000 miles and one of the longest voyages of the kind ever made. The Commodore will, of course, arrange to be present at the great camp meet on Lake George in August, and there, before a blazing camp fire, will have to depart his adventures to a host of friends and knights of the double blades. His "traps" for the voyage consist of a tent, two blankets, rubber outfit, stove of his own device, camp utensils, clothing in an India rubber bag, fishing tackle and compass—but not a single gun. More deadly than a jack-knife, Mr. Chase declaring that he has traveled over 5,000 miles in canoes, never had a cent's worth stolen nor was he ever molested in any manner, for even the roughest crowd treats canoists with a mixture of chivalry and awe. He left Cincinnati April 25 hale and hearty, and looking forward to his long voyage with pleasurable expectations.

CRUISE OF THE SCHOONER SUNSHINE, 1880.

THE Atlantic Yacht Club was under orders to start on its annual cruise, and to rendezvous off Whitestone, Saturday, July 31. The yacht Sunshine, in obedience thereto, made ready on Thursday. The sailing master was directed to remain at anchor off the club house at Bay Ridge till Friday, A. M., and then to go to the foot of Court street for water and ice, and to make her way as speedily as possible thereafter through "Gate" to the rendezvous, so as to be there before the Friday afternoon steamboat would arrive.

The steamboat brought us to Whitestone, and on stepping on board the schooner the captain received the report of the sailing master, from which it appeared that instead of coming orders he had left the anchorage off the club house Thursday afternoon, and consequently all the provisions for the cruise of a highly strengthening character had been left behind, and the yacht was not more than half ready to start on the proposed month's cruise. Another sailing master could have been procured there would have been no difficulty in the management of the yacht that same night. But it was easier to send for the boxes, and the Lieutenant was sent to the city early that evening with orders to manage in some way to get the missing provisions and also a sail which had been left behind to the yacht on Saturday in time to start with the fleet.

A pleasant evening under the awning—restful and full of anticipation—helped to dissipate the vexation caused by the thoughtless disobedience of the master; and the sanitary talk during supper was long enough to whom they could present their bills, we enjoyed the evening in talking over past recollections of former anchorings in that same spot, the most important of which was an experience unusual in yachting, that of the storm with a stroke of lightning which passed up the wire shrouds within two feet of the owner's head and tore the topmast into bits, but hurt no one.

Saturday morning was ushered in by the washing down of the decks and the purifying of things generally in order for the day. The fleet began to gather in the early afternoon and by 4 o'clock P. M. the yachts were anchored around flying the red letter A. Trains from the city with yachtsmen and their friends arrived at about 5:30 P. M. and shortly afterward the signal gun from the flagship Agnes started the fleet off for Black Rock Harbor, the place appointed for the yachts to spend Sunday.

Owing to the crowd which the train brought down our Lieutenant had great delay in getting the freight conveyed to the dock, so that we did not get off with the fleet. We were second Throg's Neck before we were able to weigh our anchor and get off, being the last leader and the Triton awaiting the arrival of their guests on the New York boat. Rounding the point of the Fort the white sails and red signals of the fleet were seen in the distance, pushing their way rapidly through a large fleet of coasting craft of all kinds that had left Sands' Point and Execution Rock astern and the wind dropping down with the sun, it was not until 10:30 P.M. that we came to anchor in Black Rock. The sloop Panita anchored first and the schooner Triton, which we had left at Whitestone, next, and during the night also, had gone through the entire fleet and anchored second. The schooner Madcap, Captain Shaw, came to anchor in the morning, having gotten aground coming in and therefore waited for the flood to let her off.

Sunday.—Beautiful indeed, the fleet of over twenty sails appeared as the clear morning light shone down upon them, bringing out their graceful outlines against the dark blue water and the red letter "A" signal floating from the mast heads. During the day the steam launch description came into the bay from Bridgeport and adjoining harbors to see the sight and enjoy the novelty the occasion offered. By orders of the Commodore, Chaplain Rev. William H. Thomas was directed to hold service on board the yacht Sunshine at 11 A. M., and about that time the gigs and yawls of the different yachts started from the shore loaded with guests and friends from the hotel and village. The crews in their navy blue and giving way in true man-of-war style presented a pretty sight as they drew boat after boat across the water with their freight of ladies and gentlemen. The services were simple—the reading from the Bible with a hymn, and an excellent sermon, not too long, from the text in Hebrews ii., 7, as seeing him "who is invisible." After the services there was a general intermingling of friends and acquaintances. The Lieutenant and his friend Mr. D. Swan, spent the day in the afternoon and evening at the hotel, and a friend of the Captain, Mr. C. of New Rochelle, and Captain Frank D. Swan, of the Madcap, took dinner and spent the afternoon with us on board the yacht. At four bells all hands turned in to be ready for the early start next morning.

Monday, Aug. 2.—At 6 A. M., with light S S W breeze, upon the signal gun the entire fleet stood out of the harbor for the run to New London. It was close hauled till we weathered the buoy off the Black Rock lighthouse, some of the yachts having to take a short hitch in order to weather it. The breeze rapidly with the bends of canvas fluttered to the breeze as each rounded the buoy was a sight well worth seeing. A fair wind continued all day freshening toward afternoon, so that many a topmast buckled as if for the last time. The Crusader led the fleet, her new sails completely hiding the dark outline of her hull. The Triton, although smaller, was close in her wake, crowding her all the day, scarcely a minute astern. The Crusader's short, stumpy stern was not short enough to save her time allowance that day, for she was outrounded by the size of these competitors fairly blew over the water, now nearing the one, now the other, then dropping astern, and again thrusting her beak in front of both. The reputation for speed which Captain P. got for his new boat these two first days was not lost during the remainder of the cruise, though sometimes it was whistled that good old Commodore Cooper's spirit had been there with the Orion to "give her a try." The Stella, sadie and Corpus Hada had a very pretty race within a stone's throw of each other, almost the whole day. The Stella passed New London Lighthip first. Her talkative competitor, the Lizzie L., was far astern—all what could be seen of her was her washer bow ploughing through the swell. The champion pennant was not even visible, though not because it was worn out.

The fleet anchored well up New London Harbor off the town; the first reaching there at one o'clock and the "whipper in" about three o'clock in the afternoon; a fair run, the distance being fifty-eight miles. The schooners came in exactly in the order of their length. The only mishap was that the Dolphin lost her topmast off Thimble Islands. Col. and Mrs. W.; friends of the Captain came aboard in the afternoon, and we persuaded him to go with us to Block Island the next day and he promised to be on board the next morning at nine o'clock sharp. The Chaplain and Captain took dinner with our friends on the Madcap and did justice to as choice a repast as a first-class cook could get up, flavored by the most genial hospitality of Captain L. D. Shaw. In the evening the Lieutenant, representing the yacht, went with others to a hop at the Edgecombe House, where the family of our Commodore was spending the summer. What time he returned no one knew.

TO BE CONTINUED.

The greatest appetizer, stomach, blood and liver regulator on earth—Hop Bitters.

T. E., Dodgeville, Wis.—Your communication was anticipated in a previous number.

P. P.—The reply, "You ought to find something better than fowl to shoot," had reference to barnyard fowl.

C. S. KELSEY.—Mr. C. J. Maynard, of Ipswich, Mass., is preparing a book on Florida birds. You will do well to procure a copy of that when published.

JOHN ZICKLER.—Your question still remains unanswered, because you do not say what city you wish to fish near, nor whether you want trout or sea fishing.

H. J. L., Chicago, Ill.—Range of 1876 model, 45-60, is 800 yards. Agency of Sharps rifle, Edwin C. Harris, Broadway, New York, is same standing advertisement in this paper.

G. E. J., New York City.—You fail to give the height of your dog at the shoulder. The beagle should not exceed 15 inches. From your description we fancy your dog leans toward the harrier breed.

S. M. D., Natchez, Miss.—The dealers who sell glass balls can supply you with score cards and books. Write to any of the New York firms whose addresses you will find in our advertising columns.

C. W. A., Newark, N. J.—Will you be kind enough to inform me if the pyramid TROUT RAISE has been changed in N. Y. State? As I understand the law it is open from April 1 to Sept. 1. Ans. The law is as you state it.

J. E. K., Newport, R. I.—Twenty numbers of Vero Shaw's Book of the Dog have been delivered to subscribers. Ten more numbers of the serial will follow. Cost 40 cents a number. We can furnish the whole or part.

W. M., South Worcester.—Will you please give me the address of a reliable breeder of game fowls? Where may I obtain some of the best strain of pit fowls known to the world? Ans. "Game fowls" are out of our line. Consult some of the police gazettes.

W. H., Boston.—The paper you inquire about is published by the Government. It constitutes No. 91 of the Bulletin of the U. S. National Museum. Your representative can get you a copy, or you might write to the author, care Smithsonian Institution, Washington, D. C.

W. H. J., Philadelphia.—Can you furnish me the back numbers of FOREST AND STREAM containing Dr. Henshalls black bass letters? How many are there? Ans. Yes. Ten or twelve are in stock. Price 50 cents. We presume that they will be incorporated in Dr. Henshall's "Book for the Black Bass," for notice of which see our advertising pages.

AFRAID OF DETONATION, New Jersey.—1. You will find the detonating nature of the so-called Dittmar "sporting" powder fully explained in our pamphlet, of which we send you a copy. 2. We know of no New York dealer in sportsman's goods in the city who can furnish you with the powder. They do not allow it in their stores. 3. The nature of the spontaneous combustion is a plausible one.

R. C. S., Rockett, Texas.—You are now publishing the articles on carp by Mr. Hessel by request. The FOREST AND STREAM is the recognized organ of fishculturalists, and the latest fish culture news is always to be found in its columns. Fishculturalists who communicate with other papers find their articles only reach a few persons, while in our columns they are read by all. Hence we find they look for news of fish culture in all lands. There is no other paper which attempts to rival us in this matter.

ENGLISH SPORTSMAN, Carthage, Mo.—We would recommend your going from Kansas City to St. Paul, and thence to Brainerd, Minn., by rail. Make that your headquarters. You can probably get supplies and guides there, and thereabouts you will find all the fishing that you desire. The country is full of lakes which contain black bass and pike in great numbers. There are also grouse, ducks and deer in their season. Near Crowing there is, or used to be, excellent fishing, and of the Otterlail region, a little farther west and to be reached by the N. P. R. R., the same is true. Let us know if we can advise you further.

CONVENTION OF N. Y. STATE SPORTSMEN'S ASS'N.

E. H. Madison, of 864 Fulton street, Brooklyn, has, by especial courtesy of the Long Island Sportsmen's Association, been granted the exclusive right to furnish ammunition, etc., on the Brighton Beach Grounds in June during the Convention, where a choice selection of sportsmen's sundries will be constantly on hand. Shells loaded at reasonable prices.

CAMP LIFE IN THE WILDERNESS.—See one edition now ready. This story describes the trip of a party of Boston gentlemen to the Richardson-Rangeley lakes. It treats of "camp life," indoors and out, is amusing, instructive and interesting; 224 pages, 12 illustrations. Price 25 cents. By mail, postpaid, 30 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

MOOSEHEAD LAKE and the North Maine Wilderness Illustrated. The only complete and comprehensive guide book to Northern Maine and the head waters of the Kennebec, Penobscot, St. John's and Aroostook rivers, and the numerous lakes and ponds connected with them. 256 pages. 30 illustrations and large map. Tinted paper, illuminated covers. Price, by mail, post-paid, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

Sportsmen's Goods.

Owing to the recent failure of a large Manufacturing Firm, we have been enabled to purchase several thousand miniature lanterns (as shown in cut) at a very low price. They are entirely new in design, and the most popular charm of the day. Can be worn as **Ladies' Bangle Charms, or Gents' Watch Charms.** The frame of them is made from **ROLLED GOLD,** the colored **CRYSTAL GLASS,** in either White, Red or Blue. Heretofore the regular wholesale price has been $24.00 per dozen, but we are now enabled to mail **Free, ONE ONLY,** to any person on receipt of **ONE DOLLAR** and this advertisement, thus giving to the readers of this paper the benefits of our purchase. To each person ordering we will mail our Catalogue and expect to gain new customers for other goods. As we can only furnish a limited number, we insert this advertisement **one time only** in this paper, hence require you to cut it out and send to us with your order on or before *August 31st, 1881.* If you send three green stamps with your order we will send by **Registered Mail.** Don't fail to send for this beauty before it is too late, and if you are not perfectly satisfied we will refund you the money. As to our responsibility we refer to any Bank or Express Co. in this city. Address

C. W. PETTIBONE & CO.,
55 Maiden Lane, New York.

The Dudley Pocket Cartridge Loader,

with the last improvement, is now ready—8, 10, 12 and 14-gauge. It extracts "tight shells," uncaps, recaps, runs and crimps. Nickel plated sample sent by mail on receipt of two dollars. For extracting and recapping only the original Dudley Recapper is all that is needed, as thousands can testify. Sample sent on receipt of fifty cents; P. O. stamps taken in payment. Send for circulars to DUDLEY & CO., Poughkeepsie, N. Y.

Important Notice to Gun Clubs.

THE FLYING CLAY PIGEON

and Trap. Ready about May 15. Send for circular to GEO. LIGOWSKY & CO., 83 Vine St., Cincinnati, O.

Hotels and Routes for Sportsmen

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Virginia Midland R. R.

The Safest, the Shortest, the Best Route to Florida and South.

Pullman Palace cars direct without change. Guns and dogs carried free. Leaves New York at 10 P. M. and 3:40 P. M.; Washington, 7:10 A. M. and 10 P. M. MERCER SLAUGHTER, General Ticket Agent, Alexandria, Va.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Pomeroy House, that city, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long, I can furnish parties going with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

SARANAC LAKE HOUSE,
(Formerly "Martins,")
ADIRONDACKS.

I beg leave to inform the traveling public and old patrons of this well known and popular resort that I have purchased it, and will open it for visitors on or about May 15. The house is being thoroughly renovated with new furniture throughout, and every comfort and convenience to make it equal or superior to any of the kind in the country. An A1 table; best of attendance; superior and experienced guides. Neither expense nor pains will be spared to give my guests satisfaction.

Address MILO R. MILLER,
Saranac Lake, Franklin Co., N. Y.

FARRAR'S POCKET MAP OF THE RICHARDSON-RANGELEY LAKES REGION, including all the lakes, ponds and rivers of that famous country, as well as the head waters of the Connecticut River, Connecticut and Parmachenee Lakes, etc.; cloth bound. Price, post-paid by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVO, REDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.
FRANK THOMSON, Gen'l Manager. feb17-tf

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kanawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

The Route of the Tourist,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntingdon, W. Va., from the West, Northwest and Southwest; at Charlottesville, Va., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line via Richmond, Va., and Huntington, W. Va., between the mouth of Chesapeake Bay and the Pacific Ocean.

CONWAY R. HOWARD,
G. P. & T. A., Richmond, Va.

Old Dominion Line.

THE STEAMERS of this Line reach some of the finest waterfowl and upland shooting sections in the country. Connecting direct for Chincoteague, Cobb's Island, and points on the Peninsula, City Point, James River, Currituck, Florida and the mountainous country of Virginia, Tennessee, etc. Norfolk steamers sail Tuesday, Thursday, and Saturday. Lowest rates. Money saved. Time saved. Sail 3 P. M. Full information given at office, 197 Greenwich Street, New York.

Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RETREAT, SHINNECOCK BAY, L. I.

BY A PRACTICAL GUNNER AND AN OLD Bayman. Has always on hand the best of boats, batteries, etc., with the largest rig of trained wild-geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests, and satisfaction guaranteed. Address Wm. N. LANE, Good Ground, L. I. Refers by permission to J. B. Shepherd, 891 Broadway and, Wm. Durcher, 320 Broadway, N. Y.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Eustis, and buck board teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat and oars $1 per day. Address KENNEDY SMITH, Eustis, Maine.

$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.

Hornbeam Rods

A SPECIALTY.

W. HUNTINGTON,

WILTON, CONN.

Makes a specialty of the manufacture of FINE HAND-MADE RODS of Hornbeam for fly-fishing. Every fly-fisher should have one of these rods, for whatever preference he may have these are the only thoroughly reliable rods, secure against breakage and capable of real hard usage. With one of these rods a sportsman may venture into the woods for a season and take no other rod, and be fairly sure of returning with it in serviceable condition. As made from wood of my own cutting and seasoning, they are powerful, easy in action and full of endurance. For circular send to WALLACE HUNTINGTON as above.

THREAD-WOUND, LONG-RANGE

SHOT CARTRIDGE CASES

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequalled in strength, quickness and cleanliness; adapted for glass ball and pigeon shooting. Packed in 1lb canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass ball, pigeon, duck and other shooting, with either muzzle or breech-loaders. Packed in 1lb and 5lb canisters and 6¼ and 12½lb kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern, will be found well adapted for glass ball and pigeon shooting. Made of two sizes, only No. 7 and No. 8, No. 7 being the coarsest. Packed in 6¼lb kegs and 1lb canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain for pistol shooting. Packed in 1lb canisters and 6¼ lb kegs.

Dupont's Rifle Fg. "Sea Shooting."—FFg. and FFFg. The Fg, for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½lb, 1lb and 5lb canisters, 6¼, 12½ and 25lb kegs. Fg coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by **F. L. KNEELAND, 87 Beaver St., N. Y.**

N. B.—Use none but DUPONT'S Fg. or FFg. for long-range rifle shooting.

MANUFACTURERS OF

GUNPOWDER.

Hazard's "Electric Powder."

Nos. 1 (fine) to 6 (coarse). Unsurpassed in point of strength and cleanliness. Packed in square canisters of one pound *only*.

Hazard's "American Sporting."

Nos. 1 (fine) to 6 (coarse). In 1 lb. canisters and ½ lb. kegs. A fine grain, quick and clean, for upland prairie shooting. Well adapted to shot guns.

Hazard's "Duck Shooting."

Nos. 1 (fine) to 5 (coarse). In 1 and 5 lb. canisters and 6¼ and 12½ lb. kegs. Burns *slowly* and very clean, shooting remarkably close and with *great penetration*. For field, forest, or water shooting, it ranks any other brand, and it is equally serviceable for muzzle or breech-loaders.

Hazard's "Kentucky Rifle."

FFFG FFG, and "Sea Shooting" FG in kegs of ¼, 12½, and 6¼ lbs. and cans of 5 lbs. FFFG is also packed in 1 and ½ lb. canisters. Burns strong and *moist*. The FFFG and FFG are favorite brands for ordinary sporting, and the "Sea Shooting" FG is the standard *Rifle* Powder of the country.

Superior Mining And Blasting Powder.

GOVERNMENT CANNON and MUSKET POWDER; also, SPECIAL GRADES FOR EXPORT, OF ANY REQUIRED GRAIN OR PROOF, MANUFACTURED TO ORDER.

The above can be had of dealers, or of the Company's Agents, in every prominent city, or wholesale at our office.

ANSWERS TO CORRESPONDENTS :— 318

TO CORRESPONDENTS.

The FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen.

Communications upon the subjects to which its pages are devoted are invited from every part of the country.

Anonymous communications will not be regarded. No correspondent's name will be published except with his consent.

The Editors cannot be held responsible for the views of correspondents.

All communications of whatever nature should be addressed to the Forest and Stream Publishing Company, Nos. 39 and 40 Park Row, New York.

FOREST AND STREAM.

Thursday, May 19.

We are pained to learn of the death at Philadelphia on the 11th inst. of Dr. Chas. E. Cady, the writer of the sketch "In East Tennessee," published in our issue of March 7, and of frequent communications which have appeared in the FOREST AND STREAM in the past months. We had never met Dr. Cady in person, but he was one of the scores of correspondents with whom we enjoy a most pleasant epistolary friendship. The formation of such acquaintanceship is among the amenities of editorial life. The correspondence of a widely circulated journal is voluminous, and extends to scores of persons who, in time, are regarded as personal friends. Possibly the knowledge we thus gain of an individual is imperfect; at the best it reveals but one part of his personality, and this may be the side the least known to those who are in daily intercourse with him. The man who appears in his letters is not the man who mingles with his fellows; yet who shall say which is the more true revelation of character—the written or the spoken thought?

The NEW MICHIGAN BILL which has passed the House and Senate of that State, and at the time of our correspondent's writing, was awaiting only the Governor's signature to become a law, is a decidedly wise provision. It prohibits the exportation of game from that State. We long ago expressed the conviction that only by the enactment of such laws would the Western States save their game from the refrigerators of the great market centres. The Michigan Sportsmen's Association originated the non-export bill, and deserve the credit of it. They will be indorsed by all classes save the nomads who butcher game for the market. It is to be hoped that other States may follow the wise lead of Michigan in this matter. By cutting off the traffic in game, the far-seeing societies who are attempting to check extermination have attained a notable advance toward the accomplishment of their object.

THE DEVELOPMENT OF THE GUN.

THE breech-loading shotgun embodies a perfection attained after centuries of slow development. It is a product of the labor and skill of successive generations of workers and thinkers.

Of the first firearm we have no record. Its experimental discharge must have been regarded as a wonderful and noteworthy event, but the echo of that report had died away long before the time of written history. The invention of gunpowder is one of the disputed dates of history. It is not improbable that the inventor of the rude primitive cannon made his experiments before Moses wrote the book of Genesis. In the Gentoo laws, a code believed to have been coeval with the Jewish law-giver, mention is made of gunpowder as applied to firearms. For the prototype of our breech-loader, then, we must go back at least to India centuries ago. Gunpowder is believed to have been introduced into Europe in the seventh century, and its adoption for firearms to have been general in the thirteenth century.

The first guns must have been crude affairs, for those which came later, and of which fair representations have been preserved to us, were exceedingly rude, clumsy and inefficient. They were made of wood, bound with iron bands; formidable for the actual damage done by their projectiles less than for the terror inspired by their belching forth of fire and smoke.

The first mention of cannon throwing stones is of those employed at the siege of Seville, in 1247. Leaving aside now the successive steps in the perfection of cannon and large guns, and following the advance in the single line leading to the sporting shotgun, we find the next step to have been the invention, in the fourteenth century, of small cannon which could be carried into the field and manipulated by three or four men. Then came semi-portable weapons fastened to long stocks, the muzzle end resting on a forked stake support, and the other end upon the ground. Another advance was the *bombardello*, or small bombard, fastened to a straight piece of wood, supported against the shoulder and fired with a match. Later followed the hand culverin, with bent stock and flash pan, and fired with a match. The soldier armed with the culverin and *bombardello* had, we are told, in addition to the unwieldy weapon itself, his coarse powder for loading in a flask; his fine powder for priming in a touch-box; his bullets in a leathern bag, with strings to draw to get at them; whilst in his hand were his musket rest and his burning match. It is needless to say that he must have risen very early in the morning to have brought much venison home at night with such a rig as that. But the old worthies thus accoutred did not try for any smaller game than their own genus. Hunting for game was practiced with bow and arrow only, until in the sixteenth century the Spaniards contrived the arquebus or matchlock. Here the match was fitted to a "serpentin" or cock, hung upon a pivot, and brought into contact with the priming by a working substantially the same as that of the modern hammer and trigger. This was further improved by the German invention of a steel wheel with serrated edge, fitted to a spring, and made to revolve rapidly, the edge coming in contact with a piece of pyrites, and by this friction producing the sparks to ignite the priming. The use of the wheel-lock for sporting purposes was very general in the middle of the sixteenth century, and for a long time was not improved upon.

But necessity is the mother of invention. A band of Dutch chicken stealers or of Spanish marauders—it is disputed which—being too poor to provide themselves with the high-priced wheel-lock, and afraid to use the matchlock because its light revealed their whereabouts to the minions of the law, abstained from their evil practices long enough to devise a weapon better adapted to the needs of roost robbers. The result was the flint-lock; and the pot-hunting fraternity scored a long credit mark. The sportsmen of our grandfathers' generation owed the mechanism of their guns to a band of poultry thieves; there is yet hope for the colored brother.

The flint-lock reached its perfection in the hands of "that king of gun-makers," Joseph Manton, in the early part of the present century, and it gave way only to a worthy superior in the modern gun exploded by percussion.

The discovery of fulminating powders and their application to gunnery mark a most important epoch in the manufacture and employment of firearms. The charge in the gun was at first placed above the fulminating powder which was ignited by the concussion of an iron plunger, struck by a cock. Then this plunger was dispensed with, and the fulminate was simply placed in the flash pan. The successive steps are familiar to almost all gunners: the priming was placed between two bits of paper and called percussion pellets; the fulminate was affixed to the breech of the newly invented cartridge and fired by a penetrating needle; then came the copper cap; then the culminating improvement of the cartridge containing both the charge and the priming, and ignited at first by the pin and afterward rim-fire and central-fire principle.

Of the many improvements and modifications of the breech-loading percussion system we shall not attempt a catalogue here. It has been our purpose simply to outline the most important stages of development through which the gun has passed. For a detailed description of guns, ancient and modern, we refer those interested to Mr. W. W. Greener's new book on the subject, where they will find clear and concise descriptions of the weapons, with numerous illustrations which admirably exhibit the peculiarities of each arm.

THE ZOOLOGICAL SOCIETY OF PHILADELPHIA.

THE success which, from the inception of the project to the present time, has marked the progress of the Philadelphia Zoological Society has been something remarkable. This success is due purely to the fact that the management is in the hands of careful business men, who have secured as their assistants gentlemen who are both competent for their positions and deeply interested in the work that has been intrusted to them.

The Ninth Annual Report of the Society, which was read at the annual meeting of the stockholders, held April 28, shows the society's affairs to be in a very flattering condition. The admissions for the year amount to no less than 208,478, of which 180,000 were paying visitors. The months of May, July, August and September were those in which the attendance was largest, that for May being 26,203, and in September running up to 36,011, indicating a large attendance of country people. The greatest number of visitors recorded for any one day was on July 5, when 4,702 were admitted. The receipts from admissions show for the year 1880-81 a slight falling off as compared with the preceding year, the difference, however, being less than $1,000. The average daily receipts from admissions were $110.26, and the largest amount received at the gate on any one day was $976.50. As might be supposed, the attendance is much larger on Sunday than on any other day of the week, and the receipts at the gate amount to $15,952.40 for that day alone. Saturday stands next in order, with $5,300 as its footing.

A comparison of income and expenditures, the estimated loss on animals having been charged to the last-named account, shows an excess of receipts over expenses of $2,749 74, and this notwithstanding the fact that the expenses of feeding the animals and of heating the garden during the unusually long and severe winter just past have been much increased. Several new buildings have been erected during the year, and much grading, tree planting and landscape gardening has been done.

The report of Mr. Arthur E. Brown shows the number of animals at present in the garden to be 901, of which 436 are mammals, 370 birds and 95 reptiles and batrachians. The collections have been increased during the year by the purchase of 82 mammals, the presentation of 58 and the birth of 19; 29 birds have been purchased and 69 presented. Of reptiles and batrachians there were purchased 3, presented 77 and born 43. The deaths among the animals exhibited make the numbers of the collection slightly less than it was at the close of the year previous. Among the births at the gardens of the society may be noticed that of a dingo, a mule deer, a collared peccary, a bactrian camel, a llama, a great kangaroo and a rat kangaroo. Two very interesting animals—a great ant-eater and a Rocky Mountain sheep, or bighorn, were received during the past year and attracted the attention of all visitors, but unfortunately neither of the two long survived its introduction to the Garden. A young female

hippopotamus was purchased for the society in New York last winter, and most careful preparations have been made for its reception at the Gardens. It was thought best not to attempt its transportation from one city to the other during the cold weather.

We are happy to learn that the young female orang-utan purchased in 1879 continues to be healthy and has increased in size and weight. Her continued good health is not less remarkable than satisfactory when we consider the almost universal disease and death which speedily overtake the anthropoid apes in confinement. The excellent health of the present specimen is, no doubt, due in large measure to the great freedom which she is allowed, and to the consequent open air exercise enjoyed by her.

An interesting feature of this pamphlet is the report of the prosector of this society, Dr. Henry C. Chapman, so well known as one of the leading men in the younger generation of Philadelphia's physicians. The value to those in charge of the collections of *post mortem* examinations on the animals which die can scarcely be over-estimated.

SEWAGE CAN BE UTILIZED.

THE prize of $100 offered by the Mayor and Corporation of Norwich, England, at the National Fisheries Exhibition at that place for the best method of treating sewage, chemical refuse and other sources of pollution to rivers, so as to render them innocuous to aquatic life, has been awarded to the Native Guano Company, Limited, of Aylesbury. This company has so treated the sewage of that town for a number of years that it is perfectly harmless; and they save the solid product, which they call "native guano," and find it profitable. They exhibit a tank with trout, alive and healthy, living in water which has been purified from the sewers of Aylesbury.

This is a subject well worth investigation on this side of the Atlantic. The day will come when we will be civilized enough to utilize our city sewage to fertilize our fields and at the same time save our fish from being asphyxiated by it, thus turning what is now a curse into a double blessing. The sooner we arrive at that stage of civilization the better.

FYSSHYNGE WYTH AN ANGLE.

A SHORT time ago we began to head our department of Sea and River Fishing with a quotation each week selected from some author on angling. We began with descriptions of different styles of anglers, from Norris, and this week we show another kind from an English author.* He is portraying some well-known *literateur*, and not giving a fancy sketch of some ideal character. The sketch is of a man with whom it would please us to fish, being somewhat the sort of an angler that presides over the fishing columns of the FOREST AND STREAM. With us, fishing is merely the excuse for being on the stream, lake or bay. The enjoyment of nature is the first consideration, and as for the mere killing of a fish it is certain that if we could sit on the sill of the back window, and take trout out of the cistern, we would not go to the trouble to tie on a fly.

We have had a glorious day's fishing, which comprised a trip of two hours down-stream and back in the morning, and as much up-stream in the afternoon, the sum total of which would foot up from a dozen to twenty trout of one-quarter to half a pound each. The remainder of the day was spent in finding where the kingfisher bred and how the chipmunk dug his hole. On one of these occasions a raccoon came to the same brook, and a delightful hour was well invested in seeing him first catch and then wash and eat his frog. During this time the utmost quiet was observed and the breath drawn as lightly as possible for fear of breaking the silence and the charm. A day has been spent in bluefishing on the salt bays of the Atlantic coast, and night has come and still no fish were caught, but the day was well and pleasantly spent. The angler whose whole satisfaction is contained in the few moments during which he has a fish upon his line enjoys only a small portion of his day, and if he takes no fish at all, as often happens to the best of men, he is perfectly miserable.

The character drawn by Davies is a man after the style of Walton himself, and not at all unlike our two American anglers, Dr. Bethune and "Uncle Thad" Norris. How the term "disciple of Walton" is misapplied! Imagine the gentle Izaak arising before daybreak and rushing to the stream at a furious pace to head off some one else, splashing into the pools and half fishing them in the race to do them all ahead of some other angler, and then at night returning after a hard day's work at whipping streams in the broiling sun to brag of the number of troutlings he had killed, and measuring his enjoyment by the rule of addition! "Disciples of Walton?" Why, such men were unknown in Walton's time—they are a modern invention, a compound of restlessness, selfishness and brag. Walton would have declined their company. Van Dyke in his recent book classes them as "The Great American Trout Swine," and scorches them severely for slaughtering fingerlings for count. The peace and quietude of the angler's spirit is unknown to them, and they are not capable of comprehending the pleasures of the man who has only taken twenty fish in the same time that they have captured a hundred. They work hard at their play, and, not being thinking men, the quiet pleasures of angling which made Walton term it "the contemplative man's recreation" are an unknown quantity; not being contemplative men, they cannot contemplate.

To such men angling is a contest into which they enter as to a race track; the man who gets the most miles, or trout, to his score is, of course, entitled to the highest honors; and Bethune's verse:

> O for the free and sinless wild,
> Far from the city's pother,
> Where the spirit mild of nature's child,
> On the breast of his holy mother,
> In the silence sweet, may hear the beat
> Of her loving heart and tender,
> Nor wish to change the greenwood range
> For worldly pomp and splendor

is lost to him. He only hears, in anticipation, the question "How many did you get?" on his return, and his heart only beats faster as he hurries up to add five more before sundown in order to be able to reply, "A hundred," and when he can do this, at a time when no other man has achieved over half as many, his triumph is complete. Poor fellow! In vain for him the loon laughs and the thrushes pipe. In vain the trees whisper in the breeze; they say nothing to him. All is drowned in the prospective "How many did you get?" The man works hard to enjoy fishing, but he has not an idea of its pleasures. If he has read Walton, he has not profited by his teachings. His whole idea is to fish for brag, and there are no accessory enjoyments to fishing. He could enjoy pulling tame trout out of a well, if they were there in quantity, as well as he could a trip into the wilderness. We thank Van Dyke for the term "Great American Trout Swine." We will often have occasion to use it, although we doubt the species being a purely American one, judging from English angling books and papers, and we incline to believe it not entirely unknown on the other side of the Atlantic. The G. A. T. S. may read with profit the portrait from Davies, under Sea and River Fishing, and see the reverse of himself, a man who may be too careless in his angling, but who is thoroughly respectable, and whom many anglers could, profitably to themselves, pattern after to a slight degree, and learn that the whole pleasure of fishing is not comprised in catching fish.

* Angling Idylls. By G. Christopher Davies, author of "Mountain, Meadow and Mere," "Rambles and Adventures of our School Field Club," etc. London: Chapman & Hall, 193 Piccadilly, 1876.

WE ARE INFORMED that a number of individuals who ought to, and no doubt do, know better, have been since May 1 and are still killing English snipe in New Jersey. Now, while there may be no law on the Statute books protecting these birds after May 1, and while it may be legally permissible for so-called sportsmen to kill these birds as they rise from the nest, there is the unwritten law of decency and fitness which it might be supposed all self-respecting persons would regard. It is discouraging to find in men of education, position and wealth the instincts of the pot-hunter overcoming the breeding of the gentleman.

In New York and New Jersey we understand that a number of persons have been permitted by a fish-warden to capture black bass during the present month, providing that the fish are returned to the water as soon as caught. This is, of course, all wrong. Many of the fish may be returned to the water, but many others will be retained by the angler. Even if they should all be put back in the lake it is impossible that any great number should be taken without some injury which is likely either to cause death or to prevent spawning during the season now at hand. We recommend the individual above referred to to withdraw his permits to fish during the remainder of the close time. He is acting illegally, and may get himself into trouble.

WHEN THE ICHTHYOPHAGOUS DINES.—The Ichthyophagous Club will dine on Friday, May 27, at 6.30 P. M. The steamer Matteawan will leave the pier foot of Fulton street, New York, at five, and foot of Thirty-third street, East River, at half-past five. The dinner will be given at the great Hotel at Glen Island, in Long Island Sound, and the party will return by the same steamer. "Den git on board, chill'n, git on board!"

DEATH OF MR. KILBOURNE.—The numerous friends of Mr. S. A. Kilbourne, the celebrated fish artist, will regret to learn of his death on the 11th inst. Mr. Kilbourne was yet a young man and had just begun to be appreciated. His work on the "Game Fishes" showed him to be a careful draughtsman as well as a skillful colorist. Those who possess specimens of his exquisite paintings of fish on shells are fortunate. As a man he was quiet and much respected.

THE LISTS of recent additions to the zoological collections of Philadelphia, and of the Central Park, this city, often include specimens which it is worth a special visit to those institutions to inspect.

THE TRAVELER is the name of a weekly paper just started by Mr. Chas. A. O'Rourke, the widely known and popular superintendent of the New York City Press Association, and the manager of the proposed "International Exchange" of this city. The purpose of the paper is to furnish concise and useful information to travelers in all parts of the world. It deserves success, and being in good hands will doubtless realize it.

The Sportsman Tourist.

ON THE LARRIWEEP.

IN THREE PARTS—PART II.

WE had agreed to start early in the morning after deer, and it was hardly gray dawn when Ignotus shook me, to announce that breakfast was ready. As I went down to the creek for an early wash, I was struck with the unearthly stillness of the morning. These solitudes are quiet enough in their noisiest moments, but of all hours of the twenty-four, the one immediately preceding day far excels the rest in this respect. The prowlers of the night seem to have sought their lairs, and the matinee performers have not yet left their beds. At the same hour the Eastern woods would be vocal with birds—

> "The thrush, that carols at the dawn of day,
> From the green steeples of the piny wood;
> The oriole in the elm; the noisy jay
> Jargoning like a foreigner at his food;
> The blue-bird balanced on the topmost spray,
> Flooding with melody the neighborhood;
> Linnet and meadow-lark, and all the throng
> That live in nests, or have the gift of song;"

but here they were all slug-a-beds. To be rid of the noise of the brook, so that I could better appreciate the intensity of the stillness, I climbed the hill, and sat down upon a fallen spruce. Here I listened with keen ears for any external sound, but could hear none. Even the leaves of the quaking aspens, which are generally in motion with a low rustling noise, were perfectly still. I shut my eyes, in order to hear better, but if I had been the one existent thing in the universe, the silence could not have been more absolute. As the line from an old song goes,

> "The beating of my own heart, was all the sound I heard."

There was something so uncanny in the stillness, that it would have been a relief to have heard even the raucous cry of a jay. I felt then that I could understand how strong men had gone mad in oubliettes. The horror of silence, superimposed upon its kindred horror of darkness, would affect the sturdiest intellect. The quiet finally became so oppressive that I could endure it no longer, but broke out into a whistle, and so returned to Ignotus and breakfast. As I reached the cabin door, a couple of Indians rode up, and sat gravely upon their ponies waiting for me to address them. If it be

> "repose,
> Which stamps the caste of Vere de Vere,"

then these two might have been leaders of the House of Lords. How comes it that those dwellers in the Antipodes, the Hindoo, and the North American Indian resemble each other so strongly in their imperturbable courtesy and their grave politeness? I commend the problem to students of Sociology, as one possessed of ethnological value. Ignotus had told me that "*Por unde va?*" was Mexican for "Where are you going to?" or "Where do you come from?"—I had forgotten exactly which—and as nearly all the Utes in this part of Colorado talk a little Mexican, I launched it, at a venture, at the one whose face looked least like a mahogany knot. Pacific though the query was, and mild the tone in which it was put, the first effect was somewhat startling. The one whom I addressed calmly drew his revolver, and before I could compose an appropriate Leather-Stocking harangue, dragged from the holster a dirty scrap of paper, which he gravely presented. This manifesto was brief and to the point—"Ko-ke-litz and Savaro—Ute sub-chiefs—from Los Pinos to San Miguel." Encouraged by this first linguistic triumph, I essayed another feat, and in courteous tones, propounded the conundrum, "Biscuit?" A crack opened in the lower part of each mahogany knot, a guttural "*Si, Senor, muchas gracias*" rumbled forth, and Ko-ke-litz and Savaro, after unsaddling and picketing their ponies, accompanied me in to breakfast. There was quite a party of us by this time, as two camp-robbers and a chipmunk had joined the company, seeming to take it for granted that the invitation included them as well as their red brethren. At any rate, they made themselves so much at home that I doubted sometimes whether they were not the hosts and we the guests. Were I rich enough, I should like to settle by competitive examination the question as to how much highly-sweetened coffee the average Indian can drink at one meal; but I fear so costly an experiment would bankrupt any one save a bonanza king, or the president of a poor man's savings bank. Breakfast over, we disperse in various directions; Ko-ke-litz and Savaro with a courteous "*Adios amigos*" to San Miguel; the camp-robbers to harry some unfortunate tomtit, or, in concert with others, to make life a burden to the first hapless hawk they may encounter; the chipmunk to investigate the recesses and resources of the neighboring rock slide, and Ignotus and myself to try the Mesa for deer. As it was possible that we might have to lie out all night, we took a blanket apiece, a tin cup, some coffee and biscuits, and thus accoutred started on our way. It is wonderful how few one's wants are when he is forced to become his own baggage and supply train. As old campaigners, we had learned that an ounce of extra weight in the morning become a pound before night, and, as old mountaineers, that a mile up hill is longer than ten upon the level, so we marched flying-light.

"Think you can make it?" asked Ignotus, as we stood looking at the wall of rock behind the cabin. "If you think it's too tough, we can go down the creek about three miles, and take the Bear Creek trail."

The implied doubt of my mountaineering abilities nettled me, and I curtly told him to go ahead and I'd follow. (Afterward I wished I hadn't.)

The outlook, or the uplook rather, was a dubious one. The cliff sloped back at an angle of nearly 70 deg., and by rough measurement, was about a quarter of a mile high. A few gnarled and stunted oak-bushes clung to its face, and here and there ran seams and fissures which promised a precarious foothold. Selecting the most available point of attack, we began the ascent. Plastered against the face of the cliff like flies against a window-pane—clinging to starveling bushes—hanging to narrow crevices by boot and finger-tips—we worked our slow way up. Sometimes, one would have to mount upon the shoulders of the other, to reach a ledge above. The guns and blankets being passed up, the climber would then give his hand to the one below, and hale him up like a bale of goods. Sometimes the shelf along which we

were creeping would fade out, and we would have to retrace our steps till a more available point was found. When such was the case, the old "Facile descensus" theory was proved to be incorrect. Going down was harder than coming up. Places which had been passed carelessly on the ascent, became terrific when looked at the other way. Possibly because, in descending we had constantly before our eyes the result in case we made a mis-step, and were therefore made cautious and timid; while, in going up, our backs being turned, it became "out of sight, out of mind." Ignotus had climbed the lee shrouds in a white squall off the Caribbees, and had pulled himself up hand over hand on the slimy iron chain, when the cage had stuck in the five hundred foot level of the Highland Mary, but, as we reached the top and fell exhausted upon the grass, he panted out, "That beats all the climbing ever I saw."

There are many beautiful bits of scenery nestled in among these everlasting hills, but there are none fresher in my memory than the Larriwcep Mesa. Perked up a thousand feet in air, rearward guarded by El Conquistador rising two thousand feet more into the clouds, flanked by black trachyte cliffs, wind-rent and thunder scarred, I would take another such a climb to-day, to look on it once more. Irish turf is not greener, Florida blossoms not lovelier, Norway pines not statelier, nor Italian skies bluer, than the grass, the flowers, the trees, the skies, that together made up that mountain garden. For the skies, and the air, and the glitter of the snow upon the peak, and the pungent smell of the balsam fir, and the muffled drumming of the great blue grouse, and, it may be, the idle thoughts and fancies born of that restful time, were as much a part of that garden as the grass and the flowers. How much of the charm was subjective, and how much objective, it were hard to tell. The charm was there, however, and had the Lotos Eaters appeared, "bearing sweet twigs of that enchanted stem," I fear I should have hailed them as brothers, and have eaten of their witch-grass, as a matter of course. Even when Ignotus, laying his hand quietly upon my arm, points out a group of black-tails, which his keen woodsman's eye has discovered in a grove of firs, where they are hardly to be distinguished from the russet tree-trunks around, even then I can shake off the spell only long enough to nod a lazy assent to his proposal to "try and get a crack at 'em." Not the least thing that makes dear this mountain friend of mine, is his patient tolerance of what he good-humpredly terms my "darned day-dreaming;" and on this occasion, recognizing that I am "under the influence," he undertakes, alone, the difficult task of stealing upon the unwary game. The grove in which they are, is nearly a mile away, and between them and us is no cover, except scattered bunches of gramma grass, eight or ten inches high. By crawling some hundred rods to the right, one might bring himself into line with a small clump of firs in the edge of the grove, which would yield him partial concealment.

Prone on his face, with his gun balanced across his neck, Ignotus begins his reptilian journey.

So slowly that he hardly seems to move, he widens, inch by inch, the distance between us.

Unslinging my glasses, I bestow my attention upon the deer—a buck, a doe and two fawns. The latter are curled comfortably together in one group, one fawn resting its head upon the shoulder of its mother, who, every now and then, lovingly licks her offspring's face. This one is seemingly the baby and pet—and a spoiled darling it is, too, as it usually meets its mother's caresses by an impatient butt of its little head, as who should say, "Don't bother; let me go to sleep." The other younker, whose nose is evidently out of joint, slumbers peacefully upon the other side. Paterfamilias lies a short distance off, head erect, keeping a sharp lookout for strangers and foes. A splendid fellow he is, with branching horns that would do honor to a "stag of ten." What little wind there is blows from the peak, and to that quarter his attention is turned. With delicate nostrils on the stretch, and pointed ears quivering, he challenges every aerial undulation that sweeps past him, if, perhaps, it may bring warning of peril near. It is a mistake to suppose that wild animals, especially deer, place much, if any, dependence upon their eyes for the avoidance of danger. The sight of a man will often not alarm them in the least, when the slightest sound, or the whiff of a tainted breeze will send them skurrying off in dismay. On one occasion, as I was sitting on a solitary rock in the middle of a little park about a quarter of a mile across, a deer stepped out of the edge of the woods, and casting a glance around, began composedly to feed. As I was waiting for a friend, I had purposely taken my seat in the most conspicuous place I could find, but the deer, after one glance, paid no more attention to me than if I were part and parcel of the rock on which I was sitting. Curious to see what the effect would be, I waited till he raised his head, and then began to cautiously lift my right arm. He looked puzzled, and, after gazing for a moment, began to draw slowly toward me. Dropping my arm as quietly as I had lifted it, he still showed no fear, but continued to advance. On attempting to raise my arm again, the sleeve caught for a moment on the handle of my hunting-knife, which clinked lightly on the rock. Though the sound was not louder than the tap of a lady's thimble on a table, he took the alarm, wheeled instantly, and was off.

Come we back to our muttons. Some indefinable sense of danger seemed to render the buck uneasy. Once he turned his head in my direction, and I could almost have been sure that he caught my eye. The powerful field-glasses brought him so near, that it was hard to realize, that he was not a few score, instead of as many thousand yards away, and instinctively I held my breath, fearful lest he should hear. It seemed contradictory, that he should be so near to me, and I so far from him. I felt as though it were taking a mean advantage of him, and as if I were a modern Peeping Tom of Coventry. Suddenly he flashed up, as though a spring had been loosed under him, but at the same instant a puff of smoke floated up from the edge of the grove, and he gave a convulsive spring and fell. The doe and fawns jumped up, dazed and bewildered by the sudden interruption of their drowsy ruminating. Another jet of smoke puffed out, the eldest born sank quietly down, and the widow and the orphan dashed wildly away. I felt as though I had been assisting at a cold-blooded murder, and only the potent question of meat-supply reconciled me to the cruel performance.

Joining Ignotus, we concluded, as we had been so fortunate, not to camp out for the night, as we had intended, but to return to the cabin, carrying the fawn between us, and coming back the next day with a pack-animal for the buck. Him, having first disemboweled, we hoisted up into a tree, out of the reach of wolves, and then turned our steps homeward. We chose a more roundabout way for returning, avoiding the precipitous cliff up which we had climbed.

Half-way down, while picking our way through an old windfall, Ignotus kicked something which rattled. Stooping to see what it was, he picked up a jagged, rusty knife and a bleached human skull. Nothing else could we find, though we searched carefully. Of what tragedy these were the sole mementos, we could only conjecture. Was it red man or white, hunter, warrior, miner or prospector, who had perished miserably in this gloomy thicket? What was the manner of his taking off—by wasting disease, by famine, by ravening wild beast, or by his brother man? Was it, indeed, a man's skull at all, and not, perhaps, a woman's? Let us hope the former, for one would not like to fancy anything in the shape of a woman, even though it were an Indian squaw, dying in such a solitude, and her bones scattered over these mountain slopes and gnawed by the fox and wolf. Taking the skull, that it, at least, might have Christian burial, an hours' sliding and scrambling brought us down into the valley, and we reached the cabin just as the shadow of El Conquistador darkened the pines on the opposite hill. H. P. U.

CANOE TOURS THROUGH MAINE.

Editor Forest and Stream:

Having received a number of inquiries regarding the pleasures and perils of the long canoe tours through the Maine wilderness, permit me to trespass with a few answers which may be of service to the future tourist.

None of these trips, which have for their point of departure Moosehead Lake, should be undertaken without a guide. If one is willing to do most of the drudgery about camp, from cutting wood to dressing game and fish, feels perfectly competent to "paddle his own canoe" through the rough and dangerous waters of the many falls, to overburden his shoulders on the "carries," *possibly* one guide to a large party might suffice. But after paddling all day long one hardly feels like swinging an axe, as added labor to erecting tents, gathering boughs for bed and attending to other duties of camp life. Two men to a canoe, with their baggage, is sufficient load for the frail birch bark, and, besides jeopardizing the craft, the tourist will soon turn pleasure into labor if he follows any other plan. This refers to following the downward course of streams from day to day like the East or West branches of the Penobscot or St. John's rivers, and not when one locates permanently on some lake or stream for one or two weeks.

Economize on anything but provisions, and have these of the simplest and most substantial character, as it's no joke to be thrust entirely upon the resources of the woods. In a canoe tour of over 400 miles the writer made last autumn, from Moosehead Lake through the Aroostook river to New Brunswick, provisions gave out, and, but for the timely capture of a number of beaver, it would have gone hard with the party.

The easiest tour is that of the St. John's River, which has been rendered less difficult the past season by the services of one Ansell B. Smith, who, for three dollars a canoe, will transport the baggage of the sportsman six miles across Umbazooksus and Mud Pond "carries." Of the two branches of the Penobscot River, I think the east is the more picturesque, although the Ripogenus Falls on the West Branch are well worth seeing, but necessitate a long carry.

The East Branch of the Penobscot abounds in falls from ten to forty feet in height, but the carries around them do not exceed a mile at the longest. The great drawback to this tour is the passage of Webster stream, which, if low, requires a seven mile carry. The stream is ten miles long from Webster lake (its source) to Grand Falls, at which point one is obliged to make a portage of three-quarters of a mile to the left to reach the East Branch, the canyon-like formation of the rocks below preventing the further passage of its waters. After leaving Moosehead, the tourist can purchase provisions at Chesuncook or Chamberlin Lake farms, and on the East Branch at Trout Brook or Hunt's farm. The passage of the East Branch can be made in fifteen days, of the West Branch in ten days, while twenty days is none too much time to allow for the St. John's tour, all, of course, depending on the "pitch of water" and the disposition of the canoeist.

The new tour through the Aroostook River to New Brunswick can only be made by hard work, plenty of guides, and unlimited time. In point of picturesqueness it does not begin to compare with the tour of the East Branch, but its hunting attractions are far in excess of any other route.* This leaves the St. Johns tour at Churchill's Lake, and follows eastward North Twin Stream to Marsh Pond, Spider and Beaver lakes.

Osgood Carry, two miles in length, the watershed of the St. Johns and Aroostook waters, interposes a serious barrier to Echo Lake, the source of the last river, but, once surmounted, the balance of the tour is easy to the three beautiful Mansungun lakes below. These lakes are encountered in their reverse order—Third, Second, First—Echo being sometimes called the Fourth Mansungun Lake. This Third Lake is over five miles long and about one and a half wide. Through a picturesque outlet of one-eighth of a mile the waters enter the Second, which is about the same length as the Third Lake, but broader. Passing a shallow bar one enters the First, or last lake, of only two miles in extent. The outlet of this lake is the Mansungun River, which, after twelve miles of uncertain wandering, unites with the Millinocket Stream to form the great Aroostook River. The sportsman will find excellent camping grounds on the left bank, at the head of Mansungun Stream, but beware of the falls five miles below, at the foot of the "deadwater." One can follow the Aroostook into the Provinces, until it unites with the St. Johns River, or he can bid it adieu at the town of Caribou, and take the cars of the New Brunswick Railroad—the latter is the better choice. On account of the low state of water last Autumn the writer was seven weeks making this trip, and experienced hardships and privations little anticipated in a pleasure excursion.

After canoeing over seven hundred miles of the interior of Maine's waters, the writer must confess to great disappointment in its opportunities of good trout fishing outside of Moosehead Lake and vicinity. Chesuncook, Chamberlin, Eagle and Churchill Lakes offer meagre sport to the fly fisherman, and that is only to be had at the mouth of streams and at the old logging dams. However, the efforts of the angler will be rewarded by a trial of his skill at either of the locks on Chamberlin Lake and at the mouth of Chamberlin River.

On the East Branch a goodly string of trout can be taken at head of Telos Cut and Telos and Webster dams, while the writer has captured salmon of small proportions just below the dam, on Matagamonsis Lake.

Unless one enjoys the unadulterated life in the woods, the Mt. Kineo House, on Moosehead Lake, with its surroundings, offer greater charms to the sportsman than any inland region of Maine.

The building has been greatly enlarged during the past winter, forty large and comfortable rooms added, gentleman's reading and writing apartments; while a telegraph wire has pushed its way through from Greenville to Birch Point, and a cable will be laid across the lake to the hotel on the opening of the season.

The ice disappeared from the lake May 10, and the sportsman is already wending his way thither. Among the many places about Moosehead Lake where the efforts of the angler will be rewarded are Centre Island, W. Farm, North Bay, Spencer and Indian ponds, but a lake forty miles in extent has so many points of interest that it is difficult to suggest all of them. What lover of the rod has not longed, after a successful day's sport, when away back in the primeval, to exhibit to his wife and friends the results of his skill? Here one can enjoy both the delights of angling and the society of his friends, while the exchange of yarns on the piazzas with brother sportsmen adds interest to the life, be their truthfulness ever so uncertain. T. SEDGWICK STEELE.

* Mr. Steele will soon publish a book on this new route, under the title of "Paddle and Portage from Moosehead Lake to the Aroostook River, Maine." The book will be even more exquisitely illustrated than his last work, "Canoe and Camera," which was one of the most artistic additions to the sportsman's library that has been issued for many years.—EDITOR.

Natural History.

TEXAS QUAIL.

UVALDE CO., TEXAS, May 2, 1881.

Editor Forest and Stream:

Will you or some of your readers tell me something of the two kinds of quail found in this vicinity, or are they the variety known as the California quail? One variety bears a very marked resemblance to the Bob White quail. They are, however, larger, the plumage much more brilliant, with quite a prominent tuft on the head. The male bird is very beautiful; its breast is mottled something like a guinea fowl, with a line of dark extending from under side of throat down over breast, spreading out in the shape of a fan. In the female the colors are more subdued, and the resemblance between it and the female Bob White is more striking.

The other variety is of a bluish or dove color, with a very prominent tuft of feathers upon the head, which in the male bird appears white, or partly so. In size they are the same as the other variety.

I have not attempted to capture any of the beauties yet, as this is the nesting season. My description is meagre, and I have been able to gather it only from chance sight of the birds as they show themselves among the cactus and chaparal. This county is quite a paradise for Bob White, and his call may be heard in every direction. He has few enemies and excellent cover, together with mild climate. Altogether this is a strange country to find him in. There are very few settlemen's, and no farms at all, only now and then a sheep ranch. And you know he is fond of a wheat or any kind of grain fields, and generally collects where the farmers are found.

Here he seems to flourish on seeds of plants, insects, etc., etc. I will venture to say that next season will find this a very fine shooting ground. The one great drawback here in hunting with dog is the number of cactus and other thorny bushes, which would soon use a dog up, unless he was accustomed to them.

Turkey and deer abound, and afford some fine sport.

This portion of Texas is about fifty miles from the Mexican frontier.—P.

Although, as our correspondent states, his descriptions are meagre, yet they seem to point to two well-known species of quail inhabiting our southwestern territory. The first species mentioned is probably the Massena quail (*Cyrtonx Massena*), and the second may be the scaled partridge or blue quail (*Callipepla squamata*).

HABITS OF QUAIL.

PERHAPS, as I am one of the best friends, as well as one of the worst enemies of the quail in this section of the country, a few words concerning the effect of this severe winter upon them may interest some of your readers.

I have no hesitation in saying that, as far as my experience goes, a quail will never freeze if he can procure sufficient nourishment to keep him in good condition; he must be starved first, and frozen afterward.

Whole bevies of them are not infrequently destroyed even when well nourished by their habit of roosting in some sheltered spot. A favorite resort is under a cedar bush, or in the secluded corner of a fence, where they remain huddled together during a severe storm until the snow, either by bearing down the boughs of the cedar or drifting about their retreat wherever it may be, consigns them to a living tomb; under which circumstances when found they will be in the last stage of emaciation, showing that starvation more than cold had to do with their untimely demise. Many perish in this way, especially during the past winter, where several thick crusts were formed at different times.

With a light snow and no crust they can generally make their escape. Of quail lost in this way few are found in the spring in this part of the country where late in fall they congregate in the bogs, about the margin of ponds, which afford them excellent cover and abundance of food from the sedge (*carex*) which grows in great profusion in such spots. If caught in this retreat by deep snow, crust, or both combined, the freshets carry them into the adjacent pond where they become food for fish instead of the epicure; but if this were the only danger to which our little friends are exposed, we could still hope to have good shooting in the autumn.

But, alas! starvation, which tames all *feræ naturæ*, also tames the quail, and drives him to seek shelter and protection from one of his most treacherous foes—the farmer.

The farmer, or the farmer's boy, cannot resist the temptation of taking down the old Queen's arm when he sees a bevy of half-starved quail seeking for food about the out-buildings, and should any escape the fatal shot the farmer's cat will be on the qui-vive for her share of the unwonted dainty.

But of this no more, for the FOREST AND STREAM has been thoroughly over the ground, and the only way to prevent the cat from going over the ground as thoroughly as the FOREST AND STREAM is to take the FOREST AND STREAM's advice about that as well as all other sporting matters. NEMO.

NOT WOLVES.—A Lockport, New York, correspondent, writing under date of the 7th inst., sends us a newspaper slip, taken from the Lockport *Journal*, referring to the capture of five alleged prairie wolves near that place. The cutting is as follows:—

"Several times during the past few weeks a pair of prairie wolves have been seen prowling about the farm of George Dysinger and the adjacent woods at Hickory Corners, about six miles southwest of this city. On Thursday last Mr. J. L. Noaker fired five revolver shots at one of them, but owing to the distance he failed to do execution. Yesterday afternoon Mr. Noaker and Mr. Davis saw one of the animals sitting on a log in a field, but on approaching the spot the wolf made off. The men examined the log, and were surprised to find in it a nest of five young wolves, which they lost no time in securing. This morning they brought the pesky little animals, which are about a month old, to this city, and exhibited them upon our streets. They have set a trap for the old ones, and expect to capture them one of these nights."

Our correspondent says: "I send you the inclosed thinking you can give some explanation regarding the animals called wolves. I say *called* wolves, for I do not think they are. I first thought they were young foxes, but, on taking a second look, concluded they were not. Instead of having a sharp nose, like a fox, it was like a puppy. In all other respects they looked like foxes. They were the color of a young fox, and had long, bushy tails with white on the end. I think they were too small to be wolves at the age they must be. The body was about nine inches long. Some parties said they were a cross of fox and dog. Do you think such could be case? They were all males. I will try to see them again, and perhaps may send you one for a pet. J. L. G."

Of course, without making an examination of the animals, we could not tell what the animals are. We feel safe enough, however, in saying that they are not wolves, and there is nothing in the description given by J. L. D. to show that they are not fox puppies. We imagine that if the old onesare captured they will prove to be nothing more than common red foxes.

It is believed that a cross of the fox and dog has been produced, but we do not think that experiments in this direction have gone further than the first generation.

THE BRITISH MUSEUM OF NATURAL HISTORY.

THE following description of the new building at South Kensington, London, to which the natural history collections of the British Museum have been removed, is taken from *Nature:*

The great terra-cotta building facing Cromwell Road, South Kensington, and occupying the site of the old 1862 Exhibition, about which for the past twelve months public curiosity has been raised, is about to draw up its blinds, and to offer a part of its extensive galleries for inspection on Easter Monday.

* * * * * * * * * *

The architectural character of the new building may be termed "Decorated Norman," but it is in many respects unique, especially as regards the treatment of its details. The first, or "ground-floor," is above the road, and the entrance is approached by a broad flight of steps and by a sloping carriage-drive. The entire structure is of brick cased with terra-cotta, the doorways and the windows being ornamented with columns designed from natural history objects, chiefly from plants. Reproductions of various animals are also introduced. The main part of the building has a tower at each end, and there are also two central towers rising on either side of the entrance. The south front of the building is about 650 feet in length, running due east and west, and is three stories high, in addition to the basement, which is above the level of the garden in which the building stands.

The Central Hall or "Index Museum" runs from south to north; it is 150 feet long, 97 feet wide and about sixty feet high; along its two sides are twelve arched recesses. At the north end is a wide and handsome staircase which branches off right and left to the upper corridors or side aisles on either hand upon the first floor. This Central Hall is more richly decorated than any part of the building. The floor of mosiac work, where Italian marble is employed, has been skillfully laid by Italian workman. The side aisles or corridors look out into the Central Hall by an open balustrade surmounted by large arches, each containing three smaller ones, the centre one being much higher than the others. The pillars supporting these are ornamented with a nearly natural treatment of *Lepidodendron*; in some few cases animals, monkeys, birds, etc., are introduced. The decoration of the ceiling is very effective. A double row of panels runs along the central hall, and on either side of this, between the iron girders and following the curve of the roof, are panels in groups of six; these are ornamented with representations of different species of trees, shrubs and flowering-plants treated somewhat conventionally. That portion of the ceiling over the main body of the hall is decorated with trees, each of which occupies six panels, as they can be most easily seen from the floor and need little treatment. At the south end, where the ceiling is over a staircase and landing leading from the first to the second floor, each panel contains but one species, the eye being near to the ceiling greater detail has been introduced. The effect of the whole is very fine, and as the hall is at present without any cases or specimens, it has the general appearance of a cathedral. This idea is further heightened by the introduction of a triforium, though this has been added merely for effect, the passages being interrupted.

Beyond the Index Museum is a smaller and less lofty hall quite divided from it, save by two arched entrances, 97 feet by 70 feet, intended to hold the British Zoological Collection. It is surrounded by arched recesses similar to those in the Index Museum. In this hall the decoration of the ceiling is also botanical, but all the species selected are of British plants. Underneath the staircases and in the recesses a plain light color is introduced, relieved with gilding. The decorations of the saloons or galleries are much simpler. The colormain throughout are of terra-cotta, ornamented with natural history objects.

The other parts of the building consist of series of galleries running north from the front or main building, but only one story above the basement. The rooms on each floor, at the end of the long front galleries and under the two end towers, are called pavilions. The main or front galleries facing Cromwell Road are lighted by windows north and south. The Central Hall or Index Museum, the Hall for British Zoology, and all the other galleries of one story high running north are lighted by skylights. The Index Museum, has, however, in addition to its roof-lights, windows in the corridors on either side.

The distribution of the space available is as follows: The long galleries to east of the entrance on the ground-floor, and all the galleries from it, running north, are devoted to Geology and Palæontology. The first floor above the Geological Gallery is devoted to Mineralogy, and the floor above this to Botany. The whole of the galleries on the west side of the building are given to Zoology. The Index Museum, according to Prof. Owen, is designed to present to the public, in a series of twelve recesses, typical examples of all the collections—in fact, an epitome of the whole animal, vegetable and mineral kingdoms. Prof. Owen further desires to show the marvels of nature and objects of special interest, as exemplifying size, etc, such as whales, basking sharks, etc. These are to occupy the centre of this great hall. Passing to the right from the Index Museum (on the ground floor) we enter the South-East Gallery of the Geological Department (233 feet in length by 50 feet in width, and lighted by windows on either side), at the East end of which is the Pavilion, a room 60 feet by 40 feet. These two galleries are entirely devoted to the exhibition of the fossil Mammalia and Birds, and are provided with pier-cases and table-cases. The larger objects are arranged down the centre of the floor.

The cases on the left hand are nearly all occupied with the remains of *Proboscidea*. Commencing with the *Dejnotherium* from Epplesheim, with its tusk-like incisors in the lower jaw, we pass to the *Mastodons*, in which, as a rule, the tusks are developed in the upper jaw and not in the lower. But to this there are exceptions; one American Mastodon having immature tusks in the lower jaw, and the *Mastodon augustidens*, from Sansan in France, having tusks in both the upper and the lower jaw.

Nearest the entrance door, in the centre of the gallery, is placed the entire skeleton of the great American Mastodon from Ohio, which must have been considerably larger in bulk than that of any existing species; on the same stand is placed the head of a young Mastodon from New Jersey, and in front of it the skull and lower jaw of the South American Mastodon from Chili. It is interesting to notice that both the mastodon and elephant had overspread the North and South American continents in Tertiary times, and they were equally widely distributed over the European and Asiatic continents; their modern representatives, however, are confined, the one to the continent of Africa, the other to India, Ceylon, etc. The tusks of some of the old fossil elephants were of enormous proportions; witness the head of *Stephas ganesa* from the Siwalik Hills, India, and that of the mammoth (*Elephas primigenius*) from the valley of the Thames near Ilford. Large numbers of elephant remains have been dredged up year by year for the past sixty years off the Dogger Bank and the Norfolk coast, affording good evidence that in comparatively modern times the North Sea was a great valley watered by the Rhine, Moselle, etc., giving pasturage to vast herds of deer, bison, oxen and elephants; where also the rhinoceros and the hippopotamus found a pleasant home. A goodly series of the remains of these animals from British and Continental localities may be seen in this locality, and also abundant evidence of the old Siberian mammoth and rhinoceros, both of which have been met with "in the flesh," frozen solid in mud and ice. Here are also exhibited an interesting series of the "pigmy elephant" from Malta, brought home by Admiral Spratt, R. N., and Prof. Leith Adams. By far the larger collection of elephant remains are those from the Siwalik Hills, India, obtained by Col. Sir Proby T. Cautley and described by Dr. Hugh Falconer, F. R. S. The "gigantic Irish deer" (*Megacerus Hibernicus*) forms a prominent and striking object in the centre of the gallery, with its branching antlers 10 feet across, a noble prey for its contemporary, the "sabre-toothed tiger" (*Machairodus latidens*), remains of both animals having been found together in Kent's Cavern, Torquay.

Passing by the cases of carnivora, of thick-skinned animals, and of ruminants, our attention is next arrested by the great bandless armadillo from South America (*Glyptodon*), whose carapace is bigger than a hogshead, and which measured nearly 12 feet from its head to the tip of its armor-plated tail.

Another of these extinct Edendates from the La Plata, the *Megatherium Americanum*, stands in the centre of the floor of the Pavilion. This colossal "ground-sloth" measured 18 feet in length, its bones being more massive than those of an elephant. It displays in every part of its framework enormous strength and weight combined with agility to break down the upper branches of trees, upon the leaves and succulent branches of which it fed, like its pigmy modern cogener *Bradypus tridactylus*, which leads an aboreal existence, climbing from bough to bough in the Brazilian forests.

The extinct Marsupial fauna of the great island continent of Australia is here well represented by the huge *Diprotodon*, the *Nototherium*, and the anomalous *Thylacoleo*. Of the Wombat family only a small living representative is known, of burrowing habits, found in Tasmania; formerly they were abundant on the continent of Australia, varying in size from a marmot to that of a tapir. The largest of these are called *Phascolomys magnus* and *P. gigas*.

The collection of remains of the great extinct wingless birds of New Zealand forms a very interesting feature of this gallery. The tallest skeleton measures 12 feet in height, and the smallest not more than 3 feet.

Madagascar had also its extinct wingless birds, similar to those of New Zealand. Eggs of both the *Dinornis* and the *Æpyornis* may here be seen, one of the latter having a capacity of two gallons.

The rarest of all avian fossils is still the *Archæopteryx macrura* from the lithographic stone quarries of Solenhofen. Fortunately for the incredulous a second specimen has recently been obtained, and is preserved in the Berlin Museum. Its lacertilian affinities are well shown in its long and rat-like tail of twenty vertebræ and its three-clawed digits in each fore-limb (or wing?). The head of the Berlin specimen is too obscure to give evidence of teeth, but its beaked jaws are clearly seen in the photograph. The original specimen described by Prof. Owen is headless.

Running parallel with the south-east gallery is the Reptilian Gallery, 225 feet in length and 21 feet wide, the south wall of which is entirely occupied with the grand series of sea-lizards, the *Ichthyosauria* and *Plesiosauria*, once so abundant in the old Lias-sic seas of Europe, and the fossil remains of which have even been brought home from the arctic regions and from New Zealand. The largest of the long-necked Plesiosaurs measures 22 feet in length and 14 feet across its extended paddles. The largest Ichthyosaur was probably even bigger than this. On the north side are displayed the remains of the great land lizards, *Dinosauria*, of which the *Iguanodon* is perhaps the most familiar example. A more recent discovery is that of the *Omosaurus* from the Kimmeridge Clay of Swindon, Wilts, the femur of which is more than 4 feet in length, and the humerus nearly 2 feet long, and enormously broad; they were probably to some extent amphibious in their habits, but their limbs were well fitted for progression on the land.

Numerous other fine Dinosaurian remains are to be seen in these cases. As we do not know the teeth of many of these huge reptiles, we are unable to speak positively as to their habits; but it is certain that from the Trias to the Chalk two groups have existed side by side, one having a carnivorous dentition and the other being herbivorous. The *Teratosaurus* of the Trias of Stuttgart and the *Lycosaurus* and *Cynodraco* from the Cape, the *Megalosaurus* of the Stonesfield Slate and Wealden were all carnivores, while the *Iguanodon*, *Acanthopholis*, *Scelidosaurus*, and the South African genera *Anhodon* and *Nythosaurus* were all vegetable-feeders. But of *Polacanthus*, *Omosaurus*, *Hylæosaurus* and *Cetiosaurius* we have no direct dental evidence. No doubt, as among the mammalia at the present day, the majority were vegetable-feeders, and the minority were predacious in habit.

In this gallery are also exhibited the flying lizards of the Secondary Rocks, most of which have been found in the lithographic stone of Solenhofen and a few in our own Lias, Stonesfield Slate Chalk and Greensand.

If Comparative Anatomy may be trusted, some of the Pterodactyles from the Chalk of Kent give evidence of a flying lizard having probably an expanse of wings of from eighteen to twenty feet.

An Australian novelty is the great horned lizard (*Megalania prisca*), 14 feet or more in length, with nine horn-like prominences on its skull and an armor-plated tail similar to that of the *Glyptodon*.

The Triassic reptiles from South Africa form a singular addition to our knowledge of ancient life forms long since passed away. They are comprised in Prof. Owen's groups of *Anomodontia* and *Theriodontia*.

Among the fossil Cheloniaus we have representatives of both the marine turtles, the fresh-water *Trionyx* and *Emys*, and the gigantic and lesser land-tortoises. Of the first of these are the remains of the great *Chelone Hoffmanni* from Maestricht, and the *Chelone gigas* from the London Clay of Sheppey, larger by far than the "logger-head" turtle of the present day. Of the last (land-tortoises) may be mentioned the *Colossochelys atlas* from the Siwalik Hills, which out-rivals the *Glyptodon* in bulk.

Three wide and four narrow galleries built at right angles to the Reptile Gallery, each 137 feet in length, the former being 40 feet and the latter 20 feet in width, are placed alternately, running due north and south, and lighted from above. These fine rooms afford ample accommodation for the fossil fishes, all the classes of the Invertebrata (molluscs, brachiopods, bryozoa, insecta, myriopoda, arachnida, crustacea, annelida, echinodermata, corals, foraminifera, sponges and plants). These long galleries or annexes, and the ones corresponding with them on the western side, are built upon the plan recommended by the Royal Commission of 1874. But the wall cases are all constructed to open in front, not at the back of the case, as suggested. They are, however, the best lighted galleries in the whole building, and best suited for museum purposes. Two of these large galleries are not yet ready for occupation, and the third is under arrangement; the narrow galleries give space for a library, special reference collections, a stratigraphical series, and working-rooms for students.

In the basement are twelve workshops, studies and store-rooms devoted to Geology, ten studies, work-rooms and laboratories to Mineralogy, and three to Botany.

The Mineralogical Gallery, on the first floor, which corresponds with the Southeast Gallery and Pavilion in extent, is also lighted by windows on either hand; it has seven wall cases, two at each end of the long gallery and three in the Pavilion, the collection being mainly contained in forty-eight large table-cases.

These table-cases form a long row on either hand, commencing at the entrance of the gallery, the odd numbers being on the left hand and the even on the right. Each of the first forty cases nearly equals in capacity two of the cases in the old mineral gallery; we have therefore a much more magnificent display than could have been attempted formerly, when the minerals and fossils were all crowded together in the same gallery.

The collections of naturally and artificially prepared crystals occupy two large cases in the Pavilion, whilst two of similar construction are filled with meteorites. The great Cranbourne Meteorite and that from Mexico occupy special cases on the east side. In the wall cases are arranged the extensive collection of rocks, two cases being devoted to polished marbles.

The general plan pursued in the arrangement remains the same as in the old Museum gallery, so that by using boxes corresponding to one-quarter of a table-case, the minerals were transported from the old to the new building and rearranged in an incredibly short space of time, and, with the exception of the Pavilion and the wall cases, have long been ready for exhibition.

In the Botanical Gallery the glazed cases for the exhibition of specimens project from the wall into the room like square shop fronts, having flat plate-glass sides. The wall side of the glass is permanently fixed, except one division forming the door. A "cell" inside, inclosed by curtains, gives access to the specimens. By this contrivance it is hoped that the dust will be excluded to a great extent.

Accommodation for large specimens, as, for example, portions of stems and sections of various kinds of wood, such as oak, walnut, pine, cedar and other dicotyledons, and trunks of palms, cycads, tree ferns, bamboos, and other striking examples of the vegetable kingdom, is provided for by three tall metal and glass cases 14 feet high, occupying the floor space in the centre of the gallery.

One-half of the main gallery is partitioned off from the public room, and fitted up with cabinets for the reception of the *Herbarium*, the nucleus of which was obtained by Sir Joseph Banks and Solander in their voyage round the world with Captain Cook. This first series of cabinets is entirely occupied with the flowering plants, which are all fastened on single sheets of paper. The Pavilion contains similar cabinets for the reception of the British plants and Filicinæ, while the room above in the tower is intended for the Cryptogamia. Down the centre of the large room are cabinets fitted to receive the great collection of fruits and seeds, each being placed near its appropriate family in the Herbarium on either side. These inner rooms, with the valuable library attached to them, are of course only available for purposes of study, but are always accessible to the botanical student and worker.

On the southwest side of the Index Museum, the gallery on the second floor which corresponds with that appropriated to Botany is designed to contain the great collection of Recent Osteology; that on the first floor is to be devoted to stuffed animals, and the front ground floor gallery to birds. The eight galleries in rear of the main building on the west side will be appropriated to the Reptilia, Fishes and Invertebrata. The collections preserved in spirits are to be placed in a special building at the north end of these galleries. The basement on the west side contains sixteen studies and workrooms and a large open space well fitted for workshops and stores.

There are a few scientific men who still strongly protest against the removal of the Natural History Collections from the old to the new building, on the ground that the locality is inconveniently far west, and that they are thereby precluded from using the collections so freely as heretofore. One of the strong grounds for protesting against the removal has been the serious inconvenience arising from the separation of the collections from the great National Library. This injury will, however, be gradually removed by the formation of a Natural History Library in the present building, a vote for which has been already taken.

The comparatively small band of scientific men who use the Natural History Museum for purposes of special work and study, would always do so wherever the collections happened to be located.

So too the holiday-makers, who come to the museum merely to be amused, will as willingly travel to South Kensington as to the Regent's Park Zoological Gardens, or to the Crystal Palace.

Undoubtedly the highest aim and use of our great National Natural Historical Collection should be to impart instruction to the young and rising generation, and afford every facility for the advancement of our scientific students, and the question whether they are now conveniently placed is simply for them to answer. If in the future South Kensington is to become a great centre of scientific instruction, then, and not otherwise, the Natural History Collections have been placed in their most suitable position.

—A farmer of London township noticed one morning that a wild goose had joined his flock. Somewhat surprised at this sudden change to domestic life, he carefully observed the behavior of the visitor. He soon learned that it had not actually joined its barn-yard relatives, but only appeared at meal time. Further investigation showed that after the goose had thoroughly satisfied her own appetite she would pick up an ear of corn and fly away Greatly interested by the strange conduct of the bird, the farmer one morning watched the direction of its flight. It was but a short distance to the river, and he noticed that after circling the goose dropped, apparently, into the river. Going down the bank, he discovered his visitor standing by a companion who was lying on the ground and feeding on the ear of corn. In order to understand this restaurant project he walked up to the feeder and found that it had been so disabled that it could neither walk nor fly. Without disturbing it he returned, and morning after morning watched the generous goose carry away an ear of corn. Finally the visits ceased, but shortly afterwards the sick gander himself wandered into the camp and gobbled up the corn himself. He has remained all winter, and the indications are that he has made up his mind to settle down and go to housekeeping.—*Montreal Witness.*

ANIMALS RECEIVED AT CENTRAL PARK MENAGERIE FOR WEEK ENDING MAY 14, 1881: One Ocelot, *Felis pardalis;* one crab-eating raccoon, *Procyon cancrivorus;* one blue macaw, *Ara ararauna;* two blue-crowned parrakeets, *Tanygnathus luzonensis*, hab. Philippines Islands; all purchased; one collared peccary, *Dicotyles tajacu*, presented by Mr. R. Williams, Jr., N. Y. City; five young foxes, *Vulpes fulvus*, presented by Mr. W. A. Sherman, Dover Plains; one lizerang, squirrel, *Sciurus bicolor*, hab. India, presented by Miss Maegie H. Bow, Brooklyn; one opossum *Didelphys virginiana*, presented by Mr. Dewitt Knox, N. Y. City; one brown bear, *Ursus arctos*, hab. Europe; one albino raccoon, *Procyon lotor;* one demoiselle crane, *Anthropoides virgo*, hab. North Africa. All placed on exhibition. W. A. CONKLIN, Director.

Game Bag and Gun.

AN ENCYCLOPEDIA OF GUNNERY.

THROUGH the courtesy of Mr. Henry C. Squires, his American agent, the FOREST AND STREAM has received advanced sheets of Mr. W. W. Greener's new book on gunnery. The volume is a large quarto of nearly 700 pages, and is illustrated with 343 woodcuts which are substantial complements of the descriptions in the text.

Mr. Greener is known the world over as one of the foremost gun-makers of the day; he has brought to the task of book-making the practical knowledge gained in a lifelong study and experiment in perfecting the manufacture of firearms. The result is a comprehensive encyclopedia of all that pertains to the subject; forming an invaluable book of reference, which will take its place unchallenged at the head of the literature of firearms.

The opening chapters are devoted to a history of the gun at different periods in the development of the arm. Much of the material for these chapters was gathered from works inaccessible to the general reader, while the frequent illustrations have been drawn from all available sources, being copied from rare old books or original sketches of antique arms preserved in European museums.

Following this division of the work is an exposition of the mechanism and principle of each of the different models of breech-loading rifles, and the various styles of bullets employed in them; and then the same method is pursued with the shot-gun.

Of special interest will be found the pages devoted to a description of the successive stages of gunmaking as now practiced in England. As this is a subject concerning which, we have reason to believe, very little is popularly known in this country, we extract here the following passages, referring our readers to the book itself for the full details:

THE MAKING OF GUN-BARRELS.

In the earliest firearms the barrels were made of plain iron, usually from one strip, which was bent, whilst hot, round a mandril, and the two edges welded together. Later on two pieces were used, one for the breech-end of the barrel, the other for the fore-end, or muzzle-piece. In some old blunderbusses the breech-piece is of iron or steel, and the muzzle-piece of brass or bell-metal. The cold-drawn steel barrels made in 1865 and the few following years were far superior to the plain iron and decarbonized steel barrels generally used. These barrels were drawn out, whilst cold, from blocks of steel, by pressing them with punches through orifices. Next in quality comes the "solid fluid compressed steel" barrel, as made by Sir J. Whitworth, which withstands heavy charges better than any plain metal barrel now used; but they are very expensive, and not well liked, for they, in common with other plain metal barrels, show no figure whatever when finished, but resemble in appearance a musket barrel. The first notice we can find of iron or steel as used conjointly as a metal for gun barrels is in the letters patent of William Dupoin (1798). His method was to lay round a rod of iron a strip of steel, then a coating of iron or "iron and steel mixed." The whole was then welded together, and the iron cores bored away so as to leave the barrel of steel, or steel and iron, as required. A few years later, old horsenails were greatly in vogue for the manufacture of gun-barrels. The nails have always been made from the very best iron, and are also considered to obtain some virtue from the contact with the horse's hoof. The nails were welded together into a straight or taper bar, which was lapped over a mandril and welded into a tube. These barrels held a high reputation at the commencement of the present century. They may easily be distinguished, being figured barrels; the figure, however, runs longitudinally with the barrel, the nails being light, and dark lines at each weld. We believe that in horseshoe nail stubs was the first successful attempt at a figured barrel. In 1806 a J. Jones patented an improved method of manufacturing gun-barrels. He made the barrels by *twisting* a scelp with bevelled edges round a mandril, so that the edges overlapped each other, and then welding together the edges of the scelp. Once introduced, the manufacture of twisted barrels increased rapidly in importance. Scelp or plain rods were first twisted, afterward the horseshoe nail stubs were twisted in the same manner, and the introduction of Damascus barrels followed shortly afterward. The manufacture of barrels from scrap iron with tilt hammers was in its prime about 1845, when John Clive, the noted barrel-maker, kept a mill in Birmingham, turning out large quantities of barrels weekly, by which he achieved a good reputation and a considerable fortune.

The iron for the manufacture of gun-barrels was formerly made from scrap and old horseshoe-nail stubs. In preparing the metal for the old-fashioned laminated steel barrels, a number of scraps were collected of various proportions, the clippings of saws, steel pens and scraps of best iron. The modern way is to make the whole from new metal, as follews: Pig-iron obtained from a mixture of the best ores is placed in a furnace, melted and cleaned from all dross by puddling—the dross, being much lighter than the iron, rises to the surface, and is skimmed off. When sufficiently cleansed the drawplates of the furnace are lowered, the heat reduced thereby, and the liquid iron while cooling gathered and worked into blooms of about 1 cwt. each. The puddler takes the bloom with a par of tongs, runs with it to the tilt-hammer and hands it over to the shingler, who by dexterously turning the metal under the hammer forms it into a square block and passes it to the roller; it is then passed through the various rolls until of the required size, and drawn out into a bar of about ten feet in length. The hammering under the heavy tilt condenses the metal, and causes the dross and scale to fly off. The rolling increases its ductility and tenacity by elongating the fibres. The steel is prepared in the same way from the best Swedish pigs, but the metal is considerably improved by the hammering and rolling, becoming much more tenacious and elastic in proportion than the iron.

The bars are cut into equal lengths, laid together and fastened into faggots; these faggots are heated in the draught furnace, welded under the tilt hammer, and the block of metal is re-heated and hammered for the manufacture of the best barrels, to condense the fibre of the metal and increase the specific gravity. After being hammered the blocks are rolled out into bars; these bars are again cut into equal lengths, laid and fastened into faggots, heated in the furnace, and welded together and rolled into thin narrow strips. In the above processes the ends of the bloom, or extremities of the rods, are cut off and thrown aside, being less dense and consequently useless for gun-iron.

The iron is now again cut off into equal lengths and laid together and fastened into faggots, heated and welded and drawn out as before described, and rolled into rods of the sizes required by the welder. The faggots are each heated seven times during the process of manufacture of the metal for the best barrels. The proportionate amounts of the different descriptions of metal in a barrel determine its quality. The old-fashioned laminated steel was composed of nearly three parts of steel; best English Damascus and modern laminated steel contain over 60 per cent. of steel; and our new silver-steel Damascus contains nearly 75 per cent. of the best worked steel. The amount of steel is determined upon before making the metal into faggots for the last time; if for scelp barrels the strips of iron are twice the thickness of the steel, the faggots being formed of alternate layers of iron and steel. In single iron Damascus barrels the proportion of iron used is not much less than the steel, but the metal for these common barrels does not pass through quite so many processes as that for the best barrels, and, although far superior in quality to ordinary iron, its tenacity and specific gravity is not so great as that of the very best gun-iron. In best Damascus barrels the iron and steel are mixed together systematically. Our silver-steel Damascus is mixed in a different manner to that of Damascus, the exact proportions of iron and steel being used, as have been found by experiment, to give the greatest strength with the finest figure. The tenacity, durability and beautiful figure of the barrels depend almost entirely on the proportions and arrangement of the steel and iron, the desiderata being the placing of the iron in the best position to give the regular and fine figure in the finished barrel.

Too large an amount of carbon in gun-iron is more detrimental than a scarcity, for where carbon has once been it is impossible to entirely eradicate it, and although it may be extracted to as great an extent as possible, it leaves a residue that possesses an affinity to re-absorb carbon fully equal to the original quantity; thus steel, however manufactured, cannot by any process yet discovered be re-converted to iron of the same nature it was originally. It will then be apparent that barrels composed wholly of steel are altogether unsuitable for shot guns. We show the fallacy of so manufacturing shot barrels, and describe the process when treating of the manufacture of rifle barrels.

In twisting the rods care is taken to keep the edges of the iron and steel strips to the outside, for it is the twisting of the different metals that gives the various figures in the finished barrel. The steel being hard resists the acids, and retains a white or light brown hue, whilst the iron, or softer metal, is so acted upon by the acid as to be changed into a dark brown or black color.

The best barrels must be made from the best, and therefore from the *most expensive, steel and iron that can be produced.* Owing to the difficulty of obtaining good scrap iron and steel—the importation of old horse-nails from the Continent has long been discontinued—it has been found necessary to manufacture gun-barrel iron from new metal. Barrels so manufactured are much superior to those made from scrap metal, and are almost entirely free from grays. Indeed, before the introduction of the new mode of making gun-iron, it was a most difficult matter to obtain English barrels free from grays, as the scrap metal could not be collected without its having a certain percentage of Bessemer steel amongst it, which, owing to its non-adhesiveness, is most difficult to thoroughly weld and amalgamate with the other metals, and consequently most disastrous to the successful manufacture of gun-barrels. The rods of metal as now prepared are extremely tenacious, and capable of withstanding an enormous strain. The average strength of rod six-sixteenths by five sixteenths by twelve inches long, containing 1.40625 cubic inches of iron, is equal to a tension of over 16,000 lbs.

We may add that it takes 18 lbs. of prepared gun-iron to weld an ordinary pair of 12-gauge barrels, which, when finished, weigh, with the ribs, lumps and loops, but little over 4 lbs. After bearing in mind this fact, and considering the great expense and loss of expensive steel and iron attending the manufacture of the metal, and the cost of welding of best barrels, it will no longer be a matter of wonderment that best guns are expensive to produce.

BARREL WELDING.

The square rods of prepared iron are first twisted to give the Damascus figure. The rods are about four feet long, and are placed in the forge fire until about eighteen inches of the rod is brought to a red heat, when one end is thrust into a square hole in a block made fast to a frame, and the other end fixed into a movable head at the other end of the frame; a rotary motion is then given to the movable head; the rod, being square, cannot turn round with the head, so is twisted in itself. The rod is carefully watched while twisting, and should one part commence to twist more rapidly than another, a man is ready with a pair of tongs to hold that part of the rod, so that it is preventing from twisting. This process is repeated until the whole rod is perfectly twisted, and a regular figure in the barrel insured.

When finished twisting, the rod will be round, except the squares at each end where held in the block and head, and the four foot rod will have become shortened to about three feet three inches, and have about eight turns to the inch. It is this twisting of the rods that makes the difference between a best barrel and a common one. All Damascus barrels must be made of twisted rods, whilst plain twist or scelp barrels are made from plain straight rods or ribands. It is the twists in the rods that cause the figure to appear in the barrels, and all iron so twisted is called Damascus—from Damascus, where a similar process was first practiced for the manufacture of the far-famed Damascus sword-blades. It gives increased strength and tenacity to the metal by rendering the fibres more dense.

The rod prepared, it is either joined to other rods or coiled and welded into a barrel singly. Laminated steel barrels are twisted, and the rods welded in the same manner as the stub Damascus, but the rods are composed of superior metals containing a larger percentage of steel. In laminated steel and stub Damascus barrels it is not usual to use more than three rods in their manufacture. Fine Damascus barrels, as manufactured by the Belgians, are occasionally made from four or six rods together, but three is sufficient to give a very fine figure.

The true English Damascus barrels are manufactured usually from three twisted rods prepared in the same way as described for the manufacture of stub Damascus, but the rods are composed of a superior iron of a finer quality in the figure or streaks, which have to be very decided, white and black, as described in iron-making.

The rods having been twisted, and the required number welded together, they are sent to the iron mill and rolled at a red heat into ribands, which have both edges bevelled the same way. There are usually two ribands required for each barrel, one riband or strip to form the breech-end, and another, slightly thinner, to form the fore or muzzle part of the barrel.

Upon receiving the ribands of twisted iron, the welder first proceeds to twist them into a spiral form. This is done upon a machine of simple construction, and consists simply of two iron bars, one fixed and the other loose; in the latter there is a notch or slot to receive one end of the ribbon. When inserted, the bar is turned round by a winch-handle. The fixed bar prevents the riband from going round, so that it is bent and twisted over the movable rod like the pieces of leather round a whipstock. The loose bar is unshipped, the spiral removed, and the same process repeated with another riband.

The ribands are usually twisted cold, but the breech-ends, if heavy, have to be brought to red heat before it is possible to twist them, no cogs being used. When very heavy barrels are required, three ribands are used—one for the breech-end, one for the centre, and one for the muzzle piece.

The ends of the ribands, after being twisted into spirals, are drawn out taper and coiled round with the spiral until the extremity is lost.

The coiled riband is then heated, a steel mandril is inserted in the muzzle end, and the coil is then well hammered. Three men are required—one to hold and turn the coil upon the grooved anvil, and two to strike. The foreman, or the one who holds the coil, has also a small hammer with which he strikes the coil, to show the others in which place to strike.

When the muzzle or fore-coil has been heated, jumped up and hammered until thoroughly welded, the breech-end or coil, usually about six inches long, is joined to it. The breech-coil is first welded in the same manner, and a piece is cut out of each coil; the two ribands are welded together and the two coils are joined into one, and form a barrel. The two coils being joined, and all the welds made perfect, the barrels are heated, and the surplus metal removed with a float; the barrels are then hammered until they are black or nearly cold, which finishes the process.

This hammering greatly increases the density and tenacity of the metal, and the wear of the barrel depends in a great measure upon its being properly performed.

When the barrels are for breech-loaders, the flats are formed on the undersides of the breech-ends, and when for muzzle-loaders the bars are forged on. If an octagon barrel is required it is forged in this form upon a properly-shaped anvil; and in rifles the barrels are welded from thicker ribands, and welded upon smaller mandrils.

Ribs are forged from rods twisted in the same manner as for the manufacture of Damascus iron. They are then forged to the required shape upon a grooved anvil. Plain iron ribs are used for very common guns, in which case they are rolled for the gun to the required shape.

We have now described the process of barrel welding, as practiced at St. Mary's Works under personal supervision. The same method is generally followed by the other barrel-makers of Birmingham and neighborhood, who manufacture for the London and country trade.

We will now proceed to describe the method practiced in Birmingham for the manufacture of medium and common grade barrels, and without which this work would be incomplete.

The iron is twisted in much the same way as that already described, but steam-power is used to turn the winch instead of hand-power. The forge-fires are blown by a steam fan, instead of the old-fashioned bellows, and the welding is done by one man instead of three. This is accomplished by having a tilt hammer close to the forge regulated to give sharp, quick, short blows, and capable of being thrown in and out of gear with the foot. The welder is also provided with an anvil, swages, mandrils, etc. When he removes the coil from the fire, he has only to knock in a mandril, straighten the coil on the anvil, jump it close by striking it on the floor in the usual manner, and place it under the tilt, re-heating the coil, repeating the process until the barrel is properly finished. The appearance of barrels so welded is not so good as that of those hammered by hand, but they are strong and sound, and on account of less care and labor being bestowed on their production, they are cheaper than hand-forged barrels.

The famous Belgian Damascus barrels, in which the figure is very minute, are made of thirty-two alternate bars of iron and steel rolled into a sheet 3-16ths of an inch thick, which is then split by a machine into square rods. These rods are then twisted as described already, but to such an extent that the threads resemble a very fine screw, there being not infrequently eighteen turns to the inch. Six of these rods are then rolled together to make the riband, and the result is the extremely minute figure; and the overtwisting, it is claimed by our author, reduces the strength of the metal, just as a hemp rope is rendered useless by overtwisting. The barrel-welders of Belgium are chiefly located at or near Liege. Other continental places where good barrels are made are St. Etienne in France, Brescia in Italy, and Suhl in Prussia.

Passing through the successive steps in the preparation of the gun-barrel, we come at length to the proving of them. This is obligatory upon the manufacturer in London, Birmingham and Liege.

MODE OF PROVING.

A description of the *modus operandi* of proving gun-barrels may be interesting to sportsmen and gunmakers in those countries in which no proof-house exists. The system of proving at both the Birmingham and London proof-houses are identical. Each barrel passes through the proof-house with a number attached to it, so that the name of the owner or maker is not known to the workmen, who therefore have no opportunity, if they were so willed, of spoiling the article from spite or malice against the maker. Before the barrel is sent into the loading-room it is gauged by plugs and stamped with a number. The workman whose duty it is to stamp the barrels stands at a bench upon which fifty or sixty numbered steel punches are arranged in order. Corresponding to these are numbered gauging-plugs, varying in size from that of a pea up to two inches. Having ascertained the exact bore of the barrel by means of one of these plugs, he takes up a punch, bearing a similar number to the plug, and stamps that number upon the barrel—say seventeen. The man whose duty it is to load the barrel, seeing the number, is able to judge of the proper amount of loading to put in it. Leaving this room and following a short tramway, along which the barrels are conveyed, we come to the "Loading-Room."

*The Gun and its Development; with Notes on Shooting, by W. W. Greener, author of "Modern Breech-Loaders," "Choke-Bore Guns," etc. Illustrated. Cassell, Petter, Galpin & Co.; London, Paris and New York, 1881.

Here everything is done by rule and measure, every precaution taken to ensure safety, and every means used to prevent fraud. The room is divided into three compartments, separated by strong brick walls, so that should an explosion occur in either the injury would be confined to the division in which it took place. The floors of these rooms are always kept damp and well swept. In the first compartment the barrels are loaded by one man who has the barrels arranged round the room. In front of him is an arch of copper measures numbered successively from one up to about fifty; upon ascertaining the number stamped upon the barrel by the man in the receiving room, he takes up one of the measures bearing a corresponding number, and having filled it with gunpowder from a bowl by his side, he places the charge in the barrel; he next takes a proper sized cork wad and a leaden plug from a numbered box corresponding with the boxes, and afterwards a second cork wad with which he loads the barrel. Thus loaded the barrels are passed into the second compartment, where the charge is duly rammed home with copper rods prepared for the purpose. The barrel is then passed on to the third compartment, where it is primed, and then transported into the firing-room. The firing-room is a large, lofty building, lined throughout with sheet iron, and has ventilators; in the roof and the windows are apertures, capable of being immediately closed, with iron shutters arranged upon the same principle as the Venetian blind. The barrels are arranged upon a grooved rack, and fired by a train of gunpowder which connects the breech vents with each other. The train is fired by a percussion cap, which is detonated by a hammer working on a pivot and pulled from the outside; the door is of iron, and it and the shutters are closed before firing. The method of firing and arranging the barrels will be better understood from the annexed diagram, showing the interior of the firing-room while the barrels are being proved. After the train is fired the doors and shutters are opened and the smoke allowed to clear off, and the barrels may be seen then partially buried in a sand heap behind the rack; the bullets are shot into the sand heap on the other side of the room. The barrels are then collected, and those that have, through any cause, missed fire are re-primed and again placed on the rack; the other barrels are conveyed to the inspecting rooms, where they are washed out, inspected, and, if found perfect, marked according to the Proof Act. The barrels, however, have previously to stand the hot-water test, which consists in plugging the muzzle with a lead stopper, filling the barrel with boiling water, stopping the breech with a similar plug, and striking it with a hammer, so that the water, being compressed, exerts an internal pressure upon the barrels, and if there be any flaw or minute hole it will force its way through. Common barrels have to stand for twenty-four hours before being cleaned or looked over, so that if any flaws are in the barrels the action of the acid residue from the powder will eat into them and make them more apparent.

The plan of proving described is provisional proof, when the barrels are in tubes; for definite proof, when the barrels are together, and have the breech-actions attached, each barrel is fired separately. The guns when loaded are taken to the lobby of the firing-room, and one gun is taken into the room and proved at a time; the barrels and breech-actions are fixed upon and fastened to a traveling block of the required shape, and fired by means of hammers dropping upon a striker which strikes the cap in the cartridge. The hammer is pulled by a cord passing through a hole in the wall. Various shaped blocks are provided to suit the various sized and differently constructed single rifle breech-actions. Should any flaws or defects be discovered after proving the barrels, they are returned to the maker, who remedies them as he best can, and re-turns them for proof. Best barrels are frequently burst at proof, but they are more often bulged, in which case the bulges are knocked down by the maker, and the barrel re-proved, until it either bursts or stands proof. We have heard that in one case a barrel was proved and bulged eight times, but that it stood all right, after being proved the ninth time. In the definite proof the weak breech-actions are frequently blown to pieces, or else made to gape at breech, in which case the maker hammers the false breech till close, and case-hardens it, and when again proved it generally stands. The proving of breech-actions is very necessary, as it prevents, in a good measure, dangerous common breech-actions being sold. In the United States, France, Germany and Holland, no proof-house exists, and we believe it is only in London, Birmingham and Liege that barrels are compelled to be proved by Act of Parliament. All small arms bearing the Belgian proof mark may be sold and used in England without being re-proved, provided they do not bear the name of any English maker. The Gun Barrel Proof Act does not extend to Ireland, Scotland or the Colonies.

PHILADELPHIA NOTES.

PHILADELPHIA, May 16, 1881.

MR. FRANKLIN JONES, of Philadelphia, ex-president of the Philadelphia Sportsmen's Club, has presented to the Philadelphia Mercantile Library a complete set of FOREST AND STREAM, handsomely bound, from the first issue of the journal to about May 1, 1881. The library association values the gift highly, and has so expressed it to Mr. Jones.

The second annual hare and hound meet of the Germantown Bicycle Club was given on last Saturday at Germantown. Three hares were chosen for Saturday meet, Messrs. F. W. Corse, Chas. Tatam and Geo D. Gideon, and were given ten minutes' start. Nearly twenty-five hounds, mounted on every variety of bicycle, followed in hot haste after the fugitives who left behind them a trail of torn paper. The hares were not overtaken and finished five minutes in addition to the time allowance ahead of the first hounds. Nearly all of the latter rode from start to finish. Among those participating were several invited representatives of other city clubs.

A very exciting match between the two best pigeon shots of the Riverton Gun Club lately took place at the grounds of the club. The gentlemen, whose names I am not allowed to mention, made excellent shooting, and the one whom it was thought beyond all doubt would win was vanquished, the winner astonishing every one by his coolness.

Mr. L. M. Gilbert who furnished those "wonderful going birds" for the late match between two members of the N. Y. Gun Club at Bergen Point had just such flyers at Riverton. We doubt if better pigeons could be found among the "blue rocks of England."

Within the city limits of Philadelphia woodcock have been found nesting. On Crum Creek the dividing line of Delaware and Philadelphia county, young birds just fledged were seen last week—is this not early?

The protection afforded by our park has had the effect of making it an excellent harbor for the quail, and we are told by one of the guards that a number have already paired off and may be expected to raise broods. Last year several coveys were hatched within the park limits, and favored ones had the opportunity of working (without gun) their young dogs on the birds.

Many anglers are off trout fishing. HOMO.

HOUNDING VS. STILL HUNTING.

WE continue the publication this week of the numerous replies received in response to our request for experience and observation on the subject of deer-hunting. The particular points of the inquiry were as follows:

1st. What is the character of the country referred to?
2d. What is the prevailing method of hunting deer?
3d. Describe hounding deer, as practiced in the section referred to, and its effects. Does it drive deer out of the country?
4th. Describe in like manner still hunting and its effects.
5th. What class of men kill the most deer?—market hunters or parties of sportsmen?—residents or non-residents?
6th. Would resident sportsmen approve of a law prohibiting hounding deer? Would the residents assist in enforcing it?
7th. Would they approve of a law permitting hounding, but prohibiting the killing or capturing of the deer after it has been run into the water? Would such a law be practicable?
8th. What is the open season for deer?
9th. What are the winter habits of deer, so far as you have personally observed them.

MAINE—PENOBSCOT CRITICISED.

"Penobscot" has given you the geography of a small portion of our game region and its character, which applies to the whole country drained by the Machias rivers, save that some of the townships are well timbered. I will not give bounds, for an examination of a map will show the region drained by these rivers to be many times larger than that described by "Penobscot."

I propose to answer some points of his article, hoping others will follow suit—"Having visited and thoroughly explored a tract of country," etc. This must have been in September, as I understand the hounding season is September; also he must have killed two deer out of season. "My surprise is boundless" when I see such admissions.

"It is needless to state that this was not because of the hounding, but in spite of it, and wholly owing to the splendid facilities for cover made by the growth of the timber during the ten years of my absence, it being too small to afford the necessary protection at that time." Let us see what are the facts just here. I have been upon this ground for the past ten years, not as a hunter, but among the families of the lumbermen, and frequently at their camps, and they, knowing the interest I take in sporting and game protection, have kept me well posted, not only for the last ten, but thirty years. I am well acquainted with nearly all the lumbermen from Ellsworth and Cherryfield to Calais, besides having hunted and explored, myself, this region last October, as far as Buddington.

I did not see a hound or hear his "music," only one poor cur, dead, near a deserted camp. I did not visit L. K.'s camp, where unfortunate gentlemen were said to buy game to take home, with a wonderful story of its capture by themselves.

Ten years ago deer were nearly exterminated by crust hunters with dogs and by wolves. After the wolves had cleaned out nearly the whole they left. When we found that near the settlements there were a few deer remaining we set about to protect them, and then commenced our trouble with the crust hunters. Every worthless scamp had a cur and an old army gun, ready for the first good crust, no matter when—December, January, February or March (I will say here, in my opinion, the open season for all kinds of game in Maine should be from September 1 to December 1.) We found the wolves were not our worst enemies, but the dogs, hence the law against hunting deer with dogs.

Finding law alone useless, we formed a society for the protection of game, and have labored with a will until the present against no little opposition.

These men, as a class, were poor and worthless, idle, dishonest and treacherous, and worse than all, have the sympathy of a large portion of the community not interested in game protection.

We paid our own bills, sent men into the woods to look after law breakers and dogs year after year, and soon the change came that was apparent to all. Deer were certainly rapidly increasing, and our cause soon became popular, and those who were our worst enemies when we begun, are now friends. Nearly all the crust hunting is stopped, and has been for several years. We admit that a few deer are killed out of season; not many. Some of our late converted friends are our most active workers. Nearly all the camps upon the townships in this region have one or more of our friends who keep us posted, in each crew, which helps us greatly. All the pot hunters, crust hunters, duck netters, hounders, etc., are known to us. That there has been the amount of hounding deer during this time that "Penobscot" alleges, I deny. That the increase of deer in this region is due to the efforts of sportsmen resident in this middle and eastern part of Washington County, aided by the dog law, not by the "growth of timber and hounding," is evident to all.

"There were gangs of men and hounds." "Hounding in this region is practiced as follows."

Thanks for the above information. "There is, as is well known, a law prohibiting hounding at any and all seasons in this State, but it is not enforced, and I doubt the propriety of attempting to do so, as the great majority of our business men." Business men have the same rights as mechanics or day laborers, and no more. If business men are to be allowed dogs to hunt as they please in August and September, why not the resident poor be allowed the same privilege in February and March? The poor man needs the fresh meat, but the business man does not. I regard the poor man who kills a deer for his family use, out of season, a king beside the business man who hounds deer in August or September. Cannot any man see that it is either protection or not protection? A law not enforced is worse than no law. Any reasonable man can see that class legislation is out of the question, for we all have equal rights by the laws of our country. We in Washington do not intend to have this law repealed, but to have it enforced, and for that purpose we called for an appropriation, which we have, and more, intend "to pull in," if required.

"As to still hunting" * * Still hunting is where true skill tells, and no sportsman can help enjoying it.

"In conclusion," etc.; I will change this and have it read, "I am convinced that if dogs are not allowed to hunt deer, no other legislation will be required for their protection."

Who are to protect our game—residents or non-residents? We have a few deer in Maine, besides some small game, which is rapidly being destroyed, and, unless great care is exercised, we shall soon be without. Let us save it.

We are sensitive—I mean *we* not *I*—for we feel our efforts are in vain unless sustained by those who ought to be our friends. We claim we are entitled to some respect for our efforts to protect game from citizens of our own State. Sportsmen cannot afford to trample game laws under foot in any State much less this where game is so nearly extinct. Who are the true sportsmen?

I think I have shown the cause of the feeling against dogs in this State, and will say no more at present.

In answer to questions, 1. Answered by Penobscot. 2. Still hunting. 3. Don't believe in it; drives them off, etc. 4. New burns at night, or evening and morning upon light snow, driving. 5. Market hunters. 6. Yes, yes. 7. No. 8. Oct. 1 to Jan. 1. 9. Yarding. OLD TUB.

Machias, Me., May 10, 1881.

The writer of the above sends us the following letter received by him. The country referred to is a tract twenty miles square:

Dear Doctor: Because I have carried "rod and gun" about here for twenty-seven years, less thirty-two months during the unpleasantness, you ask me, "What do you think of 'Penobscot's' article in FOREST AND STREAM of May 5?"

I think it well calculated to mislead those not fully acquainted with the facts.

No comparison can, with any degree of fairness, be drawn between the present time and ten or twenty years ago, so far as hunting deer with dogs is in question.

"Penobscot" speaks of deer being hunted with dogs every year for the past twenty at these lakes. Now, whatever of value his article may have had, it is nearly destroyed by this statement, for, fifteen or twenty years ago, deer were almost an absolutely unknown quantity, owing to the presence of large numbers of wolves throughout this section. The wolves did not all go away until within ten or twelve years, not leaving until the deer were nearly exterminated. And it is only since about 1870 that they have begun to return and increase. There has been comparatively little hounding as yet, being against the law of the State.

Since the organization of the game association at Machias five or six years ago, and through their efforts to enforce the law against illegal killing, deer have increased wonderfully.

Now, as to the effect of hounding. Does it frighten or drive them from the country? There is a large tract of almost unbroken forest, nearly twenty miles long, and from one to four or five miles wide, and lies so near the settlements as not to have been molested by the wolves. Lumbering operations have not been one-half as extensive as through the Mopang section. Ten years ago deer were far more plenty here than anywhere on the Machias waters. The conditions for hunting with dogs were unusually favorable, owing to the many lakes it contained. Now, while the swamps here, as about the Mopang, have become more dense and impenetrable, yet the deer, although so much more plenty ten years ago, have nearly all disappeared, and there has been but little "still hunting," but a good deal of dogging.

While every other place within twenty-five miles report large increase every year, this large tract has become almost depleted of deer.

Sportsmen from abroad came here a few years ago and hired Indians or cheap natives and showed them this easier, although unlawful way of catching deer. I cannot learn that very many have been killed—not more than thirty in one year. The belief entertained by all is that they have been driven—frightened away by dogs. I think from what testimony I can gather that there has been more dogging here than at any other place in the country, with the result mentioned.

I do not believe that one deer in a hundred killed in Eastern Maine previous to 1875 was driven into the water by dogs. This method is of quite recent establishment. Local sportsmen have had one of their best hunting grounds completely ruined—the game all driven away or destroyed by dogs—and all done in defiance of law.

One experience of this kind is quite sufficient. We now say most emphatically, and mean it, too, "Not any more dog, please!"

Sportsmen about here petitioned the Governor last winter to appoint a deputy to look after this matter of game violations. We now have just the man we want—one thoroughly acquainted with game and wood-craft—the best shot and most successful hunter anywhere in this section. He proposes to have the law respected, certainly so far as relates to hunting deer with dogs, or taking ducks with nets, and is sustained by sportsmen and taxpayers. While we are glad to meet with brother sportsmen from abroad, and will insure a hearty and cordial welcome to all who respect our laws, no one coming with the avowed purpose of breaking the law and disregarding public sentiment need expect anything different from what he deserves. C. F. S.

Machias, Me., May 12, 1881.

THE ADIRONDACKS.

I notice with sympathy Adrion Ondack's article, March 10, on hounding and still hunting. I am well aware it is a natural prejudice that hounding is ruinous to the interest of deer hunting, and I ask by whom is this hue and cry raised? By sportsmen who are satisfied with one or two deer a week? By men who rather bring down one buck crashing through the thick undergrowth with a single bullet than butcher fifty, standing knee deep in water, unsuspecting danger, with a broadside of buck-shot? Echo answers in both instances "No!" Those who oppose with such vigor hounding, of course with some exceptions, are comprised chiefly, as your correspondent says, of hotel proprietors and market hunters, and the latter generally get rid of their game at the hotels, in or out of season, it makes little difference. What I say is through personal observation. I have sent many a speeding bullet on its deadly mission, having hunted from the northern wilderness of New York to the parks of the Rockies, and from the timber of Minnesota to the river bottoms of the South, and my experience has been that ten deer are gained by still hunting to one hounding. For illustration, I spent four happy months in the Adirondacks last season, from June until October, and the following will be an exact account as to my observations concerning deer hunting. I left Paul Smith's July 15 with two guides, camping utensils, provisions, and other requisites for an extended trip of two months. Our route lay via Bay

Pond to Camp Kendall, on Bay Pond River, where we remained three weeks, chiefly to fish. While here we ascertained by the mighty shooting, which sounded like the fusillade of musketry, that another camp was located somewhere in our vicinity, which conjecture was proved true by finding their camp on one of the arms of Bay Pond. Could you have seen the shallow waters near that camp ground, looking like the yard of a slaughter-house a half century old, all covered with the entrails and heads of slaughtered deer, regardless of size or sex, you would not at least claim that hounding was the worst feature which beset the hunting and extinction of this noble game. We knew of thirteen they had killed, and, you may ask, for what use? To sell at five cents per pound, on contract, to more than one summer resort not a hundred miles from Au Sable.

Who has ever visited any of the hotels in the Adirondacks in June and not had the privilege of eating almost daily a deer steak? I for one never have.

We left Kendall Camp after enjoying good sport with the trout, and wended our way to McDonald Pond, further into the wilderness by about twelve miles. Here we were in our own solitude for eight days. The next day, however, our blissful repose was disturbed by a party of nine making their appearance, four sportsmen (as the guides call them) and five guides, two of the sporting fraternity being well-known New Yorkers. They had a whole armory of rifles and shotguns (the latter predominated), and enough rubbish in the shape of jack lamps and other unnecessary equipments to fill a curiosity shop. It was clearly visible that these men were tenderfeet in the Adirondacks and novices in the art of hunting deer. Could these men, any one of them, down a deer with a hound in hot pursuit? No, they could not hit the broad side of a barn with a rifle bullet, but they managed to salt down the hind-quarters of a half score or more of deer killed by floating. I would call your attention now to the fact that I have shown you, and I positively know of twenty odd deer having their existence ended by the device of floating. Now, notice the comparison between floating and hounding. This same party and myself consolidated canoes and hounds upon the opening of the hounding season. We had seven guides, and ourselves numbering five, made twelve in all. As to dogs we had seven. Wasn't this force enough to hound successfully? We hunted together several days, and killed three deer and one large buck which had been shot at several times, was started four times, knowing it to be the same, as he had one antler broken off which, when killed, proved to be an old break.

Now, if you would save the deer, if you would do a manly deed, help pass a law prohibiting all shooting of deer while watering, for a few years at least in the Adirondacks, you will have an abundance as your reward in times to come. And ye who speak so decidedly against hounding, your only resource is to hound it now—if you hunt in the northern wilderness of New York you will find a poor show in its thickets to still hunt. Purchase your hounds, put them on a fresh scent, but don't stand by that deep hole on some river bank with shot gun in hand, waiting for the oncoming deer to swim it in order to continue in his favorite runway, and then pour your buckshot into him while in the water. If you are honest in this, nine times out of ten your dogs will return to camp with their tails between their legs, looking very disconsolate. And, in conclusion, would advise you to take "lots" of pork in camp, and not depend on "fresh meat," or you may look more emaciated upon your return from camp than did Tanner after his fast. B. A. M.

I am glad to see the letters concerning hounding deer. Although I always had a prejudice against it, I believe the advocates of hounding at proper seasons are right. The extermination of our deer (in Vermont) was not due to hounding, but to most barbarous crust hunting, the perpetrators of which should have been hung or shot at sight like wolves. I am also glad to see that "Sycamore" dares to show up an absurdity of Frank Forrester, who, though a very delightful writer at times, is, in my opinion, greatly overrated as a sporting writer. Always dogmatic, his "Field Sports" and "Fishing" are filled with errors and contradictions, and many noteworthy things are only "conspicuous from their absence."—R.

FISH AND GAME AT THE RANGELEY LAKES.

THE ice in the lakes, according to present indications, will not be out till about the 17th of this month. It is thought trout fishing will be better than any previous year, from the fact that a large amount have been artificially hatched and turned into the Lakes in the last few years, the largest of which will weigh upward of two lbs. each. The laws have generally been observed, and very few fish have been taken through the ice the past winter.

Deer and caribou are quite plenty, though much havoc has been made among them the past winter by lawless persons, and in some instances the guides have participated in the nefarious work. We hope sportsmen who are aware of these facts will, under all circumstances, refuse to employ such guides. Through the efforts of the Rangeley Lakes Sportsmen's Association, Fish Commissioner Stanley was requested to look after the matter. Deputy-Sheriff Tainter, of Dixfield, by request of the Fish Commissioners, immediately went to Rangeley, feigning to buy horses, but was quite anxious to secure a few deer skins. A few green hides were shown him, which he purchased, but being desirous to obtain a few more, a party of deer hunters was soon organized, the deputy being one of the party for a hunt, of course. He was now led into all the secrets of the business, and was told who had been the participants, how many had been killed, etc. The deer hounds were called out, and all the equipments being in readiness, the party started, but ere the dense forests bearing toward the Kennebago was reached, the deputy, becoming fatigued, gave up the hunt, and returned home with all the information necessary to prosecute the offenders. No arrests have as yet been made, though daily expected. Could the unlawful killing of these animals be stopped they would soon be very plenty in all directions about the Lakes.

Daniel Barker, of Bangor, Maine, and foreman of the lumber business about the lakes, was crossing the Moosehuckmaguntic Lake, about the middle of last month with horse and sleigh. His attention was attracted by the baying of a hound across the lake. He soon saw a flock of caribou on the ice pursued by the dog. They all crossed, and entering the thicket, one of the poor animals getting strayed from the flock returned to the lake, and seeing the horse and sleigh, doubtless mistook it for the flock. The frightened animal came up to the team and circled around and around, sometimes near the reach of Mr. Barker's whip. Mr. B. says it showed every possible sign that it was seeking protection, but on reaching the landing the poor thing was obliged to give it up, and plunged away to care for itself in the dense forest.

About the middle of the winter one day a deer came bounding into Rangeley village. The facts are, it was chased by a hound, and being frightened, ran in there for protection; whereupon another hound was set on and the poor animal caught and killed. The question may be asked why such things are allowed, when it is so much against the interest of the locality. Our answer is that neighbors dislike to complain of neighbors. But it is hoped that sportsmen will invariably refuse to employ a guide who is in the habit of keeping a hound, for it is well authenticated that a hound means the destruction of moose, deer and Caribou around the Rangeley lakes, as foxes are seldom hunted in that locality.

Phillips, Maine, May 9. S. F.

TO WHOM IT MAY CONCERN.—It was reported in the Vermont papers that Canadians were net fishing in Vermont waters, near "Hog Island," Lake Champlain. The writer lately visited the place to ascertain if these reports were true. He found parties taking large quantities of "dore" (*S. americanum*), seine fishing, but the parties interested were not "Kanucks," but genuine "Hog Islanders"—Vermonters. Their catch numbered one night over 3,000 fish, mostly dore. The same parties are, I believe, still fishing there, and ship their fish south by express. A friend who lives near there says, that every evening "pot hunters" are shooting black ducks in the marshes near the mouth of Missisquai River, Highgate, Vt. The guns used are heavy ducking-guns different from those used by the natives. As these marshes have been leased by the "Malden, Mass., Gun Club," they would do well to check this if they wish ducks to breed there. And gentlemen of the St. Albans "Fish and Game Protection Club," are you but ciphers that you allow such doings to take place under your very noses? You are not ornamental, so please be useful and protect the fish and game in your vicinity, and all true sportsmen will bless you.—STANSTEAD.

THE BROOKLYN GUN CLUB was organized in 1872, among the first members being Chas. W. Wingert, who was the first secretary and treasurer; Dr. Aten, Dr. Mermire, now deceased; Messrs. H. and W. Shipman, Captain A. Elmendorf, Mr. Bryar and Dr. Monroe. For five years the club enjoyed a very prosperous existence, although the club had no stationary headquarters, meeting at each other's houses and holding their monthly shoots wherever they could find a convenient place. In 1877 a reorganization was effected, with Dr. H. F. Aten as President; W. A. Brush, Vice-President; A. Elmendorf, Secretary, and J. C. Monroe, Treasurer; Mr. A. Eddy, Dr. Wm. Wynn and Mr. Wm. Banta were the new Board of Directors. A not less prosperous career of the club followed from 1877 to the present. The monthly contests of the club have been well attended, and the membership has been large and increasing. The present officers are—President, Dr H. F. Aten; Vice-President, G. W. Post; Secretary, A. Elmendorf; Treasurer, J. C. Monroe; Directors, G. H. Creed, Wm. M. Baxter and Thomas S. Blankley.

GAME NEAR LOOKOUT MOUNTAIN.—Chattanooga, Tenn., May 9.—Friday night I went to visit a friend living five miles out of town, and while talking of last season's hunts, etc., he said, "I have tried twice to kill an old gobbler out on that hill and failed; wish you would go out in the morning and kill him, he runs right over me." I replied that it would not do, etc., but at last was persuaded by him and my love of the sport to go out, and about 5 o'clock Saturday morning I was near the roost, quietly waiting and listening for a gobble. About sunrise I heard one, and started as quietly as possible that way and got as near as I dared and commenced to call, and was answered by hens and gobblers; a hen came within thirty yards of me, but I would not shoot her I heard the big gobbler a little way off, and thought that it would not do for him to tempt me in like manner. I could hear some half-dozen gobbling, but could not see them. They promise to be very plenty next season, so do our other birds, quail and what are called pheasants around here, but I think they are the partridge (similar to the quail in color, etc., but about the size of chickens). Snipe were very abundant three or four weeks since, but were very poor and wild; ducks of the different varieties are very numerous in the season. Deer and foxes furnish us many a spirited chase, and in the mountains fifteen or twenty miles off we can find without difficulty the black bear.—JAY CEE.

NIAGARA FALLS SHOOTING CLUB.—At the annual meeting of the Niagara Falls Shooting Club the following officers were elected for the ensuing year:—President, Alva Cluck; Vice-President, Hans Nielson; Secretary, William Pool; Treasurer, S. T. Murray; Board of Directors, J. M. Witmer, H. F. Pierce, A. Murray. The following delegates and alternates were chosen to represent the club in the coming annual meeting of the State Association in Brooklyn in June:—Delegates—J. M. Witmer, H. F. Pierce, Wm. Pool, H. E. Griffith, H. C. Howard. Alternates—A. Cluck, H. Nielson, L. W. Pettibone, J. F. Quick, C. H. Ganun. The delegates were instructed to invite the State Association to hold the annual meeting for 1882 at Niagara Falls.

NEW JERSEY—*Alpine, Bergen Co.*—I have spoken with hunters and others, and learn that the quail have been much reduced in numbers by the severity of the past winter, and that there have been no pains taken to shelter or feed them. Could not learn about other birds or game.

Woodsville, Mercer Co.—About one-tenth of the game in this section perished. The farmers did not feed them.

Metedeonk, Ocean Co.—The birds have stood the winter very well. About ten per cent. have perished. In a few cases the residents have fed the birds.

Springfield, Union Co.—The snow and severe weather in our section were damaging to game, especially quail. Perhaps one-half were killed. No general attempt was made to feed the birds. I fed a flock of quail from the commencement of the snow until it was gone, and although the birds had plenty of feed and excellent corn only seven lived through. Of three other small flocks that I knew of left after the law was up, only one has been heard of, and that one had only five birds in it.—N. C. D.

LANCASTER COUNTY, PA.—There never has been a winter in which the game birds of this section suffered so much. The snows were deep, and there were many of them, and the ground was almost covered, as by an impassable sheet. I found many coveys of birds frozen to death under the lee of a bank where they sought refuge from the storm, and were smothered or killed by the weight of the snow, or frozen from being pressed in. I do not believe any birds escaped in this section that were out during the whole winter. Those that we housed appear to be doing well now, if we can judge by their cheery, Bob White calls in the early morn or at sunset eve. What the colds and storms of winter have not killed the vagabonds that yearly light our forest seem determined to do. It is a great pity that incendiaries were not by law condemned to perish in the flames.—BIRKSHOT.

THE MAROONER CLUB, of Vicksburg, Miss., makes annual hunting and fishing excursions to the haunts known to its members, who are all good sportsmen and true. The club does not confine itself solely to having fun either. It has taken the lead in stocking the streams of the neighborhood, and has thus earned for itself a good name. The membership is not large, but the club is compact, harmonious and enterprising. The officers elected at the last meeting were: Dr. T. G. Birchett, Chief, and W. L. Polk, Secretary. Resolutions were at that time also adopted embodying an expression of the respect which the members of the club entertained for their late fellow member, Dr. E. T. Henry, of whom an obituary notice says: "A gentleman of fine intellectual attainments, a physician of skill and culture, a man of rare dignity of character, combined with unquestioned integrity, a high sense of honor, an instinctive scorn of all things mean and ignoble and an unconquerable devotion to the right, made Edmund T. Henry a thorough gentleman in its truest and most approved sense."

THE FLYING CLAY PIGEON.—Mr. George Ligowsky, of Cincinnati, has invented a substitute for live pigeons. It is a hollow clay disc-shaped "bird," which is thrown from a peculiar trap. The flight of the clay target is described as a sailing or skimming, much resembling the swift horizontal flight of a game bird. The swiftness of this flight may be increased or diminished at pleasure, and can be made to sail, on a level, 100 yards. The direction of flight may also be changed at pleasure, and the action of the trap varied as with glass balls. We have not yet seen the flying clay pigeon in use, and so have no personal knowledge of its working. We shall take pleasure in reporting upon it as soon as we have tested its merits.

SHOOTING GROUNDS FOR BOSTONIANS—Cambridge, May 13.—Are you acquainted with any place within reach of Boston (the Cape preferred) where a party of three or four fellows can find good shore bird shooting for two or three weeks in the fall? We want a quiet place where there are few gunners, and where the shooting ground shall be of easy access to the house. The expense is of small consequence. Also can you tell me the best place for upland plover, during the month of July east of Connecticut, and in Mass.?

Bay snipe shooting may be found at Rye Beach, N. H. There are grass plover also there. Cape Cod used to be a good place. Shooting depends upon the season. Possibly some gunner

MIGRATORY QUAIL.—The Sherbrooke, Canada, *Gazette* says:—"Many of our readers will be gratified to learn that some of the Migratory Quail, which were liberated in this vicinity a year ago, have reappeared at the farm of Mr. Sam Burrell, in Lennoxville. We hope to hear from other parties to the same effect. Last winter was an unusually severe one, and whole bevies of the ordinary quails were reported frozen throughout the Northern States. It remains to be seen how the season affected those of migratory habits."

NEW ORLEANS GUN CLUB.—New Orleans, May 11.—At an election of officers for the ensuing year the following gentlemen were elected to fill the various offices of the New Orleans Gun Club: President, F. A. Cousin; Vice-President, Paul Chaudet; Treasurer, J. K. Rencaud; Secretary, J. E. McDaniel. Board of Controllers—E. L. Randlet, Mr. Frotcher, Allen Junel (Auditor of State), and Edw. Odell. The treasurer's report showed the finances to be in a good healthy condition.

THE MARLBORO, MASS., SPORTSMAN'S CLUB held its annual meeting, May 2, and chose the following officers: Loren Arnold, President; J. G. Howe, Vice-President; H. S. Fay, Esq., Secretary; Louis Lanoise, Treasurer. The above-named officers with Lieut. T. J. Beaudry form the Executive Committee. The club is in good condition every way, and will shoot glass balls every other Wednesday, commencing May 4.

THE NEW MICHIGAN BILL.—E. Saginaw, Michigan, May 14.—The bill recommended by the Michigan Sportsmen's Association to prevent the killing of deer, ruffed grouse, pinnated grouse, wild turkey, colin or quail, speckled trout and grayling for other purposes than consumption as food within the limits of this State—in other words, to prevent the shipment of the above mentioned game from the State—passed the Senate 23 to 1, and the house 58 to 2, and now only awaits the Governor's signature to become a law.—H. B. R.

DETROIT.—The next Michigan State medal shoot will occur on Thursday the 19th of May, and inasmuch as E. H. Gillman is the present champion, there is likely to be another hot and determined contest. There is absolutely nothing left for sportsmen hereabout except spearing and trolling for bass and pickerel. But this sport is liberal and glorious for all who participate in it.

WE ARE OFTEN ASKED if Baker's three-barrelled gun is a safe arm, etc., etc. Now, we are growing tired of these repeated inquiries and wish to have it understood, once for all, that we do think it a safe gun, have had the highest testimonials from those who have used it, and do not hesitate to commend both the gun and its manufacturer.

A valued correspondent in Wyoming has for sale some fine prairie dog skins, suitable for mounting. He has also some relics found on Custer's battle field. Letters addressed to this office for W. A. A. will be forwarded.

—Our ever-bright contemporary, *Puck*, has this spring note: "And now is the time when the ice-cream vender makes his appearance on the street and the small boy who buys a cent's worth is importuned by his companion to give him "atherings," and after he has eaten the cream he takes the paper and jabs it on his companion's cheek, saying: "Here, cully, you're 'ather' me."

Sea and River Fishing.

FISH IN SEASON IN MAY.

FRESH WATER.

Brook Trout, *Salmo fontinalis.*
Pickerel, *Esox reticulatus.*
Pike or Pickerel, *Esox lucius.*
Pike-perch (wall-eyed pike) *Stizostedion americanum, S. griseum,* etc.
Yellow Perch, *Perca flavitilis.*
Striped Bass, *Roccus lineatus.*
White Bass, *Roccus chrysops.*
Rock Bass, *Ambloplites.* (Two species).
War-mouth, *Chænobrytius gulosus.*
Crappie, *Pomoxys nigromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilis corporalis.*

SALT WATER.

Sea Bass, *Centropristis atrarius.*
Striped Bass, *Roccus lineatus.*
White Perch. *Morone americana.*
Scup or Porgie *Stenotomus argyrops.*
Pollock, *Pollachius carbonarius.*
Tautog or Blackfish, *Tautoga onitis.*

FISHING ABOUT NEW YORK.—We are prepared to direct anglers to fishing resorts easily accessible from this city. This information will be given upon personal application to this office or to those who may inclose self-addressed envelope. The kind of fishing, the distance and the time to be spent should be stated.

. . . . *As an angler, he is one whom old Izaak would have loved, for with him angling is an idyllic pastime, a contemplative man's recreation. He has no care for the more exciting branches of the art. He cares but little for the toils of salmon fishing, or the excitement of lanting the savage pike. More to his taste is the quiet ramble beside the trout stream, the seat in a punt, gudgeon fishing, or a still calm evening by a pool side, angling for tench. He himself will tell you that he is an angler because of the opportunities it affords for pleasant and profitable reverie. It was very little matter whether he caught fish or not when he went a-fishing. From what we have observed, we doubt that the angler whose portrait we are sketching was born to the art; we think he was rather led into its exercise by the delight he takes in its accessories; therefore he is, as a rule, not a success ful angler. His pursuit of the fish themselves is not keen enough for that, and he is too often led astray by some extraneous object. His float may be carried down, and the fish may entangle his line in the weeds, the while he is unconsciously peering at the petals of a flower through a magnifying glass. His rod may lie on the bank of a stream while the minnows are nibbling the feather off his flies, and he will be absorbed in the study of gravel sections or rock strata laid bare by the winter torrents. When he returns to angling consciousness, he will extricate his line from the weeds, or put fresh flies on his line, with a quiet smile, and without the least impatience.*

G. CHRISTOPHER DAVIES.

TROUTING IN TIM POND.

I NOTICE in your ever live paper an advertisement from Kennedy Smith, of Eustis, Maine. As all real sportsmen wish to aid each other, evidence of which is often seen in your columns in various ways, allow me to say that Tim Pond is one of the few places where trout are very plenty, and the place is easy of access. I do not mean it is close by home. But one can leave New York at evening and the next evening be at Kingfield, or North New Portland, according to the route they may take. From Boston the route is by boat or Maine Central Railroad to Portland. From Portland by rail to Farmington, thence by stage to Kingfield and to Smith's Farm. At Kingfield Mead's hotel is one of the best for an invalid, pleasure tourist or sportsman that it has ever been my lot to find in Northern Maine. There are many excellent trout brooks within easy distance of this hotel. And on the route from Kingfield to Smith's Farm you follow the banks of the Conybassett River nearly eighteen miles. This river has many trout, and a few years since was as well stocked as any in Maine. The scenery is wild and very beautiful, the road good, if, perhaps, at this season we except the nine miles of new road (four years old), through Jerusalem; after leaving this road it is nine miles to the Smith Farm, with as fine mountain scenery as can be found in New England or Switzerland.

Dan Clark & Son run the stage from Farmington to Eustis. Many of your readers will recollect the senior proprietor as the veritable old "whip," who, years since, took them to Rangeley. His outfit is complete in all respects and rates reasonable. If a party chooses to go from Portland to West Waterville they can there take the Somerset Railroad to North Anson; John Ayer is president; I knew him when a schoolmate, his rank ran high, but not higher than afterward as a leading manufacturer of his State, or as a railroad manager. His road, as well as the other, sells round trip tickets. Two years since there was a good hotel at North New Portland, eight miles from North Anson. I think there is one at Anson.

I have been over the route from Farmington to Eustis five times, and always find new charms. I have once been from Eustis to New Portland; the drive is somewhat longer and the road very good. It passes through "Flaggstaff," where Arnold lost so many soldiers on his way to Quebec, then along Dead River, at the foot of Mt. Bigelow, for several miles. Just as the road turns into the "Notch" there is a good hotel, though with rather high prices. After turning from the Dead River banks the road comes upon what is called the "Horseback," a "ridge," barely wide enough for a carriage track, which is some hundreds of feet above the brooks and meadows below, while the peaks of the mountains on either side are thousands of feet above the "Horseback." Through "Lexington Plantation" the road is like a race track in a trotting park. As I am writing for your patrons and not for hotels or routes, I have spoken of both ways of reaching Smith's Farm.

I have been to Tim Pond for trouting and shooting three times, and before I am a year older I hope I shall have been there twice more, because I can get more and better trout and game for the outlay of money, time and fatigue than any other place I have yet found, after many years of experience, and because the scenery is just what one covets. A man in Connecticut, who has been there once, and I hope will soon be there again, said to me last Saturday, that after more than forty years of fishing—he has been in poor health the last ten years—Tim Pond was the only place that completely satisfied him in the number of trout, the quality of the scenery, the cabins and fair treatment that he had yet found, though he had traversed Connecticut, New York and Maine.

If such of your readers as go there are to use bait they know what they prefer. If they are to use the fly, permit me to say that the "Montreal," as made by Wm. Mills & Son, is the most successful. I told them how the fly cut from the trout looked and they have imitated it to perfection. Just at night the Coachman, the Scarlet Ibis and White Miller do well. Now and then a brown hackle will lure the speckled denizens of the clear waters of the mountain wreathed lakelet. But Col. Hayden, after some months of experience, as well as myself and others, has decided that the "Montreal" is the favorite.

There are many good trout brooks near the farm house, and a fine pickerel pond near Flagstaff. There are outside places of amusement and plenty of game near the lake, with dells, glens, cascades, ravines and gorges. About three and a half miles away is a small beaver pond, boiling with the gambols of good-sized trout. It is not the season for small game. Bears and other large game are always plenty. All these things add variety and pleasure.

If there are other facts and particulars you desire in relation to this sportsmen's paradise, I should be glad to furnish them, hoping that some of your readers may find the same rich enjoyment at Tim Pond that I and about one hundred others here realized, and intend to repeat. J. W. T.

FISH PROTECTION IN CALIFORNIA.

THE San Francisco correspondent of FOREST AND STREAM writes us that there is great complaint from all who have tried the streams this season of the scarcity of fish; and this in the face of the fact that many of these streams have been stocked by the very active Fish Commissioners of California. Along most of the California streams which are easily accessible from the larger cities, numerous Portuguese and Greeks have settled, particularly the former. These people are vandals, respecting no game laws and doing as they please. They keep their affairs among themselves, and while one will know of the other's law-breaking, people of other nations are kept in the dark. These people, usually small farmers, vignerons or woodchoppers, kill the fish at all times. They use traps, lime, etc., and, in the pools, giant powder. People are so accustomed to the use of giant powder in mining operations and in splitting logs, etc., that cartridges are not scarce and are very handy Several dozen fish can be taken by using one cartridge. Our correspondent says he took five traps out of a stream in one day's fishing last season. In one stream a gentleman living near by had put 10,000 trout two years in succession, but they were trapped and blown up and the stream was depopulated. He gave up the attempt to stock it. And this, our correspondent says, is a common experience. Several sportsmen's clubs have been organized with the ostensible object of protecting the fish, but most of them have established preserves on lakes, etc., and general preservation has not been aimed at. With the game clubs pigeon-shooting has obscured the idea of preserving game.

A club in Marion County, organized to protect the streams, had a man to watch before the season opened. He caught several irresponsible boys, and forcibly took "red-handed" a prominent member of the Sportsman Club, well known as an enthusiastic lover of angling, but never before suspected of law-breaking. He was prosecuted, but was freed because he averred that he had caught chubs and given them to Chinamen. That is the plea he got off on. Enthusiastic anglers are, however, not usually noted for a fondness for chubs, nor Californians for philanthropy to Chinamen. He was seen to take the fish and put them in his basket. A new trial will be had.

Our correspondent also informs us that a number of gentlemen in San Francisco are about organizing a society with the exclusive object of protecting the fish and game of the State. They will enlist the aid of gentlemen residing in the country.

The winninish from Maine has been successfully acclimatized in California. The San Francisco *Call* says: "At a meeting of the Academy of Sciences last week, T. D. Wakelee presented a specimen of land-locked salmon, caught in Felt's Lake, San Mateo County, this being the first specimen of this valuable fish caught on this coast. The circumstance is worthy of note, in that it proves that the Eastern land-locked salmon, a most excellent good fish, will propagate and flourish in California waters. The eggs from which this particular fish was derived were received from the Government officials and placed in Felt's Lake by our State Fish Commissioners two years ago last December. The fish exhibited was some eighteen inches long, which shows the size the fish will attain in that time. There is no doubt of its being the true *Salmo Sebago*, as all its markings agree exactly with the descriptions in the books. The Fish Commissioners are very much gratified at the result of this lot of eggs, as the fish is a valuable addition to our food supply. Moreover, what sportsmen will all rejoice in, is the fact that it is a first-class game fish, taking the fly readily. Eggs of this fish have been put in Tulare Espinosa, Tahoe, Donner, and several other lakes and streams, but this is the first specimen of this salmon taken. Felt's Lake, where it was caught, is an artificial reservoir, with very little water flowing into it."

The *Call* makes an appeal to sportsmen to broaden their views and devise plans for the protection of fish and game in the whole State, instead of the few preserves in which they are individually interested. This is the proper way to proceed in order to avoid all appearance of selfishness, and we hope the sportsmen of the State will heed the *Call*, which truly says: "Our city sportsmen are too apt to consider themselves the only sportsmen. They are apt to look upon country people as all 'pot hunters.' They have ignored the existence of many good men who could help in preserving the fish and game; in fact, the only men who would see the laws enforced, by being on the spot when they are broken, and where the law-breakers could be detected and punished. Fish ponds for members and shooting matches between members are very good things in their way, but neither will protect fish or game. It is reasonably certain that should the society referred to succeed in getting gentlemen in the country to interest themselves, and to act as guardians of the streams, the State Fish Commissioners would do all they could in stocking streams so guarded. Organizing clubs alone will not do. Advertising rewards will not do. Passing resolutions will not do. It needs practical co-operation among all classes of sportsmen, and the country sporsmen can do more than all in the city. But let both join hands in the good work, and benefit will result."

DERIVATION OF "BASS."—In your editorial of April 21 on the local names of fishes, a statement often found in American books on angling, is repeated, that the word *bass* is a corruption of the Dutch *barsch*, meaning a perch. In the works of Couch and of Yarrell upon British fishes may be found a cut and a description of a "bass," a marine fish of the English coast, which is evidently a perch by the description, and is stated to be a game fish, often taken with hook and line. Besides this testimony that the word is good English, we have that of the early settlers of Massachusetts, who often mention the bass fisheries as important sources of profit; so that they were in Plymouth farmed out to individuals for the benefit of the colony. By their frequent and familiar use of the name *bass*, it would appear that these people brought the word with them from England and applied it to the American fish, as they, in many other cases, applied European names to American animals —S. C. C.

Our correspondent is correct, but we did not mean that the name of "bass" was an "Americanism," "Bass" and "Perch" have a common derivation. Both are now distinct English words, and refer to fishes which belong to the family *Percidæ*. Webster gives "bass, a corruption of *barse*," and refers to the latter. He gives the derivation of barse as from the Anglo-Saxon *bears, baers;* Danish *baars;* German *bars, barsch, baersich*; Latin *perca*, etc. Our idea was merely to show that the names originally referred to the same fish, and that in the case of a fish called perch at the South and bass at the North, there was equally good authority for both. The "black bass" of the North is in some parts called "black perch," the "sun-fish" becomes "sun-perch," etc.

How a love for the natural world may be carried into the furnishing of the dwelling is told by Dr. Thad S. Up de Graff in his tribute to a friend, which was published in *The Bistoury* for October, 1880:

"Were we called upon to pen a single sentence, revealing the character of our friend, A. L. Williams—now dead—we should say 'he loved the birds and flowers.' Loved them with a consuming, never ceasing ardor, that lighted up his face and sparkled in his tender eye, at the very glimpse of them. Many times have we seen him leave the stream, when engaged in the gentle art, to climb a precipitous bank, there to fondle a delicate anemone which his keen eye had discovered. Seated upon the grassy bank of a rippling mountain stream, we have listened to his eloquent praise of some favorite flower, or of the song of a well known bird His eye ever on the alert for a new wild flower; his ear quick to catch the first note of every feathered songster. His acquaintance with nature extended beyond that gleaned from books—it was a familiar knowledge, born of an intimate companionship with the creatures of his choice. Every tiny flower that struggled for an existence in the tangled grass, or beneath a fallen tree, found a ready, cheerful rescuer at his hands, for he knew their haunts and searched for them with a never-failing delight. To hear him talk to the birds and comment upon their habits, was alone richly worth a day's ramble in his company. The bird that chirped unseen in the branches of a tree or soared away to the clouds was quickly recognized and some peculiar habit unfolded to the companion who cared to listen. A taxidermist of considerable skill, it was not strange that his dwelling was ornamented with the beautiful creatures that he so much loved. As he pointed out each pretty specimen of his handiwork a little story of its capture was always related, revealing the great enjoyment that his excursions to the woods invariably engendered. Bird-nests of various kinds hung suspended by the picture frames of his sitting-room, at home; birds were grouped in various attitudes about the apartment, while ferns and wild flowers grew in cones and from brackets constructed of fungus growths taken from the forest trees. Thus, in his dwelling, was his fondness for nature manifested."

NOTES FROM EAGLE'S NEST.—May 11.—Fishing is very late this year. A few worm-drowners have caught small baskets of small trout. They will not rise to fly in snow water here, and we have drifts in our mountains yet five feet deep, if an inch—I do not know but more. Over in Davenport, Mr. Snyder, one of your old subscribers, and a true sportsman on land or water, has been snatching up illegal fishermen, and Justice O'Connor has been teaching them the terrors of the law. All honor to both. I have just received fifteen thousand California mountain trout eggs from my long-time friend and ancient comrade, Seth Green; and John N. Bennett, another worshipper at the shrine of the FOREST AND STREAM, is already hatching them out with fine success. He says he will not lose thirty eggs out of the entire lot. He is a splendid fishculturist. I have not yet wet a line, but I have got my Orvis rod out, looked over my tackle, and shall soon try a May fly over on the glad waters of the bright Beaverkill. And will I not report to the FOREST AND STREAM? Yea, verily—so mote it be!—NED BUNTLINE.

THE LAKE MEGANTIC ROUTE—Sherbrooke, P. Q., May 14. —"E. J. T." can reach this place by the Grand Trunk, or by the Passumpsic railway. From here to Lake Megantic, the present terminus of the International Railway, 70 miles. Return ticket, $3.35. After 25th inst., small steamer through lake 12 miles; one mile portage to Spider Lake. Guides are: S. D. Ball, Pierre Le Royer (Indian) and Ed. Noel. P. O. address, Agnes, Lake Megantic, P. Q. Terms, $1 to $1.50 per day. Fishing for trout and lunge, fly and trolling, after June 1. I have visited Lake Megantic every year for the last eighteen years, and will be happy to give any information in my power respecting it. Supplies can be obtained here and at the lake.—D. T.

THE NEPISIGUIT SALMON GROUNDS—New York, May 12 — I am informed that the land on both sides of the pools on the "Rough Waters" of the Nepisiguit River, New Brunswick, has been bought by some parties. This was the portion of the stream where salmon fishing was formerly obtainable from the fishery officer at $1 per day per rod. The land on *all* the salmon pools above was purchased some time ago by some anglers, and the fishing was also under lease by the Dominion Government, which has led to law suits now pending. So, there is now no "public" fishing on the river, which, by the way, has furnished very poor sport of late years and is rapidly deteriorating.—MANHATTAN.

TROUTING IN PENNSYLVANIA.—Last week some good trout fishing was had at Jim Henry's neighborhood, Pa. All disciples of Walton know where Jim's is, so I need not give the route to get there. Theard, an old and expert fly-fisherman, stated only to-day that he had fished almost every stream in our State where there was room to make a cast, and after all found that Jim's house was as good a starting point to reach fairly good waters as he could find in Pennsylvania.—HOMO.

AN EIGHT POUND SHAD.—A North River shad, weighing eight pounds, was on exhibition on the 11th inst. at the restaurant of Thomas L. Clark & Son, 215 Washington street, New York. It was caught by the veteran shadder, Sam Ludlow. We saw the fish; it measured 26½ inches in length, 6¾ in depth, and was 3¼ inches thick just froward of the dorsal fin. Its head was so large that it could not get into the gill-net further than just back of the eye, the twine mark coming to the posterior edge of the suborbital bone.

NOVA SCOTIA TROUT FISHING—Montreal, Quebec, May 11—Good trout fishing is now to be had in the lakes back from Buckingham, Quebec. Mine host, Lynch, of the Montreal House, Buckingham, has good camps at these lakes, and his charges will be very reasonable this season to carry parties to and fro, and furnish all necessary supplies while camping there.—STANSTEAD.

GET OUT YOUR TACKLE.—A small school of bluefish was seen off the coast of New Jersey on the 12th. Weakfish have been taken in Gravesend Bay in the shad nets, and one man claimed to have taken one on a line on the 14th. The June schools will be composed of small fish, but hungry ones. See that your tackle is in good order, and if not, then buy new. If you don't know who keeps the best tackle just look through our advertising columns; you can't miss the right one.

THE WILLEWEMOC CLUB in the Catskill mountains owns Willewemoc Lake, one of the best trout preserves in this State, together with club-house, out-buildings and furniture, and about twelve acres of land. A share in this club can be obtained at a reasonable price by prompt application to "Willewemoc," care of FOREST AND STREAM.

—A rather curious incident occurred to an acquaintance of mine while fishing in some private water near here. He was fishing for trout with the worm, and had, as he supposed, hooked a fish; but what was his astonishment in pulling out the line to find, instead, a half-digested frog attached by the leg to the hook. Evidently the fish had taken the frog some time before, and, in swallowing the worm, the hook, instead of fastening in his throat, caught the frog's leg.—*Fishing Gazette.*

—Some of our readers may possibly have read about the eccentric but forgetful Rev. George Harvest, who lived in the latter half of the last century. Mr. Harvest had a partiality for the then Bishop of London's (Dr. Compton) daughter. The wedding day, in short, had been fixed, but, unluckily, he (Mr. H.) forgot all about it and went out fishing instead. The Bishop's daughter, highly incensed, broke off the engagement.—*Fishing Gazette.*

RANGELEY LAKES.—The excursion fare to Rangeley Lakes from Boston and return, by the popular Boston and Maine Railroad, is $12.50. This road looks out for the interests of its sportsmen patrons. See its advertisement elsewhere.

Fish Culture.

[A paper read before the American Fisheultural Association, and here reprinted from advanced sheets of report of U. S. Fish Commission, Part VII.]

EPOCHS IN THE HISTORY OF FISH CULTURE.

BY PROF. G. BROWN GOODE.

IT has been my aim in the following paper to recount, in chronological order, the principal steps in the progress of fish culture in Europe and America. No originality of matter or of method is claimed. The work has been done for my own convenience, and that of others who may have felt the need often felt by me of a concise summary of the facts in the history of the artificial propagation of fish. This paper has been hastily prepared, and, perhaps, contains misstatements or omissions. Criticisms or corrections will be received gladly, especially if they relate to statements concerning priority of invention. Without further introduction, I will proceed to the consideration of the first and greatest epoch.

I. 1741—*The Discovery of the Art of Fish Culture.*—In the year 1741 the art of fish culture was discovered by Stephan Ludwig Jacobi, a wealthy landed proprietor living at Hohenhausen, a small village in the duchy of Lippe, in Northwestern Germany. This discovery was not made public until 1763, thirty-eight years after the time when Jacobi, a youth of seventeen years, first conceived the idea of artificially fertilizing the eggs of fish for the purpose of restocking ponds and streams, and began a series of painstaking experiments.

There is so much of interest in these early efforts at fish-breeding, that I shall not hesitate to speak of them somewhat at length, quoting freely from a paper recently published by my friend, Dr. Ludwig Hapke, of Bremen, who has taken the pains to visit the home of Jacobi, and to correct many errors concerning the worker and his work, which may be found in all the writings hitherto published on the history of fish culture.

Stephan Ludwig Jacobi was born April 28, 1709, upon his ancestral estate of Hohenhausen in the province of Varenholz. After a few years of study, under a private tutor, he was sent to the Gymnasia of Lemgo, Detmold and Hamburg. In 1734 he settled on the University of Marburg, where he spent four years in the study of jurisprudence, philosophy and mathematics. In 1738 he turned his attention to agriculture and, in 1741, after his marriage, he assumed the management of the estate which he had inherited from his father. In 1745 he was appointed "Landlieutenant," or Lieutenant, of Militia. He was not, however, a military man, though he is spoken of as an army officer in all works on fish culture. Like many of the leading landed proprietors of Germany, he engaged in various enterprises not strictly agricultural, though properly pertaining to his functions as landlord. The village of Hohenhausen, which was located upon his estate, was a prosperous settlement of about one thousand inhabitants.

Among the industries in which he was engaged was the management of a flour-mill, a vinegar factory and a factory for the fabrication of starch from potatoes. He was also employed in public service, having been chosen superintendent of the work of building a canal from Schötmar to Uffeln, an enterprise by which numerous meadows and swamps were reclaimed from the water, and which was also of importance in the years of destitution (1771 and 1772) in providing work and food for many hundreds of suffering peasants. He was, however, particularly devoted to the culture of fruit and of fish, and is said to have employed successfully for many years a system of rotation of crops. Certain extensive tracts upon his estate he was accustomed to devote for a certain period to fruit-growing, then, by overflowing them, to give them up with equally satisfactory results to the rearing of fish. As late as 1805 the twelve little troughs which he used in hatching fish eggs, as well as the other apparatus devised by him, were still to be seen by those who were sufficiently interested to inquire for them.

Jacobi was a man of commanding stature and fine personal appearance. He died, aged seventy-five years, on the 22d of April, 84, his widow surviving until 1805. He left twelve children, the best of whom, Gerlach Ferdinand Jacobi, inherited the estate, and up to his death, in 1825, continued the fish-breeding industries which had been established by his father.

The "Father of Fish Culture" was, in the opinion of Dr. Hapke, one of the important scientific investigators of the age in which he lived. A pupil of the renowned Christian Wolf, the disciple of Leibnitz, the predecessor of Kant, he was trained in the best methods of the mathematicians and natural philosophers of his day and nation. He was unfortunate in being ahead of his time. He was a citizen of one of the smallest of the, at that time, infinitesimally small German provinces, and was in the prime of life when the Seven Years' War occurred [1756–1763], and when the social and scientific development of Germany was retarded by internal dissensions. He appreciated the full scientific and practical import of his discovery and lost no opportunity to make it public and to introduce it into general usefulness. He himself published papers in various periodicals and was in constant correspondence with the chief naturalists of Germany and France, like Buffon, Lacepede, Fourcroy and Gleditsch, while also encouraging others to give publicity through the press to the methods and results of his labors. A contemporary biographer wrote: "By reason of his discovery of the methods of artificially fertilizing the eggs of fish, as well as an account of many useful discoveries in physics and mechanics, he was well known to the academies of Berlin and St. Petersburgh, as well as within the narrower limits of his own fatherland" (Lippische Intelligenzblatter, 1768, p. 585). He was so well known throughout the country that a letter sent to him from the American Colonies sometime between 1760 and 1770, and addressed to *The Trout Culturist Jacobi, Germany*, passed safely to his address. [HAPKE, Dr. L. Zur Entdeckungsgeschichte des Kunstlichen Fischzucht. Abhandlungen des Naturwissenschaftlichen Vereins, Bremen, vi, 1876, pp. 157–164.]

It is claimed by many French writers that the process of artificial fecundation was discovered as early as 1420 by Dom Pinchon, a monk in the Abbey of Reome. This claim was not advanced until 1854, when the Baron de Montgaudry called attention to certain manuscript records at that time in his possession, found among the archives of the abbey. The claim is a somewhat feeble one, and it is believed by many authorities that the practice of the French monk was simply to collect and transplant the eggs which he had found already naturally fertilized, thus discovering artificial breeding, but not artificial propagation. However interesting to the antiquarian, the proceedings of Dom Pinchon had no influence upon the progress of fish culture. [MONTGAUDRY: Bulletin de la Societe Zoologique d'Acclimatation, Paris, I, 1854, p. 8°. HAIME: Revue des Deux Mondes, June, 1854, and Report U. S. F. C., Part II, 1873 (pp. 465–492), p. 472 (translation). MILNER: Report U. S. F. C., Part II, 1873, p. 531. MILLET: La Culture de l'Eau, p. 128. HAPKE: op. cit., p. 151. MOLIN: Rationelle Zucht der Susswasserfische, etc. Wien, 1864, p. 4.]

To Germany, beyond question, belongs the honor of discovering and carrying into practical usefulness the art of fisheulture. Upon the estate of Jacobi, as has been seen, it was carried on as a branch of agriculture for nearly eighty years—from 1741 to 1825—though it was nearly one hundred years before public opinion was ripe for a general acceptance of its usefulness. Recognition of fish culture was finally brought about by the zealous advocacy of men of science in France, Scotland, Bohemia and Switzerland. During the interim it appears to be certain that at no time was the practice of fish culture from a practical standpoint entirely abandoned by citizens of Germany.

II. 1763—*Announcement of the Discovery of Fish Culture.*—In 1763 some anonymous contributor to the Hanoverian Magazine published a description of the methods employed by Jacobi in the artificial culture of trout and salmon. [Hannoverische Magazin, 1763, Erster jahrgang, p 363.] On the 5th of August, 1765, Jacobi himself, in the same periodical, recounted the story of his experiments and their results. [HAPKE: op. cit., p. 160. HAIME: op. cit., p. 474. MILNER: op. cit., p. 531. MILLER: op. cit., p. 127. BLOCH: Hannoverschen Magazin, 1783, pp. 387–800. KRUNITZ: Encyclopadie, 1778, p 456. MEZLER: Landwirthschaft's Kalender, Stuttgart, 1771, p. 72.]

III. 1764—*Indorsement of Fish Culture by the Savans of Germany.*—In 1764, in the year after the announcement by Jacobi of the results of his experiments, Dr. J. G. Gleditsch, a renowned botanist, presented to the Berlin Academy of Sciences a communication, in which he pointed out the importance of the new discovery. [GLEDITSCH: Denkschriften der Konighichen Akademie zu Berlin, xx. (1764), 1766, pp. 47.]

IV. 1770—*First French Publication of a Treatise on Fish Culture.*—In 1770, the memoir of Jacobi was published in Paris in an abridgment of the Memoirs of the Academy of Berlin. [Memoires de l'Academie Royale do Prusse, etc.]. In Duhamel-Dumonceau's "General Treatise upon the Fisheries," published in 1773, was published a translation of Jacobi's memoir on artificial propagation. [DUHAMEL DU MONCEAU: Traite General des Peches, publie par ordre de l'Academie des sciences. Paris, 1773, part iii, p. 209.]

V. 1771—*First Recognition by Governments of the Importance of Fish Culture.*—George III, of England, recognizing the importance of the discovery of Jacobi, granted to him a life pension. [PEZAY: "Soirees Helvetiennes," Amsterdam, 1771, p. 169. MILLET: op. cit., 1870, p. 128.].

VI. 1772—*First Public Demonstration of the Principles of Fish Culture.*—In 1772, Prof. Adanson, in his lectures in the Royal Garden of Paris, now the Garden of Plants, demonstrated to his hearers by practical illustration the processes of fish culture. [MILLET, op. cit., p. 128.]

VII. 1788—*First Publication in English of a Treatise on Fish Culture.*—A translation of Jacobi's memoirs was published in London, in 1788, under the title, "S. L. Jacobi's Method of Breeding Fish to Advantage."

VIII. 1791—*Beginnings of Fish Culture in Italy.*—As early as 1791, Joseph Bufalini, of Cesena, in Northern Italy, had succeeded in artificially fecundating the eggs of many species of fish. [*Opuscoli scelti di Milano*, 1791. *Vis litteraire de Spallanzani*, by Tourdes, p. 63.] Little has, however, since been done in Italy, particularly in the way of public fish culture.

IX. 1800–1840—*The Work of Early Disciples of Jacobi in Germany.*—As we have already seen, the son of Jacobi carried on fish culture at Hohenhausen from 1784 to 1825. According to Hartig and Von Kaas, the forester Franks, and perhaps others, practiced successfully the methods of Jacobi at Steinburg, in Lippe Schaumburg, soon after their promulgation. Head-forester Martens made some successful trials at Schieder in 1837, which were continued for many years. In 1837, Court-hunter Schnitzer, a pupil of Martens, established in Leppe Detmold, Jacobi's own province, a trout-breeding establishment, which, in 1844, was still in successful operation. Here were made some interesting observations upon the influence of temperature on the development of eggs. In 1840, Knoche published an account of successful experiments at Oelbergen. [HARTIG (Ernst Friedrich): Lehrbuch der Teichwirthschaft, 1831, p. 411. KNOCHE: Zeitschrift fur den landwirthschaftlichen verein des Grosherzogthums Hessen, No. 37, 1840, p. 457. WAGENER: Vaterlandische Blatter, Detmold, 1844. HAPKE: op. cit., p. 161. HAIME, op. cit., p. 476. BLANCHARD: op. cit., p. 539.]

X. 1820—*Initial Efforts at Fish Culture in France.*—About the year 1820, MM. Hivert and Puachon fertilized the eggs of the trout, and attempted to restock the waters of the Provinces of Haute Marne, in eastern France. [MILLET: op. cit., p. 128. BLANCHARD: op. cit., p. 374.]

XI. 1824—*Beginning of Fish Culture in Bohemia.*—In 1824, in the duchy of Horazdovic in Bohemia, successful experiments in salmon culture were carried on by Director Studeny, the young fish dying when fingerlings. [FRITSCH: Die Flussfischerei in Bohmen, Prague, 1871, p. . HAPKE: op. cit., p. 162.] In 1853, a new interest was awakened in Bohemia by the experiments of Prof. Purkynje in trout culture.

XII. 1837—*Beginnings of Fish Culture in Great Britain.*—In 1837, Mr. John Shaw, after studying for several years the habits of the spawning salmon, succeeded in fecundating their eggs and raising the young fish to the age of two years. His experiments, though undertaken chiefly to demonstrate the identity of the fishes known as the *parr* and the *smolt* with the young of the salmon, were of great importance in the development of fisheultural science in Great Britain. [SHAW, JOHN: An account of some experiments and observations on the pan and on the ova of the salmon, proving the pan to be the young of the salmon. Edinburgh New Philosophical Journal, XXI. 1836, pp. 99-110. Experiments on the growth of the salmon, Proc-Royal Society, Edinburgh, I., 1838, pp. 178-9, pp. 275-9, Edinburgh: New Philosophical Journal, XXIV., 1838, pp. 165-176. Observations on the growth of the salmon. London, Smyman, 1840, p. 11.]

Gottlieb Boccius claims to have successfully raised young trout at Chalsworth and Uxbridge, England, as early as 1841. [BOCCIUS, GOTLIEB: A treatise on the management of fresh-water fish, with a view to making them a source of profit to landed proprietors. London, 1841, 8vo. A treatise on the production and management of fish in fresh waters by artificial spawning, breeding and rearing. XXx., London. 1848.]

In 1854, the Brothers Ashworth hatched 260,000 young salmon at Lough Corrib, in Ireland, and soon after similar enterprises were undertaken for the River Tay, by Mr. Ramsbottom, and for the Dee by Mr. Ayrton.

XIV. 1842-1844—*Experiments of Remy and Gehin.*—In the year 1842, according to various French authorities, an illiterate fisherman named Joseph Remy, living in the mountains of Vosges, after studying for some years the spawning habits of the trout in the brooks about his home, succeeded in fecundating and hatching their eggs, and in feeding the young fish until they were old enough to shift for themselves. In the latter part of his undertaking he had an associate named Antoine Gehin. These fishermen were actuated solely by professional zeal, and before their labors became generally known, had succeeded in rearing to a marketable size several thousands of trout. In 1843, Remy, in a letter to the Prefect of the Vosges, narrated the results of his experiments, and in the following year he and his colleague received a premium from a local society—the Society of Emulation of the Vosges.

An immense stress has been laid upon the importance of these men to fish culture, particularly by French writers, Quatrefages, Haxo, Milne Edwards, Haim and others, an importance which I am, however, unable to appreciate to the same extent as they. In the first place, it seems somewhat improbable that the art of fertilizing fish eggs was, as is usually claimed, an original discovery of these men. Jacobi's experiments had been published nearly eighty years, and in the French language, in various popular treatises on fish and fishery, for fully seventy years. Remy was not so thoroughly illiterate as is usually represented, or he could not have communicated his observations in writing to the provincial authorities, nor have become a candidate for an award from scientific society. It seems quite unlikely that the names of Jacoby and Goldstein were to him entirely unfamiliar. Consider, too, that the reputed discovery of Dom Pinchon, in the fifteenth century, was made in the neighboring province of *Cote d'Or*, while in *Haute Marne*, the remotest portions of which are not thirty miles distant from Vosges, local experimenters, as early as 1820, "had succeeded in hatching the eggs of the trout and obtaining their young to replenish the brooks and creeks of that district." [MILLET: op. cit., p. 128.]

Even the claim that the labors of the Vosges men were of immense importance to fish culture in France is not so clearly tenable. When the important essay of Quatrefages was published in 1848, their work was unknown to its author, and to this essay all Frenchmen agree in ascribing great influence in stimulating their national efforts in fisheulture.

I hope it is not uncharitable to suggest that the chief significance to fish culture of the work of Remy and Gehin lies in the opportunity it afforded to France to throw its energies into the field without acknowledgment of indebtedness to Germany. At the same time I am not disposed to deprive their experts of the commendation which they deserve for their practical successes in fish-breeding. The French Government, when in 1850, after resolving to make a grand experiment in stocking the waters of France with fish, seriously considered the question of giving to Remy and Gehin the direction of a portion of the enterprise as a recompense for the merit of having created a new branch of industry in France—an encomium which they thoroughly deserved. [HAXO: ——— Reflexions sur l'Ichthyogenie, ou des œufs des poissons l'eclosion Epinal: Imprimerie de Cabane, 1851. 12mo. German edition, Leipzig, Spamer, 1855. MILNE EDWARDS, A.: Annales des Sciences, Naturelles, Paris. 3d series. XIV., 1850, p. 53. MILLET: op. cit., p. 129. HAIME: op. cit. Annales de la Societe d'Emulation des Vosges. V. 1844, p. 301.]

XV. 1842—*Beginnings of Fisheulture in Switzerland.*—A decree of the Swiss Government, issued in 1842, gave complete instructions to fishermen upon the method of artificially propagating fish. [VOGT: ——, HAIME: Revue des Deux Mondes, 1854.] As early as 1784 Spallanzani, Provost of Geneva, who had been one of the first to recognize the value of the discovery of Jacobi, published a treatise "On the Artificial Propagation of Animals and the Nature of Hermaphrodites," in which he detailed the results of experiments made by himself. [BOSONNET, 186.] In 1857 was founded the establishment at Zurich, soon followed by many others. [BOUCHON BRUNDELEY, Rep. U. S. F. C., Part II., p 575.]

XVI. 1848—*Revival of Interest in Fish Culture Among the French.*—In 1848 was published the celebrated memoir of Quatrefages upon "Artificial Fertilization in Fish Culture," to the influence of which Haime and other French writers attribute the new interest in fish culture, which was for several years quite absorbing, which resulted in many improvements in the art, and to which, indeed, may be directly attributed the general revival of interest on the subject, which soon spread to America and elsewhere, and which has not since abated. [QUATREFAGES, A. DE: Des fecondations artificielles appliquees a l'elove de poissons. Comptes Rendus of the Academy of Sciences of Paris. XXVII., 1848, pp. 413-416. Revue des Deux Mondes, Jan. 1, 1849.]

XVII. 1850—*Encouragement of Fish Culture by the French Government.*—In 1850, Prof. Alphonse Milne Edwards, Dean of the Faculty of Sciences of Paris, was instructed by the French Minister of Agriculture to ascertain the value of the facts recently published concerning fish culture. He visited England, and also the establishment of Remy and his associate in the Vosges, and published a report, in which he recounted that the Government takes measures to stock the streams of France with fish.

In 1850 was established at Huningen, in Alsace, the first fish breeding station, or "piscifactory," as it was named by Prof. Coste. The year 1850 should be memorable in the annals of fish culture, since it marks the initiation of public fish culture. To the establishment at Huningen the world is indebted for some important practical hints, but most of all for its influence upon the policy of governments. The fortunes of war and conquest have now thrown Huningen into the hands of the German government. [COSTE (J. M.): Notice Historique sui l'etablissement de pisciculture de Huningen. Paris, 1850. Instruction pratiques sur la pisciculture, survies de memoires et de rapputs sur le meme sujet. Avec figures, Paris, Masson, 1853, 12mo. DETZEM et BERTOL: Fecondations Artificelle des Poissons. Mem. de la Soc. d'Emulation des Donbs, 1851.]

XVII. 1850—*Beginning of Public Fishculture in Norway.*—In 1850 the Storthing or Parliament of Norway voted 3,000 specie thalers for the prosecution of fish culture. Norway is thus entitled to share with France the honor of pioneership in fish culture, though, by reason of her remoteness, her influence has not been so extended. [HAPKE, op. cit., p. 160]. It is worthy of mention that about 1850 the art of fish culture was again independently discovered by one Jacob Sandungen, a Norwegian peasant. [MORIT: op. cit.]

XIX. *Beginnings of Fish Culture in Finland.*—For a third or fourth time the art of fish culture was independently discovered by a Finnish peasant named Matts Thomasson Wallila about the year 1852. [MOLIN: op. cit., p. 7.]

In 1857 H. J. Holmberg was sent by the Russian Government to Sweden and Norway to see how far the methods of fish culture then employed were applicable to Finland. [Molin p. 10.]

In 1862, through the labors of Holmberg, who in that year became inspector of pisciculture in that country, the first breeding station was established. In 1873 there were already ten large establishments in this province. [SUDAKEVICZ: Rep. U. S. F. C., Part II., p. 512.]

FIXTURES.

September 1, at Pittsburgh, Pa. Close of entries Pennsylvania Field Trials. First Annual Derby. J. R. Stayton, Secretary, Pittsburgh, Pa.

September at St. Louis, Mo. St. Louis Kennel Club Third Annual Bench Show. Charles Lincoln, Superintendent.

October 1 at New York City. Close of entries Eastern Field Trials. Trials commence on Thanksgiving Day. Jacob Pentz, Secretary, P. O. Box 274, New York City.

May 17, 18, 19 and 20, at Lincoln, Neb. Nebraska Dog Show. Isaac T. Webster, U. S. A., Superintendent.

THE BEAGLES RATTLER, MAJOR AND DYKE.

OUR illustrations this week are of the three beagles, Rattler, Major and Dyke. Rattler is the property of Mr. J. N. Dodge, and at the Westminster Bench Show won the FOREST AND STREAM special prize for straight-legged beagles. Rattler's age is 3½ years, his weight 20½ lbs. His measurements, sent to us by his owner May 18, are as follows: Height at shoulder 14½ inches, length from nose to set on of tail 27½ in., length of tail 10 in., girth of chest 23 in., girth of loin 18 in., girth of head 14½ in., girth of forearm 5½ in., length of headfrom occiput to tip of nose 7¾ in., girth of muzzle midway between eyes and tip of nose 7½ in., length of ears from tip to tip 16.

Major belongs to Mr. Pottinger Dorsey, and at the late bench show was the winner of the FOREST AND STREAM special prize for bench-legged beagles. Major's age is 4 years, his weight 22 lbs. and his measurement May 11 as follows: Height at shoulder, 13 in., length from nose to set on of tail 28¼ in., length of tail 10¾ in., girth of chest, 20½ in., girth of loin 17½ in., girth of head 13½ in., girth of forearm 5½ in., length of head from occiput to tip of nose 7¼ in., length of muzzle midway between eyes and tip of nose 3½ in., length of nose to stop 3½ in., length of ears from tip to tip 15½ in., length of leg from foot to elbow 7 in., length from knee to elbow 4 in.—*May* 11, 1881.

The bench-legged beagle Dyke, the property of Messrs. Bond and Maddux, was not present at the bench show. His age is 2 years and his weight 20 lbs. Height at shoulder 14 inches, length from nose to set on of tail 31 in., length of tail 12 in., girth of chest 21 in., girth of loin 17½ in., girth of head 14 in., girth of forearm 6 in., length of head from occiput to tip of nose 8 in., girth of muzzle midway between eyes and tip of nose 8 in., length of nose to stop 3 in., length of ears from tip to tip 16½ in., length of leg from foot to elbow 8 in., length from knee to elbow 5 in. —*May* 12, 1881.

NATIONAL FIELD TRIALS.

THESE trials were held on Tuesday, Wednesday and Thursday last, the 26th, 27th and 28th inst., over Sir Vincent Corbett's estate, Acton Reynald, near Shrewsbury, and the secretary, Mr. Samuel Ebrall, must be congratulated on the success which rewarded his management. The draw took place at the Raven Hotel, Shrewsbury, on Monday, the 25th, at 12 P. M., when, strange to say, very few field trial goers put in an appearance; but this did not affect the business part of the affair, as the entries mustered as strong as last year, which was satisfactory. The judges were Sir Vincent Corbett and the Rev. W. Serjeantson; and they took considerable pains to come to right conclusions, with absolute success, I firmly believe, as without doubt their verdicts were most unanimously endorsed.

TUESDAY, APRIL 26.

We met at Shawberry White Gates, seven miles from Shrewsbury, at 9.30 A. M., and at once began the

Pointer Puppy Stakes, for Puppies born in 1880.

Mr. C. J. Cotes' lem w Jezebel, by Shot—Juno, 12m0.....	agst	Duke of Westminster's liv w Gannet, Garnet—Plane, 12m0.
Viscount Downe's liv w Sal, by Drake—Nell, 10m0 (drawn).....	"	Mr. C. J. Cotes' liv w Judy, by Shot—Juno, 12m0.
Mr. G. Pilkington's liv w Moffatt, by Bow—Gretna, 14m0	"	Mr. R. J. Lloyd-Price's liv w Luck of Bron-y-Gader, by Luck of Edenhall—Ready Money, 10m0.
Mr. R. J. Lloyd-Price's liv w Fatima, by Bang—Hebe, 12m0	"	Mr. W. Brailsford's liv w Dodge, by Monk—Sue, 12m0.
Mr. R. J. Lloyd-Price's liv w La Vole, by Luck of Edenhall—Belle Faust, 10m0....	"	Mr. A. P. Heywood-Lonsdale's liv. w Wymstay, Birr—Drab, 12m0.
Mr. R. G. Mawson's w liv t Quits, by Faust-Snipe, 15m0	"	Mr. D. R. Scratton's liv w Hero, by Bang—Hebe, 12m0
Mr. R. J. Lloyd-Price's liv w Lady Zoe, by Luck of Edenhall—Belle Faust, 10m0..	"	Mr. A. P. Heywood-Lonsdale's liv Cassandra, by Birr—Fan.

Awards.—First prize, Mr. R. J. Lloyd-Price's La Vole: second prize, Mr. R. G. Mawson's Quits; third prize, Mr. G. Pilkington's Moffatt.

I append the card as it was originally issued, because, as the stakes were not run on the heats plan, it would be impossible to produce a card of winning and beaten dogs for the first or second round, since any of the runners could be called in the second round if the judges thought they had shown sufficient merit.

The first brace, Mr. C. J. Cotes' Jezebel and the Duke of Westminster's Gannet, were slipped in a grass field, wherein amongst some rushes both found, but left their point, and the bitch Jezebel knocked the birds up. In the next field Gannet took a good point on a brace, Jezebel backing wonderfully well, and to gun both dropped irreproachably. Viscount Downe's Sal and Mr. C. J. Cotes' Judy were to have come next, but Sal, being ill at the time, was drawn, and I am sorry to say that she subsequently died, having picked up poison, I was told, when being worked by Edward Armstrong previous to her trial.

Mr. G. Pilkington's Moffatt and Mr. R. G. Lloyd-Price's Luck of Bron-y-Gader were the next brace. Moffatt, going well throughout, pointed a hare, then found a brace which her breaker put up, when loudly ordering the bitch on. Luck then false pointed, and Moffat flushed, and both failed to make out a brace, which was under their noses; but clearly it was their breaker's fault, as both men were in such a desperate hurry to go forward that they put up the two birds, which both dogs were just winding.

In the next—a good open field—Luck pinned down a brace in excellent form, being backed to order; and the next brace, which were Mr. R. J. Lloyd-Price's Fatima and Mr. W. Brailsford's Dodge, were called. The bitch ran far more merrily than the dog, who seemed a cautious, careful worker, not likely to make a mistake if he could help it. Mr. Brailsford, however, disliking his pace, drew him.

The next brace were Mr. R. J. Lloyd-Price's La Vole and Mr. A. P. Heywood-Lonsdale's Wymstay. La Vole found a brace exceedingly well, was not backed, and Wymstay put up the birds. As regards their form, La Vole was the most stylish worker we had so far seen. In the next field Wymstay, going wild, ran up a brace again, never dropped to wing, and altogether failed to give anything like a good account of working capabilities.

Mr. R. G. Mawson's Quits then ran against Mr. D. R. Scratton's Hero. Quits began by false pointing, Hero backing her admirably, and both went well and with great style, Quits particularly working fast, cleverly and smartly. She next found a brace in a grass field, when Hero, neglecting to back, ran into them down wind; but when Quits subsequently pointed a pheasant, she backed her capitally, and the next brace were ordered to the front.

This was Mr. Lloyd-Price's Lady Zoe and Mr. A. P. Heywood-Lonsdale's Cassandra. The latter, as soon as slipped, put up a hare, and chased another beyond fence, thereby putting out all chances of scoring.

Judy ran her bye with Lady Zoe. Both were merry goers, and had just settled into their stride with a will, when both found a brace of pheasants, Lady first acknowledging, but it was a very near thing; then Lady pointed twice on a hare, Lady backing her well each time. The latter then found a brace. Judy, jealous, got up from her back, and they put up the birds between them. In the next field both quartered still better, but Judy, although going fast and cleverly, carries her head a bit too low, whereas Lady, on the contrary, went in old Drake style. After luncheon—Gannet and Luck of Bron-y-Gader were called for first ties. When going down wind, Luck put up a brace, and then Gannet found another brace admirably well, which the other bitch had left.

Fatima and Moffat ran next. Fatima pointed a hare's form, was beautifully backed, and Moffat finding a brace well, was also well backed, and they were taken up. La Vole and Quits had a sharp thing, both going in superb style. La Vole found a brace, and was well-backed; she next dropped to wing to a wild brace, and Quits false pointing, the awards were there and then made—La Vole first, and Quits second; and we began the running for third prize with Lady Zoe and Moffatt. Moffatt twice false pointed, then got on a brace well, then false pointed twice again, and was well backed each time; the birds clearly had been running down the fallow. Finally, after a very long and fruitless tramp in a rough grass field, Moffatt got a point on a brace, and Lady pointed a hare, when the judges gave Moffatt third.

WEDNESDAY, APRIL 27.

We began at 9.30, at Moreton Corbet, the

Setter Puppy Stakes, for puppies born in 1880.

Mr. D. Hollins' bw w Styche, by Basto—Rum, 14m0.....	agst	Mr. E. Bishop's bk w t Belgium, by Ranger—Duchess, 11m0
Viscount Downe's liv w Silk, by Emperor Fred — Silk, 11m0.....	"	Mr. R. Ll. P. Llewellin's bk w t Dashing Ditto, by Dash II.—Belle, 11m0
Viscount Downe's lem w Fred, by Emperor Fred — Silk, 11m0.....	"	Mr. T. Cunnington's bk w t Count Dan, 14m0, by Count Dan—Laurel, 14m0

Mr. T. Cunnington's bk w Sir Alister, by Tam o' Shanter—Daisy, 15 m0 (a bye).

AWARDS.—First prize, Mr. Thos. Armstrong's John o' Groat; second prize, Major Platt's Wild Rose; third prize, Viscount Downe's Fred; fourth prize, Mr. R. Ll. Purcell Llewellin's Dashing Novice.

The first brace on the card were Mr. Daintry Hollins' Styche and Mr. Elias Bishop's Belgium; but Mr. Hollins' bitch being not on the ground, time was allowed for her to appear; but I now append the running of the brace, viz.: Styche chased a hare clean out of the field, and they were taken up at once.

Viscount Downe's Silk and Mr. Purcell Llewellin's Dashing Ditto were in reality the first running brace, and both flushed a brace and dropped to wing; then Ditto pointed a brace, and Silk found another, both being well backed throughout. Afterward, Silk indulged in chasing a lark slightly, and finally both dropped to gun well.

Viscount Downe's Fred and Mr. Thos. Cunnington's Dan II were next. Count Dan found a brace of pheasants well, Fred backing only to order, and Count Dan had to be called to, as he would not drop to gun. Fred then flushed a brace of birds, Dan chased a lark, and in the next field Fred found a brace very cleverly; and Count Dan, not backing, ran in spitefully, and put them up, of course. Going into a fine wheat, Fred false pointed, and Dan took two points on wild birds, then both ran into a brace near the fence and the next brace were called.

Major Platt's Wild Rose and Mr. Geo. Thomas's Rose of the Valley were a very smart brace, and the "bustle of the Rose" began by Wild Rose taking a false point on very hot scent, and being well backed; then, merrily, fast and well. Wild Rose particularly was exceedingly stylish, going with her head right up in fine fashion. However, to resume the running, Rose of the Valley found a brace capitally, and Wild Rose also got a point near the fence, Rose of the Valley not backing her. They were the best brace we had seen so far.

Mr. Thos. Cunnington's Blue Maud and Mr. A. P. Heywood-Lonsdale's Scot were next. The bitch is an excellent goer; she is fast, stylish, goes with her head up in form, and quarters her ground beautifully. The dog is much slower, and lacks the bitch's fire. However, he found a rabbit, dropped to it, and Blue Maud also dropped the moment she caught sight of "bunny." To a brace of birds put up by a keeper the bitch pulled up sharp and well, the dog not dropping to wing. Then both ran into a bird, neither dropping, and again both got head over heels into a brace unaccountably, and they were ordered up forthwith.

Mr. R. G. Arbuthnot's Bushranger and Mr. Purcell Llewellin's Dashing Novice had a long trial. Bushranger is a handsome son of Champion Ranger; he goes fast and only wants work to make a flyer. In the first field, Novice was drawing on to a bird, when Ranger, not backing her, they ran up, jealous of each other, and of course put up the birds between them. Next, Novice took a point near the fence (the birds, however, had gone through), Bushranger backing perfectly well. Both quartered well and fast, but Ranger put up a cock pheasant in a meadow, and a brace of birds in a rough grass field. In the next field he pulled up for a point, then broke up his bird and knocked it up, whereas Dashing Novice found a brace well. Ranger was unlucky, but he is a smart dog and gives every promise of filling into a workman.

Mr. Thos. Statter's Fickle and Messrs. Weyman and Buchanan's Grouse had a very short spin. Fickle is a merry and stylish worker, full of fire, whereas Grouse is a much slower and a too care ful worker. He, however, took a point on a hare's form, the little bitch backing him well; but the next put up a hare and chased it out of the field, thereby putting herself out—very hard lines on Mr. Statter, but the bitch will yet make her mark, or I am very much mistaken.

Mr. Thos. Statter's Fickle and Messrs. Weyman and Buchanan's Grouse had a very short spin. Fickle is a merry and stylish worker, full of fire, whereas Grouse is a much slower and a too care ful worker. He, however, took a point on a hare's form, the little bitch backing him well; but the next put up a hare and chased it out of the field, thereby putting herself out—very hard lines on Mr. Statter, but the bitch will yet make her mark, or I am very much mistaken.

Mr. Thos. Armstrong's John o' Groat and Mr. H. C. Hartley's Milo ran next. John o' Groat as soon as slipped found well a brace; Milo being unwilling to back, was ordered down; and to gun both behaved well. Both quartered their ground well, but not very fast. When sent on Milo declined to drop to wing to a wild brace, and after passing on a fallow they both false pointed, the birds evidently having been disturbed, as we put them up afterward near the fence. John o' Groat then found another brace immediately afterward, while Milo was breaking fence; so the next brace were called. John is an exceedingly well-broken dog, but he is not quite fast enough. However, he did his work thoroughly well, and reflects credit on Tom Armstrong.

Mr. A. P. Heywood-Lonsdale's Lassie and Mr. Elias Bishop's Scotchman had a short trial. Both went fairly well and fast, but Lassie took a false point in a bare wheat field, when Scotchman backed her admirably well. The dog, however, next ran into a brace, not noticing wing at all.

Mr. Thos. Cunnington's Sir Alister, who was a bye, ran with Grouse. The latter had improved very much in pace, but when he found a brace he blinked his bird, and only dropped to shot, not noticing wing, Alister backing him well, and they were ordered up.

For the ties Belgium and Silk came first, when Silk pointed a lark and Belgium a brace of birds; then Silk found a brace capitally, and was well backed; Belgium, flushing next, put out his chances.

When Dashing Ditto and Fred came up for a turn Dashing Ditto found a hare close to the fence, Fred behaving well behind. Fred then found a brace, pointing them through the fence, and Dashing Ditto false pointed in a bare wheat.

Silk and Dashing Ditto when run together false pointed, both evidently on the same scent, and they were soon taken up.

Wild Rose and Rose of the Valley had then another spin. Wild Rose found a brace capitally, and to gun both dropped beautifully. Then Wild Rose false pointed, and dropped to gun, while Rose of the Valley flushed.

Bushranger and Dashing Novice, who had run together previously, were called again, when Bushranger flushed a pheasant, and then drew up to a brace of birds, and put them up so badly that the judges ordered him up. He was very unlucky certainly, as he is a smart dog, but so full of fire that he wants a lot of work.

John o' Groat and Lassie then came up. John, again going in his careful style, drew up for a capital point on a brace, when the bitch declined to notice him, and she flushed another brace and did not drop to wing.

Sir Alister and Silk were then sent to the front. Both winded birds, but could not make them out, and they actually were flushed by the crowd in a hollow. They made a nice brace, as the bitch had improved very much since the morning, and the dog was running very well indeed. Howbeit, Silk flushed, and finally she false pointed, and then flushed a brace again, and John o' Groat and Wild Rose ran for first and second prizes. John seemed to wind birds, but he could not make them out for a very good reason, as, after some fast work, when the bitch also steadied herself for them, the keeper declared they had gone. The dog then twice false pointed, Rose backing admirably each time. John was then tired out—his bolt was evidently shot—and he went very stale, but he had done a deal of work throughout the day, and it was really excusable. Finally he drew up for a very long way to a hen pheasant, and the bitch was false pointing on the brow of a hillock on probably another pheasant's run, and John o' Groat was declared the winner, the bitch taking second.

Sir Alister and Fred then ran for second prize, when Fred pointed a hare, and Alister declined to back him; Fred then flushed a bird down wind, but Alister put up in the same field, not only a brace of birds, but also two pheasants one after the other, and the judges having made up their minds, Dashing Novice and Alister were run for fourth prize, when the bitch found a brace in style, Alister backing well, and the bitch got the flat. The judges then gave their full awards as stated above.

THURSDAY, APRIL 28.

Although we were supposed (and had officially been told) to begin, as Artemus Ward would put it, "uncommonly early," and in fact every one had put himself out a great deal in order to get to the meet at Besford at nine, we never began work in earnest until it was very nearly ten o'clock. However, at a few minutes to ten we entered upon the

Waverley Stakes for Braces, Dogs and Bitches, Pointers and Setters, all ages.

Mr. Barclay Field's Rist and Sall (pointers).
Mr. Thos. Statter's Pix and Pilot (pointers).
Mr. R. Ll. Purcell Llewellin's Countess Rose and Dashing Bondhu (setters).
Mr. Thos. Statter's Tweed and Truth (setters).
Viscount Downe's Jane and Mite (pointers).
Mr. A. P. Heywood-Lonsdale's Bow and Bridget (pointers).
Viscount Downe's Diamond II. and Sam III. (setters).
Mr. R. J. Lloyd Price's Luck of Edenhall and Belle Faust (pointers).
Mr. W. H. Lipscombe's Erne and Cissy (setters).
Duke of Westminster's Minnie and Doxy (pointers) (drawn).

AWARDS.—First prize for pointers, prize for best brace of either breed, prize for second best brace, and £10 added, were divided between Mr. R. Lloyd Price's Luck, of Edenhall, and Belle Faust, and Mr. Barclay Field's Rist and Sall. First prize for setters, Mr. R. Ll. Purcell Llewellin's Countess Rose and Dashing Bondhu.

Mr. Barclay Field's Rist and Sall were first slipped, and most stylishly and well they worked. The dog found, and was backed at long range superbly, and both quartered in their well-known style, going a great pace all the while. Then one of them ran into an odd bird in the hollow, and in the next field they did a wonderfully good bit of work, pointing and backing like clockwork, Charles Bishop working them most beautifully, never speaking a word to them. Mr. Thos. Statter's Pix and Pilot were the next brace. They found a brace very well indeed, both going fairly fast, but not quite quartering as well as they might have done, and as they finished they were ordered up rather quickly. Mr. Llewellin's Countess Rose and Dashing Bondhu were the next called. They beat their ground beautifully, and went a "cracker" from beginning to end. Rose took a point on a hare, the dog backing her marvellously well as soon as he caught sight of her; and then the bitch found another hare, and the dog pointed a brace of birds in the corner through the hedge. The backing was perfect throughout. The next brace then came up, viz., Mr. Thos. Statter's Tweed and Truth. These were also very nice goers, and they beat their ground well; they found twice near the covert in good form, roading their birds well; but the dog was rather backward at backing, at first needing attention on his breaker's part. We then had Lord Downe's Jane and Mite, two fast goers, when one took a false point, being admirably backed, and then in a bare field they had a flush, and the next brace was called. Edward Armstrong, I must say, had had a very long task to keep good pace. Mr. Lonsdale's brace ranged well and fast, but they flushed a brace in the hollow. Bow then pointed a rabbit, and went after it some few yards, the bitch being very good behind, and the dog again took a good point, this time on birds, and was well backed again.

After luncheon we ran for the championship—Mr. Lloyd Price's La Vole (pointer) and Mr. Thos. Armstrong's John o' Groat (setter). La Vole pointed a lapwing at sight, and in the next field she got remarkably well on a brace of birds. John then pointed a pheasant, roading it very finely for over a hundred yards. The dog then false pointed twice, the birds evidently having been running all over the field. Then again they false pointed, and the pointer bitch won through pace, style and range, as no more birds could be found.

The Brace Stakes was then resumed, when Lord Downe's well-known Diamond and Sam went at a tremendous pace and quartered in irreproachable style. Diamond false pointed, Sam not caring much about his work behind him, and in the next field they missed a brace, there being evidently no scent. Mr. R. Lloyd Price's Luck of Edenhall and Belle Faust were the next goers. They each in turn got a point, but could not make out the birds. Then the dog left his point, being ordered on, and the bitch found them out capitally after a little roading, thereby she, the original backer, finding them out after all. Then Belle Faust found a brace well, and again backed Luck at some one hundred and fifty yards, when the dog pointed a brace over the brow of the hill. Finally, Luck again found a brace. They worked very well, fast and systematically.

Mr. W. H. Liscombe's Erne and Cissy ran next. Cissy was the warmer worker of the two, Erne going somewhat slow at first, and being inclined to follow fence rather. The two, however, were evidently a smart-hulling brace of setters, beating their ground well and carefully. Mr. Liscombe should be complimented on them, as they made no mistake; but field trial form was required for any success, as some of their rivals were very highly strung. Mr. Liscombe should persevere; he is evidently a sportsman of the first water, and I trust he will some day pull off the Brace Stakes. Erne and Cissy finished their trial by flushing a brace, and were taken up. The judges then came to their decisions, and gave the first prize for setters to Mr. Llewellin's brace: and the first prize (pointers) of £30, the second of £10, and the £10 added, to be divided between Mr. Barclay Field's and Mr. Lloyd Price's pointers. After a vote of thanks to the judges for their decisions, and particularly to Sir Vincent Corbett for the use of his manor, the meeting of 1881 came to a conclusion.—*London Field.*

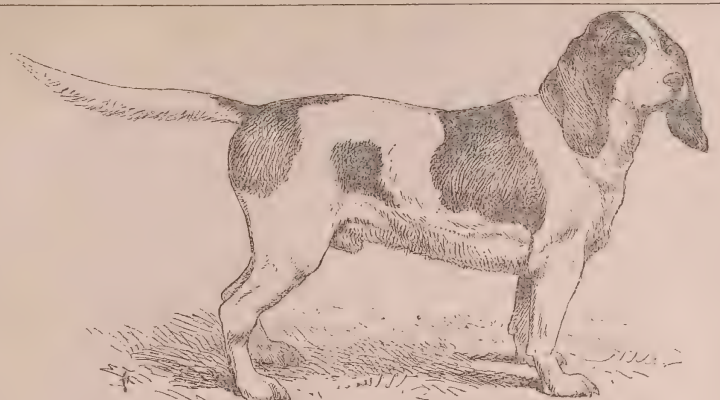
MEASUREMENTS OF FIRST PRIZE WINNERS.

We give below the age, weight and measurements of some of the first prize winners in the setter and pointer classes at the late Westminster Kennel Club Show. We have written to the owners of all the blue ribbon dogs, and will publish the list in full as received.

RUSH.

Mr. Edmund Orgill's champion pointer dog Rush, winner in champion pointer class for dogs under 55 lbs, age 5 years, weight 53 lbs, height at shoulder 23in, length from nose to set on of tail 36in, length of tail 12¼in, girth of chest 28in, girth of loin 23in, girth of head 17in, girth of forearm 8½in, girth of thigh 16in, length of head from occiput to tip of nose 9in, girth of muzzle midway between eyes and tip of nose 9½in, girth of neck midway between head and shoulders 17in, length from corner of eye to end of nose 4in, length from elbow to top of shoulders 12in, length of ear from top to set on at skull 5in.—*May* 13, 1881.

RUE.



Mr. Edmund Orgill's champion pointer bitch, Rue, winner in champion pointer class for bitches under 50 lbs., age 21 months, weight 40 lbs, height at shoulder 21½in, length from nose to set on of tail 33in, length of tail 12in, girth of chest 26in, girth of loin 20in, girth of head 14⅛in girth of forearm 7⅛in, girth of thigh 13⅝in, length of head from occiput to tip of nose 8⅛in, girth of muzzle midway between eyes and tip of nose 8⅛in, girth of neck midway between head and shoulders 13½in, length from corner of eye to end of nose 3⅜ in, length from elbow to top of shoulders 10½in, length of ear from top to set on at skull 5in.—*May* 13, 1881.

RHONA.

Mr. Edmund Orgill's pointer bitch Rhona, winner in pointer class for bitches under 50 lbs, age 2 years, weight 46 lbs, height at shoulder 22½ inches, length from nose to set on of tail 35 in., length of tail 13 in., girth of chest 27 in., girth of loin 21½ in., girth of head 15 in., girth of forearm 8 in., girth of thigh 14 in., length of head from occiput to tip of nose 9 in., girth of muzzle midway between eyes and tip of nose 9 in., girth of neck midway between head and shoulders 14½ in., length from corner of eye to end of nose 4 in., length from elbow to top of shoulders 11 in., length of ear from top to set on at skull 5½ in.—*May* 13, 1881.

PRINCESS.

Mr. George G. Barker's champion pointer bitch Princess, winner in champion pointer class for bitches over 50 lbs, age 4 years 7 months, weight 54 lbs, height at shoulder 22½inches, length from nose to set on of tail 36 in., length of tail 12½ in., girth of chest 28 in , girth of loin 22½ in., girth of head 15½ in., girth of forearm below elbow 6 in., length of head from occiput to tip of nose 9½ in., girth of muzzle midway between eyes and tip of nose 8¾ in., girth of neck midway between head and shoulders 14 in., length from corner of eye to end of nose 4 in., length from elbow top of shoulders 11½ in., length of ear from top to set on at skull 5½ in.

RATTLER.

WATER LILLY.

Mr. C. H. Mason's pointer bitch Water Lilly, winner pointer class for bitches over 50 lbs, age 3 years, weight 53 lbs, height at shoulder 24 in., length from nose to set on of tail 37 in., length of tail 13 in., girth of chest 28 in., girth of loin 13 in., girth of head 16 in., girth of forearm 7½ in., length of head from occiput to tip of nose 9¾ in., girth of neck midway between eyes and tip of nose 9¼ in., girth of muzzle midway between head and shoulders 26 in., length from corner of eye to end of nose 4 in., length from elbow to top of shoulders 11½ in., length of ear from top to set on at skull 6½ in.—*May* 13, 1881.

RAPP.

Mr. W. R. Hobart's pointer dog Rapp, winner in pointer class for dogs over 55 lbs, age 5 years, weight 72 lbs, height at shoulder 24⅝ in., length from nose to set on of tail 41½ in., length of tail (has been docked) 13½ in., girth of chest 31 in., girth of loin 25⅓ in., girth of head (in front of ears) 17⅝ in., girth of forearm (2 in, below elbow) 7 in., length of head from occiput to tip of nose 9⅝ in., girth of muzzle midway between eyes and tip of nose 10¼ in., girth of neck midway between head and shoulders 16½ in., length from corner of eye to end of nose 4½ in., length from elbow to top of shoulders 14 in., length of ear from top to set on at skull 6 in.—*May* 12, 1881.

SPARK.

Mr. D. C. Sanborn's champion English setter bitch Spark, winner in champion English setter class for bitches, age 3 years, weight 50 lbs, height at shoulder 20 in., length from nose to set on of tail 37 in., length of tail 13 in., girth of chest 26 in., girth of loin 20 in., girth of head 15½ in., girth of forearm 8 in., length of head from occiput to tip of nose 9½ in., girth of muzzle midway between eyes and tip of nose —length from corner of eye to end of nose 3¼ in., length from elbow to top of shoulders 10 in., length of ears when extended (measurement taken across the head) 15 in. —*May* 12, 1881.

PETREL II.

Mr. John C. Higgins' English setter bitch Petrel II., winner in imported English setter bitch class, age 3 years 4 months, weight 45 lbs, height at shoulder 20½ in., length from nose to set on of tail 33 in., length of tail 14 in., girth of chest 26 in., girth of loin 20 in., girth of head 15 in., girth of forearm 10 in , length of head from occiput to tip of nose 9 in., girth of muzzle midway between eyes and tip of nose 4¼ in., length from corner of eye to end of nose 4¼ in., length from elbow to top of shoulders 13 in., length of ears when extended (measurement taken across the head) 16 in.—*May* 12, 1881.

CHIEF.

Mr. Max Wenzel's Irish setter dog Chief, winner in open Irish setter class for dogs, age 21 months, weight 57 lbs, height at shoulder 24 in., length from nose to set on of tail 41 in., length of tail 14 in., girth of chest 23 in., girth of loin 19 in., girth of head 16½ in., girth of forearm 7½ in., length of head from occiput to tip of nose 10 in., girth of muzzle midway between eyes and tip of nose 9½ in., length from corner of eye to end of nose 4¾ in., length from elbow to top of shoulder 12½ in., length of ears when extended (measurement taken across the head) 18 in.—*May* 14, 1881.

Mr. Charles Moran, Jr.'s, native English setter bitch Donna, winner of first in open class for native English setter bitches is expected to whelp shortly; we are thus prevented from securing her measurements at this time. Later on they will be given.

PHILADELPHIA AND BALTIMORE NOTES.

PHILADELPHIA, May 7.

OUR Riverton Gun Club is, of course, much pleased with its late victory over the New York City Club, and its members receive the warmest sort of congratulations from their friends, and well they may, for it takes the best of shooting to overcome our knights of the trigger. Was not Arnold's a splendid score?

For the past three or four days those of our sportsmen who found time to attend the late Westminster Kennel Club's show have been discussing the merits and demerits of the winning dogs. Is it not strange there exists such a diversity of opinion when animals are bred so near perfection in form? I am sure from what I hear Philadelphia dog men say they hold to the "handsome is as handsome does" doctrine.

MAJOR.

DYKE.

Mr. W. W. Colkett's Echo, out of Hubbell's May by Reid's Sam is becoming a great favorite as a sire in Philadelphia. Not a few gentlemen have bred their native bitches to him, and his get are making capital field dogs. Echo is a large setter, much too large to my liking, but there is perfection in his head and outline. In the field he has proven excellent, and he is worked regularly and often, which cannot be said of but few of our noted blue-blooded dogs in Philadelphia. The majority of them are never hunted. Echo is not in the public stud, let me say, and it is only the friends of his owner that can procure his services. If sportsmen were more particular in breeding their bitches to animals of known and tried field qualities, and not make their choice of dogs noted for fine appearance and extended pedigree alone, there would be less disappointment, and I would say fewer nervous and gun-shy dogs bred.

During the past week a number of snipe were killed on the meadows bordering Woodbury Creek, which, on being opened, were found to contain eggs. There was not a female among the lot that did not have them in a very advanced stage of development. This fact speaks for itself.

While at Baltimore last Thursday and Friday I noticed in Druid Hill Park several varieties of warblers had reached that section. I observed the black and white creeper, yellow rump and yellow warbler which struck me as being rather early this backward spring. In the most advanced seasons we hardly look for the body of warblers before the 5th to the 10th of May in the neighborhood of Philadelphia, and all migratory birds of this order most certainly will be late in their coming this season.

Such members of the Baltimore Kennel Club I conversed with seem to think that a class at dog shows for so-called bench-legged beagles would be out of order. Said one—"If bench-legged beagles are bassetts let the class be for bassetts—do not create a new name." I was assured that there had been some beagles in Baltimore that had been bred to the dachshund.

Dr. Geo. Renling, of Baltimore, showed your correspondent two pair of deer antlers interlocked that had been found with the skeletons of the animals near Warm Springs, Va., showing that in combating the bucks had become thus securely fastened together and miserably perished. HOMO.

THE LOST ONE FOUND.—*Editor Forest and Stream.*—As I was walking up New street on Saturday the 7th I saw a man with a liver-colored spaniel bitch evidently for sale. He was showing her obedience by letting her follow him off the chain, and, of course, I stopped at once, as anything in the shape of a spaniel is an irresistible attraction to me. Judge of my surprise on recognizing my bitch, Flirt II., the notice of whose loss appeared in your columns some two months ago. As I crossed the street she bounded up to me much to the man's astonishment, and in about ten seconds there was a crowd of delighted messenger boys and bootblacks listening to the argument between us. Of course he made the usual assertions—she was given to him by his uncle—was then ten months old—he had had her from a pup, etc., etc.; but I opened her mouth, which settled the question of age (about two years), and showed him my private mark and told him she was mine, and I was going to take her. He was quite good-humored up to this point, but then he changed, and dared me to take her. I said, "All right," and turned away with "Come on, Flirt," and didn't she just "come on." Some of your morbidly nervous New Yorkers would have taken their "Davy" she was mad if they had seen her, but I guess Mister Man was the mad one of the three in reality, as he followed me, calling "Rose, Rose, come here, Rose!" but *Rose* had vanished from the moment *Flirt* had seen her master, and I turned into a friend's office to avoid trouble. When I came out Mister Man had disappeared, while one of the "Finest" waited to ask me why I didn't keep the fellow in conversation till he arrived. Had I seen him coming I would have done so, for the sake of punishing at least one dog thief, but the argument was becoming slightly warm, and I wanted to get the bitch at all hazards.

I think the breeders may "tally one" against the dog thieves on this. I only hope others who may have lost valuable dogs may be as fortunate as I was.—DIDO.

EASTERN FIELD TRIALS CLUB MEETING.

A MEETING of the Executive Committee of the Eastern Field Trials Club was held Thursday afternoon, May 12. The principal business before the meeting was the revision and adoption of the running rules, which were accepted with a few alterations, which we will publish if forwarded to us as promised by the secretary. The cup offered by the FOREST AND STREAM for the best dog run by its owner was accepted with thanks. A cup was presented to be given to the best dog in any stake that the club saw fit. The president, Mr. J. O. Donner, will also give a cup to be called the "President's Cup," to be competed for by puppies entered by their owners; and another cup has also been presented called the "Mombera' Cup." The report of the Committee on By-laws is to be printed and distributed among the members. It was deemed advisable to try and procure more birds, and Mr. Donner was given power to do so. A club meeting was called, and Mr Geo. T. Leech was elected treasurer in place of Mr. H. N. Munn resigned.

A DOG'S LONG JOURNEY HOME.—The following clipping is sent to us by Mr. J. C. Lodor, of Chattanooga, Tenn.: "Saturday morning a setter dog was sent on the C. S. train by Mr. J. C. Lodor to Glen Mary, a station on the C. S. Railway, 112 miles distant from Chattanooga. As the train pulled into the station the dog suddenly jumped from the car, and before any measures could be taken to arrest him he disappeared in the forests. He arrived in this city Wednesday noon, and immediately on reaching home sought his former companions, and was found in the kennel by its owner soundly and comfortably asleep. The dog traveled fully 200 miles over a rough, mountainous region, and was compelled to swim the Tennessee River twice during its journey, making the entire trip in three and one-half days. He procured little or no food while on route, and was half starved when he reached home. The dog had never been through the country before, and how he found his way through the almost impenetrable forests and interminable mountain ranges will ever remain a mystery."

Our correspondent adds a most interesting sequel to the story: Inclosed please find an account of a remarkable instance of instinct which appeared in our *Daily Times* under date of 7th inst. Your correspondent at this place said he would send the account to you, but I thought to give you the correct version of it, as it is in some things incorrect. The facts are these. A black setter bitch owned by me named "Mit," of imported red Irish and Gordon stock, being gun-shy and thereby useless, as I hadn't time to break her of the fault, had a litter of six pups on March 24th, and as soon as I could wean them I sent her to Glen Mary as stated in the account. Upon her return home I told my younger brother, to whom the bitch was very much attached, and who had taken her to the depot and tied her in the car to take her back and send her again to Glen Mary, but upon his trying it she refused to follow him, and when he tried to catch her she growled and snapped at him—the first time she was ever known to be cross. I had to call and tie her for him, when he took her on Friday (6th) and reshipped her to Glen Mary, which place she reached, and Mr. K., the gentleman to whom I sent her, acknowledged the receipt, and said she seemed pretty well satisfied

This morning, while breakfasting, I heard one of the dogs come in through the front part of the house and lie down at the back of my chair where I had taught Mit to lie. Thinking it my pointer pup I paid no attention to it, but asked, when I had finished eating, "Nick, do you want your breakfast?" and was very much surprised at the response in Mit's voice. I looked around—it was she.

She had never been ten miles from this place before her trip to Glen Mary, but had found her way from that place to her home twice. Mit has surely earned the right to stay at home.—J. C. LODOR.

BLACK SPANIELS.

[Reprinted from advance sheets of Vero Shaw's "Book of the Dog," furnished to the FOREST AND STREAM by the author, through the courtesy of Cassell, Petter, Galpin & Co., publishers, No. 596 Broadway, New York.]

THESE engaging dogs have of late years almost monopolised the classes provided at dog shows for spaniels other than Sussex or Clumber, and their popularity is still increasing rapidly. As a beautiful dog, the black spaniel certainly ranks very highly, while as the companion of the sportsman he is invaluable. Opinions differ very considerably upon the purity of the breed, and even its most ardent admirers have in some instances been brought to affirm that the black spaniel is a mongrel; others are equally positive in their assertions that it is nothing of the sort, but that many specimens can trace an unbroken pedigree.

Mr. A. W. Langdale has written as follows:

"This breed of spaniels is most popular and highly prized, and has in the last few years been brought up to a standard of excellence such as has never before been arrived at. A team of black springers, for so the large size of this breed are called, in their jet-colored satin-like coats, on a bright winter's morning, on a snow-covered track, look lovely! I say the large size are called springers, and this is so because of their peculiar movement among turnips, swedes or mangolds, where, directly they get wind of fur and feather, they jump about from ruck to ruck in quite a different style to their Sussex or more sombre Clumber brethren. The blacks, as a rule, are not favorite dogs for covert shooting, as their color behoves a sportsman to be very good-sighted or his pet may be made to suffer for his quarry. They are not so noisy or babbling as the Sussex, and I have seen some of the old-fashioned sort work up to their game with scarcely a note. Of late, to obtain smooth coats and shortness of leg, there has been a great deal of crossing between the black and Sussex breeds; and I should say that, although it is not quite the thing, still it has undoubtedly had the desired effect, as seldom have there (if ever) been better blacks before the public than have been on view at our recent exhibitions. I believe that Mr. Burdett first brought out the black spaniel, and it was from him that Mr. Phineas Bullock secured the cream of his world-wide known kennel. Among this team were such raven-colored beauties as were the admiration of all breeders, and Mr. Bullock knew it, and kept his breed to himself. Old Bob, Flirt and Nellie, to say nothing of Bruce, were, indeed fine specimens—Nellie especially. By some of our most experienced judges this latter was held up as the *beau ideal* of the black field spaniel; she had a lovely head, very small eyes, and I quite indorse the opinion of the critics in saying I never saw his equal. Dr. W. W. Boulton had also a different strain, produced originally, I believe, from a liver-colored bitch called Fern. However, this gentleman understood his work, and produced at different times such dogs as Beaver, my Lorne, Regent, Bruce *alias* Bucclengh, Beverlac, Ranie, Brush, Black Prince, Blanchette Pearl, etc., to say nothing of a grand team of black cockers to be alluded to elsewhere. Dr. Boulton's dogs were, with few exceptions, straighter in the coat than those of his *confrere* Mr. Bullock, and so when they met each other in the judging ring it was always a very near squeak for either, the Doctor winning by the coat, but the other by the height and general symmetry. Dr. Spurgin, I myself, Mr. Handy and Mr Bonner may be said to be among the principal breeders of blacks of late years. Recently Mr. T. Jacobs, of Newton Abbot, has been most successful on the bench. Mr. Bowron has also shown them, but his eye was a lawyer on a good one. In speaking of Mr. Bonner, that gentleman keeps his dogs more for work in the fields than the show bench, and that is why we do not see him in the front rank as often as we should like. Blanche (one of the newly inter-liver-and-black cross) won for him at Birmingham, and claims my old dog Lawyer as her sire, the dam Flora being a black. This same dog sired Gip, who did good service for Mr. Avery, of Southampton—in fact, as a stud dog I do not know his superior; he has immense power, and is a thoroughly symmetrical dog, and should be invaluable to a maker for shy bitches. The following are the principal points that should be looked to by an intending buyer: Height at shoulder, 18½ inches; color, whole black, no white; weight, 40 pounds; ears, set low down and wavy; coat, smooth—a little wave is admissible, but both this and the ears must be free from curl; eyes, a dark hazel; stern, docked to about 10 inches, and carried low. The dog should be well feathered all round, but not below his hocks."

Following on the remarks of Mr. A. W. Langdale, the result of the experience of Mr. T. Jacobs, of Worlborough House, Newton Abbot, will be read with interest, as, at the present time, Mr. Jacobs' kennel is, *facile princeps*, at the head of affairs in the black spaniel world. Mr. Jacobs, it will be seen from his remarks, although so successful as an exhibitor, has not yet quite obtained what he wants, though from what we have seen and heard of his magnificent Kaffir, whose illustration accompanies this article, we are of the opinion that he must be very hard to please if he is in any way dissatisfied with this really typical dog. Mr. Jacobs writes as follows:

"As a breeder and successful exhibitor of spaniels, I freely give you, for the benefit of your readers, the little knowledge I have acquired in the art of breading and rearing of that useful animal. What I write is not taken from books or former writers, but from my experiments and experience, confining myself chiefly to the present fashionable and handsome breed of black spaniel.

"Much has been written and said on the purity of the breed, deprecating the means I have adopted to produce them as calculated to alter a presumed type, and frequent missiles have been hurled at me and my dogs from behind the hedge. But where is the pure-bred black spaniel so much talked about? Proof of the existence of the pure-bred one (if ever there was one) has not been forthcoming; like most other sporting dogs, they are the result of different crosses.

"I have bred many times from the most noted dogs and bitches said to be the only pure strain of black spaniel, and have never known them to throw one even litter of blacks, always a mixture—liver, black, black and tan, liver and tan, black and white; some with long, some short, bodies and legs, curly, wavy, smooth, and all sizes and shapes.

"What does this indicate? Common sense tells me, a cross with different types, varieties and colors some time or other must have been introduced. I never can believe that there ever was a distinct breed of black spaniel, nor do I believe that the Sussex is a distinct breed; it is true we can trace them back for many generations, like we do the Laverack setter, but how were they derived in the first place?

"We may keep to one strain for many years, and, in time, call them a distinct breed, but what is the result? To preserve that strain we must be continually breeding in and into one family, until we get them difficult to rear, reckless and devoid of sense, when they become useless for the purpose they are required (I have noticed the latter fault showing itself in the Sussex). Therefore breeders have to resort to the crossing with another family, which may be of a different type or color; by so doing you raise a great 'hubbub' and cry that your dogs are not pure. In spite of these cries I followed my own dictation; my great aim was to improve the breed of spaniels. Purity of breed I had foremost in my mind, which I do not consider I sacrificed when I mated my black bitches with a liver-colored Sussex, the result of which was a decided improvement. Your readers may judge for themselves by having a look at Kaffir, Zulu and Squaw, and noting their performances. I did not rest here, but thought there was still room for improvement, and by breeding these blacks together, I have produced something that promises to eclipse everything I have yet seen. I am gradually creeping near the standard I have marked out for my beacon, viz:

"Temperament.—Pleasing temper I always look to first; never breed from a bad-tempered sporting dog, every sportsmen knows what a nuisance they are.

"A long body, short legs, with plenty of bone and feather, a purfect smooth, satin-like coat, with no inclination to wave or curl, moderately long.

"Ears, covered with long silky hair (not ringlets), well set low down, and hung close to the cheek; small or narrow where they spring from the head and large and lobe-shaped at the base, well furnished with hair on the inside leather.

"A long head, not snipy, or heavy like the Clumber; dark, pleasing eye—a yellow eye denotes bad temper, therefore should be avoided.

"Level mouth, not pig-jawed or underhung, but I prefer the former fault to the latter, which prevails, I am sorry to see, in some of our present show dogs. Breeders should avoid these as stock dogs.

"A long neck slightly arched, well clothed with muscle; strong across the loins.

"Ribs, well sprung, and barrel-shaped.

"Belly, well clothed with long hair, and not tucked up like the greyhound (a common fault).

"Broad chest, well clothed with muscle and feather.

"Feet, round, cat-like, with a plentiful supply of hair between the toes.

"Tail carried in a line with the back.

"Many have argued with me that by mating black with liver color would throw the black puppies rusty or bad black; but being a breeder of pigeons for many years, and knowing the fact that by mating a dun hen with a black cock, or *vice versa*, you produce a much better black than by breeding two blacks together, I thought this held good with pigeons, why should it not with dogs? I therefore mated my spaniels as before described; the result is, I have never seen one bad black, and have bred more than a dozen litters in that way.

TO BE CONTINUED.

KENNEL NOTES.

NAMES CLAIMED.

Kate O'Neill—Mr. J. R. Barton, Brooklyn, N. Y., claims the name of Kate O'Neill for his red Irish setter bitch puppy by Mr. H. M. Richard's Mike (Rufus-Fly) out of Mr. C. B. Fitz-Morris' Nora Rhue (Elcho-Nell II).

Mack and Joe—Mr. W. H. Drane, Clarksville, Tenn., claims the name of Mack and Joe for two beagle dog puppies by Rambler out of Freckle. Bought of Mr. C. E. Norbeck, La Crosse, Wis.

Royal—Mr. B. F. K. Jennings, Springfield, O., claims the name of Royal for red Irish setter puppy by Bob out of Tip. Purchased of Mr. Wm. R. Moore, Belleville, Ohio.

Spartan II.—Mr. T. J. Leonard, Providence, R. I., claims the name of Spartan II. for black and blue setter puppy by Spartan out of Bonibel II.

Prince B.—Messrs. B. P. and W. R. Holliday, Baine, Miss., claim the name of Prince B. for setter puppy by Mr. D. C. Burgundthal's Rake out of Phyllis.

Bachelor—The Lachine Kennel Club, Whitestone, L. I., claims the name of Bachelor for liver colored spaniel dog, whelped March 28, by Imp. Benedict (1st special New York, 1881) out of Mr. J. Otis Fellows' Pansy.

Bride—The Lachine Kennel Club, Whitestone, L. I., claims the name of Bride for black spaniel bitch by Benedict out of Pansy.

Brilliant—The Lachine Kennel Club, Whitestone, L. I., claims the name of Brilliant for black spaniel bitch, whelped April 6, by Benedict out of L. K. C.'s Juno.

Start—Gen. W. S. Tilton, of Maine, claims the name of Start for his Gordon setter bitch whelped Nov. 4, 1880; bred by Mr. C. T. Brownell, New Bedford, Mass. Start is out of Maud and by Mr. Brownell's Dash, who took first premium in his class at the late show in New York. She has been sent to Mr. Fred Taft, of Dedham, Mass., to be educated.

Nelly M.—Mr. J. M. Mosher claims the name of Nelly M. for liver and white cocker bitch by Wildair out of Sara Bernhardt. Purchased of Mr. J. Otis Fellows.

Joe B.—Mr. E. F. Welch, Newburyport, Mass., claims the name of Joe B. for red Irish setter dog, whelped August 30, 1880, by Elcho (Elcho-Rose) out of May (Rover-Ruby). Presented to him by Mr. J. W. Bell, Portsmouth, N. H.

BRED.

Sara Bernhardt-Brag—Mr. J. Otis Fellows' cocker bitch Sara Bernhardt to owner's black cocker Brag, May 3.

Isabella-Schuyler—Mr. W. Tallman's (Providence, R. I.,) setter bitch Isabella (Chester-Fannie II.), formerly Mr. John Davidson's, winner first puppy stakes, Memphis, 1876, to Schuyler (Scranton's Bluff-Jennie) April 15.

Grouse Grouse Dale—Mr. Chas. Lounsbury's English setter bitch Thorne to Grouse Dale, May 3.

Meg-Blossom—Mr. T. H. Smallman's Gordon setter bitch Meg to Dr. Niven's Blossom, April 24.

Norah-Jack—Dr. J. S. Niven's Irish terrier bitch Norah to Lachine Kennel Club's Rome Ruler, April 25.

Mollie-Blossom—Mr. E. Tinsley's (Hamilton, Ont.) Gordon setter bitch Mollie (first prize at Toronto) to Dr. Niven's Blossom, May 2.

Moll III.-Blossom—Dr. J. S. Niven's Gordon setter bitch Moll III. to owner's Blossom, May 6.

Flora-Scott—Mr. G. A. Colman, Charlestown, Mass., has bred his Gordon bitch Flora (Doane's Tom-Chloe) to Mr. W. E. Perry's Scott (Bigelow-Tib-W. P. Perry's Pete).

Ida, Jr.-Jack—Mr. Wiley Embry's (Columbia, Tenn.) red Irish setter bitch Ida, Jr., (imported Erin-Old Ida, she by Old Joe out of Old Buck) to Mr. G. W. Campbell's Joe, Jr.

Minnie-Max—Mr. Geo. P. Wells' (Boston, Mass.) red Irish setter bitch Minnie to Major Dexter H. Follett's imported Max.

Champion Spark-Count Noble—Mr. D. C. Sanborn's (Dowling, Mich.) champion setter bitch Spark to Count Noble, May 13.

Minto-Emperor Fred—The Lachine Kennel Club's English setter bitch Minto to New York, May 9, by Mr. John R. Robinson's champion Laverack setter Emperor Fred May 10.

Topsey Benedict—Mr. R. R. Williams' imported black spaniel bitch Topsey to the Lachine Kennel Club's imp. Benedict, May 12.

Madcap-Benedict—The Lachine Kennel Club's black spaniel bitch Madcap (2d Montreal, 2d Toronto, 1880) to the Lachine Kennel Club's imp. Benedict, May 15.

Flirt-Echo—Mr. A. J. Kelly's (Anderson, Md.) red Irish setter bitch Flirt (Rory O'Moore-Queen Bess) to Echo (Plowboy). Flirt won first Philadelphia, 1879, and first Boston same year.

Lilly-Sensation—The Baltimore Kennel Club's pointer bitch Lilly to Champion Sensation.

Flatterer-Derg—The Baltimore Kennel Club's Flounce to Derg, April 24.

Bell-Derg—Mr. Edward Tanner's (Washington, D. C.) red Irish setter bitch Bell to the Baltimore Kennel Club's Derg.

Fairy-Tyrone—Mr. Thompson's (Philadelphia, Pa.) Clumber bitch Fairy to Mr. de Luze's Trimbush.

WHELPS.

Nigger—Mr. J. W. Jackson's (Opelousas, La.) native black setter bitch Nigger has eight puppies—five black and three red—six dogs and two bitches, whelped April 27, by owner's red Irish setter dog Mark (Thorstein-Buck).

Fannie-Jaunty Bond—Mr. J. W. Jackson's (Opelousas, La.) liver and white pointer bitch Louise (Bow-Jaunty) whelped four dog puppies May 9 by owner's liver and white pointer dog Lorne (Faust-June), all liver and white and marked nearly like sire and dam.

Maud II.-Rock—Mr. C. E. Lord's (Cook Spendthrift-Irish-Delaware Belle) color, orange and white; dog pups with black noses.

Gipsie Queen—Mr. J. C. Vance's (Chattanooga, Tenn.) Irish setter bitch Gipsie Queen (Rory O'Moore-Queen Bess) whelped May 13 eighteen pups, fifteen dogs and three bitches, by Captain (imported Irish stock). The puppies all seem healthy.

Blix II.—Mr. S. W. Bode's (Baltimore, Md.) pointer bitch Blix II. (John-Blix) whelped on May 5 ten puppies, four dogs and six bitches, by Mr. R. Orgill's Champion Rush. Color, black and white and liver and white.

Curlew—Mr. J. Otis Fellows' cocker bitch Curlew whelped May 15 six puppies, four dogs and two bitches, by Champion Brag.

Leander—C. O. W. Church's (Colorado Springs, Col.) bull terrier bitch Jennie Lind (Young Victor-Queen) whelped May 3 seven puppies, two dogs and five bitches, by owner's lately imported bull terrier Tony.

Vesper—Mr. H. J. Ferry's (Palmer, Mass.) setter bitch Vesper (Drake-Diana) whelped six puppies May 3, two dogs and four bitches, by Laroop's Dick.

Vinnie—Mr. S. T. Hammond's (Springfield, Mass.) pointer bitch Vinnie (Ranger-Bess) whelped eight puppies May 10, five dogs and three bitches, by Croxteth. All of them are white with very dark liver markings. None for sale.

SALES.

Spartan-Bonibel II. Whelp—Mr. W. Tallman, Providence, R. I., has sold to Mr. T. J. Leonard, of Providence, R. I., a black and blue setter puppy by Spartan (Powell's Sport-Scranton's Dorcas) out of owner's Bonibel II., whelped March 7, 1881.

Bang-Bang-Jack Whelps—Mr. A. T. Keppan, Newark, N. J., sold at New York Show one puppy by Bang out of May to Mr. Edwin J. Neal, New York; one to Mr. Chas. G. Gleason, New York, and one to Mr. Wm. E. Cook Moorehead, New York.

Flash-Snap Whelps—Mr. Geo. Kingsley, has sold pointer puppy Flash (Snapshot-Elf) to Mr. W. R. Williams, Orange, N. J.

Flirt—Mr. R. Lamb, New York City, has sold pointer puppy Flirt (Snapshot-Elf) to Mr. Goodwin, Providence, R. I.

Ida-Snap—Mr. Lamb, New York City, has sold pointer bitch puppy Ida (Snapshot-Elf) to Dr. A. McCollom, of this city.

Mistress of the Manse—Dr. A. McCollom, New York City, has sold to Mr. R. Lamb, New York City, the lemon and white cocker spaniel bitch Mistress of the Manse (Dr. J. W. Arnold's Music-Dr. J. Symington's imported Belle.)

Florita—Mr. Peter McKenzie, Picton, Ontario, has purchased of Mr. R. Blackwood, Montreal, Canada, the Gordon setter puppy Florita by Mr. W. W. Hartwell's Boots out of Mr. R. Blackwood's Young Flora.

Fresnie—Mr. Louis Southworth, Montreal, Canada, has purchased of Mr. Blackwood, Montreal, Canada, the Gordon setter puppy Fresnie by Boots out of Young Flora.

Fleta—Mr. Shelton Stephens, Montreal, Canada, has purchased of Mr. R. Blackwood, Montreal, Canada, the Gordon setter puppy Fleta by Boots out of Young Flora.

Lyn—Mr. J. C. Bishop, Monson, Maine, has purchased the foxhound bitch Lyn, whelped November 6, 1879, by Old Judge out of Fashion.

Juliette—Mr. Louis Loedtler, St. Louis, Mo., has sold to Mr. H. C. Bevering, Milwaukee, Wis., his dachshund bitch puppy Juliette (Dr. Twaddell's Unser Fritz-Lochner's Waldine).

Home Ruler—The Lachine Kennel Club have sold to Mr. Geo. R. Krehl, of London, England, the Irish terrier dog Home Ruler (first New York, 1881) by Champion Sporter out of Kathleen.

Kathleen—The Lachine Kennel Club have sold to Mr. Geo. R. Krehl, of London, England, the Irish terrier bitch Kathleen (2d New York, 1881, and Montreal, 1880, Puppies) by Champion Sporter out of Rosey.

Chipps and Rena—Mr. A. H. Graydon, of London, Ont., has sold to Mr. Fred Tillson, of Tilsonburg, Ont., the all liver colored pointer Champion Chipps (Cæsar-Moll) and the lemon and white pointer bitch Rena (Sensation-Graydon Rose).

Smuggler II.—Mr. J. F. Harrison, Chicopee, Mass., has sold the pointer dog Smuggler II. (Dash-Fanny) to Mr. F. P. Magoun, New York.

Don—Mr. G. R. Nichols, New Haven, Conn., has sold to Mr. H. C. Bingham, same place, his Gordon setter Don by Dr. S. Fleet Speir's Gypsum out of Mr. W. H. Pierce's Jennie.

Benedict-Fanny Whelp—Mr. J. Otis Fellows, Hornellsville, N. Y., has sold to Mr. Eugene W. Durkee, New York City, a black spaniel dog puppy by Benedict out of Fanny.

Brag-Princes Whelp—Mr. Geo. A. Finley, Canandaigua, N. Y., has bought of Mr. J. Otis Fellows, a liver and white cocker dog puppy by Brag out of Princess.

NAME CHANGED.

Ida to Gertrude—Dr. A. McCollom, New York City, changes the name of his pointer bitch puppy by Snapshot out of Elf from Ida to Gertrude.

PRESENTATIONS.

Leah—Mr. Rathburn, of New York, has presented Messrs L. C. and Henry L. Zayas his imported champion mastiff bitch Leah, which has already secured several first prizes. She was awarded the first

prize, securing the silver medal, in the champion class at the last dog show.

Florence—Mr. R. Blackwood, Montreal, Canada, has presented to Col. S. D. Bruce, New York City, Gordon setter puppy Florence by Boots out of Young Flora.

IMPORTED.

Black Bess—On the steamship State of Alabama, which arrived in New York on the 20th April, arrived the cocker spaniel Black Bess. She is by the celebrated Brush out of the not less celebrated Rhea. Three years old, weight 23½ lbs. and thoroughly broken to field work. She is due to whelp on the 26th inst. to Bob III.; he by Buccleugh out of Nell. Black Bess has taken numerous prizes at shows in Ireland, as has Bob III., so that her progeny ought to be of the greatest value, as they combine in their blood all the winning strains of black cockers. Black Bess is very short of leg and long of back and is well covered with a jet-black glossy coat of hair without a single white one for contrast. Her legs and feet are furnished with tremendous heavy feathering, and, take her all round, she is a typical specimen of this most fashionable breed.

A CAMP-FIRE LOVE STORY.

SUPPER was over, the back log rolled to its place, our pipes well under way, and four of us outstretched by the big fire. We had been quizzing each other with good-natured raillery, until Tyro, thinking that the nonsense had gone far enough, said:—

"Very well, my boys, enjoy your thrusts at my awkward proportions as much as you please; tell me I am longer when I lie down than when I stand erect; but had it not been for my abbreviated stature I would not be among you now—the butt of your ill-natured and unkind jests. There was evident a good purpose in putting some of my length on my sides; and I am thankful for it, as it was the means of my escaping decapitation."

"Were you a soldier, and did a shell, whistling over your head, strike a comrade in the breast and kill him?"

"More wonderful than that; but I'll give you the whole story, and you may judge if my escape was not providential, and if I do not have reason even to this day to be thankful for my miraculous preservation from instant death. Years ago, before my hair was touched with the silvery frosts of many winters—long ere the crow feet of time had left their imprint around my peepers, I was termed a somewhat jovial youth, short but solid, with a decided penchant for the follies and frivolities of life, and more specially noted for a weakness—if weakness you choose to call it—for the fair sex. I had plenty of money, a good honest face and heart, ready to die at any time for a pretty eye, and waited upon the ladies, old and young, with the chivalrous gallantry of a Don Quixote; but I was inconstant, until at last I found my conqueror in one who enthralled me with her charms. She was the perfection of a beautiful woman. Never did an eye sweeter glance than hers. Her ruby lips were covered with unstolen kisses, her pearly teeth glistened at every smile, and when she smiled, two dimples came and went in enchanting succession. She was tall, with a form graceful as a sylph, and a face perfect in feature and delicate in coloring. These were but minor charms; for in a woman there is no grace more captivating than a sweet musical laugh, and hers was absolutely infectious. And her voice, egad, such an one—

> 'A voice whose music to the ear
> Becomes a memory to the soul.'

Methinks I can even now hear its witching tones as she called me her dear old dumpling. Those were happy days, when I dreamed of happier days to come, when she listened with pleasure, secret though it was, to my protestations of love, her eyes radiant with unuttered thought, but every glance loaded with the richness of love. Oh boys, believe me, I was solid with the daughter, but the old man—aye, there was the rub. The old man was against me, collectively and individually, first, last and all the time. His dislike to me was from my avoirdupois not being correctly distributed. Financially I was above par, but physically I was too short; and to tell the truth, as I can see it now after the lapse of many years, we did make a funny looking couple, she so tall and fair, I so short and ruddy. But then our young love was blind, and the old man was wide awake, with his boots on. Yet his opposition did not prevent my calling at his house about the regulation number of times per week, nor stop our rambles in the tender starlight. The father might curse me, but swear-words fell upon me much as rain falls upon the back of a duck. I cared not the snap of my finger for them.

With the governor, patience at last ceased to be a virtue and he resorted to heroic remedies to rid himself of his prospective son-in-law. He had annoyed me in various ways, but all to no purpose. He finally laid a trap for me. It was on my regular Wednesday evening call. I had scarcely rang the bell when I heard a tremendous clatter, which for a moment startled me, but supposing it to be the sudden dropping of a window or the slamming of a blind, I gave it no more thought, but patiently awaited the opening of the front door, meanwhile whistling a new hymn of love, a sort of voluntary as it were, putting the finishing touches on my back hair, and feeling if my collar and tie were all right. The door was opened, and in the flood of light that came from the hall I saw the cause of the clatter that had startled me a few moments before.

Father and daughter stood before me, and I stood on the platform of a rat-trap. The old wretch had placed it on the steps directly under the bell pull, expecting to catch me by the leg, but the jaws snapped together over my head, and I was safe.

My brevity had proved my salvation. Had I been longer I should have been cut off short. Never until that moment did the daughter seem to realize the disparity of my length, and a coldness grew up. I lost the girl, but my life was saved. Where is she now? I think she married an oysterman at Princess Bay, and has developed, I am told, into a terrible virago.

The old man had me arrested a few days after for assault and battery, but I beat him. Now come, boys, let's turn in.

MILLARD.

Robust and blooming health in Hop Bitters, and no family can afford to be without them.

Rifle and Trap Shooting.

RANGE AND GALLERY.

A BRITISH MILITARY TEAM.

THE urgency of the American riflemen in pushing forward the Hilton trophy in the face of their rivals on the English ranges has roused a feeling that the Volunteers of England ought to do something in the matter, and the talking episode which precedes any action on the part of an Englishman is now in vogue. Some very sensible things are being said, some of which we append. But we can in a few words warn our cousins that if they come it will be to meet men armed with a rifle little if any inferior to a long range match rifle, such a one, in fact, as our American amateurs are sending away to foreign countries, while our regulars are armed with the Springfield rattletrap, and our State Militia have antiquated specimens of the Remington, Peabody and other arms.

Mr. H. Smith, the Honorable Secretary of the North London Rifle Club, who is thoroughly competent to speak for English Volunteers on the matter, says:

It strikes me as being somewhat of a pity that there is no prospect of a British team accepting the offer of the U. S. N. R. A. to shoot a match this year at Creedmoor, and I think that before the offer is finally abandoned some further steps should be taken in the matter. The reply has been made, as to the small bore match (or, more properly speaking, the any rifle match), but there is another match of equal if not of greater importance, viz., the Hilton, open to teams armed with military rifles, at 200, 500 and 600 yards. I believe I am right that the U. S. N. R. A. rather pushed the Hilton to the front in preference to any rifle match; and surely it would be possible to get a British team together to go over and try and win that Hilton. Probably the Martini-Henry rifle would have to be used, as being the English military rifle, but even so, why should an English team fear to accept the match? The scores attainable with the Martini-Henry at 200, 500 and 600 yards are quite good enough for any ordinary team match, and I doubt whether any American *home fide* military weapon could do much better at the short ranges. Just now, when the world is jeering at the want or marksmanship displayed by the English troops, is not a fitting time to shirk a match with military rifles with any other competitors. I, for one, have no fear but that the result if a suitably good team were got together. The matter of funds is a serious one, but I feel convinced that if the affair were taken up in a practical way plenty of money would flow in, especially if it were made a point to interest the city *home fide* military weapon could do much better at the short ranges. Just now, when the world is jeering at the want or marksmanship displayed by the English troops, is not a fitting time to shirk a match with military rifles with any other competitors. I, for one, have no fear but that the result if a suitably good team were got together. The matter of funds is a serious one, but I feel convinced that if the affair were taken up in a practical way plenty of money would flow in, especially if it were made a point to interest the city and banking firms in the match as a national contest, as it would be. The "any rifle" is more or less of a toy used by the few; the Martini-Henry is the regulation arm of the British soldier, hence a match with the latter would be infinitely more interesting to the nation at large than anything that could be done with the former. The "any rifle" team will not float. Well and good; let a try be made for a Martini team (or what would be better if permitted by the Americans, a "M. H. L." team). Anyhow, I think the N. R. A. should consult the wish of its members before finally declining so important a match. If it is found that the money could not be obtained, and that a team good enough were not willing to go, then the matter must needs fall through. But I certainly think that the points should be definitively ascertained before the Hilton match is declined. If those who are of my way of thinking will write to me and say so, even if only on a post-card, I will take care that their views are formally represented to the Council of the N. R. A.

The *Volunteer Review*, of London, which has a clever way of hitting the nail on the head very frequently when speaking of our American riflemen, says, in speaking of the proposed match:

"It would appear that some hopes have been expressed that a team of English riflemen should be sent to Creedmoor this year, and it has been advocated by some persons that the Henry-Martini rifle would be the proper weapon for such a match. We may say that, should the Henry-Martini rifle be officially adopted as the weapon with which the English team should compete at Creedmoor, the American riflemen will inflict upon them such a crushing defeat as will effectually cure them from any weakness for the Henry-Martini rifle for the future. We are not speaking without book, but having attended a meeting at Creedmoor for the whole period and a three days' tournament afterward, we are prepared to state that any effort to defeat a team of American riflemen would only succeed by being backed up by what are called match rifles. The military arm of the British Army would in such a competition be simply nowhere."

BOSTON, May 14.—With a charming May day for the riflemen to-day, there was a small attendance at Walnut Hill to participate in the second quarterly shoot of the new match season just inaugurated. The wind from the 3 o'clock point was blowing gently on arrival and remained steady up to 12 o'clock. From that time it became vacillating. Mr. G. L. Winship, a member of the association who has not shot since last season, fenced eight bullseyes on the same target, but dropped on his seventh shot for an eight. The old Badge match, No. 3, closed to-day. There is a tie existing between Mr. E. Bennett and Mr. M. E. Baird for the trophy offered, which will be settled later, according to the rules governing the match. The best scores are as follows:

Handicap Match (Creedmoor Target).

J Merrill	4555545555—48	C H Dunlap	4445555534—44
J B Fellows	5554555455—48	D Chambers	5544445553—44
A C Adams	5554445555—47	A Carson	5544554441—43
A Carter	5454455554—46	C Bennett	5444444455—43
J Borden	5544554445—45	A C Benton	4455434451—42
B W Appleton	4445554554—45	D Roberts	5444434434—41
H S Harris	4445545545—44	W Gardner	4455534444—40
B Jamison	4544554545—44	W S Presby	4434454455—40
S Howard	4545454445—44		

Sharpshooters' Match (Massachusetts Target).

BOSTON, May 10.—The Schuetzen Corps held its second meet on its new range at Bayside to-day. The day was beautiful, but a rather strong wind from the southeast gave considerable trouble, but ordinary results being secured by the day's efforts. The best scores are appended:

Massachusetts Target, Off-hand.

W Schwartz	9	11	10	10	5	11	10	9	8	9—93
J H Miller	11	5	10	11	11	5	5	12	3	10—83

George C Gueath	8	4	8	10	4	7	4	5	5	5—60

On Tuesday next the East Boston Schuetzen Corps will formally open its new range and a large number of invited guests, "including the Governor of the State," have signified their intention of being present.

GARDNER, Mass., May 13.—At the last record of the Rifle Club at Hackmatack Range there was a good attendance. The inch ring and Creedmoor target combined was the one used. Distance, 200 yards, off hand. The story of the work of the club is told by the following score:

	R.	C.	R.	C.	Totals.
I N Dodge	99	46	96	43	186—94
G F Ellsworth	78	44	91	46	169—90

F H Knowlton	64	44	60	42	124—86
G C Goodale	63	42	80	40	116—82

LAKESIDE, Ill., May 10.—A special shoot of the Lakeside Rifle Club was held to-day and the following scores were made at 200 yards, off hand. Captain W. M. Farrow, of New York, being present, gave a splendid exhibition of off-hand work:

W M Farrow	5554555545—48	I A Farnum	4545554455—44
Re-entry	5545455455—47	W H Chenoweth	4454544541—43
"	4555445555—47	D B Williams	5444445544—43
B E Clarke	5554444454—46	Borcherdt	4435444544—41
J E Tilt	4454554543—43		

MEDFORD, Mass., May 11.—The warm, sultry weather to-day prevented as good a showing at Bellevue Range as usual, yet the few riflemen present made some excellent scores. W. Charles making the first clean score ever made at the range, heading the list with a 50. The following is the summary (10 shots, 200 yards):

W Charles	50	C Hartwell	44
C H Russell	47	F L Claflin	43
W Jacobs	45	A Jackson	43
J Winslow	45	A Bigelow	42
H Withington	45	S F Johnson	36
A J Greene	45		

The following is the standing of the prize winners in the Silver Ware match as they stand at present writing (handicap added):

J R Peel	46 47 47 47 48—246	A Whitney	46 46 45 46 46—229
W Charles	49 49 49 49 49—245	A W Webb	46 45 46 45 46—239
F Hollis	49 49 49 48 49—244	R Abbott	45 49 45 46 47—239
E F Richardson	48 48 49 49 48—242	N P Ames	45 46 45 46 48—238
A C Gould	48 47 47 47 47—240	A B Archer	46 45 45 46 47—236
P L Claflin	47 47 46 47 45—242	E J Crain	46 47 47 47 48—235

W Jacobs	45 46 46 46 45—240	A J Green	44 44 46 44 45—234

This match will probably be closed the 1st of next month.

SAN FRANCISCO, April 24.—The first stage of the competition between the Pacific Rifle Club and the Rifle Club of the Presidio took place to-day at the Presidio Rifle Range and resulted in a victory of the Pacific Rifle Club by 49 points. The following were the scores, each man firing 40 shots:

Pacific Rifle Club.		Presidio Rifle Club.	
J Kuhnle	179	Private Temple	172
Klein	178	Lieutenant Wilson	171
N Williams	177	Captain Anderson	170
McKillian	176	Sergeant Lowry	169
Sime	173	Private Ponyor	166
Bankhead	171	Private Hoyt	166
Lautenberg	169	Lieutenant Weller	164
Beaver	168—1291	Private Hess	164—1342

Capt. McKinney, Mr. Sprawl and Phil. Jacoby shot a match with military rifles, 100 shots each, 500 yards, at the Presidio Range, San Francisco, on May 15.

NEW ORLEANS, May 8.—The second contest of company teams for the second Denver prize took place to-day at the New Orleans Rifle Club Park. The scores were as follows:

Washington Artillery, Battery C.

	200 yards.				500 yards.				
Dudley Selph	4	4	5	4	4—21	4	4	5	5	5—23—44
G W Charlton	4	4	4	4	4—20	5	3	3	3	4—18—38

Battery C, Washington Artillery, and Battery C, Louisiana Field Artillery, are even on the company shoots, the latter having won the first contest.

CAMDEN, N. J., May 11.—The shooting matches at Stockton Rifle Range to-day, where the fourth semi-annual meeting of the Pennsylvania Rifle Association took place, were very interesting. The first contest was for the Tryon diamond badge, 200 and 500 yards; 200 yards out of a possible 120. The scores were: A. B. Parker, 85; C. W. Zieber, 71; Dr. M. Price, 91; Major J. H. Burroughs, 100; W. C. Cranmer, 100; L. J. Somers, 82; H. C. Rushton, 62; Isaac Tull, 88; G. W. Miles, 60; H. Manderson, 94; G. L. Thompson, 90; W. H. Case, 87; E. H. Jones, 77; W. De V. Foulke, 83; L. Thomas, 90; I. R. French, 49. The score at 500 yards stood: A. B. Parker, 104; C. W. Zieber, 67; Dr. M. Price, 113; Major J. H. Burroughs, 87; W. C. Cranmer, 85; Isaac Tull, 84; H. C. Rushton, 111; Isaac Tull, 64; G. W. Miles, 71; H. Manderson, 113; G. L. Thompson, 102; W. De V. Foulke, 62; L. Thomas, 57. The badge was awarded to Dr. M. Price, whose total score was 204 out of a possible 240.

Then came the individual match at 200 yards, for which eighteen prizes were offered, valued at $180. The following are the winners and their scores: Dr. D. Price, 103; T. W. Taylor, 102; J. Green, 100; H. C. Rushton, 99; W. C. Cranmer, 98; L. E. Freas, 98; Mr. Proctor, 98; Mr. Edwards, 98; A. G. Gardwell, 98; Major J. H. Burroughs, 97; W. De V. Foulke, 97; L. Thomas, 95; L. J. Somers, 94; A. Brown, 92; J. Tull, 92.

The third competition was for a silver cup, which has to be won three times by teams of eight from association clubs before it becomes the property of the winning team. The West Philadelphia Club had a "walk-over." They scored 374 points out of a possible 560. This cup has been won heretofore once by the West Chester Rifle Team and twice by the Pennsylvania Rifle Club.

The fourth match was an "individual contest at 500 yards," nine prizes, valued at $53. The following are the winners and their scores, out of a possible 120; H. C. Rushton, 117; C. W. Zieber, 114; W. De V. Foulke, 113; Mr. Edwards, 113; L. Thomas, 113; R. S. Redfield, 113; Major J. H. Burroughs, 111; Dr. M. Price, 109, and H. Manderson, 107.

Only one team, the Quaker City Club, entered for the fifth match, which was open to teams of four, distance 500 yards. They were awarded an aneroid barometer.

The best shooting made during the day was that in an individual match at 1,0 0 yards. The first prize, a National Rifle Association medal, was won by H. Rushton, who scored 48; the second, a skeleton stock rifle, was carried off by W. De V. Foulke, who made 46 points. L. Thomas also scored 46, but he was obliged to take third place under the rules.

CREEDMOOR, May 14.—But one match occupied the attention of the riflemen this morning at the A. range to-day. There was another match, open to "junior marksmen," as defined by the recent classification bill, but as nobody can make out what the system means and fewer still have patience to puzzle out the logarithmic calculations necessary to determine the standing of a marksman there was no second match. The competition was open only to members N. R. A. and N. G., S. N. Y., in uniform; 200 yards; any rifle; military rifles to receive one point allowance on each entry; seven shots each entry; two best scores to count; entrance fee $1 each for first and second entries; 66 per cent. to first, 34 per cent. to second prize. The leading scores stood:

C E Taylor	55	32—87	M B Hull	29	31—60	
J L Paulding	33	32—65	J R Grohman	29	30—59	
P G Fenning	32	32—64	E E Lewis	28	30—58	
J H Brown	33	28—61	F E Bennett	29	29—58	
J L Price	31	32—63	E S Browe	29	29—58	
G J Seabury	31	31—62	C E Overbaugh	29	29—58	
D F Davids	31	31—62	F J Donaldson	27	30—57	
F H Holton	29	31—61	J W Wright	28	29—57	
W R Bostwick	30	31—61	E L Madison	23	29—57	

LOUISIANA VS. COLORADO.—Capt. Dudley Selph has mailed to the Denver riflemen, the following communication answering the challenge received from them, and proposing terms for an annual shoot for a standing prize:

NEW ORLEANS, May 6, 1881.

To the Officers and Members of the Tabor Sharpshooters, Denver, Col.:

Gentlemen—Your challenge, dated April 19, and received here, April 25, 1881, was answered by telegraph as follows:

"Challenge received too late for May 1. Particulars by mail."

I desire now to say that with only one week's notice we could not select a team by competition, and as we have no regularly organized military rifle association, it is necessary to select a team by competitive practice from the various military companies of our city.

We are willing to shoot, and can promise you a team worthy of your best efforts, and with this view I beg, on the part of our riflemen, to offer the following suggestions:

Military matches are now generally shot at both ranges, 200 and 500 yards, and the majority of the old team are strongly in favor of both ranges. I, therefore, propose that a contest between a team from your "sharpshooters," and a team from our military riflemen be made for June 5 and 12, 1881, for a banner or pennant of silk with the coat of arms of Colorado on one side, another coat of arms of Louisiana on the other. Each team to pay $50 for the manufacture and embroidering of the banner, and that it shall be contested for annually, and each winning to be inscribed on the winner's State side.

Our boys are tired of being assessed for every match, and suggest this as the best plan to do away with any money consideration.

If this proposition meets with your favor we would propose that the following terms be agreed upon: The match to commence at 200 yards on one day and at 500 yards on the other day, each rifleman to have fifteen shots at each range, and at liberty to "wipe out" after each five shots; grand total to win.

The teams to number twelve or fifteen men. Creedmoor rules to govern; rifles to be military, with trigger-pull of six pounds.

There shall be a spotter, scorer and umpire for each game, and one referee to all protests for both teams.

I am satisfied we will all be better pleased to have in view an annual contest for a "champion banner" than to depend upon irregular matches for special prizes, and it may be that the "little chips" will follow the example of the "old blocks" when the latter shall have gone to the "happy hunting grounds" of the white warriors.

I will be pleased to have your association consider the foregoing suggestions and equally pleased to have you offer others, which I will communicate to our riflemen. Very truly, DUDLEY SELDE.

—The Leach Cup will be shot for on May 30 under the auspices of the Amateur Rifle Club at Creedmoor.

PRINCETON COLLEGE has a rifle club of which C. R. Gill, class of '31 is President; G. P. Way, '83 Secretary; and C. E. Mamiere, '81, T. S. Clarke, '82, and W. C. Jones, '82, members.

RIFLE CLUB ELECTIONS.

The Lakeside Rifle Club, of Chicago, Ill., (formerly the Lake View Rifle Club), elected the following officers, April 23, to serve for one year: President, S. F. Hunckell; Vice-President, J. A. Colehour; Captain, John McConnell; Secretary and Treasurer, F. J. Lang.

The California Rifle Association met on April 30. The following members were elected directors for the ensuing year: Gen. John McComb, Major A. F. Klose, Col. A. Andrews, Major W. B. Burtis, Lieut. C. P. Le Breton, Capt. H. S. Templeton, Lieut. P. H. McElhiney, Corporal T. E. Carson, Lieut. M. N. Laufenberg, Capt. J. H. McMenomy, Capt. A. J. Fritz.

The annual meeting of the Quebec Rifle Association was held in the Brigade office, Montreal, May 4, Lieut.-Colonel McEachren in the chair. Hon. Mr. Caron, Minister of Militia, was elected President, the Vice-Presidents being Lieut.-Colonels Maltice, Ouimet and McEachren and Major Stewart; Secretary, Major Mudge; Treasurer, Lieut.-Colonel Martin; Executive Officer, Lieut.-Colonel Fletcher.

—Peter Giannini, one of the best rifle shots on the Pacific Coast, has left for Switzerland, to compete in the great Federal shooting festival which takes place at Freyburg in July next. He also intends to compete in the German Bundes Festival at Munich, Bavaria, to come off during the latter part of August.

ALLEE SAMEE MELICAN MAN.—While a military team was practising the other day at Carson, Nev., a Chinaman, who was looking on, was jokingly asked to try a shot. To the surprise of the military men, he accepted the invitation, and essayed to shoot from a knee rest, and also while lying down. He was told that he must shoot offhand. This he refused to do, but finally he was allowed to have his own way, when, coiling himself up on his side, he thrust the barrel of the rifle between his feet and aimed for the 200-yard target. Three minutes elapsed, during which time the soldier boys tittered and chuckled at the Chinaman. At last, when they began to think he had fallen asleep, he pulled the trigger and made—a bull's eye. He continued firing until he had made five bull's eyes in succession, when, returning the rifle, he remarked, "Melican man shootee putty good."

THE TRAP.

LONG ISLAND SHOOTING CLUB.—Monthly contest, 5 traps, 7 birds each, 80 yards boundary, Hurlingham rules; West handicapped 27 yards, Madison 26 yards. Score:

West	1 0 1 1 1 1 0—5	Wesley	1 0 1 1 1 1 1—6
Madison	1 1 1 1 1 1 1—7	W Lawrence	1 1 1 1 1 1 1—7
Wilson	1 0 1 1 0 0 1—4	Akhurst	1 1 1 1 1 1 1—7
Funson	1 1 1 1 0 1 1—6	Walton	1 1 0 1 0 1 1—5
Burritt	1 1 1 0 0 0 1—4	Joerger	1 1 1 1 0 1 1—6
Henry	1 0 0 1 1 1 1—6	Leavitt	1 1 1 1 1 0 1—6
Van Staden	1 1 1 1 1 1 1—7	Robinson	1 0 1 1 1 1 1—6
Medway	1 1 0 1 1 1 1—6	Morton	0 1 1 1 1 0 0—4
Thompson	0 0 1 1 1 1 1—5	Creed	1 1 1 0 1 1 1—6
Stiles	1 0 1 1 1 1 1—6	Yelckman	1 0 1 1 1 0 0—4

In shooting off ties the result was: Madison, 26 yards, 15; Van Staden, 22 yards, 14; Lawrence, 24 yards, 21; Akhurst, 22 yards, 4.

BROOKLYN GUN CLUB.—Match for the Pelhemus bronze trophy:

	Yards.		Yards.
H Tunison, 28	11100111110111—12	R Barker, 28	11111111110011—13
G W Tait, 25	11011101111111—12	Lawrence, 26	11111010101111—12

W. W. E.

RUPERT, Penn., May 14.—By invitation of C. M. Drinker the Catawissa Glass Ball Club shot on the Fair Grounds, at Bloomsburg, Saturday, Mr. Drinker presenting a fine ammunition case to the best score:

Solleder	01111 01101 00101 10100—11
Drinker	01100 11110 01001 01111—12
Thomas	10111 11111 01101 12000—14
Yetter	11111 11111 10111 11001—18
Fox	00010 01110 11010 11000—10
Aldrich	11111 11111 11011 11101—18
Eyer	11001 10111 10011 11101—14
Kreigh	01111 10012 01111 11111—16
Stadler	11111 12000 11111 11111—19
Laycock	10111 00001 01111 10001—11
Reifsnyder	11101 01101 11111 01111—16
Harmon	11001 11011 00100 10001— 9

It was too late to shoot off ties.

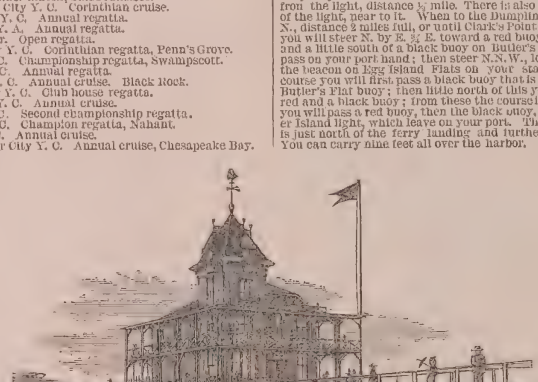
SPENCER, Mass., May 14.—A new Holden trap has been purchased by the Sportsman's Club of this town. The club is in a very prosperous condition and an improvement on all former records is expected.

BROOKFIELD, Mass., May 14.—The old board of officers of the Sportsman's Club have been elected. A Holden trap has been purchased and the work of breaking glass balls is to be looked after more closely than ever before.

Messrs. John E. Graham and Frank E. Butler, of Erie, Penn., have set themselves up as "champion all-around shots of the world" and have added to their own skill the performance of the "canine wonders, George and Dan."

THE ROCHESTER GUN CLUB will hold its third annual prize shoot to-morrow afternoon.

ROCKLAND, Mass., May 14.—A match was shot here to-day between the Rockland Glass Ball Club and the South Abington Sportsman's Club. The shoot was at 20 glass balls each, 18 yards rise, from card trap. The score was: Rockland Club, 210; South Abington, 191.—C. J. A.



ONE ARM.—Mr. Styles, of the Long Island Shooting Club, has but one arm, but is an expert shot. It takes an expert two-arm shooter to get ahead of him at the trap.

You can save Doctor bills and keep your family always well with Hop Bitters.

Yachting and Canoeing.

FIXTURES.

May 22.—Quaker City Y. C. Opening cruise.
May 23.—Southwark Y. C. Annual regatta.
May 23.—Cooper's Point Y. C. Annual regatta.
May 24.—Canoeing open regatta, second and third-class yachts.
May 24.—Southern Y. C. Professional races.
May 26.—Southern Y. C. Professional races.

NEW BEDFORD YACHT CLUB.

AN important epoch in the history of yachting in America is marked by the formation of the New Bedford Yacht Club. At the time a few clear-headed and energetic gentleman undertook to promote a small local organization of precarious life into a great club of national proportions and influence, little or nothing of the sort had yet been attempted. That narrow and rather selfish pride which always marks the small beginnings of purely local associations still held full sway along the coast to such an extent that it had been found all but impossible to build up a club of more than "provincial" range in a harbor close by, where yachts assembled by the score during the summer, and where of all places one might have expected to see a flourishing institution floating on the seas of success and popularity. The complete failure of several attempts made at Newport in previous years to overcome the barriers of localism, standing like solid walls between the fleets of visiting yachts for years, might have deterred others less energetic than the founders of the successful club in the White City, especially as New Bedford is some miles from Buzzard's Bay, and, so far as distance goes, just that much less accessible to yachts from the West, and to those from around Cape Cod practically no more convenient than its more fashionable and pretentious sister city. But "where there is a will there is a way," and while we still had our affections and expectations blighted upon the beauties and attractions of Narragansett Bay, all hands were suddenly surprised to find that from a struggling infant in another port had been coaxed and coached one of the largest, most liberal, enterprising and yet "select" yacht clubs in America. Our likes show that this had been foreseen, and before it was too late an effort was made in these columns to resuscitate the waning yachting spirit and nautical fame of old Newport town, but to no purpose, though, as the sequel has demonstrated, so we were not only willing but glad to find that a new state of things at last came to the fore, even though not of the origin we had all along in view. We hail the success of the New Bedford Y. C. as a new departure, something like an oasis in the desert of the dry, dreary monotony of existence into which yacht clubs had fallen and were content to drag on a somnolent, self-admiring retirement from public view. The membership of the new club was drawn from all quarters. It was not New Bedford first, last and every time, and nothing but New Bedford, but every yachtsman cruising from Nantucket to Newport and could throw in his lot with the rest if he chose. The club thereby became not a petty local thing, but national. Its races were thrown open to all alike; its prizes were liberal, the management excellent, the club house a prominent and attractive structure devoted to legitimate purposes, and not a tippling shop in disguise. Its officers worked untiringly in its behalf, and not for self-glorification. The citizens of the town gave sympathy and funds, and above all, the club took root and lived up to the traditions of a wide-awake sailing organization, securing respect for its flag and the good wishes of the best class of yachtsmen—those who desire to see clubs and racing established on the broadest basis possible, and the furtherance of the sailing interests their main and only object. The New Bedford Yacht Club is now one of the largest in point of membership and vessels, has the best appointed club house in the country, and in some features has taken the lead of all others "this side of the Cape." It is still growing rapidly, with a constantly increasing income, and this season's racing in Buzzard's Bay bids fair to surpass all previous records, as the largest fleet ever gathered in our waters is likely to be seen collected in the harbor when the New York, Eastern and local yacht squadrons meet by appointment to engage in the most interesting matches we are promised for the year. New Bedford, by the energy and forethought of a handful of gentlemen, has built itself up as a yachting station of national import, and now may justly lay claim to being the Cowes of America. The first steps looking to an organization were taken Nov. 10, 1878, when a request to call in the local papers about twenty gentlemen assembled and concluded to build a small house for the care of their boats and the convenience of the few small yachts then hailing from the place. The first officers were chosen Feb. 10 and the undertaking was fairly launched.

Pursuing the "even tenor of its way," working harmoniously together, the membership increased to an extent hardly thought of in the beginning, until it became so large that it was thought advisable to change the location of the house and thereby increase its capacity for good. A charter under Massachusetts laws had been obtained, dated Jan. 25, 1878. It was finally agreed to purchase a water privilege and erect a suitable building, which was carried into effect, and the present admirable location and facilities opened June 15, were the result. Upon a call for assistance most of the gentlemen of the city applied to gave the club their support by becoming members, and to-day the books show a total of nearly 300 and a fleet of sixty yachts, including the well-known schooners Myrtle, Magic, Peerless and Clio, all having New Bedford as their home port. The club feels a justifiable pride in its success, which has not been spasmodic, but a gradual healthy growth, harmonious in its action and having the good will of the resident public. The house is easy of access, horse cars for its door, city water, telephone communication, gas and everything necessary for comfort or convenience; a water front of 9 ft. depth at low tide; a harbor easy of access, with channels well buoyed and not excelled in beauty or safety on the coast, the club feels that its "lines have fallen in pleasant places," and it cordially invites all the yachting fraternity to make its house their home during their stay in New Bedford waters.

The sailing directions for entering the harbor are simple: The Dumpling Rock light bears from the Sea-and-Chickens lighship N. E. ½ E., distance seven miles. Mishaun Ledge is on this line of bearing, about midway between the two lights, with S. ¼ E. at low water. Therefore when running for Dumpling light from near the light-ship do not keep to the north of E. by E. the first three or four miles. From the buoy on this ledge you can keep directly for the Dumpling light and need only give it a berth of 300 feet. You will pass a red buoy on your starboard hand that is on a sandy shoal about south from the light, distance ¼ mile. There is also a black buoy just south of the light, near to it. When to the Dumpling light, steer N.E. by N., distance 2 miles full, or until Clark's Point light bears north, when you will steer N. by E. ½ E. toward a red buoy on Egg Island Flats and a little south of a black buoy on Butler's Flats, which you will pass on your port hand; then steer N.N.W., leaving the red buoy and the beacon on Egg Island Flats on your starboard hand; on this course you will first pass a black buoy that is nearly a mile from the Butler's Flat buoy; then little north of this you will pass between a red and a black buoy; from these the course is about north, on which you will pass a red buoy, then the black buoy, which is close to Palmer Island light, which leave on your port. The best place to anchor is just north of the ferry landing and farther in for small yachts. You can carry nine feet all over the harbor.

STEAM LAUNCHES AND RED TAPE.

WITH the increasing growth of the steam pleasure fleet, the Government, and the Treasury Department more particularly, would save itself a great deal of correspondence if the rules governing the building and running of launches and steam yachts were drawn up in concise form for general circulation or for publication. As it is, no one seems to know exactly what is required and what not, much less can any one say what fees are to be legally charged for attending to the Government demands. Inspectors may like nothing better—it pays as much more to charge a round $25 when allowed only $5, and they find it so easy to prey upon owners who "ask no questions," preferring simply to get rid of the official nuisances, that the legitimate fees are studiously kept in the dark for the inspectors' benefit. The time has come when action should be taken. This we have often urged upon the Treasury Department, but mightier matters seem to demand so much attention that red tape mystification still holds sway, and launch-owners find themselves liable to be swooped down upon by lynx-eyed officers having gain as the stimulant to over-zealous exactions, often upon mere technical grounds. There is no hope out of the mess unless steam yacht owners take the matter in hand and by united effort force some recognition of their reasonable demands. There can be no necessity for compelling small launches and river boats used for pleasure and instruction to comply in all respects with the cumbrous, mixed-up medley of "regulations" forced upon the statute books by compromises between incapable officials and the dissenting members of a league of steamboat men. It would be the work of an hour or two for a professional engineer to draw up a set of rules embodying all that is required for safety in building and completeness in equipment, and such a code, especially applied to launches and small steamers, could be kept distinct from all that relates to steamboats given to freight or passenger service. At present it costs half as much for inspection fees and humbuggery as the entire value of many a small launch, and we know, from the constant complaints reaching us, that but for the onerous Government burdens the fleet of launches and yachts driven by steam would be much larger than it is. We have nothing now to guide us but the very general and loose admonitions of Treasury officials, varying with each change of administration and interpreted according to the caprices and often limited comprehensions of local inspectors. One of the best of these circulars we give below, as o interest to many readers:

"You are informed that under Section 4,426, Revised Statutes, the hull and boiler of every yacht, or other small craft of like character propelled by steam, must be inspected, the boiler being subjected to the hydrostatic test required by law. The pilot and engineer must also be licensed and such other provisions of the law complied with as may be applicable to the particular vessel under examination.

"Sections 4,428 and 4,431 require that the iron or steel plates of which the boiler is constructed must be stamped with the name of

the manufacturer, the plans were manufactured and the number of pounds cersile strain it will bear to the sectional square inch. The boiler must be provided with such appurtenances as are necessary to its safe management, viz.: Feed-pump and check-valve, steam-pressure gauge, safety-valve, gauge-cocks, a water-gauge (showing the height of the water in the boiler) and blow-off valve and, it is to sound applicable to the kind of burner employed, a fusible plug, to insert that it will fuse by the heat of the fire when the water in the boiler falls below the prescribed limit.

"There must be on board the means of applying the required hydrostatic test. For a steam launch two buckets kept on board will be sufficient means for the extinguishment of a fire. There must be provided for each person on board a life-preserver containing at least six pounds of good block cork, adjustable to the body in the manner of a belt or jacket, with shoulder-straps.

"The fee for license as 'special engineer' for a yacht, which fee will be granted to any person of good character who has sufficient experience to manage the boiler and machinery safely, is five dollars. A similar 'special license' as pilot for this vessel will be granted to any person of like good character who is familiar with the navigation in which she is to be employed, understands the Pilot Rules and has had sufficient experience in handling this or other similar vessels.

"The master of a vessel of this class does not require license.

"A steam whistle of suitable dimensions must be provided, with which the pilot will make the signals as required by the Pilot Rules above referred to.

"When the equipment is completed and the vessel ready for inspection is to required that application shall be made in writing by the master or owner to the Inspectors within whose district the vessel is owned or employed, and to such boards other notice may be given for further information on any matter herein stated which may not be regarded by you as sufficiently explicit."

CRUISE OF THE SCHOONER SUNSHINE, 1880.

Tuesday Aug 3.—At 9 o'clock the fleet started for Block Island Our military friend who had promised to be promptly on hand at 9. was not to be seen, and our anchor, therefore, remained in the mud, waiting anxiously and watching the dock until 9:45, when patience exhausted, the anchor was weighed and we started after the fleet without him—second time with the start. We had not yet been in the distance entering Fisher's Island Sound, and as the yachts passed the Edgecombe House each gave a salute in answer to the compliment of the night before. The wind was dead ahead, light and growing lighter the morning. Slowly, slowly we crept along, following and gradually overhauling some of the fleet almost becalmed in Fisher's Island Sound. Our balloon jib topsail and staysail were too much for our seaworthy competitor—the Madcap, and indeed the only competitor we saw in that line of sail, and she was the one to read the gilt letters on our stern. The little Elephant alone of the entire fleet, never seemed to loose the breeze Quickly dodging out from behind Fisher's Island she leaned over to an eight-knot southwesterly breeze and with the broad pennant and bade good-bye to the fleet for that day. This was interesting for the rest of us, reminding some of the former cruises of the A. Y. C., when Captain Ludlow Livingston on the "White Cap" with an enormous club topsail, tilting like a board, would sail away and out of sight—the wind not seeming to be a respecter of persons.

The fleet took the breeze about 2 o'clock drawing at first in ugly puffs off the island and snapping two more topmasts. One after another they quickly rounded the Block Buoy off the treacherous reef at the eastern point of Fisher's Island, and trimmed down like under lower sails for a "long leg" to the southwest point of Block Island. From the time of hauling on the wind till dropping anchor, the Sunshine had a close race with our comrade, the Madcap, which is a schooner of about the same tonnage, carrying sails doing good service, struggling with the head sea. She rather out-footed us, sailing close-hauled, but found it impossible to pass us to windward as we could lie a little closer than she could. We both rounded the point off Block Island about the same time, and then running up staysail and jib topsail we left the Madcap to her fate, leaving her behind, and after running half an hour, we anchored within four minutes of each other. Easterly weather shut down upon us in the evening and made the yachts toss around lively during the night, chucking their bowsprits about in a manner to make sleep impossible, except over a spare anchor and passed the night quietly. The Agnes and some others housed their topmasts fearing a heavy blow, as the night looked ugly, and the harbor was entirely exposed to easterly storms. The U. S. Government Light House was in the distance, and if this is an inside strong enough to brave the winter storms and is ever finished, there may be then an excellent and pleasant rendezvous for summer cruises, but not until then.

Wednesday, August 4.—The morning broke wet and foggy; wind fresh from southeast by white caps in the distance; fishing-boats going out reefed down; 10 o'clock started with the fleet for New Bedford. Soon after starting the wind drew around and blew a smoky southwester. Black clouds of rain and squalls of wind occasionally struck us before its blinding sheet, and rushed down like thunder. The waves ran high, and, rolling from side to side, we nearly lost our port boat, and carried away our after-port davits as we had neglected to swing the davits inboard. Most of the yachts came down to standing sails, the wind coming dead ahead, but the Sunshine never could not relinquish their desire to leave the fleet and reckless-ly carried top-sails, the new schooner Cornelia being especially conspicuous in this respect. She did not gain much by it, for little Agnes withstood her forcing by more foresight and her usual efficiency in keeping just in advance, and anchored some minutes before us. It seems as though it were impossible to force a boat beyond a certain degree of speed.

About 4 P. M., we reached New Bedford, and almost immediately afterward a drenching rain settled down for the night. This threw a wet blanket on the festivities our friends of the New Bedford Yacht Club had kindly prepared for us, and it was doubly disappointing since we could not even show our appreciation of their courtesy. Our friend, the Madcap, remained behind at Block Island to meet us again at Newport.

Thursday Aug. 5th. Morning; wind east and threatening. At noon sky cleared some, and the fleet started for the Vineyard joined here by the Madcap. The Sunshine's jibboom having to remain till davit could be repaired, and sail direct to Newport for some friends who were going East with us, and we therefore did not start until early evening. Becalmed during the night between Cuttyhunk and Brenton's Reef we did not arrive in Newport until 7 o'clock next morning.

Friday, Aug. 6. Our friends arrived in the afternoon, one from Boston and two from New York, and we laid in a fresh stock of provisions for a three-weeks' cruise around Cape Cod and along the coast of Maine. The fleet got under way for Oak Bluffs just before sunset, Triton leading; and the Madcap came with them.

Saturday, Aug. 7.—Early that morning the Atlantic Y. C. fleet set sail for Greenport, where the cruise was to end. We learned on our return that their sail was a long one forward, in which the Triton led the fleet, closely followed by the Peerless and Fanita. We left about ten o'clock and sped rapidly along the rocky cliffs of Narragansett, Seconner Point, up through Buzzards Bay into the entrance of Quisset Harbor, where we dropped anchor together with the others. The sail was in marked contrast to that of the previous night over the same ground. It seemed as though Brenton's Light-Ship and the Hen and Chickens Light Ship must have been sailing toward each other since then, so quickly did we leave the one and pass the other. We lay on and off Quisset Harbor for a couple of hours afternoon and fired a gun for a pilot, who put off from the shore in a small boat, and with his assistance we easily made our way through a narrow channel into the smugest little harbor ever seen—land-locked on all sides, having room in the centre for a single yacht to swing, so that we could thrust our jibboom ashore in most places and yet have three fathoms under the yacht. The Summer Hotel fronts on this cosy lake, and not 100 yards in its rear Buzzards Bay washes the shore. There are a few cottages around the Summer House and the hotel, and the village of Woods Hole is about two miles distant.

The Lieutenant and friends walked over to the village in the evening and reached "the town" after a brisk walk, bringing up at an ice cream saloon. From there they made their way to what was the point of rendezvous for Saturday nights—and were waited upon by some artless Yankee maidens, who flavored our creams with their smiles. Needless to tell we were in "centured" New England, the heart of Yankeedom, where independence and equality plainly evident. Every one familiarly called the other by their Christian names—strangers and friends, servants and guests. A melodeon in a corner of the room furnished music, and Moody and Sankey were not forgotten. Our bashful friend E. (who has a rich baritone voice) was quite overwhelmed when a black-eyed witless asked him, with the sweetest smile, if "Ralph" would not lead in singing "Pull for the Shore." He did not like to refuse a request so politely made, but was compelled to, as he solemnly assured her that he had never heard of "that little song."

Sunday, Aug. 8.—Our friends at the hotel made the day pass quickly, and we had to thank the host for many little attentions which added to our comforts as well as pleasure. Chaplain and Captain attended services ashore, while the Lieutenant and his three friends remained on board entertaining the visitors and enjoying a quiet day's reading. Our sundown gun awakened the echoes of the surrounding cliffs, and a perfect summer's night shut down upon us. We staid out on deck till late, singing, talking and listening to the yarns of an old sea captain from the Cape who came on board to pay his respects. The phosphorescence in the water was unusually bright, and in the occasional intervals of silence, as we watched the waves against the sides, our thoughts would go far back to the legends of old, and in dreamland we almost believed the sirens's song during its lure into the lovely depths.

Monday, Aug. 9.—At 6:30 A. M. harbor pilot came on board, and we immediately got under way with light southwest wind. Off Woods Hole at 7 A. M., and took pilot to get us through the narrow entrance into Vineyard Sound. A reef extends across the passage and leaves only a narrow channel on either end to the shores. The current runs with such rapidity that the buoys are almost buried under, while the waves it drives up at times are exceedingly dangerous until right on top of them. They look more like lobster pots than anything else, and we considered ourselves fortunate in having a pilot to tell what they were The government has lately removed the "Lone Rock" and spindle, which was a large obstruction on the north end of the reef. By 9 A. M. we were at anchor off Oak Bluffs (camp-meeting grounds), and went ashore for a couple of hours only, as we had decided to push on for Nantucket in the afternoon. While there our old friend, the sloop Sirius, came to anchor from Newport, and we found to our delight a stranger on board. All came on board about one o'clock, and as the wind blew heavily from southwest we started under mainsail and jib and rounded to in Nantucket harbor at 4 P. M. without mishap.

Tuesday, Aug. 10.—The run to Provincetown, which was before us for that day, is a distance of 80 or 90 miles, so 5:30 A. M. saw the yacht well out of the harbor past the Bell buoy, with the Captain at the wheel, but the Lieutenant and friends below sound asleep. The wind was fresh from the southward, and by 9 o'clock S. M. were off the Highlands of Cape Cod, and were within a few miles of Race Point; the wind slackened and the tide began to turn against us, so that we slowly rounded Race Point and anchored in Provincetown at 5:30 P. M. The clouds gathered soon after very rapidly, and the thunder and lightning kept us from going ashore, but we were not to be surprise the storm passed directly over us without a breath or a single drop.

Wednesday, Aug. 11.—The sailing master was excused to visit some friends on the Cape for the day, and a boat-load came off from shore, the Chaplain and Captain taking a drive. The town appears better from a distance. The houses and stores on the main street are most all built directly on the roadway; no sidewalks, and wagons may drive to the front windows. It is an old whaling town, and just now is dead as the whaling trade is. We had a somewhat vivid illustration of its funereal character, though it may be common enough to the residents. A large whaler about on a two-years' cruise had just returned "home" the afternoon of our arrival, and indeed such a funeral procession as followed the dead sailor to-day on the next day previous, and our attention was first directed to the vessel by seeing a boat shove off from her side, and the sturdy fishermen, bearing his body with them, give way for the shore. A crowd of friends and relatives were gathered on the dock to receive the corpse, and his young wife among the number, as we afterward learned. Not loth to get away from such loliueness we left in the afternoon for Gloucester. Light winds and calms detained us all the night in Massachusetts Bay.

Thursday, Aug. 12.—At daylight we were only half way across Massachusetts Bay. There was not a breath of wind in the forenoon, and the sun's rays had full play upon our pretty features. But a light afternoon breeze sprung up and lasted long enough to enable us to anchor off Gloucester at 7 P. M.

As our A. B. S. had been suffering with chills and fever we dispatched the Chaplain ashore for a physician, who came off and administered to him medicine and comfort. In the evening we witnessed from the cockpit a beautiful sunrising of the campaign, and listened to one of Robert Ingersoll's stirring speeches. Lieutenant and trio, after the close of the speech, took advantage of a few spare minutes before going on board to investigate the various places of interest on some of the principal streets. There is a little more life in the place than in the Provincetown, and we managed to get some fresh provisions for a cruise. Not an agreeable harbor to remain in because of the water covered with fish oil from the many mackerel schooners, and also because of the great fall of tide about the dirty old docks. Quite a number have left for the Labrador fishing, which had just been launched, was towed by. It is difficult to find anything "yachty" about her appearance. She looked like a fishing boat, model and rigging; staunch and seaworthy, undoubtedly, and if the plans of the owners are carried out this summer she will be stormy once instead of summer days, she might be useful as a yacht.

Friday, Aug. 13.—We regretfully bade good-bye to our friend the chaplain, who was obliged to return home, and at 6:30 A. M. we stood out of the harbor. A slight breeze from the west at "Norman's Woe" (the only in name—and we ran down to Thatcher Island lights (Cape Ann) by 11 A. M. The usual southwest breeze came in from the ocean in the afternoon, and with every sail drawing we sped along by and in among the lines of Shoals. Soon after we sighted Boon Island, the highest towering light on the coast, and bowled by with the log registering 9½ knots per hour. Wood Island light hove in sight at half-past five, and about 8 P. M. we dropped it astern. Then taking in the light sails, and under the able pilotage of our friend, Mr. Hill, we stood in for Saco Bay, passing the rock, cape, and land and rocks jutting out into the ocean, distant some twelve miles west of Portland. As the family of Mr. H. was spending the summer here, we concluded to remain over Sunday, and a very charming stay it was.

Saturday, Aug. 14.—The morning passed quickly in inspecting the surrounding and walking out on the rocks to the uttermost point, where the waves must break in grand style during a storm. In the afternoon, filling the Sunshine with ladies, we started across the bay for a sight of Orchard Beach, some ten miles from the Saco. At 5 the mild westerly breeze carried us from the shelter of the point only to forsake us when a mile off the hotels at Old Orchard, and to leave the yacht with its precious burden at the mercy of an almost imperceptible tide-current. We succeeded in drifting enough to have a depressing effect upon our fair visitors; at least some young lady affirmed who was lain to recline finally on the deck broadside, alleging that the unceasing noise made her headache! This was true enough, although the result proved that the hail had not been told. One by one they succumbed, and for one dreary hour we drifted about with all the ladies *hors du combat*. A polite offer of pickled salmon to a fair guest was productive of the only notice she deigned to take of us, as well as one of pickles for a considerable time, and that was confined to one withering glance. A mild shower of rain which for a few minutes overtook us while in the above predicament, was absolutely unheeded by *les Invalides*. The aforesaid lady refused even the offer of an umbrella, utterly indifferent to her own guilty confession of the fact as well as one of pickled salmon. Such is life afloat and afloat around her. As a last resource the yawls were converted into hospital boats and we paddled our sea-sick guests about, who found in them, or imagined they did, a different motion from that of the yacht, and gradually recovered their self-control, taking one in each boat, pulled ashore to the beach, four miles away;

Old Orchard we did not succeed in reaching, but from a distance it appeared like a small edition of Coney Island. By sundown the swell from the ocean disappeared, and we got under way again, regaled by their sorrows by the beautiful sail home in the twilight. The white line of beach at Old Orchard, and as darkness came on, the many lights of the hotels and the moon glittering over the water made an ideal scene, and the evening was long remembered.

Monday, Aug. 16.—Cold and clear wind blowing fresh from the north. Yacht got under way at 9 A. M., leaving the boys ashore to spend the day and join us in Portland in the evening. At 10 A. M. Off Cape Elizabeth, when wind died away and came in again from the eastward, and we were obliged to drop anchor and lay for an hour or drive about the city for two hours and enjoyed the beautiful view of the back country from the heights at the western part of the city, and also of the bay and islands beyond the city upon the east and south. The boys were on board when it was said that there had been frost in the lowlands that morning.

Tuesday, Aug. 17.—Set sail about 6 A. M.; air was cold and still. Lieutenant and trio came on board about midnight, but being too lazy to go below decks to enjoy a comfortable berth, they drifted slowly down through the numerous vessels at anchor, and among them the famous ship Kearsarge, which made so noble a record in our late war, and showed the English crew aboard the Alabama that they had met their master in chase of victory than in the war itself. The wind continued light during the day, and we finally made Tennant's Harbor for the night. This is a hamlet on the mainland supported by the lumber trade. We found a few sleepy inhabitants hanging around the post office and only store discussing politics and the financial question. We ascertained on inquiry that there was a greenback stronghold of Maine! Fires ashore in the wooded beach showed an evening clam bake going on, and some of the ladies rowed off and visited the yacht, but the younger members of our party soon left the fishy attractions of the older ones not proving strong enough, they made a short stay.

Wednesday, Aug. 18.—Under way at 6 A. M. and drifting with the tide out of the harbor. An uneventful day's run; light head winds; came at sundown through a narrow deep passage into the harbor on Burnt Coat Island. Plain sailing into it, protected on all sides, and plenty of water. A number of fishing schooners anchored near us in the early evening, many of the fishermen having homes in the logbuts scattered over the island. We visited one of the smacks to obtain a mess of fish, and engaged in conversation with the fishermen. Many had not been to the mainland except in winter on sleds for provisions, and then to some such rising financial centre as the Tennants' Harbor of previous night. One boasted of having been in Portland. Our U. S. Courts run out at this place, extending no further East, so it became necessary to obtain a pilot for the next day's run among the islands to Bar Harbor. A genial fisherman of the blue (green) blood Yankee type offered his services for a consideration, which were accepted.

YACHTING NEWS.

☞ *The Southern Yacht Club offers* $1,500 *if a single Northern racing yacht will sail.*

NEW YACHTS.—Ward & Stanton, of Newburgh, N. Y., have ready for launching a side-wheel steam yacht for Mr. Henry Packer, President of the Lehigh Valley R. R. She is 90 ft long and 16 ft beam. Lennox, of South Brooklyn, has in hand a screw steamer for the Hon. Mr. Asphwell. She is of the high-speed river type, 110 ft long. Engines by Wright, of Newark, double compound cylinders, 8 and 16 in; propeller, 6½ ft diam, with 8 ft pitch. Boiler of the vertical tubular type, 10 ft high, 8 ft diam. Mr. A. C. Wilson, superintendent of the Greenpoint Ferry, will launch his little steamer built last season. She is 46 ft over all, about 36 feet keel, with 8.4 ft beam, and 4 ft 2 in in depth. Boiler 40 in diameter, 60 in high, made of best steel with tensile strength of 60,000 lbs. The shaft is of iron steel 7½ in diameter, after cabin 9 ft long; forward cabin 8 ft long. This launch is for sale. Captain Ellsworth's sloop, building at Greenpoint, is of the Elephant type—beamy and very deep, probably the deepest sloop of her length in tonnage in America. She is building under his own superintendence and is a very easy-looking ship for such extreme dimensions. She will make a roomy little cruiser and would perform well with a keel. Her frames are single and sawed, but of heavy stuff 5x2½; futtocks being screw-bolted to the floors. The keel is a solid piece 16x12 in. In point of model she is not unlike the small design for a twoconner we published, though she has a sort of compromise cutter stern instead of an elliptic one. Length over all, 31 ft; water line 26 ft; beam, 12½ ft; depth, 5 ft; her bilge is very easy, run clear and low line. Her cabin house is 16 ft in length and 4 ft in height, looks handsome and gives full 6 ft height of cabin. Ballast 4 tons, not to the frames; mast, 40 ft; extreme length of topmast, 16 ft; bowsprit, 16 ft with 12 ft outboard; boom, 35 ft; gaff, 11 ft; hoist, 30 ft. Palmer, at South, has launched the keel-sloop for Mr. Hall, of the small design for a two-conner we published, though she has a sort of compromise cutter stern instead of an elliptic one. Length over all, 31 ft; water line 26 ft; beam, 12½ ft; depth, 5 ft; her bilge is very easy, run clear and low line. Her cabin house is 16 ft in length and 4 ft in height, looks handsome and gives full 6 ft height of cabin. Ballast 4 tons, not to the frames; mast, 40 ft; extreme length of topmast, 16 ft; bowsprit, 16 ft with 12 ft outboard; boom, 35 ft; gaff, 11 ft; hoist, 30 ft. Palmer, at South, has launched the keel-sloop for Mr. Hall, of the small design for a two-conner we published, though she has a sort of compromise cutter stern instead of an elliptic one. Length over all, 31 ft; water line, 26 ft; beam, 12½ ft; depth, 5 ft; her bilge is very easy, run clear and low line. Her cabin house is 16 ft in length and 4 ft in height, looks handsome and gives full 6 ft height of cabin. Ballast 4 tons, not to the frames; mast, 40 ft; extreme length of topmast, 16 ft; bowsprit, 16 ft with 12 ft outboard; boom, 35 ft; gaff, 11 ft; hoist, 30 ft. Palmer, at South, has launched the keel-sloop for Mr. Hall, of the small design for a two-conner we published, though she has a sort of compromise cutter stern instead of an elliptic one. Length over all, 31 ft; water line

GONE EAST.—The sloop Ariadne has been sold to Boston owners through Manning's Agency. She was built in 1871 by Witman, and in 1878 had her stern spun out, much improving her. She is now 57 ft over all, 51 ft 4 in water line; 18 ft beam, 5½ ft deep and draws 4½ ft.

Answers to Correspondents.

☞ NO NOTICE TAKEN OF ANONYMOUS COMMUNICATIONS.

J. S., Jersey City.—The date is too late for snipe on Long Island.

M. & W., Galveston.—Do brook trout have scales? Ans. Yes, small ones.

B. M. S., Elba, Ala.—The 30-inch circles are circles 30 inches in diameter.

A. H. M., Brooklyn.—See notice of the King trap in our trap shooting column.

J. M. F., Torresdale, Pa.—We must refer you to our advertising columns for the information you want.

F. E. J., Green Bay, Wis.—We do not know of a good dog such as you want; they are very scarce. A short notice in our advertising columns might unearth one.

Hop Bitters cures by removing the cause of sickness and restoring vitality.

G. E. J., New York City.—1. From your description your dog is what is called a harrier. 2. We have not space, unfortunately, to give a treatise on the harrier, but if you will call at this office we will be pleased to answer your questions on the subject.

F. J. H., Fairport, Va.—Can you give me any information through your columns, or refer me to any back numbers of FOREST AND STREAM having reference thereto, as to the *modus operandi* of raising sea terrapin or "diamond backs" in inclosed sea ponds as practiced in North Carolina and elsewhere? Ans. Little is done in the way of cultivating terrapins. We looked up the subject and you will find all that is known about it in FOREST AND STREAM of March 3 and 31 of this year.

J. M., Albany, N. Y.—There is a fish now in our market that is too small for a shad and too large for a herring. Is this a new species, or a hybrid? Ans. It is not possible to say, judging from size alone. At some period of its life a shad is but a trifle larger than the river "herring." If they contain mature roe they may be adult fertile hybrids. The shad and alewife (river herring) have been extensively hybridized in the Hudson. It would be well to send a dozen specimens to Prof. Baird for identification. Mark them "fresh fish" and send particulars with them. Note if these fish are all of one sex or not. Small male shad ascend the rivers at two years old and are ripe milters. The females do not return to fresh water until the third year. If the fish in question are all males they may be young shad. There are structural differences between the shad and alewife which, when small, are quite hard to make out, but when of the size of the latter are plain to be seen. Note the length and shape of the sub-orbital bone, or long bony cheek scale under the eye in the shad, and its comparative shortness and rounded end in the herring. In the shad it reaches down to the lower jaw.

RIPPLE.—1. In a shooting match at balls or pigeons is it the duty or privilege of the referee to decide against a person who in shooting violates the rules, unless such violation is challenged? In other words, is it his duty to inflict a penalty without a challenge? 2. Where can I find the duties of a referee most fully defined? 3. In a match where the first prize was a medal, and the second and third prizes money, A and B tied on the highest score. C and D on the next and E and F on the third. A and B shot off their tie for first prize, A winning. It was decided that B, who had made a higher score than any except A, had now no claim on any of the prizes, C and D shooting for second prize and E and F for third. Nothing having been previously agreed on in reference to this point, was this right? If it was please make the reasons for it as plain as possible, as I cannot now see that it was just to B. Ans. 1. No, the referee only decides when appealed to. 2. Write for the "Trap Shooter's Referee" to H. C. Squires, No. 1 Cortlandt st., New York. 3. Except in class shooting the highest scores win; therefore unless this was class shooting B should have taken second prize and C should have shot off with D for third. In class shooting the various ties shoot off and the losers go out, and in this case B would have had no chance for second prize. In the case you mention, if nothing had been previously agreed on in regard to this point B should have taken second prize.

The Kennel.

FINE DUCK RETRIEVERS.—We have for sale a few puppies (whelped April 14) by the fine imported Irish water spaniel Judy (imported by Gen. W. B. Shattuc as a mate to champion Barney); sire Sandy. Pedigrees furnished. These pups when of suitable age will be delivered f. o. b. at $20 each. Orders filled in rotation of receipt. These puppies are beauties, and just the age to break for this fall's shooting. Those who have shot on Redfoot Lake, Rice Lakes or sliash bottoms know how invaluable this breed of dogs is. Natural retrievers, easily taught, devoted to the sport and capable of great labor even in icy water, they are truly the duck shooter's friend as well as servant. Address orders to W. T. DORTCH, P. P. F. & D. Club, Clarksville, Tenn. May19,2t

Hotels and Routes for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids & Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling & Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

NORTHERN MICHIGAN.

The waters of the

Grand Traverse Region.

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept 1.

The GRAYLING Season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthma Affections.

The hotel accommodations are excellent, and will be largely increased in time for the season of 1881 by new buildings and additions.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive rain facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

ADIRONDACKS.

Sportsmen and Tourists going to the woods via Plattsburgh after July 1 can find me at the Fouquet House, 44th street, and on the train for Ausable Forks Tuesday, Thursday and Saturday mornings to arrange for conveyances and seats in coach for the lakes. My coaches being new and of Abbott & Downing's latest approved pattern, I am not only able to offer more comforts and conveniences than other lines, but having guided over the entire Adirondack region so long I can furnish my patrons with such reliable information as may assist them in carrying out their plans for hunting or fishing. CHAS. J. GREENOUGH, Stage Prop. and U. S. M. Agt., Saranac Lake, Franklin County, New York.

FARRAR'S POCKET MAP OF THE RICHARDSON-RANGELEY LAKES REGION, including all the lakes, ponds and rivers of that famous country, as well as the head waters of the Connecticut River, Connecticut and Parmachenee Lakes, etc.; cloth bound. Price, post-paid by mail, 50 cents. CHARLES A. J. FARRAR, Jamaica Plain, Mass.

Hotels and Routes for Sportsmen.

TO SPORTSMEN:

The Pennsylvania R. R. Co.,

Respectfully invite attention to the

SUPERIOR FACILITIES

afforded by their lines for reaching most of the TROUTING PARKS and RACE COURSES in the Middle States. These lines being CONTINUOUS FROM ALL IMPORTANT POINTS, avoid the difficulties and dangers of reshipment, while the excellent cars which run over the smooth steel tracks enable STOCK TO BE TRANSPORTED without failure or injury.

THE LINES OF

Pennsylvania Railroad Company

also reach the best localities for

GUNNING AND FISHING

in Pennsylvania and New Jersey. EXCURSION TICKETS are sold at the offices of the Company in all the principle cities to KANE, RENOVO, A. REDFORD, CRESSON, RALSTON, MINNEQUA, and other well-known centers for

Trout Fishing, Wing Shooting, and Still Hunting.

Also, to

TUCKERTON, BEACH HAVEN, CAPE MAY, SQUAN, and points on the NEW JERSEY COAST, renowned for SALT WATER SPORT AFTER FIN AND FEATHER.

L. P. FARMER, Gen'l Pass. Agent.

FRANK THOMSON, Gen'l Manager. feb17-tf

Wild Fowl Shooting.

SPRINGVILLE HOUSE OR SPORTSMEN'S RETREAT, SHINNECOCK BAY, L. I.

BY A PRACTICAL GUNNER AND AN OLD bayman. Has always on hand the best of boats, batteries, etc., with the largest string of trained wild-geese decoys on the coast. The best ground in the vicinity of New York for bay snipe shooting of all varieties. Special attention given by himself to his guests, and satisfaction guaranteed. Address Wm. N. LANE, Good Ground, L.I. Refers by permission to J. B. Shepherd, 891 Broadway and. Wm. Dutcher, 320 Broadway, N. Y.

Bromfield House, Boston.

EUROPEAN PLAN.

MESSENGER, Proprietor.

TIM POND TROUT FISHING.

The boarding camps at this resort will be in readiness for sportsmen May 20. The abundance and quality of trout, the improvements in camps and boats, the facilities for reaching this pond and the beauty of lake and mountain scenery makes this one of the most desirable resorts in Northern Maine. The proprietor, Kennedy Smith, will give his personal attention to the wants of his guests. The railroads will sell tickets for round trip to Smith's farm in Benits, and buck board teams will be ready to haul passengers and baggage from farm to camp at reasonable rates. Board and use of boat one dollar per day. Address KENNEDY SMITH, Benits, Maine.

$66 a week in your own town. Terms and $5 outfit free. Address H. HALLETT & CO., Portland, Maine.
